FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

INTERNATIONAL AFFAIRS

SUZUKI GOVERNMENT WARNS AGAINST SOVIET THREAT TO JAPAN

Beijing RENMIN RIBAO in Chinese 30 Oct 80 p 7

[Article by Chang Lin [7022 2651] and Dong Ming [0392 2494]: "The New Exploitative Moves of the Suzuki Government of Japan"]

[Text] Over 3 months have passed since the Suzuki Cabinet came to power on 17 July 1980. Since then, it has repeatedly reaffirmed its pledge to continue the domestic and foreign policies of the Ohira Cabinet. A review of its 3-month-old political performances indicates that using Ohira's political line as a guide, the Suzuki Cabinet is now ready to take new exploratory steps in the direction of meeting the needs of the domestic and international developments. Among the steps that first command our attention was a press conference statement made by Prime Minister Zenko Suzuki shortly after his cabinet came to power, saying that "preparations are being made to set up a joint security conference to study the problems of how to safeguard the security of Japan from a broader point of view." This statement was later backed up by "a proposal to safeguard the security of Japan for the 1980's" issued by the Japanese Ministry of Foreign Affairs, suggesting that the Japanese "defense expenditure be increased to 1 percent of Japan's gross national product" and "Japan send self-defense elements and other personnel to join the UN international peace-keeping operations." A cabinet meeting has also approved the Japan Defense Agency's "special request" to increase its 1981 budget by 9.7 percent, despite Japan's present financial difficulties.

On 5 August, the defense agency issued a white paper warning Japan against the "threat of Soviet submarines" in the wake of a large-scale war game on map simulating a defense strategy against the Soviet attacks. On 18 August, the agency announced a decision to immediatly "strengthen the emergency system of combat-readiness" and to arm the reconnaissance planes with air-to-air missiles and patrol warships with torpedoes. On 18 October, Suzuki reaffirmed the "necessity of maintaining a well-measured and highly efficient defense power in order to strengthen the Japan-U.S. mutual defense system and to counter the external threats." The Japan Defense Agency has also decided to bring up to date its defense plan drafted in 1976, with the aim of strengthening the Japanese defense forces to deal with the Soviet threats.

As everyone knows, Japan's strategic proposal to "strengthen its independent defense power" dates back to the early 1970's, or the period of the "first energy crisis." Although the Suzuki Cabinet is only less than 4 months old, it has isplayed unusual courage to tackle what is considered the "most difficult" problem.

Among the well-developed western countries, Japan appears more industrially and technically capable of meeting the "energy crisis" and other major economic problems. In the foreseeable future, it still can lead other nations in economic growth. But any changes in the international political and economic situation are also likely to have direct impact on the economic development of Japan. For this reason, Japan has been very sensitive to the Soviet Union's efforts to constantly strengthen its military posture in the Far East, to step up the construction of military installations in Japan's northern territory, and to win the control of the naval and air bases in Cam Ranh Bay, which threaten the movement of Japan's merchant fleets over the seas. The Soviet Union's blatant invasion of Afghanistan also poses a threat to the oil supply line from the Middle East to Japan, thus placing Japan in grave danger.

Another step that deserves our attention is the problem concerning the revision of the constitution. The Japanese newspapers have noted a basic difference between the Suzuki Cabinet and its predecessors in dealing with this problem. The present constitution of Japan was drafted under the guidance and influence of the allied forces when they occupied Japan after the end of World War II. Although the Liberal Democratic Party (LDP) includes in its platform a provision concerning the "revision of the constitution by independent Japan," such a move cannot become effective until it is approved by two-thirds or more of the members of the Diet and by a majority vote in a special national referendum or election called by the Diet. This was why all previous Japanese cabinets were so reluctant to do anything about it. After the Suzuki Cabinet came to power, the current LDP chairman suggested that "we place all problems pertaining to the constitution on the table for discussion and consultation with all other parties out of the government." Minister of Justice Seisuke Okuno has also expressed the hope that "the Japanese people will spontaneously demand the revision of the constitution." On 7 September, in a speech to an LDP study meeting on the revision of the constitution, Suzuki said: "There is no contradiction between the call for the revision of the constitution and the appeal for the observation of it." This statement was regarded by the Japanese mass media as a step in preparing the Japanese public for the possibility of revising the constitution, although Suzuki denied that his cabinet is prepared to do so in the near future.

The focus of the controversy over the revision of the constitution is on its article 9 which provides that "Japan shall not maintain any ground, naval and air forces and other combat elements." Whether the existence of the self-defense forces in Japan is a violation of the article 9 of the constitution, whether they are permitted to join the UN international peace-keeping operations and whether they can be armed with defensive nuclear weapons under the provision of that article are the most frequently asked questions in Japan today. The controversy over the revision of the constitution is essentially an extension of the question of whether the self-defense forces should be strengthened. The "constitution-study council" inaugurated by the LDP in 1972 has been reactivated following 8 years of suspension with a pledge to present to the Diet "a proposal for the revision of the constitution" not later than the next national election. This trend has become clear since the emergence of the LDP as the majority party enjoying "a comfortable margin of vote" in the Diet and since the formation of "a united front" in the

LDP, with the "three conservative groups" (Suzuki, Tanaka and Fukuda factions) as its nuclei.

Public opinion polls have shown a rising popular support for the Suzuki Cabinet during the past 3 months following its formation. Thus far, six pro-Suzuki groups have come into being in the financial field. Suzuki is expected to be nominiated candidate for the president of the LDP by its leaders during the election scheduled for November this year. The Japanese public opinions predicted that the "Suzuki characteristic" will gradually become dominant on the Japanese political front, as the Suzuki regime is striving to end the period of transition from a temporary political power to a long-term one, and from the "era of Ohira politics" to that of "Suzuki politics."

COLLECTIVE, NOT INDIVIDUAL LEADERSHIP EMPHASIZED

Beijing RENMIN RIBAO in Chinese 4 Nov 80 p 5

[Article by Zhang Jingtai [1728 2529 1132]: "The Practice 'Let the Secretary Take Command' Must Be Changed"]

[Text] The leadership of the party is a collective leadership, not the leadership of one or two individuals. No one who becomes a member of the party committee, including the secretary, can place themselves above the collective. If an individual in a commanding position places himself above the collective, he will certainly undermine the collective leadership and promote patriarchism. In previous years, we suffered much from this. But now there are still some units where "if the secretary does not nod, no resolution can be adopted; if the secretary does not agree, no resolution can be carried out," and the secretary takes command of all matters and has the final say. In these units, the collective leadership often becomes individual leadership.

The slogan "let the secretary take command," was initiated in the 1950's. It perhaps meant that the secretary should both take command and partake in battle, and that instead of paying mere lip service he should take actual action to solve problems. Yet, during the "Cultural Revolution," because of the over-emphasis on "centralization," the functions of the secretary were pushed to an extreme so that everything had to be commanded by the secretary. As a result, except the "No 1 or No 2 leaders" or the secretary, no one has the authority to solve any problem. The slogan "let the secretary take command" then became "let the secretary have the final say and decide on everything." From the viewpoint of normal inner party relations, the slogan "let the secretary take command" is unscientific. As we know, the relationship between the secretary and the party members is one of equality, not a relationship between the commander and the commanded. In voting on significant problems, the secretary only has one vote and cannot pit one against ten and let a minority rule the majority. The function of the secretary lies in setting examples, taking the lead in implementing party lines and policies, assuring that the party committee works efficienty as if it was a PLA "squad," grasping central work, taking the whole situation into account and planning accordingly, investigating and supervising the implementation of resolutions, keeping all circles well informed, focalizing collective wisdom, developing and enriching collective experience, and improving work efficiency. In short, the secretary's daily work and overall duty in the party committee are to assume leadership, not to monopolize everything and command everything.

The leadership of the party is collective over each specific task. As a result, we have always stressed the coordination of party committee collective leadership with the division of individual responsibility. The matters that are collectively decided must be handled individually. Each must be responsible for his own tasks and must not shift his responsibility to others. The reason why work efficiency in many leadership organizations is not high and there is internal friction is not unrelated to the undemocratic work style on the part of the No 1 and No 2 leaders. For a long time, insofar as there were only the loud voices of these leaders who dictated everything, how could there be any sense of responsibility on the part of other committee members? But, the sense of responsibility of other committee members is indispensable because when they receive the trust of the party they must not stand with folded arms to see the party suffer. To counter patriarchism one must have the courage to control the patriarch. Otherwise, how can the evil feudalism be eliminated? We should also view the undemocratic work style of the No 1 and No 2 leaders in this way: our party's collective leadership and the division of individual responsibility are established on the basis of trusting the masses, relying on the masses and pooling the wisdom of the masses and only then can the leadership of the party be effective. If there is monopoly in state power and only one individual's words count, there will be no initiative among committee members. Would that individual not become an isolated person with no mass support and a leader without a following? Moreover, party work would become stagnant.

Adherence to collective leadership and doing away with individual despotism, it is necessary to correctly handle the dissenting views of the minority within the party committee. Generally speaking, although the views of the majority are generally correct or relatively correct, yet, the truth is not always in the hands of the majority. If the views of the minority truly come from the masses and represent the interests of the masses, even though such views are voiced by a minority within the party committee, yet from the point of view of the masses it is from the majority and thus should be considered as correct. We should believe that a truthful person, when practical experience proves that he is wrong, will be willing to abandon his views. If there are comrades who stubbornly adhere to their own views, we still should not discriminate against or reject them, if only these comrades adhere in action to the resolutions adopted by the majority. We should be united with them and have the patience to wait. This is completely necessary to bringing into full play the party committee's collective leadership.

Today, in carrying out the four modernizations and strengthening the collective leadership of the party, we must not let history repeat itself. The slogan "let the secretary take command" or "let the No 1 or No 2 leader decide" must be changed.

JINAN AIR FORCE STRESSES POLITICAL, IDEOLOGICAL EDUCATION

Education in Forefront

Jinan DAZHONG RIBAO in Chinese 19 Oct 80 p 2

[Article by Wang Youtu [3769 0645 0956], director of a Jinan Air Force target range: "Develop a Spirit of Spontaneity and Carry Out Political Education Well"]

[Text] Our target range is located on a piece of wild saline-alkaline soil, with poor transportation and relatively hard living conditions. However, because we have taken charge of our political education conscientiously and mobilized everyone's activism a little further, the cadres and soldiers are united in arduous struggle, and complete their security tasks relatively well each time we hold bombing, firing, or parachute training.

After the breakup of the "gang of four," we to a degree one-sidedly felt that attending political classes and conducting education was just so much big and empty talk, and added to this was the gradual improvement in living conditions on the target range over the past 2 years, with new housing and the installation of television, so that it didn't seem to matter whether we had more or less political education. The result was that ideology loosened up and the company had a continuous outbreak of disorganized and undisciplined incidents of objecting to hardship and fatigue. The cadres also became resentful, saying that soldiers today do not lead well, being both arrogant and finicky. In connection with this reality we studied what Comrade Mao Zedong and the central leaders had to say about political work and realized that criticism of the empty politics of Lin Biao and the "gang of four" did not mean that there is no need for politics; emphasis on the material foundations and the need to improve material conditions certainly does not mean not talking of the spirit or not talking of political education. From this, we positively took command of the company's political education. We thought ahead of time and prepared ahead of time for what education should be carried out at what time, did not leave anything pending or dependent, did what had to be done when it was necessary, and seized the initiative at all times. In one sense we took the initiative with respect to the assignments from the superiors. The principal content for political education this year is common political knowledge and education in outlook on life. As of the end of August, we had attended seven classes in political theory and seven classes in outlook on life as well. The time allocated was both more and faster than the requirements of the superiors. In a second sense, we took the actual initiative by being closely connected to the thinking of the troops. Although our target range is in a remote location, still there are countless ties with other parts of the country, and changes in circumstances or policy can quickly set up waves among the troops. We ordinarily pay close attention to the soldiers' reactions and promptly make suggestions to the party branch committee for timely education. Early this year, a small number of comrades became very fastidious about the way they dressed up. We immediately carried on education in "What kind of feeling a revolutionary soldier ought to have, and what kind of aesthetic standards he ought to establish," which received relatively good results. Third was taking the initiative in determining the rules of transformation in the thinking of the troops. During the period of their service, the thinking of cadres and soldiers always goes through a regular pattern of changes. Therefore, we have paid relatively close attention to summarizing and trying to learn this pattern, putting education purposefully in the forefront and taking preventive measures to improve everyone's ability to deal with various kinds of problems. For example, new soldiers are assigned to the target range every year, and all must be given orientation in how to adopt a proper service attitude in accordance with our conditions and settle down in the work of the target range. After a soldier's conscription service period is over, a fair amount of attention is given to the question of love and marriage, and at that time we conduct education in the subordination of personal interests to the interests of the revolution as well as how a revolutionary soldier ought to deal with the question of love and marriage. Becuase the education is timely and the work is done ahead of time, the soldiers are able to deal with all the problems they encounter.

In political education, we have also paid attention to methods of improving education and raising educational results. During one period, some soldiers were not interested in political studies, and we felt that if everyone did not like to study politics, there would no doubt be a problem of self-knowledge, but the principal responsibility was still on political education for being conducted too mechanically and drably. Therefore, besides making everyone aware of the importance of political study as soon as we discovered this problem, we also racked our brains during our spare time to think of ways to reform the educational methods and raise the quality of education: 1) In connection with reality, discuss one reason for every subject. When teaching a class, we need not necessarily stay in the classroom, but can walk out to see the village or a factory, and can also seize advantageous opportunities, during training, in operations, or at work, to discuss one reason for every subject in connection with reality, taking 8 or 10 minutes and using just a few sentences to increase everyone's knowledge of a question. This kind of teaching always achieves very good results. There is a Xinzhuang production brigade party branch in the area where we are stationed, and it is an advanced unit that has organized all the youths to raise themselves through their own efforts, take part in arduous struggle, and use their two hands to transform the backward aspect of the production brigade and propel it into the ranks of those who are advanced, prosperous, and rising. We then organized all the comrades to go and interview them, and this had a great effect in overcoming the soldiers' fear of fatigue and fear of hardship and establishing thinking aimed at putting down roots and building the target range. 2) Select the instructor according to the lesson content. In the past, our lessons were taught principally by the political instructor, but later we invited military cadres or local cadres to lecture, depending on the content of the lesson, and even asked family members or soldiers and commune members to lecture. In this way, we develop their strong points and are able to attract the interest of the listeners. When we conduct a class in socialism, we invite Comrade Li Xiangxian, the original party secretary of the Aoli production brigade, to lecture.

This old party secretary compares the different results from two high tides, before and after the liberation, and enthusiastically praises the socialist system, providing a moving lesson in socialism for cadres and soldiers. 3) Adopt a method of the masses themselves. The method we commonly use is for the masses to comment, one opinion for each subject, and analyze a typical instance. In March of this year, when we provided security for the live bombing training by a certain regiment, a small local tractor carrying several commune members suddenly entered the target area by mistake, and after guard Zhu Aiwu discovered this, he ran yelling into the target area without regard for his own safety. When those on the tractor heard the cries and left the target area, four airplanes carrying live bombs entered the airspace over the target range and began dive bombing, and young Zhu could only throw himself down on the ground right there, with bombs exploding only a little more than 200 meters away. Afterward, some people praised his sense of responsibility to his work, a manifestation of being ready to act when necessary; others said he was a "simpleton," so how should he be seen, finally? We seized on this incident and organized everyone to discuss it. Everyone said, "When the masses encounter danger and our revolutionary soldiers save them at the risk of their own lives, it is revolutionary heroism, and young Zhu did the right thing!" This made everyone distinguish clearly what was revolutionary heroism and what was acting rashly, or recklessly.

We have learned in practice that it is only necessary for our political work cadres to be careful in everything, be diligent in thinking about things, be adept at mobilizing their intelligence, and our political education will be able to be vivid and vigorous, rich and varied, and capable of carrying out the education in a lively manner and well.

Ideological Education Stressed

Jinan DAZHONG RIBAO in Chinese 20 Oct 80 p 1

[Article: "Jinan Air Force Promotes Ideological Education"]

[Text] Jinan Air Force units, proceeding from reality, developed education in a revolutionary outlook on life from top to bottom and achieved good results.

So far this year, the various units of the Air Force in Jinan have conscientiously implemented the spirit of the military-wide political work conference, and have purposefully carried out education in a revolutionary outlook on life with the nature of ideals, prospects, and morals, love and marriage, arduous struggle, joining the party and being proposed as cadre, the relationship between revolutionary benefit and individual benefit, and how to be a good conscriptee as its major content. The principal methods employed were as follows:

1. Party committees on all levels and political organs all took the work seriously and leading cadres directed it personally. According to initial statistics, in a little more than 6 months, more than 100 leading comrades of regimental grade or higher have taken work teams to the basic levels. They have helped the troops to study the ideological circumstances, led the development of education in a revolutionary outlook on life, and solved a great many problems. The party committee and political organ of a certain Air Force division, aiming at a few ideological problems that existed among the troops, promptly proposed some content for the education and worked toward achieving both relaxation and requirements, but mainly relaxation, with the positive advancement of both cadres and soldiers.

2. Keeping a close connection to reality, some carried on education as they would fire an arrow, emphasizing practical results. In the education, all units determined their education according to what problems existed, strengthening the purposefulness of the education and deriving outstanding results. For example, this year all units have universally carried out education in agricultural economic policy to raise everyone's understanding in response to the ideological problem resulting from the cadres' and soldiers' reactions to the system of agricultural production responsibilities. They also made resistance to the influence of bourgeois thinking an important subject of political education, carried out ideological education in resisting corruption and preventing upheaval, drew clear distinctions between the beautiful and the ugly, the good and the bad, glory and disgrace, etc., nurturing a proletarian moral character and noble sentiments.

3. They adopted various measures for the mutual coordination of the universal education and the individual education. For example, they invited local comrades to make reports, allowed advanced exemplars to explain by means of their own experience, carried on social investigations, organized inspection tours, developed frank talks of a mass nature, developed film reviews and book reviews, newspaper reading and discussion, held story meetings, evening entertainments, established wall newspapers and blackboard newspapers, exhibits, and discussions, slide shows, etc., to carry on education in a revolutionary outlook on life for the cadres and soldiers that was lively in form, new and original in content, and strengthened the educational results. Some units organically combined the administration and management of the education in outlook on life, education in current policy, education in common political knowledge, education in the excellent tradition, the three educations movement, party and youth corps education, to consolidate and improve educational results.

To lead the education in a revolutionary outlook on life to penetrate deeply, the Jinan Air Force units called a meeting a few days ago to exchange experience on education in a revolutionary outlook on life and called for realistic strengthening of leadership, comprehensive administration, and carrying this education into every item of work to make the troops' ideological establishment and training in combat readiness even better.

MILITARY AND PUBLIC SECURITY

EXPERIMENTAL TORPEDO RETRIEVED BY FISHERMEN

Jinan DAZHONG RIBAO in Chinese 29 Sep 80 p 3

[Article: "Fishing Boats Salvage Test Torpedo"]

[Text] A certain naval unit, together with the party committee of Longxudao Commune, Tongcheng County, and other leading organs, recently held a joint reception at Longxudao Commune to commend and reward fishing boats Lurongyu 3042 and 3043 of the Licun fishing team of that commune for courageously retrieving a military experimental torpedo from the sea, protecting evidence of national defense experimental results.

On the morning of 10 August, fishing boats Lurongyu 3042 and 3043 were returning from fishing when the captain of boat 3043, Yuan Xiangkun [5913 4161 0981], faintly saw something red floating and bobbing on the surface of the sea about 1000 meters from the boat, whereupon he immediately ordered the boat to draw alongside to see clearly what it was. At this time the partner fishing boat, No 3042, came up from behind and everyone looked carefully and discovered a floating object about 60 centimeters in diameter, the upper end shaped like a steel helmet and the lower end extending into the water about 7 or 8 meters. They decided that it could be a very dangerous explosive weapon. The captain of boat No 3042, Communist Party member Yuan Xiangbo [5913 4161 3124], thought: No matter what, we must think of some way to retrieve it, for if this floating object is foreign, it may well provide some intelligence data for the country; if it is ours, we will be protecting national secrets. He quickly mobilized everyone to figure out a method of retrieval on the basis of the floating object's size and weight and dangerous characteristics. Yuan Yuwen [5913 3768 4489] and Yuan Xiangdian [5913 4161 3013] bravely took the lead, one man holding net and hook in his hands, the other tying knots in the rope and securing the floating object. Afterward, the two boats towed the object back to shore.

After more than 2 hours of tense struggle, the boats made more than 50 li and finally brought the floating object safely back to the harbor, then immediately sent someone to report to the Longxudao border defense station. The concerned departments determined that this floating object was an experimental torpedo fired by a certain unit of our navy.

BROADENING OF OPPORTUNITIES FOR HIGHER EDUCATION NEEDED

Beijing RENMIN RIBAO in Chinese 11 Oct 80 p 4

[Article by Wu Mingyu [0702 2494 3842] and Bao Tong [7637 1749]: "More On Broadening the Avenues of Education; Desire for a Discussion With Yan Si and Other Comrades"]

[Text] Recently, we have seen reports in the newspapers that many places are broadening the avenues of education. In Shanghai Municipality, 24 schools of higher education have admitted 3,000 day students at their own expense. These students received fairly high marks at the higher grade entrance examination. The average marks of those admitted to the science department of Fudan University were 356.7. The average marks of those admitted to the Shanghai Second Medical College are 355.8. Other schools are also pleased with the results of their successful candidates at examination. The Anhui Provincial People's Government has given its approval for seven institutes of higher learning, including the Chinese University of Science and Technology, to jointly set up a university for day students at their own expense, and has named it the Hefei Joint University. This year this university has enrolled 200 students. In Urumqi Municipality, some schools of higher learning have enrolled more than 200 students who are paying their own expenses. Shaanxi and Jiangxi provinces have enrolled an additional 1,000 day students paying their own expenses. Jiangsu Province has decided to establish a Jingling Vocational University in Nanjing and, at the same time, to set up a secondary vocational day school. In conclusion, the readers are happy to see so many encouraging reports and are impressed that so many persons of ideals and integrity in our educational circles are doing a great deal of very difficult and practical work in training more and better talent.

In the past 2 years, some places have introduced day schools as an experiment, set up branch schools, and restored universities taught by radio, correspondence, and television. This year they have again set up day colleges for students paying their own expenses, vocational colleges, night colleges, and schools of other types. All these things illustrate that the broadening of avenues of higher education is definitely the general trend out of necessity, and that it receives a widespread welcome among the people. These avenues are being increasingly broadened.

However, there are also controversies. Some comrades have alleged that the main task of the institutes of higher learning is to improve the quality of education, and that the broadening of avenues will hinder improvements in education, particularly in the key institutes of higher learning. Some other comrades have argued that it is untimely to talk about the broadening of avenues of education. They have even claimed that such suggestions will incite trouble and unrest and arouse dissatisfaction against the party and the socialist system on the part of those students who fail the higher grade entrance examination. As there is no consensus of opinion, it seems necessary to carry out further discussions.

Broadening the avenues of education is the trend of popular sentiment.

Whether or not to broaden the avenues of higher education is not to be decided on the basis of anybody's subjective will but by objective necessity and practical possibilities.

In the past 30 years there have been nearly 3 million graduates of institutes of higher learning in our country. This number represents less than 3 percent of the total number of workers and staff members in the country. Throughout the country, a great many factories, mines, enterprises, and production brigades do not have even one qualified engineer or agronomist. The shortage of physicians all the more goes without saying. As regards talented persons in liberal arts, owing to the fact that they were ignored all along, the problem is even more serious. Why has management become the weakest link in China's economic work? Many years ago, institutes of higher education began to slash the number of courses in this field and failed to train large numbers of qualified managerial personnel for the state, which undeniably is one of the reasons. In the past 30 years, schools of higher learning trained only some 10,000 specialized persons in the science of law. At present, we have to strengthen our legal system, formulate various laws, improve the judicial and procuratorial organs at various levels, and establish the institution of lawyers. Then, we have to make contact with foreigners because we have no experts among ourselves.

Our higher education was interrupted over many years, so that there is a general shortage of new specialists on all fronts to fill vacancies left by the old ones. In 1978, 62.5 percent of China's technical personnel were older than 36, while only 37.5 percent were 35 or younger. In many organs of scientific research, the number of qualified junior personnel is only equal to, or even less than, the number of senior and intermediate personnel. This kind of age and personnel makeup is obviously abnormal.

Let us look again at the internal composition of our educational undertakings. Over more than 20 years, the ratio between our college students and middle school students was 1:16 in 1952 and 1:21 in 1965, but it changed to 1:78 in 1978. Accordingly, the proportion of students entering schools of a higher level also dropped to a large extent. The proportion of senior middle school graduates entering colleges was 56.7 percent in 1957, 45.6 percent in 1965, and 3.8 percent in 1979.

We maintain that in our discussion on the policy of promoting higher education, we cannot evade the foregoing facts.

Of course, there were many reasons for the occurrence of this situation. In addition to the sabotage of the "gang of four," there were other reasons. To fundamentally change this kind of situation, just as Comrade Yan Si [1693 1835] has said, one cannot "get the desired results from making a concentrated effort in less than a year." At present, we have no information as to whether or not there are people trying "to make a concentrated effort in less than a year." According to our nderstanding, success cannot be achieved in this important matter even within a short period of a few years. The question is whether or not we should start right now to study the issue with enthusiasm and gradually change the situation, Here lies the divergence of views.

How do we look upon the question of quality?

Yan Si and other comrades believe that at present the more serious question is quality, not quantity, and therefore it is most important to turn out tens of thousands of the world's first-rate experts.

Of course, in training our students we must pay attention to quality. Their failure would mean a waste of the manpower and material resources of the state. However, why do broadening the avenues of education and enrolling more students have to mean a lowering of the quality of education? In our previous aritcle on broadening the avenues of education, we pointed out that the guarantee for quality is decided mainly by having good teachers, good teaching materials, strict checks on the students, and good work of education management. The method of conducting a school should not be the deciding factor. In various countries of the world, many famous universities are for nonresident students, and they have trained large numbers of highly qualified persons just the same. The proportion of our senior secondary graduates entering colleges is now very small. Only one can be picked out of scores of candidates, and the qualification of students is thus assured. Moreover, these young people suffered greatly from the sabotage of the "gang of four" in education, and they now have a very high enthusiasm for study. In spite of their poor performance in past years, some students are making increasingly greater efforts and show considerable latent capacity for study. In the past 2 years, the students of branch schools in various places have generally done well in study, which is a good proof. Therefore, there is no reason to think that broadening the avenues of education must lower its quality.

Should we have tens of thousands of the world's first-rate scientists? The answer is affirmative. However, from the actual conditions of China's present level of economy, culture, education, and science, it may be seen that this practical task cannot be solved very quickly, and that it requires persistent efforts over a long period before it can be fulfilled. A pressing matter of the moment should be to make our best efforts to solve or alleviate the urgent situation of the unusual shortage of specialized personnel in various fields and at all levels. If we cannot make headway on this issue within 5 to 10 years, our construction of the four modernizations will be seriously affected. Quantitative increase and qualitative improvement are not contradictory. Any talk about quality apart from quantity is like water without its source. It would be also difficult to make sure of quality.

Comrade Yan Si asserts that we must keep firmly in mind the objective of our struggle to train a contingent of thousands to tens of thousands of the world's first-rate specialists. He says that by doing this we will be able to integrate need with possibility, quantity with quality, popularization with improvement, and immediate demand with long-term need. We believe that it is indeed necessary to integrate quantity with quality, and so forth; however, while keeping firmly in mind the objective of training a contingent of the world's first-rate specialists, we must also keep firmly in mind another objective which cannot be ignored, and that is that we must train millions and up to ten millions of qualified specialized investigation by Shanghai Municipality, its 48 institutes of higher education have 17,300 teachers and only 67,000 students; thus, the ratio of teachers to students is 1:3.9, which is only the average. In a considerable number of institutes of higher learning, the ratio of teachers to students is even lower than 1:3. This situation is considered abnormal not only by the students but also by many teachers. The broad ranks of teachers are very anxious to develop as many additional students as possible. They give their positive support to a reform of the system and structure of higher education by conducting education in many different ways to broaden the avenues of education. As a result, this year many schools are conducting night colleges of various types and are further enlarging the enrollment of day students who pay their own expenses. In Shanghai, Xinjiang, Jiangsu, Shaanxi, Jiangxi, and Anhui, some schools of higher education have a potential. This has been proved by facts.

Some comrades say that the enrollment of day students is the way for colleges, but that it can be done only after the question of dormitories for the students is solved. We cannot understand the causality in this argument. We believe that conducting day schools for local students is a good way to ease the shortage of dormitories for the students. On the contrary, if the matter of dormitories should be solved first, then why do we have to conduct day schools? Indeed, there is the problem of transport facilities. However, if we positively make practical and effective efforts, it will be much easier to deal with the question of transport than with the question of dormitories.

Potentiality is an objective reality. The question is whether people can correctly recognize and use it. We should say that the greatest potential comes from reform. In the past 30 years, our institutes of higher education have had many troubles with their method of conducting schools and with their system and structure of education. If we further emancipate our thinking and make a determination for reform, we can open up new ways to develop our higher education. At present, enrollment of every college student will cost the state more than 1,800 yuan each year. The chief expense is for capital construction, plus funds for equipment and grant-aid students. At some day colleges conducted by the localities for students who pay their own expenses, every student generally costs less than 200 yuan each year. Of course, the other schools cannot possibly cut their expenses down to this level. However, if the institutes of higher education can reform their educational system, boarding-school system, and grant-aid system, it will be certainly possible to cut expenditures.

Our country is still very poor, and so all quarters should make careful calculations and strict budgeting, get more done with less money, and stress practical economic results. We should follow this principle in conducting our schools. Poor people cannot act like rich people. Accomodating all students as boarders is not necessarily a good way to operate.

Broadening the avenues of education can promote stability and unity.

Should we broaden the avenues of ecucation? Can we do it? How can we do it? It is very necessary to carry out such discussions. In doing so, we may help people in all circles of society and the broad ranks of young people to see fully that the party and the state are doing everything possible to solve the existing difficulties personnel. Because, first, without millions and up to tens of millions of qualified specialized personnel, it will be difficult to produce tens of thousands of the world's first-rate experts; secondly, even if there are tens of thousands of the world's first-rate experts, it will also be necessary to have millions and up to tens of millions of personnel in specific fields working in coordination so that experts can truly play their roles. Both objectives must be kept firmly in mind; neither one may be cast aside lightly. Otherwise, we will fall into blindness and onesideness, will have no way to properly integrate quantity with quality, and so forth. The experience and lessons of the British people deserve our reference. The number of first-rate British scientists who have won Nobel prizes is next only to that of the United States; it is more than that of West Germany, and many more than that of Japan. However, why cannot Great Britain compete with West Germany and Japan in economy and technology? Why is the status of Great Britain daily declining in international trade? An important cause is that they have overlooked the training of large numbers of technical personnel. Though West Germany and Japan do not have as many Nobel laureates as Great Britain, they have a great many engineers and experts in various lines of trade. On the one hand, [Yan Si] sets training 10,000 - 20,000 of the world's first-rate experts against broadening the avenues of education, and on the other hand he says that by doing this we may integrate quantity with quality, and popularization with improvement. This way of discussion and illustration can hardly convince people.

Do institutes of higher education have any potential?

Some comrades disapprove of broadening the avenues of education; however, they cannot but admit that our institutes of higher learning have too few students and are truly in need of expanding the enrollment of students. However, it is said that it can't be done at present because the conditions do not exist.

Yan Si and other comrades say that education is no different from economy and requires a period of readjustment. We also agree that education requires a period of readjustment. However, we believe that both readjustment and the tapping of potential can be carried out without conflict. Why is special emphasis laid on "tapping potential, innovation, and renovation" in the readjustment of economic work, while we cannot tap the potential in our readjustment of educational undertakings? Why is it that, once tapping potential is mentioned, it appears that we are opposing readjustment?

Some comrades have suggested organizing persons from various quarters for an investigation into the schools to see if there is any potential. This, of course, is very appropriate. We believe that it is really necessary to carry out this work of investigation, to make an inspection in a responsible way, and to find out once and for all whether or not there is any potential, and, if there is, how great it is and how to tap it. As a matter of fact, are not these the facts of broadening the avenues of education which we enumerated in the beginning of this article, our rewards from taking the initiative to investigate and to tap our potential? Some comrades do not like to compare the ratio of teachers to students in our country with that in foreign countries. Well, then, we might as well make a comparison with our own past situation. On the average, there was a teacher for every 7.1 students in 1952, 6.3 students in 1957, 4.9 students in 1965, and 4.3 students in 1979. At present, our institutes of higher education have more than 200,000 teachers. If the number of students under each teacher is increased 10 percent, then over 20,000 more students can be enrolled. According to an in the field of higher education. Just like carrying out discussions on broadening the avenues of employment, newspapers and magazines in recent months have carried out discussions on broadening the avenues of education, thus greatly strengthening the faith of the masses in the party and the state. Through discussion, we may open our minds, free ourselves from mental shackles, and find out various ways of broadening the avenues of education. Through discussion, the broad ranks of young people may be helped to deal correctly with the problem of going to higher level schools, so that more young people and parents may consciously accept various ways of conducting schools. Through discussion, the concern and support of the whole party and the entire society may also be further aroused towards the cause of education. Naturally, in the course of discussion there will be differences of opinion. This is also a normal phenomenon. The more we discuss, the clearer becomes the truth. Whoever offers a correct suggestion in the discussions, we will accept it.

Some comrades have argued that the discussion on broadening the avenues of education and the newspaper reports that Shanghai institutes of higher education have enrolled day students who pay their own expenses will encourage young people to demand further study in higher level schools, and that since our institutes of higher education can enroll only a limited number of students, this problem will become more acute and will affect the stability of the whole society. Facts have proved that the "disturbances" that emerged in the work of enrollment this year were no more serious than those in past years. There is no ground to say that the stability of the whole society will be affected.

What is difficult for people to understand is why any suggestion of broadening the avenues of education can arouse suspicion that young people who are unable to go to school will be incited to make trouble. If such kind of logic can stand, then won't giving publicity to the "two preparations"--that is, making preparation for going to school and also making preparation for employment--all the more arouse a twofold suspicion that young people will be so incited? By the same token, shouldn't the slogan of broadening the avenues of employment be similarly rejected? Obviously there is no way to make one's statements consistent. As regards those who compare comrades advocating broadening the avenues of education with "Chi Qun [6688 5028] and his ilk" and who draw a false analogy between them, we all the more cannot understand their purpose. We earnestly hope that in the future, Comrade Yan Si will not treat his comrades this way, because this way of doing things will not contribute in the slightest to the discussion and solution of the problem. We welcome criticisms of our point of view. However, in discussion one should take the scientific attitude of presenting the facts and reasoning things out. We hope that this discussion can continue by seeking truth from facts and that still more comrades will participate in this discussion, which has a bearing on the development of our cause of education. Through this discussion, we can pool the wisdom of the masses, explore avenues to reform our higher education undertakings, and help them really make great progress in the 1980's.

SOCIOLOGICAL, EDUCATION AND CULTURE

SHAANXI EDUCATORS DISCUSS HIGHER EDUCATION REFORM

Beijing GUANGMING RIBAO in Chinese 5 Sep 80 p 2

[Article: "Ideas on University Education Reform"]

[Text] In the first part of July, the CCP Shaanxi Provincial Committee's Culture and Education Department convened in Xian personages comprising a portion of the world of higher education to discuss the questions of the reform and development of higher education. They discussed the following problems:

Reform the structure, and develop many varieties of higher education.

At present, the structure of our country's institutions of higher education is very unreasonable; the problems of "at one fell swoop" and sweeping uniformity are rather conspicuous; the structure is very difficult to adapt to the many needs of building the four modernizations, and it is not advantageous for raising the quality of education or developing the enterprise of education. People consider that if we want to change this circumstance, first we must develop schools of literature, law, and commerce, in order to speed up the cultivation of managerial talent for administrative and economic work. At present schools of literature, law, and commerce are, proportionately, too small. Concerned departments of Shaanxi Province, having studied the matter, consider that we must create the proper conditions to gradually enlarge the scale of the recruitment of students for the presently-existing schools of literature, law, and commerce; offer economic management courses in our engineering schools, with schools having the proper conditions establishing specialized economic management departments; and organize the schools to take on the task of training cadres at their posts; they can also send teachers to teach classes at the offices and institutions where they work, raising the cultural and scientific level of party political cadres and factory management personnel. Secondly, we must manage our schools in such a way as to have various types of school, so that [the students] can bring into full play the areas in which they are most skilled. Everyone points out that at present in full-time higher schools of engineering, with respect to the various aspects of training goals, the number of years set for study, teaching plans, and the offering of courses, there exists to one degree or another the disadvantage of excessive uniformity. They endorsed the idea of dividing schools of higher education into three types. That is, for schools of science and engineering the first type would be the minority of schools providing a comparatively solid theoretical basis and having a comparatively high level of teachers, training the various types of theoretical scientific personnel, scientific researchers, and university teachers. This type of school, in addition to doing a good job of teaching undergraduate courses, should gradually enlarge its proportion of graduate students. The second type of school should place most of its emphasis on the application of theory, training engineering and technical personnel who will be engaged in the practical work of design and manufacturing. The third type of school should place most of its emphasis on training in practical technical skills, training mainly people in the area of industrial technology. Everyone considers that with this dividing up into different types of school, one can have a reasonable division of labor in the training targets, students will be able to bring their special aptitudes into full play, bring out their special qualities, and one will be able, in a planned way, to enable all types of talent to have a coordinated development, in order to suit the many needs of developing the national economy. For the educational systems of these several types of schools, one can have 5-year, 4-year, and also 3-year and 2-year systems; a school can also have several systems of undergraduate courses, special training courses, etc. Some comrades say that from the point of view of realizing the four modernizations, in the composition of talent in the theoretical sciences, applied science, and the techniques of industrial technology, it is necessary to place a greater part of our efforts towards raising the proportion of personnel in applied science and industrial technology.

In running our universities, we must effect coordination.

Of the 39 institutions of higher education in Shaanxi at present, 22 are affiliated with the department of culture and education, and 17 are affiliated with the province. This difference in their affiliation has led to a situation in which there is duplication in setting up programs for specialized trades and professions in the various schools, and the use of manpower and material resources is scattered. Everyone cites as an example Xian's College of Metallurgical Construction, which in its construction aspect has a very good foundation, yet owing to the fact that it is under the metallurgy section, its potential cannot fully be brought into play; in addition, the State Building Committee also has to operate separately a Northwest Architectural Engineering College in Xian, and the Ministry of Communication also manages a specialized construction program for industrial and civil use at the Institute of Highway Engineering. In the entire province there are no less than 36 institutions for specialized trades and professions in the mechanical and engineering field. Under these circumstances, how can we arrange things under a unified plan, and bring the advantages at our disposal into full play? Everyone considers that we must put coordination into effect. With an institution of higher education being under the leadership of a single department, other departments can then invest in setting up the faculties or specialized programs they need. At present, the state's head office of goods and materials has set up a department of goods and materials at the Shaanxi College of Finance and Economics, which is affiliated with the main office of the People's Bank. This is a good method requiring little investment and showing quick results. Local areas can also set up, according to need, programs for specialized trades and professions in schools affiliated with the department [of culture and education], or manage branch schools with a day school system on the school's behalf, providing the appropriate subsidies. Owing to the fact that each province is financially responsible [for the students it enrolls], institutions of higher education affiliated with the province have met with obstacles in recruiting students in other provinces and cities; they consider that schools and programs for specialized trades and professions affiliated with the province that are faced with the problem of recruiting students over a broad area can consult with the relevant provinces and collect a training fee according to the number of students recruited from outside the province. In doing this, it is necessary to afford the schools a certain amount of autonomy.

Open all avenues for study; manage our schools so as to have many different forms of instruction.

Everyone considers that we must open up all avenues for study, and adopt the guiding principle of walking with both our legs at once. This is made necessary by the conditions of our country and population being large, our [technical] foundation poor, and our economy undeveloped; the young people waiting to enter a profession are many, and our workers and staff members' scientific and technical level is low. Along with doing a good job of managing our regular, full-time universities realistically we must also do a good job of television and radio instruction, correspondence education, as well as work/study programs and all types of spare-time education for workers and staff members; the central government, the provinces, and the cities should manage education, and the individual enterprises should also engage in education. In short, we should adopt many forms in developing higher education.

We must actively develop a day school system. Everyone considers that nearly 3 years of experience in Beijing, Shanghai, Tianjin, and Xian of managing these universities by having them divided into separate schools proves that, in having the cities enroll new day students, both operating expenses and capital construction investment can be cut, and so this method should be encouraged. Concerned departments of society can set up "students' residences" and actively solve the problems of transportation and board in order to create the proper conditions for putting day school programs into effect. We must make a great effort to develop a university of the air consisting of television and radio broadcasts so that, along with enrolling on-the-job staff members and workers in these courses, we can also recruit young people who have graduated from senior middle school and are waiting to enter a profession, enabling them also to receive a university education.

We must raise our teachers' level, and tap their potential.

The comrades taking part in the conference unanimously consider that the decisive factor in raising the quality of teaching is the teachers themselves, and we must strengthen our building of the ranks of teachers, and raise the teachers' level of competence. At present we must train many more teachers for basic level courses, and gradually change the circumstance of the unreasonable composition of the ranks of teachers. We must encourage the various schools to arrange for those teachers whose level of teaching competence is high to teach some of their courses at other schools. In particular, older, established schools should support new schools whose teaching force is weak. At present, in a great many institutions of higher education first-rank teachers comprise only about half of the total number of teachers, and the latent potential of the teachers is very great. How can we bring this potential into play? Some comrades suggest that we should put into effect a system of distribution of pay according to work done, according to the principle that those who work more will receive more, and put into effect a system of basic pay supplemented by rewards, as follows: those who complete their teaching assignment will draw their basic pay; those who exceed their teaching assignment will be issued a teaching subsidy in addition; and those who fail to complete the basic amount of work assigned to them will be given less pay--thus rewarding the first rank of teachers. In defining completion of the basic teaching work, it is presupposed that income earned from writing or editing books, as well as rewards for the results of scientific research, will be retained by the teachers. As for management cadres, laboratory personnel, and political and ideological assistants, a system of on-station allowances can be put into effect, encouraging the cadres to do a good job of their managerial work, and encouraging the teachers to work in the laboratories. The allowances can be set up in several grades; those at their post will receive an allowance, while those who leave their work stations will have their allowance canceled.

SHAANXI EDUCATION BUREAU SELECTS TOP SCIENTISTS FOR RESEARCH PROJECTS

Beijing GUANGMING RIBAO in Chinese 10 Sep 80 p 1

[Article: "Shaanxi Provincial Higher Education Bureau Places Importance on Selecting Those Who Are Tops in Their Field"]

[Text] The reporters Yang Zhihan and Zhang Ruixi reported that, in order to raise the level of scientific research and teaching in schools of higher education, the Shaanxi Provincial Higher Education Bureau attaches great importance to the selection of people at the head of their fields to undertake research projects. The first group of 45 top people selected from their research; 37 important scientific research projects were directed or completed by this group, amounting to 34 percent of the important research results achieved by Shaanxi's schools of higher education. Recently, the higher education bureau again selected from the various schools a second group of persons who are leaders in their fields, of which the majority are young and middle-aged teachers.

These top people were selected on the basis of having experience and ability--those having a good theoretical basis, comparatively strong research ability, and rich practical experience, and who are capable of producing important results within a period of 3-5 years. After their selection, the Shaanxi Higher Education Bureau in cooperation with the various schools conscientiously solved the problem of providing the various conditions necessary for their research. At present, for the first group of 45 persons (apart from a minority), those who needed assistants have been provided with them, those whose living quarters were not up to standard have had this matter adjusted, and those who were having difficulties with expenses were allotted money from a special fund. Northwest University's assistant professor Du Wenhu [2629 2429 5706] is engaged in research in analytical chemistry, and is in charge of the work of the analysis center. In order to guarantee the needs of his research, the Shaanxi Provincial Science Committee introduced from abroad a combined color- and mass spectrometer worth 600,000 yuan. Professor Zhao Hongzhang [6392 3163 3864] of the Northwest Agricultural Institute is engaged in the work of breeding varieties of wheat. He needed to construct a greenhouse, so the provincial authorities raised a special fund and built one for him.

The provincial higher education bureau in cooperation with the various schools, on the basis of national and local needs, the special fields taught by the schools, and the individual researchers' special areas of scientific expertise, assists the leading scientists in clearly determining the direction of their research and the topics for research.

Concerned departments and schools of the province also actively support and arrange for them to participate in international scientific exchange movements and improve themselves by comparing views with distinguished international scientists, raising their level of research capability. Of the first group of 45 top scientists, 13 have taken part in international scientific conferences, or gone abroad to teach, observe and study, engage in advanced studies, and work for short periods.

Over the past year the first group of top scientists, with the assistance of concerned departments, have already achieved many important research results. Our country's famous geologist, Professor Zhang Bosheng [1728 0130 5116] of Northwest University, completed "Wave Formations in the Earth's Crust in China and their Causes and Effects," "Wave-form Mosaic Structure of the Earth's Crust in China," and "An Understanding of the Laws Governing the Movement of the Earth's Crust in the Areas of Tianshan, Qilianshan, and Qinling," articles totaling 150,000 characters further elucidating and enriching his "inlay" theory of geological structure. Professor Zhao Hongzhang [6392 3163 3864], continuing his work with the many varieties of wheat he had cultivated in the past, developed several new varieties of wheat; these new varieties have high yield and good quality, and are already being grown experimentally. Prof Dong Shufen [5516 3219 5358] of the Xian Institute of Medicine completed his research on the treatment of paralysis of the facial nerves associated with cartilage transplant. The article "Topological Elements of Pattern 1" by lecturer Wang Guojun [3769 0948 0193] was our country's first article bringing topological research to the point of effective success in topological pattern theory, and it possessed definite creativity.

LEFTIST INTERPRETATION OF ROLE OF SCHOOLS REFUTED

Beijing JIAOYU YANJIU [RESEARCH IN EDUCATION] in Chinese No 1, Feb 80 pp 14-20

[Article by Cheng Youxin [2052 2589 0207]: "Are Schools an Instrument of Proletarian Dictatorship?"]

[Text] To realize their conspiracy to usurp the party and seize power, the "gang of four" in January 1974 pointed the spearhead at our beloved Comrade Zhou Enlai under the pretext of criticizing Lin Biao and Confucius. In concert with this, they also put forth the slogan "Schools Are an Instrument of Proletarian Dictatorship." From 31 March to 23 April [1974] the "gang of four's" diehard follower in Liaoning convened a conference on this matter. Immediately after the conference, they published on the entire front page of LIAONING RIBAO, together with a report of the conference, an editorial headlined "Schools Must Be an Instrument of Proletarian Dictatorship." Subsequently, LIAONING RIBAO and LIAONING JIAOYU published one article after another publicizing this slogan. In the winter of that same year, Chi Qun [6688 5028], a trusted follower of the "gang of four," again convened a so-called "Learn from Zhao Nong" conference in Liaoning, launching this slogan throughout the whole country.

What is strange is that after the smashing of the "gang of four," the formulation that "schools are an instrument of proletarian dictatorship" is still being expounded and propagated by some educational publications and books as a correct proposition. This creates for people the impression that it is an accurate and scientific formulation. The facts, however, are not so. This formulation is neither accurate nor scientific. It is a formulation long ago abandoned by the Russian Communists (Bolsheviks) and Lenin. The "gang of four" picked it up again in order to turn schools into an instrument for the promotion of feudal, fascist, "total dictatorship" so as to usurp the party and seize power.

I

From the standpoint of Marxist-Leninism, dictatorship is the essence of the state. It is political domination by the ruling class, the implementation of suppressive force over the dominated class. The instruments of dictatorship are different from concepts of dictatorship. Lenin said: "A standing army and police are the major effective instruments of state power."[1] That is to say, the instruments of dictatorship refer to such organs as the military and police that carry out suppression by force.

The dictatorship of the proletariat refers to "political domination by the proletariat";[2] it refers to "the seizure of power by the proletariat to suppress all resistance by the exploiters."[3] Lenin also said: "Although force is indispensable to a dictatorship, it is not simply force but labor organization--a higher form than the previous organization."[4]

Summarizing the basis of Lenin's thought mentioned above, Stalin elaborated on the functions of proletarian dictatorship this way. He said: "...the first function is to suppress the overthrown class within the state.... The second function is to defend the state against external intrusion.... Here there is a third function, the economic organization work and cultural education work of all organs of our state."[5]

When Lenin discussed the characteristics of a state under proletarian dictatorship, he called it a "semi-state."[6] It is because this state differs from those in the past: first, this is a state with a majority of toilers and a minority of oppressors and exploiters. It also has the function of organizing economic and cultural education work, which is an increasingly important status and increasingly carries the tint of a "nonpolitical state."[7] Moreover, its future course is toward extinction.

Obviously, a semi-state has a very important level of meaning. In other words, only half of the state under a proletarian dictatorship retains the original significance of the state in its suppressive force commonly shared by "political states"[8] and all dictatorships. The other half, organization and management of the economy and cultural education, is no longer a state in its original sense but increasingly becomes a "nonpolitical state" or a nonstate, a nondictatorship.

From this, we can summarize by saying Lenin and Stalin regarded the functions of proletarian dictatorship as the two functions of suppressive force by the "political state" or semi-state and the function of economic and cultural management by the "nonpolitical state" or nonstate, the nondictatorship.

The two are supplementary to each other; the growth of one causes the decline of the other. Without suppressive force by the semi-state, there will be no safeguard for the conditions of the development of socialist economy and cultural education. Without the management function for the economy and cultural education by the other half of the nonstate, the nondictatorship, the withering away of the semi-state cannot be spurred and communism cannot be achieved. In other words, the historical mission of the period of proletarian dictatorship cannot be completed without one or the other. It is precisely in this sense that the substance of economic and cultural educational construction by the nonstate, nondictatorship half of the state is included in the concept of proletarian dictatorship. It was precisely in this sense that Lenin and Stalin discussed proletarian dictatorship.

To understand this question from a different point of view, one cannot include the construction of socialist economic and cultural education in the concept of the semi-state, but one should include it in the concept of the nonstate, nondictatorship half. In other words, the substance and function of suppressive force in the proletarian semi-state absolutely must not be confused or equated with that of the proletarian, nonstate, nondictatorial half, which is one of economic and cultural education construction. They are two essentially different things.

In his essays "On the People's Democratic Dictatorship" and "On the Correct Handling of Contradictions Among the People," Comrade Mao Zedong elaborated on the substance and functions of proletarian dictatorship from the standpoint of general Marxist-Leninist theory on the state and dictatorship. As a result, he called the first two functions discussed by Stalin--the internal repression of enemy resistance and the safeguard against enemy intrusion by the proletarian dictatorship--the two functions of dictatorship. He did not call the third function discussed by Stalin, that of economic function and cultural educational construction, the third function of dictatorship.[9] In his two essays, Comrade Mao Zedong treats the function of suppressive force in the "nonpolitical state' as the goal of proletarian dictatorship.[10]

To sum up, the use of suppressive force by the bourgeoisie and all exploitative classes belong to the "political state," which is the central substance and essential function of proletarian dictatorship. Only in a specific sense can we treat socialist, economic, and cultural education construction, which increasingly carries the tint of a "nonpolitical state," as the substance and function of proletarian dictatorship.

As to what an instrument of proletarian dictatorship is, first we should clearly understand that it is not the same concept as the dictatorship of the proletariat. An instrument of proletarian dictatorship refers to an organ for the organization and implementation of the function of proletarian dictatorship, not preletarian dictatorship itself. It must also be understood that only the organ of this political state that has the function of organizing and implementing force by suppression, the organ for the essential function of proletarian dictatorship, can be called an instrument of proletarian dictatorship. Only in a specific sense can an organ for organizing and implementing economic and cultural educational construction, which increasingly carries the tint of a "nonpolitical state," be called an organ for the function of proletarian dictatorship and not an instrument of proletarian dictatorship.

We have sufficient basis for saying this, because in the writings of Marxist-Leninism, it is only the organ for organizing and implementing the "political state," that is, the function of suppressive force, that can be called an instrument of proletarian dictatorship. Never is an organ that is to carry out the function of organizing socialist, economic, and cultural education work called an instrument of proletarian dictatorship. Comrade Mao Zedong inherited and upheld this Marxist-Leninist point of view. In his essay "On the People's Democratic Dictatorship," he said: "The military, police, courts, and other organs are instruments of oppression of one class by another"[11] and are the instruments of proletarian dictatorship.

Comrade Mao Zedong's formulations above have great theoretical and practical significance. These formulations have severely drawn the boundary between what is proletarian dictatorship and what is not, and between what is an instrument of proletarian dictatorship and what is not. According to the formulations of Comrade Mao Zedong, we are not to confuse an organ of suppressive force with an organ of economic and cultural education construction, nor two essentially different kinds of contradictions. We will neither regard the school as an instrument of proletarian dictatorship nor carry out "the dictatorship of the Proletariat" over teachers, students, staff workers and their various ideological problems.

Proceeding from Lenin's viewpoint on the "semi-state," we further understand the following: Since not every socialist state organ is an instrument of proletarian dictatorship, except for the core portion of the organ of the corresponding "political state" from the standpoint of political law, and since its noncore portion or organ of the "nonpolitical state" is not [such an instrument], then not all parts of the superstructure of socialism can be regarded as instruments of proletarian dictatorship. This is because one part alone, the above-mentioned state organs of military, police, and courts, has the function of suppressive force, thereby making these [organs] instruments of proletarian dictatorship. Other parts, such as literature and art, morality, and philosophy, are merely proletarian ideology, whose function it is to serve proletarian politics and socialist construction by propagating proletarian ideology, morality, and world views rather than suppressing by force. Therefore, they basically cannot be spoken of as instruments of proletarian dictatorship. The most we can say is that they have class character, and that their chief social function is to serve as an instrument of proletarian class struggle in the realm of ideology.

II

Are schools, then, instruments of proletarian dictatorship!

In our opinion, no!

We know that education is the objective existence of a kind of social phenomenon in human society, a kind of practice and activity of mankind. In other words, education is a kind of complex phenomenon that includes materialistic and conscious aspects, not simply certain kinds of conscious phenomena.

It is the specific function of education to nurture a new generation of people in society. This is a common phenomenon that exists in any society. In this sense, education is a lasting category in human society. Marx said: "In order to change the nature of people in general so that it attains the technical ability and skill of particular labor departments, there must be particular education and training."[12]

A society can exist and develop only when its members are able to satisfy the demands of corresponding productive forces and productive relations. Therefore, every society has demands of its new generation in two areas: the possession of mutually adaptive knowledge and ability with existing productive forces, and the possession of mutually adaptive neutrality and character with productive relations. Of course, knowledge and ability, mentality and character are interrelated and interact with one another.

Obviously, these two areas of demands can be satisfied only when the new generation develops mentally under normal conditions. In this way, development and training of these three areas form the three major components of education: intellectual, moral, and physical development.

Evidently, so-called education, the essence or special function of education, is when the people of a given society (through educators) carry out goals, plans, and organized development and training on the basis of normal mental growth in order that they may obtain knowledge and ability mutually adaptive with existing productive forces, as well as mentality and character mutually adaptive with existing productive relations, and become the new persons demanded by that society.

Everyone knows that in a class society, the normal mental growth of the new generation as well as the knowledge and ability mutually adaptive with the level of productive forces which they obtain are without class character. Only political morality, spirit, and character mutually adaptive with productive relations have an extremely strong class character. In other words, among these three areas, only political morality, spirit, and character possess the characteristics of the superstructure; they alone rapidly change as a direct result of changes in the economic foundation. The other two areas do not have the characteristics of the superstructure, because they do not change rapidly following changes in the economic foundation. Rather, they change as a direct result of changes in productive forces and changes in the entire social material cultural conditions which are inevitably determined by productive forces.

This is also the case when viewed from another angle. The law that reflects the course of the normal mental growth of the new generation, as well as educational ideology and the corresponding substance, forms, and methods of teaching of the law that reflects the course of mastering knowledge and training in ability that are mutually adaptive with productive forces--all these basically do not possess class character or the characteristics of the superstructure. They change correspondingly as a direct consequence of changes in the productive forces and conditions in the entire society's material culture (as well as the people's knowledge and ability determined by this), not in direct consequence of changes in the economic foundation. Educational ideology and things that correspond to it possess class character and characteristics of the superstructure only if they reflect the political morality, spirit, and character demanded of the new generation by a particular class interest and a particular class. This is why they change correspondingly in direct consequence to changes in the economic foundation, and not to productive forces.

In this sense, then, education is a category in history; certain of its parts have class character and possess the characteristics of the superstructure.

From the above, it is clear that education is a lasting category in human society and is also a category in history. It has a historical character and certain of its parts have a class character.

Therefore, with regard to education we can only say that it partially possesses certain characteristics of the superstructure. We cannot say that it entirely possesses the characteristics of the superstructure. Hence our conclusion is that, viewed as a whole, education is not the superstructure.

At present, education in political morality, spirit, and character of our socialism has class character. But its class character is manifested in methods to convince, exemplify, and influence the new generation to accet the ideology, morality, and world views of communism. It is not manifested in the method of suppressive force to enable the new generation to accept proletarian ideology, morality, and world views (which of course would be impossible). Thus we can only say that education is a cultural instrument that serves proletarian politics through the propagation of proletarian ideology.

This is all the more true with education as a whole. It serves socialist politics and construction by disseminating scientific and cultural knowledge as well as proletarian ideology; it does not do so by suppressive force.

As an organ of socialist education, schools evidently are a cultural organ that disseminates scientific, cultural knowledge, and proletarian ideology, not an organ of prolertarian dictatorship that carries out the function of force by suppression. Consequently, schools basically are nothing like an instrument of proletarian dictatorship.

From another standpoint, as we have already discussed in the last section, since literature and art, morality, and philosophy which function in disseminating proletarian ideology, morality, and world views, and which form the organic components of the socialist superstructure, cannot be regarded as instruments of proletarian dictatorship, then this is even less so in the case of schools, which function in disseminating scientific, cultural knowledge and proletarian ideology to the next generation to make them new socialist persons, and which as a whole do not belong to the superstructure.

III

The present question is, how should we treat the formulation that "schools should be an instrument of proletarian dictatorship," as dealt with in "Articles on National Education in the Ninth Party Program"[13] in the draft party program of the Eighth Party Congress of the Russian Communists (Bolsheviks), which was revised, checked, and approved by Lenin?

In our opinion, the correct attitude should be: first, we must accept the test of practice; and second, we must place it in the context of the entire theoretical scientific system and understand it completely and correctly.

There are two drafts concerning national education in Volume 29 of the "Collected Works of Lenin."

In the section on politics, "Basic Tasks of the Proletarian Dictatorship in Russia," in his "Draft Preliminary Program of the Russian Communist Party," Lenin said: "In national education, the tasks that Russian Communists have set for themselves are to carry out to the end the undertaking that began at the time of the October Revolution in 1917, and to turn the schools from an instrument of bourgeois class domination into an instrument for the destruction of this kind of domination and for the complete elimination of class distinctions in society. During the period of the dictatorship of the proletariat--that is, the period to prepare the conditions for the complete realization of communism--schools should become not only the transmitters of the general principles of communism but, on the basis of ideology, organization, and education, then should actualize the influence of proletarian dictatorship among the semiproletarian and nonproletarian toiling masses. Their goal is to nurture a generation of people who can ultimately make communism a reality."[15] There is no mention here of how "schools should be an instrument of proletarian dictatorship."

The "Articles on National Education in the Ninth Party Program" of the draft party program of the Russian Communists (Bolsheviks) state: "In national education, the tasks that Russian Communists have set for themselves are to carry out to the end the undertaking that began at the time of the October Revolution in 1917, and to turn the schools from an instrument of bourgeois class domination into an instrument for the destruction of this kind of domination and for the complete elimination of class distinctions in society. The schools should be an instrument of proletarian dictatorship. In other words, not only should they disseminate the general principles of communism but, in the areas of ideology, organization, and education, they should propagate the influence of the proletariat among the semiproletarian and nonproletarian strata of the toiling masses in order to thoroughly suppress resistance from exploiters and to realize the communist system."[16] Appearing here are the words "schools should be an instrument of proletarian dictatorship."

Item 12 of the section on politics in "Guiding Principles of the Russian Communist Party (Bolsheviks)," which was drafted by the committee under Lenin's leadership[17] and passed by the Eighth Congress of the Russian Communist Party, reads: "In national education, the tasks that the Russian Communist Party has set for itself are to carry out to the end the undertaking that began with the October Revolution in 1917 and to turn the schools from an instrument of bourgeois class domination into an instrument for the elimination of class distinction in society and for the communist transformation of society. During the period of proletarian dictatorship, the period to prepare the conditions for the complete realization of communism, schools should not only disseminate the general principles of communism but, in the areas of ideology, organization, and education, they should also propagate the influence of the proletariat among the semiproletarian and nonproletarian strata of the toiling masses in order to nurture the next generation which can eventually establish communism."[18] Here, there is no mention of how "schools should be an instrument of proletarian dictatorship."

By comparing the quotations of the three documents above, we can see that the articles on national education in the party program passes by the Eighth Party Congress of the Russian Communists (Bolsheviks) used the overall wording of the "Basic Tasks of the Proletarian Dictatorship in Russia" in the "Draft Preliminary Program of the Russian Communist Party." Or, we can say that a significant revision was made to the "Articles Concerning National Education in the Ninth Party Program" of the draft party program of the Russian Communists (Bolsheviks), as the line "schools should be an instrument of proletarian dictatorship" was deleted.

As for the words used in the "Articles Concerning National Education in the Ninth Party Program" of the draft party program of the Russian Communists (Bolsheviks), if we understand them not just literally but in terms of the substance of the entire passage, then their meaning becomes very clear. The meaning of the passage is this: Socialist schools are a cultural organ for the dissemination of the general principles of communism and for influencing the semiproletarian and nonproletarian toiling masses with proletarian ideology; they are not the proletariat's organ of dictatorship by means of suppressive force. Having such a proletarian cultural organ as the schools, with the schools playing their role, is "beneficial to the thorough suppression of the resistance of the exploiters" as well as to the consolidation of proletarian dictatorship. This does not mean that the school as a cultural organ is an organ of suppressive force which directly "suppresses resistance from exploiters," not does it mean that the schools themselves are an instrument of proletarian dictatorship.

Obviously, this article does not demand that schools should have the function of suppression by force or that they should be an organ to carry out such a function. In essence, therefore, this article does not demand that schools become an instrument of proletarian dictatorship. In other words, the formulation in the article that "schools should be an instrument of proletarian dictatorship" contradicts the spirit of the whole passage and does not match its label. Consequently, we must conclude that the formulation is inaccurate and unscientific.

Obviously it is absolutely no coincidence that Lenin and the Eighth Party Congress of the Russian Communists (Bolsheviks) deleted the formulation that "schools should be an instrument of proletarian dictatorship." This is not only completely correct in theory, but politically it has a great foresight. Since the deletion of this formulation was based on scientific knowledge about the function of socialist schools, it eliminated the basis for subsequent use by characters like the "gang of four" to carry out counterrevolutionary destruction.

IV

Why did the "gang of four" become so interested in such a formulation, that had been abandoned by the Russian Communists (Bolsheviks) and Lenin, and advertise it everywhere?

This is because they needed such an ambigous formulation. It facilitated their exploitation of loopholes and the selling of their own anti-Leninist goods under Lenin's banner for their feudal, fascist, "total dictatorship."

They stripped the essence of the article and quoted this inaccurate and abandoned formulation out of context, with the aim of distorting the function of socialist schools. They described socialist schools as an instrument of proletarian dictatorship so that they could turn them into a tool for carrying out the function of suppression by force, exercise feudal, fascist, "total dictatorship" over the broad masses of teachers, students, and staff workers, and further use them as a counterrevolutionary instrument to usurp the party and seize power.

In other words, the slogan "schools are an instrument of proletarian dictatorship" was an organic component of the "theory" of the "gang of four's" feudal, fascist, "total dictatorship." It was part of their long-planned counterrevolutionary conspiracy to use the schools as an organ of force to carry out feudal, fascist, "total dictatorship" and as a counterrevolutionary instrument to usurp the party and seize power.

Not only did the "gang of four" think and talk this way, but they also acted this way. After they put forth this slogan, they immediately clamored to run the university as their (the gang's) political university to "advance, discipline, change," as well as to turn all professions into professions for seizing "capitalist roaders." Consequently, characters like Zhang Tiesheng [1728 6993 3932] and Xue Niuzai [5641 3662 8342] emerged at that time; illiterates and hoodlums appeared in large numbers. The "gang of four" made use of these followers to inflame and agitate the people, to seize "capitalist roaders" at all levels, and to struggle with "agents" everywhere, thereby creating for our party and motherland a serious political crisis that began in 1975 and culminated in 1976.

Socialist schools are a cultural organ for the dissemination of scientific and cultural knowledge as well as proletarian ideology. In turning them into an organ of dictatorship of suppressive force, the "gang of four" was bound to bring about chaos in the schools; teachers could not teach, and students could not study. The broad masses of youths wasted their time without all-round moral, intellectual, and physical development, and they did not learn the skills to serve the four modernizations of socialism. Some of the youths became immoral, and a minority of them became poisoned, degenerating into ruffians. The broad masses of teachers, students, and staff workers were reduced to prisoners. Our fine and perfect socialist institution of culture and learning became a dark prison of feudal, fascist, "total dictatorship." All this created a crisis in education and talent in our country.

These were the evil consequences bred from the outrage and the belittling of the law of education itself after the "gang of four," with their ulterior motives, picked up the formulation abandoned by the Russian Communists (Bolsheviks) and Lenin.

V

The Eighth Party Congress of the Russian Communists (Bolsheviks) convened in March 1919. The moment in which this congress was being prepared and convened was precisely the moment when the imperialist war of intervention and the civil war were tensely going on. At that time, the reactionary Russian Bourgeoisie and some of the counterrevolutionary intellectuals launched all-out resistance against various new areas developed by the soviets, including military, political, economic, and educational areas. Lenin was wounded by an assassin; class struggle became exceedingly intense; and the new Soviet state found itself in a critical situation! It was inevitable that certain individual formulations in the draft party program written within this historical background would bear the heavy brand of the times. The formulation "schools should be an instrument of proletarian dictatorship" was a distinct manifestation of this. However, as we have discussed earlier, this formulation and the spirit of the entire article are contradictory, so it was deleted by the congress and Lenin.

The Russian Communists (Bolsheviks) and the Soviet Government, under the leadership of Lenin and later of Stalin, were unswervingly faithful to the guiding principles passed by their party congress. In the past decades, we have never seen the formulation "schools should be an instrument of proletarian dictatorship" in the party and government documents of the Soviet Union.

At the beginning of liberation, the general formulation concerning education in our literature on education was that education is a lasting category and also a category in history; it is a social phenomenon related to the superstructure and has class character in a class society. The formulation in the "Directives on Educational Work" in 1958 was that "education must serve proletarian politics." What is noteworthy is that, by that time, the formulation of education being the superstructure had already appeared. After 1962, with the renewed emphasis on class struggle, there appeared in the literature on educational theories large numbers of incomplete and inaccurate formulations on the essence of education, such as education is an instrument of class struggle and education is the superstructure. Nevertheless, the slogan "schools are an instrument of proletarian dictatorship" never appeared in our party documents on education.

It was only in 1974, when the ultraleftist line of Lin Biao and the "gang of four" was on the rampage, that diehard and trusted followers of the "gang of four" once again picked up the formulation abandoned by the Russian Communists (Bolsheviks) and Lenin. It was under their instigation that this formulation created a stir and ran rampant.

It was precisely under this situation that in our literature on education there appeared materials one article after another propagating this slogan.

What is extremely valuable is that at the time in 1975, Minister of Education Comrade Zhou Rongxin made a daring boycott against and acute criticism of this leftist slogan of the "gang of four." He said: Our party and Comrade Mao Zedong have never suggested such a slogan as "schools are an instrument of proletarian dictatorship."

This is an honest historical record of this question during the last half century or so.

Today, after the smashing of the "gang of four," there still continues to appear in some of our literature on education the ultraleftist slogan of a formulation which was long ago abandoned by the Russian Communists (Bolsheviks) and Lenin, which has never been accepted by our party, and which became an ultraleftist slogan in the feudal, fascist, "total dictatorship" promoted by the "gang of four." Is this not worthy of our profound consideration?

Using the mirror of history is extremely beneficial to a correct summation of our experiences and lessons.

In summary, it is evident that theory, practice, history, and reality all sufficiently prove that the formulation "schools are an instrument of proletarian dictatorship" is unscientific and inaccurate. It later became an ultraleftist slogan of the "gang of four" in promoting their feudal, fascist, "total dictatorship." In our opinion, we should therefore abandon and criticize this formulation; in its place education must serve the four modernizations of socialism. This formulation of our party is more accurate in theory, and in practice it has undergone the test of history. This will help us to free ourselves from the "gang of four's" ultraleftist misrepresentations in education and science, correctly understand the essence of education, and perform our work according to the law of education itself. In this way, education can play its great role in serving socialist construction by disseminating proletarian ideology as well as scientific and cultural knowledge, as well as its great role in the work of uniting and educating the broad masses of workers and nurturing the new socialist man. This will have exceedingly great significance as we shift our strategic focus to the construction of the four modernizations of socialism and further develop theory and practice in education and science.

ADVANTAGES OF CONTRACT MANAGEMENT IN HIGHER EDUCATION

Proper Allocation of Graduates

Beijing RENMIN RIBAO in Chinese 23 Aug 80 p 4

[Article by Yang Deguang [2799 1795 1684], Shanghai Municipal Bureau of Higher Education: "Planned Management Should Be Integrated With Contract Management in Institutes of Higher Learning"]

[Text] The system of leadership of our institutes of higher education consists mainly of three types: leadership of the state (through the leadership of the Ministry of Education), leadership of various central vocational departments, and the leadership of local authorities. The practice of planned management can guarantee the steady progress of the undertakings of higher learning and can be advantageous to the establishment of the normal order of education.

However, planned management has its imperfect aspects: 1) The present enrollment plan does not proceed entirely from national requirements and is often determined according to the existing conditions of various schools. This has brought about the following situation: some specialities enrolled too many students who could not be assigned to jobs after graduation, while other specialities had too few students. For instance, many college graduates from the shipbuilding specialty have changed their line of profession by working in factories as welders and electricians. This year, however, eight institutes of higher education in the country still continued to enroll new students for their speciality of shipbuilding, while there is a shortage of students for the specialities of computer software and automation and in such fields as environmental protection, liberal arts, law, and commerce.
2) The departments responsible for various branches of work set up specialities only for their own needs, with the result that some schools cannot bring their potential into play. For instance, when Shanghai Jiaotong University, which was originally a famous polytechnic university, came under the responsibility of a central vocational department, some of the university's specialities which this department did not need, including that of hoist conveyors, could not but be withdrawn, so the university could not make use of its capability. However, the Ministry of Communications was in urgent need of personnel in this field; therefore, the Shanghai Institute of Sea Transportation newly set up a hoist conveyor specialty. If Jiaotong University could enroll students in this field for the ministry, would this not a way to achieve greater, faster, better, and more economical results? 3) Many universities have great scientific research capabilities; however, the scientific research tasks

which the responsible departments assigned to them were inadequate, so their personnel and equipment stood idle. 4) At present, some methods of allocating funds and making investments in capital construction do not help to arouse enthusiasm for running schools and do not contribute to competition among the schools. The yearly allocation of funds cannot properly reflect the number of students enrolled by the schools and how well or poorly the schools have been run.

How are we to overcome these shortcomings, fully tap the potential of institutes of higher learning, and bring into play the superiority of these institutes? In our opinion, in addition to improving planned management, we must introduce a supplementary system of contract management. This means that after the planned tasks assigned by the responsible departments are fulfilled, schools may be permitted to make direct contact with various ministries and commissions, provincial and municipal authorities, and all vocational departments, and may sign contracts with them stipulating that the schools will supply them, according to schedule, with various specialized personnel and with the results of scientific research, and other contracted parties will provide the schools with funds, foreign exchange, capital funds, equipment, and other necessary conditions.

Among the many provisions of these contracts, there are the following four general arrangements:

1. Use school laboratories and school-run factories to serve society. Many schools of higher education have modern instruments and equipment and laboratories for scientific research which other organizations or departments may use for a certain period of time, provided this does not interfere with the education and research tasks of the schools. Last year, Shanghai Jiatong University earned 350,000 yuan from serving other units with its laboratory equipment and technology. In Shanghai there are 34 factories run by schools of higher learning which can produce electronic computers such as the DS 130, magnetic discs, cardiac pacemakers, laser scalpels, and some 80 varieties of new products. However, some of these factories are constantly short of production tasks. If they introduce the contract system and accept production tasks from other units (including foreign organizations), then they can bring their superiority into full play. Provinces and municipalities with favorable conditions can even set up laboratory centers of institutes of higher education and joint companies of school-run factories to serve society directly.

2. Urgently train required personnel for other units. For instance, in Shanghai there are five institutes of higher learning with a speciality in metallurgy. At present, Shanghai does not need so many graduates of the metallurgy speciality; however, some provinces and municipalities are short of personnel in this field and are thinking about establishing new institutes of metallurgy. If they give one-third of the funds they would use to build the new schools to the Shanghai institutes of higher education, the latter will train the necessary number of qualified personnel for them.

3. Bring into play the role of institutes of higher learning in the field of scientific research. With better qualified teachers, more comprehensive courses, and complete sets of instruments and equipment, institutes of higher learning have very favorable conditions for doing scientific research. In recent years, Shanghai schools of higher learning have conducted about one-fifth of the research projects of the

entire city, and achieved about one-fifth of the results. However, they still have a very great potential. Therefore, we should encourage and help institutes of higher learning to take positive steps to undertake projects closely related to the national economy and in coordination with their scientific research courses, and sign contracts with the departments and units of scientific research, production, and employment, which will give them assignments, including contracts for scientific research, for the dissemination of results and for the transfer of technology. These contracts should define the technical and financial responsibilities of both parties and stipulate specific plans to be enforced, according to schedule, which both parties should observe and check in fixed periods. In the past, institutes of higher learning did scientific research for units without remuneration, and when they achieved results, all the honor and profits went to the other units. This situation should definitely be changed.

4. Institutes of higher learning can disseminate knowledge. From the situation of Shanghai, it may be seen that many schools of higher education, particularly old universities and key colleges, have a considerable number of teachers. Some teaching and research sections are compelled to arrange several teachers teaching the same subject by turns. With a light burden and under small pressure, the teachers make improvement slowly. When teachers with ordinary qualifications are transferred to ordinary colleges to work, with a heavy burden and under great pressure, they have often achieved results very quickly and become key teachers. Therefore, we should encourage these teachers to go to other schools and units concurrently to teach and work. According to the incomplete satistics of a certain university, 488 teachers of this university (28 percent of the total number of teachers) concurrently gave more than 25,000 hours of outside lectures last year. I suggest that in the future these schools may send out their teaching and technical personnel in an organized and planned manner and sign contracts with units which require their services. Part of their remuneration will go to the schools; the other part to these teachers. In places of flourishing economy and culture, such as Beijing, Tianjin, Shanghai, and Jiangsu and Zhejiang provinces, the old universities may even organize, according to branches of learning and special subjects, a group of teaching and research personnel to go to universities and research institutes in frontier areas to work for 2 or 3 years. (Their residence registration will not be changed, and they will recieve the same wages as before, with a certain sum of allowance in addition.) Doing this not only can help institutes of higher education in frontier areas quickly improve the quality of their teaching and scientific research work but also can tap the potential of old universities in developed areas.

In conclusion, it is entirely necessary, and also entirely possible, to introduce a system of contract management, provided institutes of higher learning can fulfill the planned tasks assigned by the upper levels, and the quality of teaching and scientific research can be guaranteed. In this way we can flexibly run our socialist universities and colleges, widen the path of higher ecucation, and better cope with the requirements of the cause of the four modernizations.

Training of Qualified Persons

Shanghai WEN HUI BAO in Chinese 23 Aug 80 p 3

[Article by Miao Jiahua [4924 1367 5478]: "The Contract System Can Also Be Adopted For the Training of Qualified Personnel"]

[Text] At present, we are using unified methods generally for the enrollment of college students and for their allocation to jobs upon their graduation from colleges. When the training and allocation of talented persons are included in the planning of the national economy and are placed under state planned management, there are many advantages. However, owing to difficulties in practical work and certain imperfections in certain specific systems, there are also some shortcomings, such as the following:

1. Dislocation between the enrollment and the allocation of students. The specific plan for the enrollment of students is laid down by the educational departments, but the allocation of graduates is controlled by the planning and personnel departments. When the plan of enrollment is being formulated, since various vocational departments cannot yet make an accurate estimate of the various categories of personnel required in the next few years, the planning departments can only roughly fix a total number of people, while all the institutes of higher education will fix the number of students to be enrolled for their specific specialities according to the actual accomodations which their specialities can give. This process is therefore somewhat deprived of reason and judgment. When the time comes to allocate college graduates, it emerges that there is more demand than supply of specialized personnel, and the number of graduates cannot meet the requirements; however, the supply of some specialized talent exceeds the demand, and the graduates cannot be placed. In 1979, universities and colleges in Shanghai graduated persons in a total of 185 specialities; however, the allocation of those graduates of 25 specialities, constituting 13.5 percent, met with difficulties, and some of them could not get employment for 3 consecutive years. As society required only a very few of some specialized talents, 85 percent of the graduates were compelled to change their lines of profession. This was a very great waste, and it also caused the frustration of enthusiasm of the schools, teachers, and students.

2. As institutes of higher learning are under the jurisdiction of different departments, the channels of allocation of their graduates are not freely open. At present, institutes of higher education are under the jurisdiction separately of either the central authorities or the local authorities; some are under educational departments and others under economic departments. Those under economic departments consider the training and allocation of personnel only within the scope of their own departments and have no cross-contact with other departments. Schools under local authorities also consider the training and allocation of personnel within the scope of their own localities, and they have no cross-contact with other localties. The Shanghai Second Medical College is under local control; its specialities of stomatology and pediatrics have a fairly good foundation and are among the best in the country. The department of stomatology can train 100 students each year, but Shanghai needs only 40 of them. The school cannot give full play to its superiority, while other places need such specialized personnel but have no institutes to train them.

3. There are some irrational aspects to the allocation of graduates. The units which receive the graduates--that is, the employers--do not bear any economic responsibility to the state, and take the personnel without compensation. This easily brings about the situation that when they want graduates, the more the better, but they will not cherish them in employment. Furthermore, according to regulations, college graduates can only be listed as state cadres and cannot become technical workers, so that some production posts which require higher special technology do not have the necessary personnel to take over. These regulations conceal the true situation of the demand for qualified personnel in society. Consequently, the

training and employment of personnel are isolated from the objective requirements of economic development. On the one hand, we recognize the value of talented persons and feel their shortage, and we want to train qualified personnel with great effort; on the other hand, there is a waste of talented persons who are employed to do what they have not learned. This is not advantageous to the development of higher education.

At present, we have integrated planned regulation with market regulation in industrial production, and we are striving to change the dislocation between production and marketing. There is also a need for reform in the schools for the training of talent. Under the present situation, it seems possible to introduce a contract system simultaneously with the practice of unified enrollment and allocation of talent, and to permit institutes of higher education to sign contracts with some employing units for the training of qualified personnel, as a supplement to the state plans.

The contract system calls for a clear definition as to the respective rights and obligations of the schools and the employing units, binding on both contracting parties. An employing unit may present its specific demands according to its requirements for the training of personnel, and it may reject those who are not qualified, to be "recycled" by the school. At the same time, it should also be stipulated that employing units must bear a part of the expense for the trianing of talented persons. As for the schools, they should fulfill the training tasks according to schedule, with a guarantee of quality and quantity, while they charge a part of the expense as school funds to be used to buy additional school equipment and improve the livelihood of teachers and staff members. As for the source of students, the schools may report to their responsible departments the additional number of students to be enrolled under contract for approval, as part of the unified enrollment. Also, they may recruit students directly from society, telling them first where they will be sent upon graduation.

The introduction of the contract system will change the situation of the "dislocation between production and marketing," so that the schools can train talented persons according to the needs of society. It can further arouse the enthusiasm of the schools for carrying out the work of education, tap fully the potential of their teachers and equipment, readjust the installation and scope of their specialities, bring their superiority into play, conduct their operation more flexibly, and thus turn out more specialized talents "marketable and in demand" for society. As far as society is concerned, the contract system can also expand cross-contacts between schools and the departments and localities, open new channels from the training of talented persons to the allocation of graduates, break through the restriction of a certain department or a certain locality, and help all departments and localities procure urgently required personnel without making a fresh start and by spending less money. Moreover, as the training of these specialized personnel proceeds truly from actual needs, and the employing units bear the economic expenses and are not going to get their personnel free of charge, they will utilize them with much greater care and will not make them do what they have not learned. As far as the government is concerned, with the adoption of the contract system, it will not be necessary to increase the investment in funds or to bear any responsibility for arranging employment for the graduates. The government can only use existing conditions to tap the potential of the institutes of higher education, develop the cause of higher learning, and help society procure a number of urgently required talents. It will lighten the pressure from various departments and localities, and from all lines of trade, to ask the government for personnel.

The key to the introduction of the contract system for training talented persons lies in the necessity of giving institutes of higher education some rights of decisionmaking, so that when they are negotiating with the employing units, they can truly become a party with authority to deal with them. Otherwise, it will be difficult to sign any contracts.

HU SHI'S ACADEMIC ACHIEVEMENT REEXAMINED

Shanghai XUE SHU YUE KAN ([ACADEMIC MONTHLY]) in Chinese No 5, 20 May 80 pp 67-71

[Article by Ouyang Jian [2962 7122 0256]: "Reevaluate Hu Shi's Textual Research on 'Water Margin'"]

[Text] As a person, Hu Shi deserves a negative rating. It is because politically he ingratiated himself with the imperialist Kuomintang reactionaries and sided with the enemy of the people. As a researcher, however, he may merit a reappraisal. In fact, he was once in the mainstream of historical development. He was said to "offer more fresh insights than his predecessors" in his research paper on the book "Water Margin" and "to have done a lot in promoting the right academic attitude toward this book." We must be objective in evaluating Hu Shi's achievement, giving him credit where credit is due and taking issue with him where he was wrong. Our opinion of him as a person must not affect our opinion of him as a researcher. Such objectiveness is necessary if we are to promote academic studies.

The following article is an attempt to reevaluate Hu Shi's research work on "Water Margin" from different angles. Comments and criticism from academic circles are invited.

1 On 27 July 1920, Hu Shi said in his article "The Background of 'Water Margin'": "'Water Margin' is a masterpiece. It deserves a more exalted place in the history of Chinese literature than 'Zuo's Annals' and 'The Book of History.' We need someone like Yen Joqu to write a researcher's guide to this book. We need someone like Wang Niensun to write a concordance. I am not qualified to undertake an important task such as this and will have to leave it to future scholars. What I am trying to do here is to show our 'Water Margin' scholars a new approach and a new perspective.

Even in a self-effacing statement like this, Hu Shi could not hide his strong self-confidence. He called the research on "Water Margin" an important task and claimed that he was showing "Water Margin" scholars a new approach and a new perspective. He was typical of the thinkers among the newly emerged bourgeoisie hoping to breathe new life into the studies of classical literature.

Since its publication, "Water Margin" has achieved tremendous popularity with the reading public because of its presentation of the human society in its breadth and depth, its colorful characterization, and its moving depiction of strong human emotions. It has also drawn sharp and conflicting responses from different classes of society. For example, the champions of feudal law and order sharply criticized and vehemently denounced the book as "glamorizing robbers" because of its handling of a controversial subject matter. The supporters of the book, on the other hand, asserted that the story glorified personal loyalty and brotherly love. The dispute between these two schools of scholars over the centuries sidetracked the real issue of how good the book is as a novel and undermined serious studies into its artistic qualities. In the 700 years between the beginning of the South Sung Dynasty and the May 4 Movement, a large number of notes, prefaces, epilogues and annotations were written about "Water Margin" but they were too fragmentary to warrant systematic study. This was because their authors, like all feudal men of letters, were too much concerned with trivialities. They dug up unrelated facts here and there. They recorded some legends and anecdotes. They left the real academic issues untouched. Actually, "Water Margin" was written long before "The Dream of the Red Chamber" and to a certain degree influenced the latter book. Yet "The Dream of the Red Chamber" was to become a subject of serious study and exhaustive research, while "Water Margin" inspired no such endeavor. It is quite a pity.

If Hu Shi was not the only scholar who embarked on the new pursuit of treating the study of "Water Margin" as a branch of science and applying the scientific method to such a study, he was certainly one of the pioneers taking this new path. His preoccupation with "Water Margin" did not come by accident. He was "the vanguard first to hold up high the banner" (words of Chen Duxiu [7115 3747 4423]) of the May 5 Movement to promote the vernacular style of writing." He said, "We need a new style of writing in which we can express new ideas and describe new things." (Preface to "A Collection of Articles Arguing in Favor of the Introduction of a New Literary Style" by Hu Shi) In order to break away from the classical style of writing "that shackled our mental faculty," he also declared boldly: "Vernacular literature has been the mainstream of Chinese literature and is the wave of the future. This much is certain." ("On Poetry Written in the Vernacular" by Hu Shi) So predictably such classical novels written in the vernacular as "Water Margin" and "The Dream of the Red Chamber" were placed on a pedestal as Chinese literary masterpieces during the May 4 Movement promoting a new style of writing. On 17 July 1920, the "Forword to 'Water Margin'" written by Chen Duxiu and "The Pedigree of 'Water Margin'" by Hu Shi were included in the newly punctuated 70-chapter "Water Margin" published by Wang Yuanfang. Lu Xun also made some new observations about "Water Margin" when he lectured on "A Brief History of Chinese Fiction" at Peking University in December 1920, and when he lectured on "Historical Changes in Chinese Fiction" in Xian City in July 1924. They all had similar views on this book. In a 9-year period, Hu Shi wrote "The Pedigree of 'Water Margin,'" "More on 'Water Margin,'" "The Pedigree of 'Zhi Yu,'" "A Preamble to 'Water Margin Two'" and "A Foreword to the 120-chapter 'The Loyal and Righteous People at Water Margin.'" These articles totaled 70,000 words in length. On major issues, Hu Shi agreed with Chen Duxiu, Lu Xun and other prominent figures of the May 4 Movement to promote a new style of writing. On certain specific points, Hu Shi offered some fresh ideas entirely his own.

Hu Shi's research paper on "Water Margin" began with a criticism of the views of Jin Shengtan, a writer of feudal times. Jin Shengtan lived at the turn of the Ming and Ching Dynasties and was an epoch-making man among the "Water Margin" researchers. He was at once a fan of "Water Margin" with a true appreciation of its literary and artistic excellence and a typical bigot of the feudal landlord class guilty of perpetuating a misunderstanding of its intentions and moral. Hu Shi smartly took Jin Shengtan to task for his contradictory views. His clear thinking and sound reasoning proved that he, as a bourgeois thinker who climbed on the stage of history to play a new role, had a better perspective and a better overview than the feudal writers who had prededed him. He pointed out: "Jin Shengtan was an extraordinary genius of the 17th century. He was indeed very courageous, by the standard of his times, to declare that 'Water Margin' is equal to 'The Book of History' and 'Guoce' in literary excellence and that Shi Nai-an and Dong Jieyuan as writers belonged to the same class as Zhuangzhou, Qu Yuan, Sima Qian and Du Pu. He even said: 'There is no writer with a better knowledge of the world than Shi Nai-an under the sun.' What a taste! What courage! Also in his preface to 'Water Margin,' Jin Shengtan declared: 'Some ancient writers had talents that were not to be found again in later years and that were unmatched by men of later ages. For example, Zhuangzhou had talents all his own. Qu Yuan had talents all his own. In later centuries, Shi Nai-an was to develop certain unique qualities. Dong Jieyuan was to develop talents unlike anybody else's.' Such good taste was rare among ancient critics." Unfortunately, Jin Shengtan's good taste was confined to the appreciation of the talents of writers. When it came to the appreciation of the writing itself, his taste was not so good any more. Hu Shi pointed out: "Jin Shengtan did what 'book editors' of his time did all the time. He made a running commentary on every word and every phrase in 'Water Margin,' thus fragmenting the book and turning the book into a 17th century textbook of vernacular writing with comments and notes both on the margin of every page and between the lines." He went on to say: "This kind of mechanical commentation and notation perpetrated by the pedants does not help the reader at all. It in fact has a harmful effect because it puts pedantic ideas about literature into the reader." Hu Shi's criticism was right to the point and very convincing.

Hu Shi's criticism was not confined to Jin Shengtan's concept of literature. He was critical of Jin's concept of history as well. He quoted Jin's words: "This voluminous work consisting of 70 chapters tells the story of 108 people. The story begins with an episode involving Gao Qiu. If the story had gone right on to the 108 people without mentioning Gao Qiu, it would leave the impression that disorder starts from the bottom. If the story had mentioned Goa Qiu without going on to the 108 people, it would leave the impression that disorder starts from the top." "Why can the story of 108 people be considered a historical novel? For a long time the grumbling of the ordinary people has made history. Why do the ordinary people dare to grumble? Normally they dare not. Why do they still grumble when they dare not to? When reason prevails in the world, people do not grumble. Now ordinary people are grumbling." Hu Shi agreed with Jin Shengtan for his democratic concept of history. But when Jin Shengtan started to compare "Water Margin" with Confucius' "Spring and Autumn" in its attempt to look to the past for moral guidance and started to spew out one pedantic idea after another, Hu Shi was quick to voice his disapproval. He incisively pointed out: "Such far-fetched theories hamper literary appreciation."

It is clear that by assailing the pedantry of Jin Shengtan, the most respected critic of "Water Margin" in feudal times, and applying social scientific methods of the bourgeoisie. Hu Shi achieved a better appreciation of the literary qualities and a better understanding of the philosophy of "Water Margin." He indeed showed future "Water Margin" researchers a new approach and a new perspective and in this regard he out-accomplished all previous critics.

2 First of all, Hu Shi deserves credit for advocating, in his research paper on "Water Margin," that the novel should be evaluated from a historical perspective. This is a good criterion for evaluation. He said: "'Water Margin' did not fall from the sky. It was the cream of the many different versions of 'The Story of the Water-Surrounded Liang Mountain' that circulated in the 400 years from the first year of the South Sung Dynasty (the first year of the 12th century) to the middle years of the Ming Dynasty (the last years of the 15th century)." This was a correct assessment, even though Hu Shi made a number of highly disputable points in some specific areas.

Hu Shi not only took a close look at the historical process during which "Water Margin" took shape, he also carefully examined the social conditions of the various periods covered in the process. For example, when explaining the reason for the rise and wide circulation of the "Story of Song Jiang" among the common people before the Yuan Dynasty, Hu Shi pointed out the following: "(1) There was enough action and glamor in the lives of Song Jiang and his men to make the circulation of their story easy: (2) As the South Sung Dynasty lost control of the northern part of China to non-Chinese, hero worship became a strong sentiment among the Chinese: (3) The government of the South Sung Dynasty was corrupt. The brutal rule of the vicious officials caused resentment among the people. It further added to the pains of the Chinese living in the north under foreign rule. Therefore, the people both in northern and in southern China shared a common hatred toward bad government and bad officials. This hatred also gave rise to a perverted admiration for robber-heros." Hu Shi was right. Lu Xun also said the same thing: "The Sung Dynasty suffered from foreign invasions from the outside and from a weak administration from the inside. So naturally people turned their thoughts to stories of robber-heroes." So Lu Xun and Hu Shi were in agreement on this point. Basing his critical review of "Water Margin" on his concept that "literature follows a process of historical evolution" and that "different historical conditions give up to different types of literature in different times," Hu Shi achieved a better appreciation of the philosophy of "Water Margin" than his predecessors. Hu Shi pointed out: "For 400 years, the story of 'Water Margin' provided the common people and the writers a forum with which to vent their pent-up anger. For example, the people of the Sung and Yuan Dynasties vented their pent-up anger by describing a bandits lair as an organization to administer justice. The people of the early Ming Dynasty vented their pent-up anger by adding an episode to describe how Song Jiang and his men fell victim to a government frame-up and were killed after they had helped the government wipe out four bandit groups. The people of the middle years of the Ming Dynasty, the likes of Shi Nai-an, vented their pent-up anger by dropping the episode of the rehabilitation of Song Jiang and his men by the government, turning the novel into an expression of anti-government sentiments."

At one time Hu Shi came under fire for calling the heroes on the water-surrounded Liang Mountain "bandits" and insulting peasant uprisings. Such criticism is debatable. In fact, Hu Shi was not the only one using the word "bandits." Lu Xun also said that Song Jiang "was indeed a bandit." Lu Xun continued; "The bandits were fighting the government troopers on the one hand, holding them at bay, and looting the people on the other hand, thus becoming a menace to the public." Lu Xun even went as far as quoting Hu Shi, "Jin Shengtan was born at a time when bandits and robbers were on the rampage in the country. He saw the destruction wrought by bandit groups led by Zhang Xienzhong and Li Zhicheng and concluded that bandits deserve no praise at all but deserve only universal condemnation," and said, "it was well put." (see "A Brief History of Chinese Fiction" by Lu Xun) Secondly, judging by the contents of "Water Margin," the novel, while basing its plot on the legendary Song Jiang and the peasant uprising led by him, was not intended as a story about a peasant uprising for one reason or another. Therefore, it is not untruthful to call Song Jiang and his men "bandits." More importantly, Hu Shi did not show any hostility toward the "bandits." In criticizing Jin Shengtan, he said: "Jin Shengtan wrote a preface to 'Water Margin' in the 14th year of the rule of Emperor Chong Zhen. That was when bandits were on the rampage in the country. Therefore Jin Shengtan sought to prove in his review that the intention of 'Water Margin' was to build up Song Jiang to be a detestable figure so that everybody who reads about him will hate him. Unfortunately, 'Water Margin' lends a lovability and respectability to the bandits. Thus it was very difficult for Jin Shengtan to prove that 'Water Margin' tried to make out Lu Zhisheng, Wu Song, Lin Chong and their likes to be detestable. So the only thing Jin Shengtan could say was 'Water Margin' merely singled out Song Jiang as a hateful person. The intention was to attach a stigma to Song Jiang as the head of the bandit group. The others I can forgive.' Jin Shengtan said it tongue-in-cheek. He not only forgave the others, but he also admired them. Because he soon contradicted himself by concluding that 'From cover to cover this 70-chapter 'Water Margin' has nothing but praise for the bandits and nothing but condemnation for the government. Anyone who reads the novel will reach this same conclusion.'" Hu Shi not only untangled "Water Margin" from the dispute between one school of feudal writers who condemned the novel as "indulging the bandits" and another school who praised it for "glorifying loyalty and justice" but also set right some of the unrealistic overpraises for the novel. For example, Liang Zichao said "Water Margin" "promoted independence, self-reliance and democracy and described the budding of human rights." ("Random Comments on Fiction" by Liang Zichao) Huang Ren also said: "'Water Margin' preaches pure socialism." ("Humble Opinions on Fiction" by Huang Ren) These men overpraised the book in disregard of historical facts. Hu Shi's comments, in comparison, were more appropriate and factual. Hu Shi had a better appreciation of what "Water Margin" was trying to say than all his contemporaries. For example, Chen Duxiu said in his short 300-word "A Re-evaluation of 'Water Margin,'": "The philosophy of 'Water Margin' can be summed up in a song found in the novel: 'The red sun is burning like fire, scorching half of the wheat and corn crops in the field. While the farmers are as worried as if their hearts were being cooked, the rich and the powerful men are leisurely fanning themselves to keep cool.' That is the moral theme of 'Water Margin.' There is nothing more to it than that." It is true that this song sung by Bai Sheng describes social injustice, but to say that it covers the entire philosophy of "Water Margin" is oversimplification. Lu Xun showed more depth of thought when he said that the characters in "Water Margin" are "anti-government," but he did not live long enough to write a treatise on the book. This makes Hu Shi's research paper on "Water Margin all the more important.

3 Secondly, Hu Shi deserves credit for being the first person to apply modern standards in the evaluation of the literary qualities of "Water Margin," thus shining up the long tarnished literary image of the novel for the first time.

"Chinese fiction has never been given a place in history." Chinese fiction has always enjoyed low esteem. The literary value of fiction has never been fully recognized. Since its debut, not many people thought much of "Water Margin" as serious literature. Jin Shengtan was one of the few who appreciated its literary excellence. He said: "'Water Margin' writes about 108 people, each having a distinctive personality. Other novels could write about a thousand people, but all of them would fall into one stereotype." So at least Jin Shengtan realized that characterization is an important quality. However, Jin Shengtan was basically a stylist. His main concern was still the "style," the "grammar," and the "diction" of "Water Margin." As a literary critic, Hu Shi outshone Jin Shengtan. He used literary standards imported from the West and made an "organic" and comprehensive analysis of the literary qualities of "Water Margin" like a professional critic. Thus he reached a number of conclusions that are highly praiseworthy.

Firstly, Hu Shi pointed out: "The central figures of 'Water Margin' are Lu Zhisheng, Lin Chong, Wu Song, Song Jiang, Li Lu, and Shi Xiu, and one or two more characters." He also reminded the reading public: "We must know that Lu Jun-i, Hu Yen-bao and Guan Sheng are not the central figures of 'Water Margin.'" He thus broke away from the formalism created by critics of the old school who would rate the importance of the characters in "Water Margin" according to their pecking order and declared in unequivocal terms that the central figures are the heart and soul of a literary work.

Secondly, Hu Shi made fastidious analysis of the aesthetic qualities of "Water Margin" part by part and made comments in good taste. For example, he highly extolled the literary excellence of the first half of "Water Margin" without any overexaggeration. He pointed out: "'Water Margin' told the story of Lin Chong in great detail. The episode on the hiding of Lin Chong from his pursuers in a temple dedicated to the mountain god during a snowstorm is a beautifully written, moving episode." He went on to say: "The chapter on 'birth signs' is one of the threads that run through the story of 'Water Margin'.......'Water Margin' builds on this old sketch, adds various details and features, and presents a very interesting picture." He also said: "'Water Margin' lends fresh creativity and imagination to the legend of Wu Song. It tells of how Wu Song beat a tiger to death, how he killed his sister-in-law, how he hurried to Mengzhou Province to beat up Jiang Menshen, and how he escaped to Yuanyang House and then Wusong Mountain. The saga of Wu Song makes some of the most exciting reading in 'Water Margin.'" He also pointed out: "The long episode about Jiangzhou gives flesh and blood to Li Lu as a man of strong temperament and personality and to Song Jiang as a man of great ambitions and high aspirations. Without this episode, Song Jiang would be just a 'name' only." These are words of praise expressed by Hu Shi for some of the praiseworthy highlights in the 70-chapter "Water Margin." On the other hand, Hu Shi also pointed out that there were also some "ill-conceived episodes" and some "unpolished," "redundant," and "hastily added" passages. He said: "The most obvious slip is the long episode about Lu Jun-i. It is a stupid episode that tells how Lu Jun-i, for no reason at all, decided to leave the enjoyment of comforts at home behind to join the outlaws on the mountain. It also tells how he trusted Li Gu and suspected Yen Ching, and how he took the advice of a fortune-teller and went to burn incense at a temple for luck. Such conduct is the conduct of an old fool. It does not become a heroic character like Lu Jun-i." Hu Shi also said: "According to the book 'Anecdotes From the Years of the Rule of Emperor Xuan Ho,' Lu Jun-i was the second from the last of the leaders on the water-surrounded Liang Mountain. 'Water Margin' does not mention this man in its earlier chapters. Toward the end the book still does not know what to do with him, so it gives him the credit of capturing Shi Wengun." Hu Shi's comments were appropriate and to the point. He had a very low opinion of the second half of "Water Margin," but he pointed out:

"There are several moving passages: the death of Lu Zhisheng, the desertion of Yen Ching, the death of Song Jiang, the burning of Emperor Hui Zhung. They are quite well-written." Hu Shi resisted the tendency of making sweeping statements, good or bad, about the book. He only gave credit where credit is due.

In addition, Hu Shi also evaluated the two rewritten episodes concerning Tien Hu and Wong Ching in the later edition of the 120-chapter "Water Margin" from the viewpoint of a literary critic, and expressed his well-pondered opinions as follows: "The story of Wong Ching is almost identical with the story of Wong Qing. I dare say that the man who put together the 100-chapter 'Water Margin' (Shi Nai-an) lifted out the story of Wong Ching, rewrote it, and made it the opening chapter of 'Water Margin,' editing some of the irrelevent details out of the story." Hu Shi also said: "Wong Ching was a good man. One could make him one of the sworn brothers on the water-surrounded Liang Mountain. One could also put him in the character of Wong Qing in the opening chapter who refused to go up to Liang Mountain. One could even make him one of the leaders with the same rank as Song Jiang." Hu Shi offered the opinion that the rewriting of the story of Wong Ching for the 120-chapter edition of "Water Margin" removed some inconsistency from the book, gave the plot a better coordination, and added more interesting details to the story. Hu Shi's power of reasoning and persuasiveness are evident here. His studies on the rewriting of the story of Wong Ching seem to add to the academic value of his research on "Water Margin."

4 Thirdly, Hu Shi deserves credit for showing "Water Margin" scholars a clear-cut scientific approach. Namely, he urged "the reader to read 'Water Margin as it is." He said: "The new edition of 'Water Margin' leaves out all the notes and comments on the margins of each page and between the lines written by Jin Shengtan. It enables the reader to read 'Water Margin' as it is written, without worrying about what Jin Shengtan had to say about the accuracy of facts and the style and without having to figure out what a 17th-century stylist meant by 'the literary style of powdering the back' or 'the literary style of clouding the mountain.'" It goes without saying that the study of literature is a study of the literary works themselves. One has to study the literary works with an unbiased mind to appreciate their true literary qualities. If one is to give up this "first-hand" study and rely solely on findings of other researchers and comments of this and that famous critic, one is engaged in a "second-hand study." That is not a meaningful pursuit.

Hu Shi once made a thought-provoking remark: "If we can disregard prejudices inherited from the past, abandon our own personal biases, and have due respect for material evidences, we will reach the same conclusions." By "disregarding prejudices inherited from the past" Hu Shi meant that one should give free rein to his imagination, be bold in one's explorations, and not be stopped in one's progress by traditional views. It is true that Hu Shi once did say: "We will not be wise if we let Confucius and Zhu Xi lead us by the nose, and we will not be men of strong character if we let Marx, Lenin and Stalin lead us by the nose." ("Introducing My Ideas" by Hu Shi) His hostility toward Marxism and Leninism had to do with his class origins and deserves criticism. Nevertheless, his academic attitudes are not entirely void of redeeming features. His changes of opinions regarding whether there was ever a 70-chapter old edition of "Water Margin" may shed some light on his academic attitudes. In July 1920, Hu Shi voiced his opinion on the assertion by Jin Shengtan that the oldest edition of "Water Margin" only had 70 chapters and that the other chapters were added by Lo Guanzhung as follows: "Regarding Jin Shengtan's assertion, we can have two choices: 1) We can take Jin's word for it that a 70-chapter edition did exist, or 2) We can assume that Jin lied and that Jin dreamed up this edition." After careful analysis, Hu Shi concluded that while it is hard to prove the first assumption, it is even harder to substantiate the second one. So his answer was: "Jin Shengtan had no reason to make up a non-existent edition. We may accept his assertion that he did have a 70-chapter edition in his home collection."

Then in June 1921, in writing his article entitled "More on 'Water Margin,'" he began to see that his conclusion had been based on insufficient evidences and began to doubt that there ever was a 70-chapter edition. He said: "I am beginning to doubt that the 70-chapter edition was as good as Jin Shengtan said it was. However, between the 100-chapter edition and a later edition, there could have been a 70-chapter edition." Then in June 1929, in writing a preface to the 120-chapter "Loyal and Righteous Water Margin," Hu Shi admitted frankly: "in those days the research on the editions of 'Water Margin' was still at an embryo stage. I did not even see the important 100-chapter and 120-chapter editions. Because of that, I reached some erroneous conclusions. The biggest mistake was to assume that a 70-chapter edition did circulate in the middle years of the Ming Dynasty, but my reasoning was not convincing enough. Nevertheless, proceeding from this assumption, I was to reach some wrong conclusions, hence my misunderstanding about how various versions of 'Water Margin' came about through the centuries." Then he cited the opinions of Lu Xun, Yu Pingbo and Li Xuanbo, saying humbly: "I admire Mr Lu Xun for making some very good points." "I also admire Mr Li Xuanbo for making bold assumptions and careful deductions." "As everyone is equal before truth," he went on, "I cast aside my personal views." His respect for truth is praiseworthy.

On the other hand, when Hu Shi disagreed with other scholars, he would present his argument in a factual and reasonable way. For example, he agreed with Li Xuanbo that "Water Margin" had strong "local flavor," but he disagreed with Li Xuanbo that there once were four parts of "Water Margin" circulating separately. He believed that "Lu Xun's idea that 'Water Margin' has always been one complete book in many chapters seems more reasonable than Li Xuanbo's idea that four separate books gradually grew into one book." On the other hand, Hu Shi disagreed with Lu Xun that there was first a short version of "Water Margin" and this was fleshed out to become longer versions. Hu Shi held the opinion that, by comparing various editions that once circulated, a complete and unabridged version was put out first. Only later were there condensed editions sold on the streets. As a matter of fact, Lu Xun and Hu Shi could be both right on this point. It was very likely that the formation of "Water Margin" went through both processes: a short version growing into a long version as well as a long version being condensed into a short version. Under normal circumstances, a literary piece starts with a bare-bones structure. It is then fleshed out and improved upon, to end up in a longer version. Then when it is printed for sale on the streets by merchants, it is again condensed to save on printing and paper cost so as to facilitate sales. This shows that a short version can grow into a longer version and a long version can be cut into a shorter version. These two processes complement each other rather than clash with each other. The foregoing is proof that Hu Shi had the schietist's attitude of respecting objective conditions. Hu Shi's famous catch phrase "Be bold to suppose, be careful to prove" has always been refuted as a bourgeois idealist phrase. Nevertheless, his saying "Wait when there is no evidence, suppose when evidence is inconclusive, resolve when evidence is conclusive" ("Introducing My Personal Thoughts" by Hu Shi) seems to smack of materialism.

5 Hu Shi's research on "Water Margin" inevitably shows certain limitations imposed by his class outlook and his times. It was mentioned earlier in this article that it was natural and expected of Hu Shi, as a bourgeois thinker, to resist and even be hostile toward Marxism and Leninism. Fortunately, his "pernicious influence" in this regard was very limited. It calls for no further elaboration in this article.

I am of the opinion that while Hu Shi showed some materialist leanings and a sense of history in his research work on "Water Margin," his basic concept of history is still idealist. The most noticeable fault in his research conclusion is that he grossly underestimated, even failed to see the role of the people in the creation of the masterpiece "Water Margin." Similarly he attached too much importance to the role of the writers in the creative process.

"Water Margin" owed its creation, first of all, to the enthusiasm of the masses in telling and retelling the story. In addition, the "storytellers" entertaining the masses regularly added their creative touches to the story, broadening its appeal. As early as during the years of the South Sung Dynasty, the stories of the "blue-faced beast," the "unruly monk" and the "martial art expert" lifted out of the "Water Margin" were included in the repertoire of the "storytellers." They were also acted out in dramatic form in town squares to the delight of the townspeople. Lu Xun once pointed out: "The story of the 'Three Gallant and Five Righteous Men' mirrors the feelings of the common people just like 'Water Margin' does. However, it touches the surface only and lacks depth." ("A Brief History of Chinese Fiction" by Lu Xun) Indeed, it is the objective of "Water Margin" to mirror the feelings of the common people. Just because "Water Margin" mirrors the inner thoughts, feelings and aspirations of the common people and other working people, it has survived the barriers of time and distance and, with each retelling, it has been embellished and improved. Limited by his knowledge, Hu Shi did not even mention that the "storytellers" had anything to do with the shaping of "Water Margin." Similarly, while Hu Shi realized that the drama of the Yuan Dynasty also contributed to the formation of "Water Margin," he had a low opinion of that particular literary form. He said: "The writers during the Yuan Dynasty had a childish style and used an amateurish technique." "They were not very creative." This opinion led him to overexaggerate the contribution of Shi Nai-an in an arbitrary way. He was of the opinion that Shi Nai-an, with his "keen insight," "gradually maturing literary technique," and "boundless creativity," "did away with a primitive mountain lair and destroyed all the robot-like, lifeless characters in the old 'Water Margin' storyline. Then he went on to rewrite 'Water Margin,' rebuild the Liang Mountain, create a dozen or so unforgettable heroic figures, and turn out an immortal masterpiece." Hu Shi did not stop here. He blamed Shi Nai-an for "not daring to give up entirely the plot of 'Water Margin' that had circulated for 400 years before him." He argued: "If Shi Nai-an had pushed the long-circulated story of the water-surrounded Liang Mountain to the back of his head, if he had forgotten all about the story of the '36 leaders and 72 sub-leaders," and if he had concentrated on the story of 7 or 8 men like Lu Zhisheng, Lin Chung, Wu Song, Song Jiang, Li Lu and Shi Xiu, he could have made his novel more exciting and more of a literary gem. It is a pity that he could not break out of the confines of the historical outline of 'Water Margin.' It is unfortunate that he could not give up any of the 108 men. But any one man has his limitations in literary skill. It would be impossible for any writer to create as many as 108 true-to-life characters. So Shi Nai-an was forced to do patchwork. He messily 'squeezed' 108 men onto the Liang Mountain.'

Hu Shi actually put the carriage before the horse. What he said contradicted the facts. As it happened, the most outstanding heroes in "Water Margin" were the products of constant hewing, polishing, refining and vitalizing by folk artists who told and retold the story of "Water Margin" for a living. These heroes were not "resketched" or "rebuilt" by Shi Nai-an from his own imagination. The structure of "Water Margin" also attests to this truth. As the story of "Water Margin" was told and retold year after year to live audiences, the passages that most appealed to and drew the warmest responses from the listeners were constantly embellished and polished until they became short stories that could be told by themselves, each of them concerning one character or a group of characters. Shi Nai-an's achievement was precisely in his following the old storyline of the water-surrounded Liang Mountain, linking up the short stories in a well-organized manner, and giving the entire book a final artistic polishing. Otherwise, if he had completely cast away the folk version of the story, he could not have produced a novel like "Water Margin."

Hu Shi's idealist concept evident in his research on "Water Margin" did exert considerable influence. For example, on the subject of what class ideology the writers of "Water Margin" represented, many latter-day researchers agreed that there was not just one writer, but "a group of writers," including "storytellers" who worked from one residential area to another as well as playwrights and script editors. At the same time, under the influence of Hu Shi, the same researchers would go back to the life, experiences, outlook and viewpoints of Shi Nai-an for support of their conclusions. That was why they often drew the wrong conclusions. Moreover, the questions about who Shi Nai-an was, what he did for a living, whether he wrote "Water Margin" or not have remained unanswered until today.

In short, Hu Shi's research of "Water Margin" was part and parcel of the May 4 Movement in favor of a new type of literature. It was conducted under the right principles and showed a materialist approach. When the "gang of four" were plotting conspiratorial activities under the pretext of criticizing "Water Margin," they also made a big fuss of criticizing Hu Shi's research on "Water Margin." In fact, their gibberish was trash compared to what Hu Shi said. For example, the "gang of four" repeatedly tooted the theory that "Song Jiang was trying to pull the rug from under Zhao Gai." This theory was merely an echo of Jin Shengtan's "The Literary Style of Spring and Autumn" which Hu Shi refuted. The "gang of four" have spread their pernicious influence far and wide on the research of "Water Margin." This influence has to be cleared away. To achieve this goal, one of the things we can do is to reevaluate Hu Shi's research on "Water Margin."

SOCIOLOGICAL, EDUCATION AND CULTURE

ROLE OF 'EXPOSURE' IN LITERATURE DISCUSSED

Lanzhou GANSU WENYI [GANSU LITERATURE AND ART] in Chinese No 4, 20 Apr 80 pp 87-92

[Article by Bao Zang [1405 5661]: "Tentative Discussion of the Issue of 'Exposure' in Literary Creations"]

[Text] For many years, "exposures" have been a "forbidden zone" in China's socialist literary and artistic creations. It has been deeply branded on everyone's head that to write an "exposure" is tantamount to being "anti-party and anti-socialism"; consequently, when theoreticians speak of "tigers" changing their colors, creative literary and artistic people dare not ask for details.

Following the smashing of the "gang of four," the CCP Central Committee resolutely implemented the artistic and literary program of "let a hundred flowers blossom; let a hundred schools of thought contend. Revolutionary literary and artistic workers broke the shackles of old ideas to write numerous works exposing the crimes of Lin Biao and the "gang of four," and revealing contradictions among the people. These were condemned as works of "exposure literature," when actually they recreated the social life of a certain time or in a certain aspect, and powerfully reflected the aspirations of the people.

Despite the inability of some people in real life to look at reality, and despite the inability of writers to shake off lingering fears, nevertheless, such works have appeared in the field of literature, and they manifest a flourishing vitality. This is a fact that cannot be denied.

Today, the probing exploration of the "exposure" issue in socialist literature and art, and the diligent summarization of both positive and negative experiences is of significance for our complete and dialectic understanding of the social function of literature, and in making literature and art play the role they should play in the struggle to realize the four modernizations.

(1)

Ever since the "gang of four" was smashed, a lot of attention getting literary works of wide-ranging influence have appeared in China's literary world: "Shift Forman," "The Scar," "Sacred Mission," "Red Yulan Magnolia Beneath the Large Wall," and "Between Men and Demons" have reflected the irreconcilable contradictions between the crimes perpetrated by the tyranny of the "gang of four" and the broad masses of the people. "A General Cannot Do Such Things," "The Future Beckons," "Flower

Harbinger of Spring," and "How Plant Manager Qiao Took Office" were timely revelations of the social contradictions following the Third Plenary Session of the 11th Party Central Committee, which emancipated the mentality, eradicated myths, and in seeking truth through facts, demonstrated the contradiction between the party's fine traditions and the tendency toward mental ossification, bookishness, and following beaten paths. Events have demonstrated that this sort of works possess profound value in making people think, and is intimately related to the welfare of the broad masses of the people.

In the new socialist era, contradictions continue to exist in society, but so long as we adhere to the materialist theory of reflection, one cannot deny the role of "exposures" as performing a primary social function in literature. The materialist theory of reflection holds literature and art that acts in ideological ways are reflections in people's minds of a certain social life. Today, the perniciousness of the "gang of four" is far from being completely purged, and ultra-leftist trends of thought still threaten four modernization construction. Though the exploiting classes have been wiped out; the class struggle continues to exist; the power of old customs still stubbornly exists; and there are still many obstacles on the road along which we are advancing. Certain party and government organizations have an unhealthy tendency toward divorcing themselves from the masses, toward attitudes of the yamen, overstaffing of agencies, and excess hands for available work, and the subjectivism, factionalism, bureaucratism, mentality of special prerogatives of some cadres; the ossification or semi-ossification of the mentality of quite a few people; the violation of the law and the breaking of discipline, graft and embezzlement, hooligan criminality, as well as the use of influence, backdoor dealing, extreme individualism, and anarchic tendencies of some are perfectly obvious to everyone. When literature and art start with life as it is lived, such contradictions cannot but be reflected. Reflecting the contradictions, and mobilizing people to solve these contradictions is precisely the major task of socialist literature in the new era.

But "exposure literature" (this usage being adopted for convenience in expression), both now and in the past, has frequently been blamed in the following way: "the contradictions and dark aspects that "exposure literature" reflect are not the true essence of life, so they are not real." What is meant by the essence of life? It is the relatively stable internal relationship formed by special contradictions contained in life itself. Marxist philosophers feel that in the process of development of contradictions in all things, contradictory activity exists from beginning to end in the process of development of everything. Without contradictions there can be no world. Both aspects of contradictions are always the unity of opposites. In social life, good things always develop out of the process of struggle with bad things and, in fact, the good, and the beautiful always exist relative to the false, the hideous, and the evil, and develop out of mutual struggle with them. It is the struggle between such contradictions and the outcome that determines the quality of life, its content, and its appearance. This is the essence of life. In such a sense, not to write about contradictions, and not to write about the struggle between light and darkness leaves no ways in which to reflect the essence of life. For the proletariat and revolutionary peoples to realize communism, they must make a thoroughgoing break with the old ownership relationships and the old traditional conceptions. In improving the objective world, they must likewise improve their own subjective worlds. Their recognition of contradictions, the solution of contradictions, and step by step idealistic advance toward the light is the content of our social life. But this road of advance is not a smooth one, and sometimes evil forces may obstruct the advance of society or even drag society backwards, yet the overall trend must inevitably be the triumph of justice over evil, and the triumph of light over darkness. In adhering to the materialist theory of reflection, following the typical principles of creativity, truly showing the struggle between contradictions in real life, revealing the laws of the development of life, and in showing people the way ahead, socialist realistic literature, no matter whether eulogizing or exposing, can reflect the essence of life. It is just that one emphasizes praise for the heroic struggles in three great revolutionary battles of revolutionary heroes and the masses of the people, writing of figures who evoke praise, tears, or respect, establishing models for positive study by the people. The other emphasis disclosure of the decadent backward forces in society that harm the masses of people and revolutionary endeavors, writing of figures who evoke laughter, contempt, and revulsion to provide the people with negative examples that may serve as a lesson and inspire people to march forward in a determined struggle. The two are mutually complementary and reach the same goal by different routes. Though "exposure literature" places lopsided emphasis on the false, the hideous, and the evil, showing off the seamy side of life, it may be equally true. Whether or not a literary or artistic creation is true has nothing to do with whether their creators said something good to hear or bad to hear, nor whether it soothes or grates on the ears of hearers, but rather whether that which was written accords with objective reality. So long as it accords with objective reality, it is true. To term a thing as being false, hideous, or evil and then purposely cover it up or beautify it is to lose the essential truthfulness of matters.

Additionally, there are some "well-intentioned people" who are always apprehensive lest an exposure of contradictions among the people might damage socialist endeavors. Such people, who are always fearing that the sky might fall, have no reason at all for their apprehensions. What we are exposing is an ulcer on our body, which is an ailment that the toxic germs of the old society have created on the body of the proletariat and the masses of the people, rather than the body itself of the proletariat and the masses of the people. The purpose of revealing it is to arouse attention for treating it rather than to wipe out the body. Surely, when pus and blood are squeezed out or gangrene dug out, pain is inevitable, but if sickness is hidden for fear of criticism and it attacks the vitals, life itself may be threatened. Therefore, we positively cannot ignore the work of prevention and treatment of illness. Stalin made a very profound observation on this point. It was 1930 when the USSR was at a crucial turning point in history and the class struggle within the country was extremely sharp. Trotskyite elements in literary circles and agents of the kulaks were viciously slandering and attacking Soviet authority. Fearing others might misues it, Gorki began to have doubts about the self-criticism among the people that had been carried out for a time in the press, so he wrote a letter to Comrade Stalin to set forth his views. In a letter of reply, Stalin stated with extreme clarity: "We cannot do away with self-criticism. No matter what, we cannot, Aleksei Maksimoviy. Without self-criticism, the stagnation and corruption in government organizations, the growth of bureaucracy, and the destruction of the creative initiative of the working class cannot be avoided. Of course self-criticism provides the enemy with materials. You are entirely correct on this point. But it also provides materials (and a driving force) for our progress, for carrying forward the building of the strength of the workers, for the development of competition, and for shock brigades. The advantages offset or outweigh the disadvantages." ("Complete Works of Stalin," Vol 2, pp 152-155). Here Stalin operated from a strategically commanding position to declare the necessity for the growth of self-criticism, and made an extremely brilliant analysis of the pros and cons of the development of self-criticism. This is very inspiring for our present day correct appreciation of the social role of "exposure literature." We must study this Marxist method of understanding things used by Comrade Stalin and not look only at the bad points of "exposures," but realize more fully the good points of "exposures," and we must particularly believe that the good points will triumph over the bad points. In this way, we can have a supportive attitude toward "exposure literature."

(2)

In order to make "exposure literature" play a positive role in real life, we should diligently summarize both positive and negative experiences.

The primary problem is to clearly identify the object for exposure. This problem may be stated simply as any dark forces that harm socialist endeavors and the welfare of the masses of people must be exposed. The 10-year rampage of Lin Biao and the "gang of four" caused great catastrophe for the Chinese people and created a historical regression. They are criminals in Chinese history, and writers should use critical pens to expose their towering crimes. Though a certain number of works have been written to expose their crimes, they are far from being enough, an epic work with depth and breadth has yet to be produced. We should use an epic article with great profoundity to nail their hideousness to the historical pillar of shame. In the 30 years since the founding of the People's Republic, the ultra-left trend of thought has brought immense suffering to the masses of the people and done serious harm to socialist endeavors. The enlarged anti-rightist struggle of 1957, the "Great Leap Forward" of 1958, which ran counter to objective laws, the anti-right deviation of 1959, which compounded error upon error, produced periods of hardship, one after another, such as are rarely seen throughout the world. Our literature and art should truly depict this period of history, and conscientiously summarize these historical experiences so that our sons, grandsons, and later generations will never forget them. This decidedly is not "looking back," but possesses extremely profound and far-reaching historical significance for impelling the forward development of society and avoiding a historical regression. Today, our party has already brought about a shift in its work emphasis, and the major contradiction we face is "reform of China's current production relationships and the parts of the superstructure that impede realization of the four modernizations, to sweep away all of the power of habit that does not help realization of the four modernizations." ("Report on the Work of the Government" delivered by Chairman Hua Guofeng at the Second Session of the Fifth National People's Congress) The revolutionary art and literature of the new era must become involved in life and expose the current major contradictions in society to help the people have a clear-headed appreciation of reality and to criticize decadent and backward forces in order to sweep away obstacles to the realization of the four modernizations.

"Exposures" must be in accord with the reality of the essence of life. Realism is a common requirement for all literature and art, and "exposure literature" is no exception. Lu Shun felt that literary and artistic creativity "did not have to be actual events of the past, but had to be actualities that might come about. So it does not 'fabricate' or 'slander'; it neither reveals shameful secrets nor does it just record shocking and appalling so-called 'incredible things' or 'things that are stranger than fiction.'" (Qiejieting Essays, Vol 2, "What Is Satire?") In our real lives, there is no lack of false, hideous, and evil things, but one cannot write only about "the actual events of the past," but about the actualities that might come about, which is to say one should summarize, condense, and typify. "Exposure literature" must guard against expression of "personal animosities "and write about "public enmity" instead. "Private animosities" are natural forms that are not necessarily representative, and that are not necessarily true either. (It should be recognized that among the phenomena of life there are phenomena that reflect the essence, which is also true), while "public enmity," in that it has universality and reflects the will of the masses of people, is true in essence. So-called "exposure literature" bereft of the essential realities of life is not only of no benefit, but is harmful. As Lu Xun said, "even if such a thing were possible, it would be nothing but rumor mongering and slandering." (Qiejieting Essays, Vol 1 "On Satire") Though these words may be somewhat harsh, they speak to the nub of the issue.

"Exposure literature" must strike at current evils. It is not enough for "exposure literature" merely to expose contradictions, it also has to do as Lu Xun said, "the adversary must be mortally wounded in the place that is struck." We do not want merely to expose the crimes of Lin Biao and the "gang of four," the perniciousness of the ultra-left line, and the harm done by modern superstition; we want also to demonstrate in a profound way the historical and social causes of these criminal phenomena, summarize their valuable historical lessons, and provide the broad masses of cadres and people a profound education. Quite a few works of the "exposure" variety have been produced in the wake of the smashing of the "gang of four," to be sure, but quite a few works lack historical depth. Some of them have fantastic and tortuous plots; some of them are repetitive love stories; and some tell only of superficialities in life, lacking depth. They are particularly lacking in baring the major social contradictions impairing the realization of the four modernizations. Still others bare one aspect of contradictions, ignoring the other aspect. It will do no harm to mention here "Woman Robber," ("Cinema Creations" 11th issue, 1979), and "Defiance of the Law," ("Yalu River" 10th issue, 1979). These two works have a basically sympathetic and appreciative attitude toward the silly little girl in "Woman Robber," and toward Bochun, the one who was in "Defiance of the Law," and they lack the needed exposure and criticism. At the present time, the major contradiction in social life is whether it is possible to bring about stability and unity and a common effort for the four modernizations; but "Woman Robber," and "Defiance of the Law" are major elements in the destruction of social stability, for which reason they should receive a certain amount of exposure and criticism. Thus, we have the responsibility of pointing out that unless such hideous phenomena are exposed and criticized, there can be no hitting home at current evils. Of course, we cannot rashly negate a work of literature.

"Exposure literature" should be adept in discriminating between two kinds of contradictions that are of a different nature. Of course, we cannot love enemies, and we cannot love hideous phenomena in society. All that is degenerate and backward we should expose and lash, but writers must clearly discriminate between contradictions between the enemy and ourselves, and contradictions among the people. We must mercilessly expose the crimes of the enemy, strip away their camouflage, and expose the trend toward their doom. Criticism of the people's shortcoming is also necessary, and it has to hit home at crucial points, but it must be from the standpoint of the people and be enthusiastically couched in terms of protecting the people and educating the people. At this point I would like to raise Comrade Yeh Wenfu's [0673 2429 4395] "A General Cannot Do Such Things," ("Poetry," Issue 8, 1979) The poet has the greatest esteem for the meritorious service of the general as "an army horse on a campaign," is pained at the general's mental transformation in being "uncaring about the weal and woe of the people," and is severely condemnatory of the general's "unceasing life of pleasure." The poet is moved by genuine sentiments, made aware through righteous causes, and strikes out with a violent shove. In everything, he "is hoping they will improve but does not want to go into the water for this group." (Lu Xun, Qiejieting Essays, Vol 2, "What Is 'Satire'?") The poet stands at the apex of the age with a spirit of high resolve for revolutionary undertakings and a heart filled with ardor and sincerity for revolutionary comrades, sounding the tocsin of continuous revolution for revolutionary cadres. In this poem, the poet deals rather effectively with and reflects the contradictions among the people, and provides precious experience as well in how to handle the "exposure" issue in literature in the new age of socialism.

"Exposure literature" should permit the reader to see the light in the darkness. History must always develop through struggle, and light must always shine through darkness. This is the dialectic method of life itself. Literature and art cannot contravene this law of the unity of opposites of light and darkness. Aleksander Ostrovskii's "Great Thunderstorm" was clearly an exposure of the dark tragedies in Russian society. Kaqielinna's [phonetic] suicide by jumping into a river was doubtlessly a powerful denunciation of the dark monarchy, but the author manifested a newly born strength in her body. Nikolai Toupolyubov has said, "There is something in the 'Great Thunderstorm' that buoys the spirit and gives encouragement." From Kaqielinna's body, the spectator can see "a ray of light in the darkness of the monarchy." ("A Ray of Light in the Darkness of the Monarchy") When even bourgeois criticism of realistic writers permits readers to see a ray of light in the darkness, how much more so our socialist literature. Therefore, "exposure literature" positively cannot allow readers to see only an expanse of darkness and feel that there is no way out. In his analysis and critique of Bednyi's "Climb Down From the Hot Stove," Stalin stated concretely that, "In this essay (as in other essays) there are numerous brilliant passages that strike at the vitals. But there is also a measure of tar there that dirties the entire picture, turning it into an out-and-out 'bilierwa'." (Quoter's note: "Bilierwa" is Russian colloquial for "mire" or "swamp" or, in other words, a "bloody mess.") Stalin very severely criticized Bednyi, saying his "criticism of the shortcomings of Soviet life" had become "a slander of the Soviet past and the Soviet present." (To Comrade Bednyi," Complete Works of Stalin, Vol 12) These views are extremely precious. Lu Xun also said, "If a work appears to be satirical but is utterly without good intent and devoid of warmth and makes the reader feel that everything in the world is utterly lacking in value and is unredeeming, then it is not satire but 'freezing irony'." (Qiejieting Essays, Vol 2, "What Is 'Satire'?") Works of "freezing irony" can perform no positive role in real life.

When it comes to the issue of "exposure" in literary and artistic creativity, we have experience to follow and lessons to learn from. We have to be adept at learning the lessons of experience, and we must dare to create boldly so that our socialist realist literature will make new breakthroughs in this regard.

(3)

Writers of "exposure literature" must be clearheaded, have a firm standpoint, act as warriors in defense of truth, and be a vanguard in leading the way for the four modernizations.

Writers of "exposure literature" must maintain independent thinking in their daily lives. During the rampages of Lin Biao and the "gang of four," they promoted feudal fascist dictatorship and a policy of duping the people, going in big for modern superstition on the one hand and going in big for "putting their own relatives into official positions," shackling the people's minds, not allowing them to go beyond certain limits. In the field of literature, they preached, "leaders to produce ideas, the masses to produce life, and writers to produce artistry" in a so-called "three-way combination for creativity," thereby turning writers into mouthpieces with no thoughts of their own. They also required writers to "start with the line," and "put the main theme first," particularly "to write works that struggle against capitalist roaders, to usurp the party and seize authority, and to create counterrevolutionary opinion on their behalf. They completely abolished independent thinking by writers in a vain hope of making writers into useful tools for the promotion of a counterrevolutionary political line. Today, we encourage writers to think independently, to boldly innovate, which means breaking the mental shackles imposed by Lin Biao and the "gang of four," getting rid of the disturbance caused by the ultra-left trend of thought, and giving writers' thoughts and creativity a broad realm. In this broad realm, writers should eradicate all sorts of superstition, overcome all prejudices, resist all erroneous trends, and get rid of pragmatism. In this broad realm, writers should use the Marxist standpoint, viewpoint, and methods to plomb diverse socialist depths and illuminate the darkness, get to the bottom of matters, study new situations, discover new problems, make timely use of their own artistic work to put forward original views about life, help people accurately understand life, and proceed to actively reform life.

Writers of "exposure literature" should also dare to have the fighting courage to be firm rocks in the middle of a stream, and have an uncompromising battle spirit. When you lay bare false, hideous, and evil things, and when you attack decadent and backward forces in society, you will, of course, meet with a mad counterattack by these forces. This is the inevitable logic of revolutionary struggle. Sometimes when facing an erroneous trend, you may come under attack or even be persecuted. This is also not unprecedented. Under these circumstances, in order to protect the interests of the people and the interests of socialism, revolutionary writers must continue to battle tenaciously. If the revolutionary writers of today are unmoved at the sight of the people's suffering, calmly accept the sight of the four modernizations being destroyed, and yield ground when they see evil forces on the rampage, what kind of serving the people, or serving society, or serving the four modernizations is that! It is not easy for a person to discover truth, but to uphold truth is even more difficult. Martyr Zhang Zhixin [1728 1807 2450] is a model whom revolutionary writers study. During the days when he was pelted with adversities, in thinking about the future fate of the country, he said what the broad masses of people wanted to say but could not, and when threatened with death, he continued to maintain, "my views will not change." China's literary and artistic circles need more Zhang Zhixin style warriors concerned about the country and the people, and in upholding truth!

Naturally, "exposure literature" writers must also take into consideration the social consequences of their works. In this new socialist era, our party's political line is "unite people of all nationalities throughout the country; arouse all positive elements; and with one heart and one mind go all out, aim high and achieve greater, faster, better and more economical results in building a modernized socialist power." In order to attain this objective, we must adhere to the four basic principles, and we must create a stable and united political situation. This is where the fundamental welfare of the people of the entire country lies. Our objective in writing "exposure literature" is to reveal the contradictions in the realization of the four modernizations, to remove the obstacles to the four modernizations, and to advance the early building of a modernized socialist power. Understood in these terms, the roles of eulogy and exposure are differences in approach with equally satisfactory results. We are revolutionary utilitarianists who cannot help being concerned with the welfare of the people, the state and the party. And these welfares are not concentrated on the realization of the four modernizations. If we depart from this objective, expose for the sake of exposure, contravene the four fundamental principles, and in impairing stability and unity also destroy four modernization construction, we will thereby have turned our backs on the fundamental welfare of the people. This kind of "exposure literature" is simply self-defeating. Commenting on the denunciatory novels that flourished toward the end of the Qing dynasty, Lu Xun said, "Even though meant to rectify society, they do not differ much from satirical fiction; their showy representations demonstrate a paucity of literary sophistication. Lacking magnanimity and writing skill, the novelists depend on exaggerations to please the reading public." In his criticism, "Eyewitness to 20 Years of Monstrosity," he pointed out again that impetuous descriptions and exaggerations due to zealous disclosures of social evils have so much eroded their appeal that they are but a symposium of scandals for idol gossip and laughter." These are problems that also merit attention in writing "exposure literature" today.

In the environment of this socialist historical new era, both democracy and the legal system should give revolutionary writers political assurance when writing "exposure literature." In the fields of science and literature, we will unswervingly carry out a program of "let a hundred flowers blossom; let a hundred schools of thought contend." Acting on the premise of support for the four fundamental principles, literary and art works may extol the light and they may also expose darkness. So long as they do not oppose the party or oppose socialism, they should be permitted to exist, and so long as they do not violate criminal laws, they should neither be attacked nor persecuted. The historical tragedy of the enlarged anti-rightist campaign of the 1950's shall have no repeat performances! We must truly refrain from seizing on mistakes or shortcomings, not beat people with sticks, and not label them with the "three no-isms." We should encourage writers to liberate their thoughts, boldly create, permit them to make mistakes, and permit them to correct their mistakes too. There should be no loss of people as a result of literature, and no loss of literature as a result of people either. Only in this way can an excellent situation of flourishing creativity come about.

As long ago as the 1920's, Lu Xun said with deep feeling, "Because the Chinese people have never dared to look at human life properly but could only practice deceipt and cheating, literature and art that deceives and cheats was also produced, and this literature and art led the Chinese people ever deeper into the morass of deceipt and cheating, until they are no longer aware of it. The world is changing daily. The time for our writers to take off their false fronts, and sincerely, deeply, and courageously look at human life and write of its flesh and blood has arrived. There has been need for a long time for a new field of literature, and there has been need for a long time for several fearless pathbreakers!" ("Graveyard. On Opening the Eyes and Seeing"). Today, the days when the Chinese people were "deceived and cheated" have passed. With the smashing of the "gang of four," a "brand new field of literature" has been opened, and we have joyously seen a group of new "pathbreakers" struggling to appear. We believe that only by upholding dialectic materialism, diligently summarizing negative and positive experiences with "exposure literature," continuing to make the most of its fine points, and overcoming the shortcomings and inadequacies that are so difficult to avoid in exploration thereby developing in a more healthy way, that people will have a more realistic understanding about the position and function of "exposure literature." We may expect that in the new socialist era "exposure literautre" must become a literature that cries out on behalf of the people, and a literature that opens the way to the four modernizations.

NATURE OF POPULATION LAW, DEMOGRAPHY DISCUSSED

Hangzhou HANGZHOU DAXUE XUEBAO (ZHEXUE SHEHUI KEXUE BAN) [JOURNAL OF HANGZHOU UNIVERSITY (PHILOSOPHY AND SOCIAL SCIENCES EDITION)] in Chinese No 2, Jun 80 pp 22-27

[Article by Wang Shengduo [3769 5116 1122]: "An Exploration of the Nature of Population Law and the Classification of Demography as a Science"]

[Text] Ever since the "taboo area" of population theory was broken through, people in the scientific circles have broached many dubious theoretical questions awaiting solution. One of such questions has to do with the nature of population law and the classification of demography as a science. Is population law, after all, a natural law or a social law? Does demography belong to natural science or social science? An exploration of these questions is of great theoretical and practical significance to us.

Concerning the Nature of Population Law

For a long time, this view has prevailed: that is, "population law is a social law and not a natural law." I think this "is--and not" formula of bringingup the question is partial, simplistic, and hence imprecise. This touches first of all our understanding of the essence of population. The so-called population is no other than humanity characterized by certain given biological faculties living in certain given social relationships. Therefore, population is of a dual nature, i.e., characterized by man's natural as well as social disposition.

Man's natural disposition is namely his biological constitution. Man has evolved from a higher animal through the process of labor. At the beginning of human society, the primitive men had bearly left their animal world; their life and procreation were a manifestation almost entirely of their natural disposition. The law of creatures was nearly in complete control of the reproduction of the population of primitive men. Up to this very day, there are still many similarities between man and higher animals in terms of the biological characteristics of their organic constitutions, and their procreative instincts and birth-giving laws. This is common knowledge. "Therefore the very first concrete fact that needs to be defined is bodily structures of these individuals and the relationship between these individuals conditioned by such bodily structures and nature."[1]

---

[1] "Complete Works of Marx and Engels," vol 3, p 23.

Social disposition is what man alone possesses. "Man's essential character is not an abstract thing that an individual innately possesses; in its realistic nature, it is the sumtotal of all social relationships."[1] All of man's activities (including production struggle, class struggle, and scientific experiment, and daily activities such as wearing clothes, eating, taking up residence and walking around) are of a social nature. An absolutely isolated individual like "Robinson" does not exist. This is also common knowledge. Man's social disposition fundamentally and strictly separates man from the animal world. Therefore, Marx clearly said in his "Economics--A Philosophical Manuscript": "Man is a social being."[2]

Population thus represents the dialectical unity between man's natural disposition and man's social disposition. In this entity of unity, man's social disposition is the dominant aspect. Population is therefore the entity of unity between man's natural disposition and man's social disposition dominated by the latter. This is namely the essence of population as we understand it.

In the treatment of a fact such as this in the nature of common knowledge, we have somehow found ourselves in constant debate for a long time. Some people totally disregard man's natural disposition; they attribute man's essential character only to his social disposition, and they in turn attribute his social disposition to his class nature; hence: "human nature = man's social disposition = man's class nature." This was the representative view of the 1960's. At that time, anyone who chose to discuss man's natural disposition would be at once attached the label of advocating a "theory of human nature." Yao Wenyuan's stick was most frightening. He said: anyone who chooses to discuss such biological demands as "food and sex" is "liable to equate human nature with animal nature."[3] In his view, man has no natural disposition, but only a social disposition. And what is man's social disposition? Yao Wenyuan thought that it was namely man's class nature. This is obviously contrary to facts. Because man's class nature is an important content of his social disposition, but not its only content. In the primitive society and in the future communist society, class nature never existed and will no longer exist: would that mean man's social disposition never existed and will no longer exist?! "Human nature = man's social disposition = man's class nature" therefore constituted the theoretical basis which led to the expansion of class struggle. Even up to now, there is still a market for such a simplistic formula as "man's social disposition is reflected only in his class nature." Therefor, there is need to criticize it solemnly in order to return to order from disorder.

---

1. Marx: "Concerning Feuerback's Outline."

2. In his "Economics--A Philosophical Manuscript," Marx clearly discussed the duality of man's essential character: "Humanity is directly of a natural substance." "But, man is not only himself of natural substance, he is also the natural substance of humanity." "So-called humanity is a bodily substance of natural force turned into a lively, realistic, and sensual objective existence." [It] is an entity of unity between a natural disposition and a social disposition.

3. WENYI BAO [LITERARY GAZETTE], No 2, 1960.

Of course, neither can we agree with this point of view, that is, to equate man's natural disposition with an animal's natural disposition. Some people say, "From the point of view of biology and from the point of view of natural disposition, there is no essential difference between man and other higher animals."[1] Such a view is rather over exaggerated. In reality, there is still an essential difference between man and other animals in terms of their biological characteristics regarding physique, structure, cerebrum, procreation, etc. Therefore, what we are talking about here is man's natural disposition; such man's natural disposition has its own intrinsic characteristics (or it can be called man's characteristic natural disposition), which only closely resembles an animal's natural disposition. There is a great difference between "close similarity" and "essential sameness."

The duality of the nature of population determines the fact that population law is also of a dualistic nature. Population develops according to law. In this process of development according to objective law, man's natural disposition and social disposition both play a role, with his social disposition merely playing the dominant role. We may put it this way: man's natural disposition is the basis of the existence and development of population; man's social disposition is the dominant factor in the existence and development of population. Population law is both natural law and social law; but that which occupies a dominant position is social law. This is to say, the process of a population coming into being, essentially, is a social process which is controlled by social conditions. The population theory of the bourgeoisie fails to see this; before Marx, they took human nature as man's natural disposition, and the formula "human nature = biological nature" assumed a ruling position. They denied the essential difference between man and the animals and vainly attempted to transplant the natural law of animal procreation directly to population law; this was utterly preposterous and, as a result, they were naturally subject to the solemn criticism of classical Marxist writers. Marx pointed out: "Actually, every particular, historical mode of production had its particularly and historically functioning population law."[2] Marx contrasted man with the animals and on the basis of man's social disposition--that is, the fact that man lives in various social modes (and not just purely in the natural environment) so that the growth of a population must have its own social characteristics--he reached this conclusion: different modes of social production have different population laws. Engels said, precisely because of such a fundamental difference, "it is impossible to transplant the laws of the animal society directly to the human society."[3] In response to the error of the population theory advanced by the bourgeoisie, Lenin also pointed out: "The conditions of the growth of humanity are directly determined by the organic structures of the different societies."[4] Consequently, we should not study population laws abstractly apart from the social disposition of population.

Regrettably, we have in the past infinitely and absolutely exaggerated these truthful views. As a result, the classical writers seemed to have only stressed man's social disposition on the question of population, and population laws seemed to be

3. "Complete Works of Marx and Engels," vol 234, p 163.
4. "Complete Works of Lenin," vol 1, p 430.

only social laws, so that man's natural disposition became completely negated, and we dared thus no longer to suggest that in the process of the development of a population natural laws also relatively independently play a role. The kind of metaphysical prejudice that "population law is social law and not natural law" is inferred from this very situation.

In fact, this is a misunderstanding. Our revolutionary guides never denied man's natural disposition, nor did they deny the important role of natural law. Marx said: "The realistic characters of man are diverse, just as the prescriptions of man's essential character and man's activities are diverse."[1] How can man, as a reality, be without the biological characteristics of man's essential character--his natural disposition? If so, that would be equivalent to saying that "man is not born from the womb of his mother, but transformed from the God of a monotheism." This kind of men are not men in blood and flesh, but "abstract men." Engels also pointed out: "Including man," "all higher organisms develop and procreate according to a common law." All procreative instincts are similar. How can we deny the role of natural law? He also specifically suggested: "The romantic relations between persons, especially between the sexes, have existed ever since the beginning of humanity."[2] Marx also said: "The relations between the sexes are the most natural relations between persons." "Eating, drinking and sexual love are of course true human faculties." He never excluded man's natural disposition and biological nature, but was only opposed to exaggerating man's natural disposition and biological nature into his "ultimate and only" disposition and to equating the functions of man with those of an animal.[3]

From this point, what Malthus said about "sexual desires between the sexes being inevitable," just as "food being a necessity for man's existence" and [desiring food] being a human instinct, is an undoubted fact. The question is that he went to the other extreme, partially stressing and exaggerating this natural disposition on the part of man and totally denying man's social disposition, and further asserted that, according to man's procreative instincts, population was bound to increase geometrically beyond control, whereas means of livelihood could only increase mathematically, so that population surplus would prove inevitable and nothing would do unless a large proportion became "killed, starved to death, or died of illness." This was utterly preposterous, and a case of equating the functions of man with those of an animal.

Materialists acknowledge man's procreative instincts. Little children are unaware; old persons cannot have children; "after 10 months' [sic] pregnancy, a child is born one day"; all of these biological facts exist objectively. But man is different from the animals; he can, through social reform, restrict the procreative instincts from the moral standpoint."[4] He can, through birth control, consciously "adjust man's procreation at the same time, like he adjusts material production."[5] And this is one thing only a socialist society can achieve.

There is an important practical meaning, therefore, for us to face squarely the duality of population and population law and their relationship as opposites in unity. It enables us to understand that population reproduction, apart from social conditions, must also be predicated upon definite natural conditions. It was precisely on the basis of this point that Vice Premier Chen Muhua recently pointed out: in resorting to birth control on a large scale, we must energetically propagate the scientific knowledge about human biology and procreation. "We must break through the conventions of feudal thinking, forthrightly presenting the scientific and technical knowledge of birth control in 'the hall of the sophisticated' in conducting our widespread propagation, so that every household and every individual will understand," and so that everybody can appreciate the natural scientific knowledge on birth and thereby control his procreative instincts and become consciously a master in the realm of procreation.

Concerning Population Quantity and Quality

Let us explore furthermore the nature of population law from the relationship between population quantity and quality. Population, like anything else, is an entity of unity between quantity and quality. Population development includes the development in quantity and in quality. In the determination of the quantitative and the qualitative condition of a population, both social laws and natural laws play a role. In the past, we paid attention only to the quantitative aspect of a population (population total, population density, rate of increase, etc) but not to it qualitative aspect, and hence we contrarily treated "an improvement of population quality" as a poisonous weed and criticized it without reservation. We dared still less to study the natural laws by which an improvement of population quality could be achieved. This was a violation of dialectics. Could it be that a population was only susceptible to quantitative prescription but not to qualitative presecription?

What we speak of as population quality here is the organic unity of the three important factors, the ideological consciousness, the scientific and cultural level, and the physical health of a population. The improvement of these three factors is obviously subject to the constraint of social conditions, but neither can they depart from the functioning of natural laws (especially in the case of physical health). Therefore, this question has always aroused man's attention and exploration.

As early as the ancient times, people already simplistically considered man's natural biological disposition and thought of improving population quality from this angle. The ancient Greeks were the very ones who studied the laws of human heredity on the basis of material heredity and thereby cultivated the evil custom of putting to death infants with biological defects. Aristotle, who was called "a very great thinker of ancient times" by Marx, put forward his own conceptualization and perception as to why, in the hereditary process, children looked like their parents and the younger generation looked like the older generation, and thereby expressed the opinion that the physique of the father's generation was the "blueprint" of the son's generation. Our colloquial saying, that "when planting rice we must have good sprouts, when wishing for a son, one must have a healthy mother," also has such a connotation. Later, genetics became a science and proved that the physical situation of the son's generation had to do, of course, with its inherited social conditions, but it was closely related also to its endowed physical heredity from the father's generation, and that certain diseases (such as high blood pressure, psychosis, etc) could also be hereditary.

As a result, in modern genetics the science that specializes in the study and improvement of human heredity--eugenics, also called the study of "hereditary health," has started to develop. It specializes in exploring how to have the best qualities of parents passed on to the younger generation and how, at the same time, to avoid letting harmful hereditary factors create born biological defects in the children.

This plays an important role in the improvement of population quality. We may present an example in this regard: according to a survey by the World Health Organization, the death rate of children from the marriage of close blood relatives is generally three times higher than that of children from the marriage of non-close blood relatives. Therefore, our Marriage Law prescribes: between "blood relatives of direct descent, or those who are brother and sister to each other or brother and sister sharing one father or one mother," and in the case of "those who are victims of venereal disease and psychopathia not yet cured, and those who have caught leprosy or other diseases and are therefore judged in medicine to be unsuitable for marriage," marriage is prohibited. There is a fully scientific basis for this.

The focus of our birth control work has already been shifted to the emphasis on the "one-child family." How to assure the physical and mental health of a single child, reduce his hereditary diseases, and look after his normal growth, gaining of strength and acquisition of talent concerns the happiness of such family and also affects the quality of the population, our four modernizations construction, as well as the prosperity of the nation. Therefore, we especially need to study hereditary health and to promote eugenics.

But, for a long time, because we denied man's natural biological disposition and stressed only man's social class disposition and thereby whipped up an erroneous trend at home and abroad in equating eugenics with racial discrimination and hence putting eugenics to death with a single blow, we made people cringe with fear in ever thinking about taking up eugenics and hence created an artificial taboo area. For instance, the "Philosophical Dictionary" compiled by the Soviet Union adjudicated eugenics to be an "extremely reactionary," "bourgeois pseudo-science." We must now reverse the verdict on behalf of eugenics for the sake of its reputation. As a science, eugenics does not have any class nature, because hereditary diseases do not select any race or class. In the case of its certain principles (such as "overbreeding, from the eugenical point of view, can be more harmful than beneficial"; "since one reaps what one sows, hereditary characteristics can be passed on generation after generation"; etc) we can very well correctly apply their scientific truth in order to create happiness for mankind in behalf of the progressive classes, but they can also be distorted and utilized by racists as the theoretical basis for racial discrimination and genocide. Hitler was one who made use of eugenics to unscrupulously propagate the fallacy that German's "superior race should rule the world." The gang of four also made use of eugenics to unscrupulously indulge in a reactionary emphasis on genealogy. These falsehoods must be thoroughly criticized. But we must not, because of this, pour away the child along with the dirty water by completely negating eugenics.

The compilers of the "Philosophical Dictionary" also arbitrarily declare: "Man and man's spiritual development and physical development are entirely determined by the social conditions in which he lives." This does not accord with the Marxist theory and objective facts, because man lives in the natural environment just as he does in society. "So long as man exists, natural history and human history continue to restrain each other." In the case of man's natural disposition and social disposition, "the two aspects are closely related."[1] Both natural laws and social laws have played the role of a unity between opposities in respect to the development of man. It was precisely in this sense that Marx held that in studying man, we must at the same time consider the mutual relations and roles between man's natural disposition and social disposition. "From now on, natural sciences will include the science of man, just as the science of man includes natural sciences: this will be a science [in its own right]."[2]

An attempt to partially and excessively stress man's social disposition and the deterministic role of social conditions in respect to man's spirit and physical strength, deny man's natural disposition, and dismiss the role of the laws concerning man's innate, natural heredity fundamentally falls short of explaining many facts. For instance, both at home and abroad are found many "crude children"; it is possible for us to try to unlock the attendant causes simply from the sociological angle?! Such an ultra-left theory is tantamount to dismissing eugenics and the natural sciences altogether. This is undoubtedly utterly erroneous. Marx and Engels cited the example of man's natural selection in ancient society to illustrate this point; they related Morgan's words by saying: "Marriages between clans without any blood relations procreated physically and mentally healthier races; when two advancing tribes were merged together, the skulls and brains of the new generation became naturally expanded to the extent by which they combined the talents of both tribes."[3] Modern science has also proved the theory concerning the fact that children begetted by parents free of any blood relationship are mentally and physically superior; this accords with the principle of eugenics. We must respect science and facts.

We must restore the scientific outlook of eugenics. Now, the taboo area has already been broken through, and eugenics has already been liberated. Not a few units in our country have already started anew their eugenical studies and achieved not a few results. For instance, the level of the developing band [7359 1601 2111 5890] technique in the study of human chromosomes has been greatly elevated and has begun to be applied in clinical diagnosis; not a few units are studying the establishment of a new method for cultivating choriod cells in order to lay the foundation for diagnosing chromosome diseases in an earlier stage of the embryonic period; not a few localities have started pre-birth diagnoses (including diagnoses on the sex and growth of the fetus); some cities have also established office visits by patients for heredity consultation, carried out marriage and birth control guidance, and accumulated not a little experience in reducing the occurrence of hereditary diseases and strengthening the physical health of the population.

For a long time, the study of man's natural disposition has been overlooked, suppressed, or even dismissed. We should eliminate our remnant fear, do our best to catch up, and make a go of our study in this regard quickly in order to establish scientific demography.

Concerning the Classification of Demography

An exploration of the nature of population law is designed to define the nature and classification of demography; as the former is made clear, the latter becomes also easy to solve. Does demography, after all, belong to the natural sciences or the social sciences? The answer now can be supplied.

I am of the opinion that, on the basis of the dual nature of population law, demography partakes of the contents of both natural science and social science; we can neither simply ascribe demography to the natural sciences nor do so to the social sciences; demography is a marginal science, a comprehensive science situated between the natural sciences and the social sciences. Population is a complex totality consisting of multiple dispositions and multiple relationships. It is bound to touch on sociology, economics, historiography, nationality science, biology, psychology, medicine, genetics, ecology, the study of resources, the study of talents, etc. We must establish the independent scientific system of demography on such a comprehensive scientific basis. The objective of demography is the study of the nature of the law of development on the part of population reproduction. Only by carrying out such a comprehensive study is it possible to accomplish this.

Among bourgeois demographers, some overlook social laws and social sciences and proceed from the single-minded biological point of view, thinking that "only from man's born biological aspects" is it possible to discover the laws of population development; some overlook natural laws and natural sciences and attempt to study the quantity, distribution and composition of population, plus the birth rate, death rate, regional changes and social changes and other aspects of population change of the like, purely from the social science angle. The results of their respective insistence on such extremes can in no way reveal the real nature of the law of population development.

These experiences and lessons have already attracted people's attention. Today, demography has already started to develop in the direction of comprehensive research. During the last 10 years, there are several hundred institutions of demographical research in the world engaged in comprehensive scientific research; there are 4-5,000 journals and publications (among whose contributors many are well known natural scientists, social scientists, or scholars of other sciences) devoted to the exploration of demography from a broad angle.

Facts indicate that demography is a comprehensive system of scientific knowledge. Deviating from this, demography is bound to turn into a dead alley and fail to comprehensively and realistically reveal the nature of the law of population reproduction. For example, demographical economics studies the nature of the law of population development in the economic aspect; demographical sociology studies the relationship between population law and social law, and explores the nature of the law of population development from the angle of social development; demographical hygiene and genetics studies the nature of law in respect to the physical health of a population; demographical statistics studies various numerical data about a population such as birth rate, death rate, and natural increase rate in order to generalize certain characteristics of the law of population development; demographical geography studies population distribution and the relationship between a population and aspects of the natural environment in order to reveal the nature of the law of population development from these angles. While discussing the causes of China's large population, Malthus held that China's temperate climate and soil conditions are particularly inducive to the rearing of many children; this point is of some referential value to us. If we make some comparison internally, half of our territory occupied by the minority nationalities accommodates a very thin population, which makes up only 6 percent of the total; apart from social causes, natural causes (such as cold climate, wind and sand, aridity, etc) are evidently also a factor in this regard. Last year, Tibet's birthrate target was 10 percent; efforts were made to let them procreate without restriction, but the result was that only a 5 percent rate was achieved. In hot regions, people develop early, and in cold regions people mature very late: this is common knowledge to everyone. This illustrates that factors exerting influence upon a population are complex and complicated, and they cannot be simplified when we explore the nature of population law.[1]

Demography must study the nature of the law of population increase and also the nature of the law of population longevity. Then, wherein does the law of population longevity lie? Since liberation, the lifespan of our people has been generally extended. Take Shanghai as an example, the average lifespan of males is 70.80 years and that of females is 75.48 years, with both figures more than 28 years longer than those of 1951. This extension has changed the historical saying, "It has always been rare for a man to live to 70 years of age," and reached an average lifespan even longer than that of the Americans, the Japanese and the Britons. Obviously, of foremost importance has been the cause in the aspect of the social system. But was this the complete and only cause? No. Causes in the aspect of nature must also be explored. In its report published on 6 January this year, "Exploring the Secrets of Longevity," the NEW CHINA NEWS AGENCY made a study of this question. A joint medical study team conducted a survey of 53 old persons 90 years or older in age amidst the Maya tribe in Brazil discovered the secrets of longevity to be: serene environment and fresh air, controlled food intake centered on a vegetarian diet, constant physical labor, optimism, openness, and refraining from anger in the face of irritating events. The team also discovered that the older generation relatives of half of these old persons also held a longevity record. This illustrates that longevity may also have to do with heredity. Natural laws and factors in the aspect of natural sciences are all worthy of our daring exploration; such a general orientation of our research in exploring demography not only from theories but also from practice is correct. We can fully expect that as we emancipate our thinking and seek truth from facts under the guidance of Marxism, our demography is bound to come later but rise higher in achieving even more gratifying advancement!

---

[1] In 'Das Kapital," Marx also discussed the impact of nature on population development. Citing one example, he said: "Why did (ancient) Egypt have such a large population?" The natural conditions of the country such as fertile soil, good climate and fresh air constituted also one of the important factors.

EARLY CRITICISM OF THE QING DYNASTY FEUDAL AUTOCRACY

Beijing GUANGMING RIBAO in Chinese 30 Sep 80 p 4

[Article by Zhang Jinfan [1728 2516 5672], Qui Yuanshou [6726 6678 3757] and Yang Kan [2799 1030]: "The Modern Struggle to Criticize the Qing Dynasty Feudal Autocracy"]

[Text] In China the concentration of feudal autocracy is expressed in the absolute power held by the Emperor. The Emperor alone is the center of the administrative, legislative, judicial and military powers and as such holds the highest power in the nation. In the wake of the ultimate development of imperial power, the Royal family and the Emperor's wives' and mother's families also shared in the glory, power and influence. Even servants and officials usurp power by becoming the Emperor's spokesmen. The Han, Tang and Ming dynasties all suffered the usurpation of power by officials. The formation of the system of feudal autocracy together with the absolute power held by the Emperor produced a unified autocratic, centralized state. This had a progressive effect on national developments. However, the misuse and corruption of this system of imperial power by beaucratic politics had a major reactionary effect on history and became an obstacle to social developments. This was clearly shown by conditions in the Qing dynasty. The goal of the Qing dynasty rulers was to scrupulously maintain their ancestral system and clan laws and repress all reforms. Up till the time of the bourgeois revolution in the west the Qing government still strangled all capitalistic developments in order to maintain the economic foundation of the autocracy--the natural feudal economy, and fell ever further behind the advanced nations. The functioning of the entire machinery of state revolved around the Emperor and the people's political initiative and progressive thoughts were smothered. "Speak but little and bow a lot" became the most common attitude and guide in bureaucratic circles. This provides a clue to the stagnation, backwardness and corruption of the Qing dynasty.

Even though the reigns Kang Xi, Yong Zheng and Qian Long were able to maintain a certain degree of national power, nonetheless, after the mid-Qing dynasty, the corrupt autocracy was in a steady decline and the Chinese people bordered on disaster. After the defeat in the Opium War the progressive people in China were awakened, and opposition to the feudal autocracy gradually became the main trend in modern progressive thought.

(1)

Around the time of the Opium War, the blows of the peasant rebellions against the Qing dynasty, the influences of the initial development of capitalism and the danger of foreign capitalist invasion caused the landlord class to produce a number of progressive thinkers. They saw the evils of rule by the feudal autocracy and made analyses and gave criticism. Gong Zizhen and Wei Yuan are representatives of this new trend of thought.

Gong Zizhen more or less understood the close relationship of the Qing dynasty feudal autocracy and the corruption of bureaucratic rule with "10,000 mute horses" in intellectual circles. He blamed the Emperor's attempt to maintain his absolute authority for the use of such high-handed tactics that "there was universal hatred for officials and everyone's honesty and sense of shame were ruined." This was accomplished by issuing such decrees and laws that the longer a person was an official the less the sense of shame; the greater the ambition the more they curried favor; the closer one's position to the Emperor the more subtle one's tricks. Officials in high positions used all their energies to judge the Emperor's likes and dislikes in order to further their own interests. They knew of nothing beyond this. To preserve their official positions they became "models of experience" in collecting their salaries without working and passing their days in a life of ease. The fate of the nation and the suffering of the people became "dark dogs under the white clouds, totally unrelated." (GUSHI GOUCHEN LUNYI MINGLIANG LUN ER, SAN, SI [THE STUDY OF ANCIENT HISTORY, ON GOODNESS 2, 3, 4]) Gong Zizhen's description of the flagrant mistreatment by the Qing dynasty rulers and the shameless corruption of the officials opened peoples' eyes to the fact that the autocracy was the source of the social problems and government corruption.

Gong Zizhen was very concerned and openly wondered if this were to continue "what would become of the nation?" This then generated the demands for a change from the system of autocratic rule. Because of the limitations of his time period and location he was unable to suggest any new system of social order, but could only "prescribe the same old cures" (YIHE ZASHI [MISCELLANEOUS POEMS]) and restore the three dukes' "discussion of the Way." His suggestions on the expansion of the authority of the high officials and for more imperial respect for the high officials had no effect on the monarchy.

In some respects Wei Yuan's discussions and criticisms of the monarchy surpassed those of Gong Zizhen. He also opposed the selfishness of the Emperor's treatment of the nation, "his power, interests and fame robbed us of our happiness and brought worry to all the people." He saw the choice between the imperial selfishness or concern for the nation as the factor which determined good government or chaos.

Wei Yuan compared the state to the human body. The Emperor is the head, the officials the hands and feet, and the people the breath. If a person wished to continue living he must breathe every minute. So the life and death of a nation is totally dependent on "taking care of the breath." Therefore, the "enlightened ruler" must "breathe with the people" and make sure that the peasants' "opinions were made known to those above." He was opposed to "partial opinions" and favored "broad opinions." The Emperor must have broad access to the people's views in order to be fully informed and wise. He should be "dictorial" in gathering correct views and not "dictatorial" in gathering individual opinions. The demand for removal of barriers between the monarch and officials and superiors and inferiors became a basic point in the later bourgeois demands for "promoting the people's rights" and "establishment of a parliament." Wei Yuan went further in saying that the Emperior is not divine, "the Emperor is made through mass agreement," which means to be produced by the masses. The Emperor is but "one of the masses" and no more. (MOGUXIA-ZHIPIAN 2, 3, 12 [WRITINGS ON AN OLD TABLET, ON GOVERNMENT, 2, 4, 12]) He did not at all believe that the Emperor was an inviolable god. On the contrary, if a country fell into chaos "the fault lay with the Emperor and the people should blame him." (SHU JINSHIWAN GU YUANYI ZHUAN HOU [WRITTEN UPON COMPLETION OF THE BIOGRAPHY OF GU YUANYI FOR THE JIN DYNASTY HISTORY]) This was a new view for those times.

After the Opium War Wei Yuan came in contact with Western forms of government and expressed his admiration. He said, "America uses tribes to represent the ruler. This solution can be universally applied without harm." Switzerland is the "paradise of the West." (HAIGUO TUZHI, HOUXU [A DESCRIPTION OF MARITIME NATIONS, POSTSCRIPT]). Although this explanation is shallow and mis-informed it nonetheless was the beginning of contact with Western political and social systems for the intellectuals and explains why they saw Western democratic forms of government as superior to the Chinese feudal autocracy. The formal suggestion that they "regard the barbarians as masters," i.e., learned from them, smashed the restrictions of the feudal aristocracy which had closed off the country. This opened the path for others to contact bourgeois thinking and start the struggle against the feudal autocracy. Wei Yuan's bold attact on "royal authority" showed a certain degree of awareness of the people's strength and wisdom, demonstrated his vague perceptions of the progress of Western democratic government and revealed the special features of early democratic thought in China. This worked to "cut through the thickets in forging a path" in setting the mood for and promoting developments in democratic thoughts.

(2)

Following the formation of anti-revolutionary forces both in China and abroad around the 1870s the government of Qing dynasty feudal autocracy daily became an evermore useful tool in oppression of the Chinese people by the foreign invaders and it declined ever deeper into corruption and reactionary mentality. After the birth of the bourgeoisie there was progress in development of thought in opposition to the Qing dynasty autocracy. This thought expressed the early bourgeois reformist ideological trend of criticism of the aristocracy as found in Western bourgeois political theory. The major representatives of this trend were Zheng Guanying, Wang Tao, Chen Chi, He Qi and Hu Liheng. After the war between China and France they gradually began to feel that the feudal autocratic government was a hinderance to the development of bourgeois modern enterprises, so they continued their criticism against this rule and advocated a constitutional monarchy. He Qi and Hu Liheng described China under feudal dictatorship as "government for selfish ends not for the public good, and unfair laws favoring some over others. The people are like children but the ruler treats them no better than slaves. The officials are like tigers yet the ruler indulges them like hawks and dogs." (CENG LUN SHU HOU [2582 6158 2579 1775]) They believed that to change China from a poor weak nation to a wealthy strong nation there must be a change from the system of feudal autocracy and the establishment of a bourgeois parliamentary system and that "prolonged peaceful government must be based on this." (XINZHENG LUNYI [A DISCUSSION OF NEW GOVERNMENT])

After the Sino-Japanese War the nation was in a national crisis of unprecedented gravity. The fate of a nation was at stake and the restoration movement reached a high tide. Under these conditions the bourgeois reform faction made an even more fierce attack on the monarchy. Yan Fu followed the Western "doctrine of social contract" in believing that the birth of the monarch was separate from divine will and that he served the people in the function of a "public servant." When the state was being maltreated because of weakness the soverign ought to "protect the people" by exerting all his energies to improve the people's abilities, morals and strength and thus make the nation "stronger and more wealthy day by day." The inability to perform this would result in loss of position as the people have the power of recall. From this we see that Yan Fu's concept of the "sovereign" was no longer the Emperor of the system of the feudal autocracy. He believe that after the Qin dynasty all emperors were "nation-stealing bandits" who made many laws to "protect what they have stolen" and "prevent mass opposition." These laws "destroyed the people's talents, scattered their strength and weakened their morals. The result was a weakened nation which could not resist an invasion. To demonstrate Chinese weakness and Western strength he made a comparison. "The Westerners describe their rulers as follows: The state is the public property of the people and the nobles, generals and ministers are public servants of the state. However, in China the ruler is described as follows: The Son of Heaven owns the four seas and has innumerable subjects. . . . This being the case, the people of Western nations have more respect and honor than our nobles, generals and ministers, while the Chinese people are mean and humble, no better than the offspring of slaves. If there is war the citizens fight for public property and public interest, while in China it is slaves fighting their masters' interests. What hope of victory is there if slaves must fight against people so ennobled?" (BIHAN [6582 7281]) Although these comments give excessive praise to bourgeois social and political systems they do reveal the oppression and enslavement of the people by autocratic rule and from the viewpoint of the weakening of the state are quite correct.

Tan Sitong made an even stronger criticism of the feudal autocratic dictatorship. He issued a call to "cast off the neck of the monarchy" and showed a stronger more combative democratic spirit. Tan accused the Emperor of believing the entire nation to be his "personal property," of "wasting the nation's life's blood and vitality" and of being vain and licentious. He accused the Emperor of oppressing the people in "unimaginably harmful ways and of invoking the crime of "despoiling joyous occasions" to oppose reforms, all of which resulted in numerous tasks remaining undone. He thoroughly cursed the Emperor as an "enemy of the people" and cursed the dictatorship as "benighted, obstructive and unethical." He advocated "slaying the Emperor" and abolishing the monarchy, thus demonstrating his especially negative attitude toward the royal system.

He also suggested a "doctrine of social contract" similar to that proposed by the enlightened Western bourgeoisie and used it to refute the heart of the system of feudal autocracy-royal power. He pointed out that the relationship between the ruler and the people was: "First there was the people and then there was the ruler, so the ruler came last and the people are basic." He believed that, "those that rule should perform for the people, the officials aid in the performance of the people's affairs." If the ruler is not suited to his position, the "removal of the ruler" is a matter of course. (REN XUE [PERFECT VIRTUE]) This refuted the concept of divine ruler found in the theory of "rule by divine right" and argued that the people have the right to remove the ruler. Although his presentation was not very scientific, nonetheless it was seen as a powerful attack against the divine right of rulers. Tan Sitong openly demanded that bourgeois freedom and equality replaced feudal obligation and advocated using the "people's rights" and "democracy" to transform the feudal autocracy. He once also united criticism of the monarchy with anti-Manchu feelings. In the view of Tan Sitong the entire Qing dynasty was thoroughly corrupt, "like a dark prison without a single law or policy worthy of being recorded. It is thoroughly vexing." (ZHI WANG KANGNIAN SHUER [A LETTER TO WANG KANGNIAN])

On the basis of criticism of the system of feudal autocracy Kang Youwei and Liang Qichao suggested the establishment of a parliamentary system. Kang Youwei believed that "all strong nations have a constitution and a parliament. In the parliament the ruler and the people discuss laws of the land." Therefore, China "ought to establish a constitution and a parliament and let the people share in the many affairs of state, thus forming a three-way system of authority." This was seen as beneficial in transforming the system of feudal monarchy into a capitalist system of constitutional monarchy. (QING DING LIXIAN KAIGUOHUI XI [AN ANALYSIS OF THE DEMAND FOR A CONSTITUTION AND A PARLIAMENT]) Liang Qichao believed that in China the feudal dictatorship had "taken over each person's right of self-determination and invested this in a single individual, so one person had taken away the rights of a multitude." (LUN ZHONGGUO JIROU YOUYU FANGBI [CHINA'S WEAKNESS ARISES FROM INDULGENCE AND ABUSES]) The result was that for a long period China had "accumulated weaknesses." YU YAN YOULING XIANSHENG SHU [A LETTER TO MR YAN YOULING]) He herein emphasized that the problem of "people's rights" is central to the success or failure of the nation. He clearly pointed out that the "source of wealth and power" of Western capitalist nations lies in the capitalist political system. He heaped lavish praise on parliamentary government and advocated establishing a constitutional monarchy in place of the feudal autocracy.

From the above we can see that in the latter part of the nineteen century there was much more opposition to the feudal autocracy than during the Opium War. Moreover, there were other differences. At the same time there was a development from minority criticism into an ideological trend of definite scope. This opposition had greater influence in society and made an even greater attack on the corrupt autocracy. This then simulated a wild hatred of reactionary forces. The feudal autocratic clique under the leadership of the Nala clan carried out a bloody repression of the Constitutional Reform and Modernization Movement by the bourgeois reformist faction. This event demonstrated the stubbornness of the feudal autocracy and demonstrated that victory in the struggle against it was no easy matter.

(3)

The lesson taught by the successive failures of the Reform Movement of 1898 and the Boxer Rebellion two years later made some patriots realize that in order to develop capitalism and save the nation it was necessary to overthrow the "foreign ruling house" of the Qing dynasty autocratic dictatorship. Thereupon, the bourgeois revolutionary faction as represented by Sun Zhongshan advocated the violent overthrow of Qing ruling house. There quickly arose a democratic revolutionary trend of thought advocating the establishment of a bourgeois democratic republic, and this became the mainstream of progressive thought in twentieth century China. From this moment China entered a new stage of thought in opposition to feudal autocracy.

The book GEMING JUN [THE REVOLUTIONARY ARMY] by Zou Rong [6760 1369] which was written in a sharp, incisive style became a call to arms in the attack against the autocratic system. He said that the autocratic form of government made successive rulers believe that the whole nation was "the private property of a single ruling family" and that "none of the people have any equality or freedom." Therefore, it was necessary to use revolution to "slay the autocrats who rule us and thus restore the human rights accorded by Heaven," to "sweep away several thousand years of autocratic rule and escape from several thousand years of slave-life mentality in order to purify the Chinese homeland and turn the decendants of the Yellow Emperor into the fathers of a new nation." He also made a rational explanation of the need to overthrow the Qing dynasty autocratic dictatorship and enthusiastically praised revolution as a "general rule of evolution," "a universal truth," and "the innate wisdom of the people." He moreover offered the outline for a Chinese nation based somewhat on the French declaration of human rights.

Chen Tianhua verified the need for the elimination of the autocracy in order to forge a democratic republic. He said, "all those who have recently made comments on the comparative forms of government say that democracy is the best. The cry of nationalism is heard daily. The call is for the removal of the evil form of the old government and the implementation of the very best and most beneficial form of government, a republic." He believed that "for one person to be a god above reproach and for one family to hold power over a whole nation" was not compatible with the trends of the time. (LUN ZHONGGUO YI GAI CHUANG MINZHU ZHENGTI [ON THE BENEFITS OF DEMOCRATIC GOVERNMENT IN CHINA]).

The great pioneer revolutionary Sun Zhongshan was influenced by theories based on Western bourgeois politics. He summed up recent historical experience in opposition to aggression and in opposition to the Qing dynasty feudal autocracy, outlined modern ideological trends opposing feudal autocracy and offered his theory of the three peoples principles. The main organizational parts were opposition to feudal autocracy, the establishment of a bourgeois republic and the implementation of a bourgeois democratic system of civil rights.

Sun Zhongshan was profoundly aware that if the Qing court and the autocratic system were not quickly overthrown it would be difficult for the impoverished and weakened nation to avoid disaster from outside powers. He felt a passionate and lofty sense of responsibility to the nation and the people. He took an even stronger democratic revolutionary stance in criticizing and exposing the evils of the Qing dynasty autocratic rule. As he pointed out, "The present government of China can be summed up in a few sentences: In all matters whether they pertain to the royal court, the people's affairs or even local matters, the common people have no rights of expression or information. The officials have the power to render judgments, and when the people are abused there is no one to turn to. . . . The people's ears and eyes are blocked and their intelligence is obstructed. Even more frightening is that political documents are not available and the newspapers are severely restricted.... As for the invention of new implements and the creation of new ideas, the people are afraid of the death penalty and dare not act. There is not a single Chinese person who is not covered in darkness." (LUNDUN BEINAN JI [A PRISONER IN LONDON]) These words used clear democratic concepts to expose the oppression of autocratic politics, point out the lack of people's rights under autocratic dictatorship, explain why autocratic dictatorship is an obstacle to social progress, scientific culture and the development of production technology, and point out that it is a factor in making

China remain a poor, backwards nation. He concludes from this the liberation of China from "a thousand years of poisonous autocracy," and "the implementation of people's rights" "cannot be delayed." (MINBAO FAKANCI, SANMINZHUYI YU ZHONGGUO QIANTU [INTRODUCTION TO THE 'MINBOA,' THE THREE PEOPLE'S PRINCIPLES AND CHINA'S FUTURE])

In the TONGMENGHUI XUANYAN [DECLARATION OF THE TONGMENG SOCIETY] Sun Zhongshan clearly called for the "expulsion of the Manchus, restoration of Chinese rule, the establishment of a nationalist state and the equality of rights." He made a further description of his plans for establishing the nation, "after the popular revolution establishes a nationalist government all citizens will be equal and can participate in the government. There will be the general election of a president. A parliament will be formed of publicly elected representatives, and it will formulate a national constitution to be obeyed by everyone. Anyone who dares declare himself Emperor will come under open attack by all!" This has three levels of significance: the first is the armed struggle for power; the second is the establishment of a bourgeois parliamentary republic; the third is the prevention of any restoration of a feudal monarchy. Sun Zhongshan is worthy of being called a democratic, revolutionary warrior. He demanded the complete overthrow of the dictatorship of the Qing dynasty feudal monarchy, implemented the highest form of democratic republic found within the bourgeois revolution, and moreover carried out a struggle against the bourgeois royalist faction that wished to implement the perverse theory of a constitutional monarchy. "Anyone who dares declare himself Emperor will come under open attack by all!" This vigorous battlecry manifested his brave opposition to the feudal autocracy and his extreme faith in the principles of a democratic republic, and at the same time demonstrated the bravery and determination of the revolutionaries to fight for and protect democratic rights.

The above material clearly shows that the ideology of the bourgeois revolutionary faction had surpassed and made great improvements over the early levels of opposition to the Qing dynasty feudal autocracy. The modern democratic thought in opposition to feudal autocracy promoted a high tide in the older democratic revolution and won broad sympathy and support. Under the leadership and struggles of the bourgeois revolutionary faction the entire population of China arose in opposition to the Qing dynasty, finally carrying out the revolution of 1911, which with one stroke overthrew the feudal autocracy of the last two thousand years and established the republic. However, the weak bourgois revolutionary faction bowed to the might of imperialism and feudalism and China soon became republic only in name. Under the northern warlords government was actually a dictatorship by the landlord-comprador class. There was only the outline of a nationalist state, the people's will and rights were all destroyed.

The modern struggle to criticize the Qing dynasty feudal autocracy expressed the important aspects of a struggle between progressive and reactionary forces and between revolutionary and anti-revolutionary elements, and expressed the struggle between advanced capitalist modes of production and corrupt feudal modes of production. It reflected historical trends in social developments, heightened the people's awareness of democracy and mobilized the organization of mass opposition to the Qing dynasty feudal autocracy. However, because the Chinese economy was undeveloped, the national bourgeoisie was very weak and the world had already entered the imperialist era the effectiveness of the Chinese struggle against feudal autocracy was not great. The national bourgeoisie lacked the power to change or eliminate the economic foundation of feudal autocracy--the national feudal economy, its social foundation--

the feudal clan system and its spiritual supports--feudal relationships and morality. Therefore, the traditions of the Chinese feudal autocracy were like "historical inertia" which hung over the whole society. Although they were later swept away by the new democracy and the socialist revolution their poisons are strong even today so we must still carry out an unrelenting struggle against them.

ARTICLE DISCUSSES STATUS OF LAW IN CHINA

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 1, Feb 80 pp 7-12

[Article by Dong Likun [5516 4539 1024] of the Legal Research Institute of the Shanghai College of Social Science: "No One Can Stand Above the Law: A Discussion of the Relationships Between the Law and Individuals, the Party, the Government and Policies"]

[Text] Our socialist laws reflect the will of all the people. They are vigorously enforced standards of behavior which all people must respect. All individuals, organs of state and social groups must obey the law, no one can stand above the law. Therefore, at the Fifth National People's Congress Comrade Ye Jianying strongly pointed out, "China's socialist laws must have the greatest possible authority." Since the founding of the nation we have enacted a great many laws. If these laws have the highest authority and if everyone from the highest state and party leaders to each citizen was able to consciously obey the law and work according to the law then the plot of Lin Biao and the "gang of four" to usurp party and state power could not have succeeded and the nation would not have suffered ten years of chaos. The overturned cart is a warning to the carts behind. We must honestly sum up our historical experiences, discover the reasons why Chinese laws lack authority, make an honest analysis and suggest solutions in order to establish supreme authority for socialist laws and truly implement socialist legal rule.

The Relationship Between Law and Individual Will

An extremely important problem in imparting high authority to our laws is to clarify the relationships between the leaders, individuals and the law. For a long time the function and authority of the individual have had inappropriate influence while the law has been secondary to the individual. During the Cultural Revolution Lin Biao made perverse slogans giving ultimate authority to the individual. He turned our leadership's words into "the highest directives" and "the highest law" while not even glancing at the constitution or the law. Even after smashing the "gang of four" the leadership's words still remain in absolute authority in the minds of some people, and the two "fanshi" [0416 2508] theories are the most recent forms of expression of the absolute authority of such leadership. Those who adhere to this viewpoint of the two "fanshi' theories are not afraid to go against party decisions, violate state laws or harm the party and the state. They only fear violating the words and phrases of such leadership and forcefully work according to these two "fanshi" theories. One can hardly imagine that operating according to such a viewpoint would maintain the authority of our state laws!

Is the individual subject to the laws or are the laws subject to the individual? Marx has expounded on this in a profound, enlightened manner. He said, "Law ought to be an expression of the interests and needs generated by the whole society and by a particular concrete mode of production, rather than the irresponsible acts of a single individual." (MAKESI-ENGESI QUANJI [THE COMPLETE WORKS OF MARX AND ENGELS] Vol 6, p 292) Marx very clearly explains two problems: (1) Law is the product of the development of a particular state of the mode of social production, which is the division of social classes, and is a tool by which the ruling class rules and oppresses the class which is ruled. (2) The law is a tool which manages the state and adjusts the internal relationships within the ruling class. The ruling class and all its representatives must equally obey the law. The first problem can be understood by everyone. The second problem has long been ignored by people. In actuality, it is only when the law is thoroughly functioning in making adjustments to the internal relationships within the ruling class that this class is able to maintain its status as such. As everyone knows, in a class society the so-called class rule cannot be carried out by member of the ruling class, but is accomplished through a ruling group composed of representatives of the ruling class. Then, how does the ruling class select its representative and how does it organize this ruling group? How does the ruling group focus its class will, implement its class mission and protect its class benefits? All these problems were solved through the use of laws. "Law expresses the winning of the authority of state government." (LIENING QUANJI [THE COMPLETE WORKS OF LENIN] Vol 13, p 304) "If the will is that of the state then it ought to be expressed as the laws enacted by the state organs. Otherwise the word 'will' is nothing more than an empty word." (LIENING QUANJI, Vol 25, 75) The law unquestionably not only reflects the will of the ruling group, it also reflects the will of the general membership of the ruling class. The general membership of the ruling class uses laws to oversee the activities of the ruling group in power and moreover enacts laws to share in the benefits obtained through class rule. The ruling group in power uses law to exercise rule over the whole society and also uses law to handle criminal elements within its own class, protect class unity and to more effectively repress resistance from the ruled class in order to maintain the status of rulers. Therefore, the reckless behavior and lawbreaking of any individual is contrary to the overall interests of the ruling class and must be subjected to the unified opposition of the entire ruling class. Individual submission to the law is a special form of submission by the individual to the overall group (class). Past and present both in China and abroad there are countless examples of ruling class leaders who broke the law and were deprived of power.

According to Chinese historical records Prince Taijia of Yin "flaunted the laws of Tang and was immoral" so the minister Yi Yin placed him under palace arrest. (SHI JI, YIN BENJI [THE HISTORICAL RECORDS, THE BASIC ANNALS OF YIN]) Yi Yin was known as the most virtuous minister of antiquity. Prince Chang Yi of the Han dynasty was enthroned as emperor but his behavior "destroyed the rites between emperor and prince and brought chaos to the Han legal system." he was finally deposed by Huo Guang who could be still regarded as a loyal Han dynasty official. (HAN SHU, HUO GUANG ZHUAN[THE BOOK OF HAN, THE BIOGRAPHY OF HUO GUANG]) For an official to depose an emperor is a truly unforgivable act, but as the deeds of Yi Yin and Huo Guang protected the overall interests of the ruling class they were praised by feudal historians. Since ancient times there has been the saying "the ancestral temple honors the lord." (HAN SHU, HUOGUANG ZHUAN) It can be seen that no matter whether it is a class which rules over slaves or is a feudal ruling class the interests of the entire class always come before the interests of the individual. The bourgeoisie are naturally just the same. Everyone knows that in recent years the president and officials of capitalist nations have been forced out of office because of criminal behavior.

China is a socialist nation under a proletarian government, the law reflects the will of all the people, leadership cadres of all levels are public servants who carry out the will of the people, the public servants must carry out the will of their masters and serve their masters. How could the masters be expected to obey the servants or permit any reckless behavior by the servants? The Paris Commune, the world's first proletarian government, long ago set an example for us. All worker personnel of the Paris Commune were chosen directly by the people and the people used the law to oversee their work. Moreover, the worker personnel could be recalled at any time for transgressions against the people's will in the performance of their duties. All worker personnel of the state must give absolute obedience to the law and obey the people's will. This is an important lesson which the Paris Commune has given to us.

Will not emphasis on individual obedience to the law negate the effectiveness of the leadership in managing the state? It will not. The reason why the great leaders of history were great and why proletarian leaders became leaders is because they were very skilled in focusing the hopes and needs of their class and they became its representatives. If these great leaders dwell on a lofty plane above the class members and do not reflect or represent the interests of or work for the hopes of the class members then who would qualify them as a representative and who would ever say they were great? All of our state and party workers must carry out a system of democratic centralism, the cadres must carry out a work style of "coming from the masses and going among the masses," must concentrate on mass needs and wishes, must go through normal organizational and legislative procedures, and must centralize the common needs and desires of the masses in the party and the state policies and laws. Without proletarian leaders and without all levels of leading cadres in the party and state these important tasks will not be properly accomplished. However, any departure from the vital livelihood practices of the proletariat and the broad masses would leave all policies and laws like rivers without sources, trees without roots. The means of concentrating on mass hopes and needs and transforming the vital livelihood practices into party and state laws requires the complete utilization of the skills of the proletarian leadership. On the second day after the October Revolution the newly born Soviet government adopted Lenin's proposal to enact the famous "Peace Act" and "Land Act." These two acts reflected the existing hopes of the Russian masses and greatly stimulated the progress of the socialist October Revolution. The acts were proposed by Lenin, they were promulgated by the Soviet government, they reflected the hopes of the Russian proletariat and masses, and this entire process reflects the function of the proletarian dictatorship in formulating new laws.

In the question of the relationship between the individual and the law in the proletariat, each person must obey the law and the words of the individual are no substitute for the law, just as in the case of the words of the leadership. The proletariat strongly advocates that "all people are equal before the law." Any person who breaks the law is subject to legal punishment. An important French thinker of the Age of Enlightenment J. J. Rousseau said, "No matter what the form of government in a country, any person within the scope of its jurisdiction who is not required to obey the laws will inevitably come to control the rest of the people." (LUN RENLEI BUPINGDENGDE QIYUAN HE JICHU [DISCOURS SUR L'ORIGINE DE L'INEGALITE DES HOMMES] p 52) This is a profound statement. Feudal society places the feudal ruler above the law, implementation of "authority rests solely with the emperor," and "there is no reverence for the law as such." Therefore, feudal society has no democracy and no rule by law, all it has is the despotism of the feudal ruler. We are the revolutionary proletariat and want not only to liberate ourselves but also liberate all mankind. How could the proletariat ever permit any control by the will of other people?

Nonetheless, we cannot but notice that we have had several thousand years of feudal society and feudal thought has deep roots. At the same time, for a long time since founding the nation we have virtually ignored the law and with the added destruction of Lin Biao and the "gang of four" we now are plagued with the remaining poisons of applying the laws to suit a person. Therefore, we cannot but operate according to the law and truly make everyone equal before the law. This concerns not only the authority of our socialist laws but also concerns the prestige of the party and the state as well as the future of rule by socialist law. We must strictly enforce the laws. All people who break the law must be legally and equally punished no matter how great their past glories or how high their status.

The Relationship Between the Law and the Party and Government Organs

There are now quite a few people who use the name of the party or an organization to place themselves above the law, resist implementation of the law and even transgress against it. For example, the SENLINFA [FORESTRY LAWS] were enacted but some rural brigades, communes and even some county committees openly broke the Forestry Laws by cutting and harming large areas of the national forests (See the RENMIN RIBAO for 6 August 1979). The State Council enacted the SHUICHAN ZIYUAN BAOHU TIAOLIE [WATER PRODUCTS AND RESOURCES PROTECTION ACT], but in the Dongting Lake region some factories, communes and farms still knowingly harmed state water products resources (See the RENMIN RIBAO for 25 July 1979). On November 17th of last year the RENMIN RIBAO reported that in Jilin province certain brigades, communes and commune-run enterprises together with state and collective units acted entirely for their own interests under their leadership to organize the large-scale theft of enormous amounts of imported oil-field implements from the state. This created a serious incident which resulted in an oil-field shutdown. The stolen implements were valued at several hundred thousand yuan. Some places and units even enacted land policies and land laws contrary to state laws. Without doubt, if the above-mentioned deeds were the acts of ordinary individuals they would quickly have been placed in custody, but because they were done by state or enterprise units even loud protest by the masses would be of no avail. Such conditions have seriously endangered the implementation of our state laws and have harmed the authority of our socialist laws.

Our party regulations clearly stipulate that the most important task of party organizations in all levels of state organs and in all enterprise units is to guarantee the thorough implementation of party policy and state laws and regulations. They are the tools for the complete implementation of party policy and state policies and laws. How then could some party organizations place themselves above the law? This took place under certain conditions. First, for a long time, especially during the cultural revolution, we placed unsuitable imphasis on centralized party leadership and had the party leadership monopolize matters. Some people mistakeningly believe that since the party provides leadership in all matters we should obey the party committee in all matters and the law is no exception. It was natural that the "party committee should be superior to the law." Second, in practice some individual party committees actually placed themselves above the law. They said that "independent judgements" and "obeying only the law" was anti-party, that it "used law to oppose the party" and made repeated criticisms. Examination and approval by the party also became systemized and for a long time there was the idea that the party committees were above the law. Third, in cases where individuals made false records in the name of their organizations there was no way to correct the matter and all cases were determined by the party committee according to what the secretary of the party committee said. Even if this was contrary to state law the people could do nothing about it. Therefore, we had to carry out re-education regarding the relationship between the party committee and the law.

As everyone knows our constitution was drafted by responsible persons of the party central and by persons from all the various organizations and was discussed in committee. It also was passed by the state's highest organ of authority--the National People's Congress, embodies the will of the entire party and all the people and represents the shared interests of all the people. If state laws are subject to the decisions of any level of the party then in truth the group interests of the entire party and all the people are subject to the interests of an individual or a small group. This is an absurd theory and a dangerous practice.

The party's judicial work is not dominated by the party committee. The party's most important task is to guarantee the complete implementation of the state laws, to guarantee the independent performance of the judicial organs and see that they are not subject to takeover by or interference from other government organs, groups or individuals. The state is like a human body and is composed of various components. The various parts have mutual restrictions and provide mutual support, but no one part can substitute for another. The brain can direct the work of a person's hands and feet but cannot perform that work in place of those organs. The judicial work of the party leadership has the same principle. Those who believe that only the party committee can judge cases and that they are party leaders only if the party interferes in judicial work just don't understand this principle. Actually, the independent performance of duty by the judicial organs is not independent of the party leadership. Each level of the judicial organs must make work reports to comparable levels of the National People's Congress and the responsible standing committees, and at the same time, each level of the judicial organs also has a party organization. Isn't this party leadership? For a long time we ignored the specific function of the judicial organs and were unable to guarantee the thorough implementation of the state laws. This fundamentally weakened the party leadership.

We now have a real need for energetic construction of the judicial organs. We must especially do research on how the judicial organs are to carry out legal supervision of all levels of state organs and enterprise units. As for the problems of how to exercise investigative authority and judgemental authority over their illegal acts, in our search for solution it is worthwhile to examine the means used in other countries. (Miersen) a professor of law at the British Academy recently told us in an information exchange that before World War II British law prohibited citizens from suing state organs and only permitted suits against individual government workers. Therefore, the government had the potential for great incursions in the rights of citizens and they suffered consiedrable loss of rights because of this. After the war British law not only permitted legal action against the government, the parliment also established a new special agency to receive accusations at all levels of govennment and to be responsible for investigating these accusations. England also established an administrative court to resolve disputes between citizens and the government. The Yugoslav expert Professor (Pupofuji) emphasized a particular point during an information exchange. In Yugoslavia when any unit of a state organ, district or enterprise breaks the law it is treated just like any natural person in the pursuit and determination of legal responsibility. He gave the example of a municipal committee making a wrong decision, one which broke the law. This committee could be prosecuted in order to determine their legal responsibility. The Yugoslav Constitutional Court has charges of criminal cases involving units of government agencies, districts and enterprises.

After the Socialist October Revolution Lenin advocated the establishment of a Worker-Peasant Procuratorate in order to oversee the work of the agencies of the newly formed Soviet government. Lenin said, "The Worker-Peasant Procuratorate is established for our government agencies and its activities should without exception touch all government agencies--local, central, commercial, administrative, educational, theatrical and so on--in short, no agencies are to be excepted. (LIENING LUN GUOJIA YU FA [LENIN'S DISCUSSION OF THE STATE AND THE LAW] Vol 3, p 310) The Worker-Peasant Procuratorate was of great use in ensuring that all levels of state government thoroughly carried out Soviet laws, regulations and policies and protected the new Soviet system of government.

The early experiences of England, Yugoslavia and the Soviet Union teach us that full implementation and application of the nation's laws requires not only that all offenders be punished but that all state agencies, collectives and enterprises that break state laws are to be prosecuted to the extent of their responsibility, and that moreover there should be a special agency to perform this work. According to article forty-three of the constitution, "The Supreme People's Procuratorate shall conduct investigations of all workers and citizens in State Council departments, local agencies and state agencies who do not obey the constitution and the law." From this we see that all state organizations are subject to investigation and prosecution just the same as any individual person. In the past we enacted many laws but made no provision for implementation by any particular agency so that after a law was broken there were no places where the masses could go to lodge a complaint. It was the relatively common condition of "having laws but no enforcement." Lenin has told us, "If there is no agency to force the people to obey the laws and regulations then they have no authority at all." (LIENING QUANJI, Vol 25, p 458) We now must clarify the relationships and individual professional responsibilities of the legal and judicial agencies with party committess on all levels and the state agencies, greatly strengthen and build up the investigative agencies, ensure the independent investigative authority and judicial dicisions of these agencies, truly operate according to the constitution and the law, ensure that the judicial agencies supervise the implementation of the laws by all units of the state agencies, collectives and groups and enterprises and prosecute any violations of our state laws. We also ought to have a special agency to accept and handle any exposure of and complaints against the illegal acts of any units of state agencies and enterprises made by the masses. In short, we must take thoroughgoing effective action to ensure that our laws are fully implemented by all departments, districts and units.

The Relationship Between Law and Policy

The substitution and negation of law by party policy has prevented China from fully and truly implementing its national laws, and for a long time the ideology of legal nihilism has been a major factor preventing their implementation. Hasn't someone called us to account by asking, "You advocate the authority of law, but where does that leave the party and party policies"? Therefore, if we don't clarify the relationships between policy and law our socialist laws are but empty words.

Theory and practice tell us that if party policy replaces the law the alliance between the proletariat and the other classes will be damaged and the proletarian revolutionary activities well be seriously endangered. Everyone knows that the party is a class organization and that the communist party is the vanguard of the proletariat. Its guiding principle, line and policies are formulated by the party's All-China National Congress and the central committee which collectively reflects the hopes and needs of the proletariat. The laws express the national consciousness and are formulated by the nation's highest power structures. The nation's highest power structures not only have proletarian delegates but also have representatives from all classes with which the proletariat has alliances. It also has representatives from the socialist workers and from patriots who protect socialism and national unity. Together with the proletarian representatives they participate in discussing and determining our national laws. To replace laws with party policies is to deprive all the non-communist party political factions, the various classes and levels of their legislative rights. This results in harm to the efforts of the proletariat and socialism. Lin Biao and the "gang of four" carried out their extreme "leftist" policies, trampled on the law, destroyed the political alliance, stopped the normal activities of the National People's Congress, and carried out the "centralized leadership" of their gang and the results brought a great disaster to our party and the nation. Could we ever forget this painful historical lesson?

Another reason why party policy cannot simply replace laws is because policy and laws have different modes of expression and different means of implementation. Party policy is the party's guiding principle and the concrete manifestation of the party line. It has a guiding function for our practice and generally is relatively involved with principles. The law is a standard of behavior which everyone must obey. The definition must have clear content and make sharp distinctions. The law must clearly define what can be done and what can not be be done. Implementation of party policies depends primarily on persuasion and education, while the laws depend on enforcement by the state. When a law has been broken the punishment must be administered and there is no room for discussion of the matter.

Party policy cannot replace the law, however legislative action can change a policy into a national law. As Engels pointed out, "All needs of citizens and society--no matter which class is in control-- are still subject to the will of the nation so that the laws can be expressed in a form that can be effectively acted upon." (MAKESI-ENGESI WENXUAN [SELECTED WORKS OF MARX AND ENGELS] Vol 2, p 393) Comrade Peng Zhen [1756 4176] said, "Law is the expression of the codification of the party central's direction and policy and is the embodiment of the relatively mature and proven party practices in the form of laws." (See the RENMIN RIBAO for 29 July 1979) Obviously in China to offend the law means to offend party policy and to obey the law means to obey the party leadership. Without doubt all party organizations, groups and individuals must without exception carry out party policy just as they carry out the law. All decisions, directives and documents must be carried out to benefit the law and cannot be in conflict with the law.

The law is a special form of party policy and in the great majority of cases the law and party policy are unified. However it is hard to avoid contradictions between law and policy. The means of resolving such contradictions is not only related to trust in the law but is related to the existence of the socialist legal system. Most of the time in the past, we over-emphasized the idea that laws must serve the needs of the conditions of class struggle and when there is a contradiction between law and policy the law must stand aside even to the point where party policy replaces or negates the law. For a long time the broad masses lacked faith in our law and when cadres felt that laws were too binding they ignored or negated them. The fact that after 30 years of national construction we still do not have a complete legal system is definitely related to this way of doing things. "In a nation without an unwavering set of laws the people have no basis on which to act." Because we lack a stable set of laws the "gang of four" had an opportunity to seize power, the party and nation fell into a long period of chaos and there was fundamental harm to the proletariat and the masses. Practice proves that emphasis on the subservience of law to policy is extremely harmful. We must absorb the lessons of our past experiences and when there are contradictions between the two the law must take the lead. We must solve our problems according to the spirit of the law and protect the stability and authority of the law.

Of course a law once enacted is not beyond change. If a law has fallen behind conditions in construction or in the revolution the spirit of the policies can be followed to use the state legislative organs to eliminate, modify or replace the law. Lenin said, "If the old laws won't do, the already changed conditions then require that they be transformed, so they ought to be changed." (LIENING QUANJI, Vol 28, p 204) What we emphasize is that the elimination, change and enactment of laws must be undertaken according to a strict legal process by the appropriate legislative organs. No person's words or any group's decisions or any conditions must be allowed to arbitrarily replace the laws with policy. Recently the standing committee of the National People's Congress passed a resolution extending the life of all laws and regulations except those which conflict with each other. The National People's Congress and its standing committee are our only legislative bodies and without their consent no laws can be changed or eliminated.

We have discussed the relationships between the law and the leadership, the party committee, the state agencies and policy. For a long time these relationships were overturned in China, and because they were overturned our laws lacked authority. We must now correctly handle these relationships. In terms of theory we must clarify the problems, in terms of practice we must resolutely follow the laws in our operations. We must reach the state where there are laws to obey and with mandatory observance of them, and where infractions of the laws are investigated and where severe punishments are carried out without exception. Our socialist laws will then possess the greatest possible authority and only this can guarantee peaceful unity of the political situation and promote the smooth progress of the "four transformations."

REGIMENT PICKS NEW LEADERS BY DEMOCRATIC PROCESS

Jinan DAZHONG RIBAO in Chinese 7 Oct 80 p 1

[Article by Ji Xuan [3444 1357]: "Integration of Recommendation by the Masses and Examination by the Leadership Is a Good Method"]

[Text] Recently, a certain regiment of the Jinan Units, under the guidance of the higher-level organizational work team, used the method of integrating recommendation by the masses with examination by the leadership in selecting successors in forming the regiment's leading group.

This regiment has been engaged in this work since the last third of July. They--the regiment--first of all concentrated on the cadres of the entire organization and the cadres at the company level and above, carried out ideological mobilization and the study of relevant documents so that the masses knew the policies well. On this foundation, they used the method of having the masses write down secretly their opinions, writing their recommendations for whom should be selected, what kind of post he should hold, and the reasons for the recommendation on a printed form. Afterward, the work team gathered and studied the forms, made an overall appraisal, examined the candidates, determined the objectives of the selection process, put forward a plan for the composition of the leading group, and finally reported it to the higher-level party committee for its approval. By adopting this method, the political ideology, military techniques, professional level, organizational ability, and confidence of the masses, as well as age, physique, and cultural level, of the members making up the leading group were all fairly good.

Practice proves that the integration of recommendation by the masses with examination by the leadership in selecting successors has the following advantages: First, it speeds up the process of rejuvenating the leading group. Before readjustment of the eight persons in the regimental leading group, seven were overage. The average age of the group formed by the democratic recommendation is now 37.5 years, 6.1 years less than that of the former group. Second, it is of benefit in discovering talented persons and leaders who know their subordinates well enough to assign them jobs commensurate with their abilities. For example, Tian Hongchi [3944 3163 3069], former deputy political instructor of the 3d Battalion, received the most recommendations from the masses for the post of director of the political department. A thorough examination of him by the work team proved that the views of the masses were correct and thus unified the leadership's views. Tian Hongchi was promoted to be director, skipping intermediate ranks. Third, democratic recommendation provides a good education for cadres. The people of this advanced group are all topnotch people in the regiment. Regimental commander Wang Futian [3769 1381 3944] is solid and experienced in his job, well versed in the artillery soldier's profession and highly trusted by the masses. Political commissar Li Guangping [2621 0342 2494] has been a company political instructor and a battalion political instructor for many years, and has comparatively rich experience in basic-level work. Chief of Staff Li Zhijun [2621 1807 6511] has a fairly high level of military techniques and staff work, and is bold, resolute and vigorous. Now, the leading members of this regiment are enthusiastically grasping their work and vigorously "fighting" at their respective work posts.

FULL-TIME MILITIA CADRES AGING, YOUTH NEEDED

Jinan DAZHONG RIBAO in Chinese 14 Oct 80 p 3

[Article in "Notes on Militia Work" column by Wang Wanchang [3769 2429 2490] and Pan Yusong [3382 3768 2646]: "Ranks of Full-Time People's Armed Forces Cadres Must Be Rejuvenated"]

[Text] Recently, in continuing to gain an understanding of militia work, we feel profoundly that to effect the rejuvenation of the ranks of full-time people's armed forces cadres is an important question in building up the militia. At present, it is fairly common for full-time people's armed forces cadres to be too advanced in years. According to our understanding, many of them at the county level are 40 or more years old, and there are commune people's armed forces department heads who are over 50. If this situation is not changed, it is bound to affect the development of militia military training and the building up of the militia.

Therefore, we should vigorously engage in the work of selecting young cadres, striving hard to create a full-time armed cadre contingent that is young, possesses a definite military and political quality, and is full of vigor and vitality. According to the traditional method of selecting full-time armed cadres, first, they can be selected from among specialized, demobilized armymen and, second, they can also be selected from among outstanding militia cadres and others who are suitable for this type of work. At present every year a group of specialized demobilized armymen come to the localities, and there are also many outstanding militia cadres who have both ability and political integrity. For one county, there are many persons who are suitable for and ready to do militia work. It will not be difficult to select several tens of young cadres if we carry our work into the family household.

From the long-term point of view, we ought to set up a necessary system for maintaining the youthfulness of full-time armed cadres. Departments concerned can, according to actual conditions, make rules that separately require youthfulness for secretaries in charge of people's armed forces and for people's armed forces department heads, thereby systematically insuring the youthfulness of people's armed forces cadres. To set up a fixed system that puts an age limit on cadres engaged in people's armed forces work will also be of benefit in making satisfactory arrangements for full-time people's armed forces cadres.

The rejuvenation of the ranks of full-time people's armed forces cadres is not only a matter for the people's armed forces department but is a matter for party committees at every level. The party committees should, together with the people's armed forces departments, get a good grip on this work and vigorously coordinate with the departments in selecting, examining, and approving young full-time people's armed forces cadres, and conscientiously solve problems that arise in this process. For cadres that are not suitable for continuing people's armed forces work, they must, according to the individual situation, make appropriate arrangements.

MILITARY AND PUBLIC SECURITY

MATERIAL BASE SAID NECESSARY FOR GOOD MILITIA WORK

Jinan DAZHONG RIBAO in Chinese 14 Oct 80 p 3

[Article by Wang Zhaozhe [3769 0340 0772]: "Getting a Grip on Foodgrain and Money Promotes Militia Work"]

[Text] In the past several years in Zhaoyuan County production has greatly developed but there are still many production brigades in which production depends on loans and the commune members do not have money to spend. The militia work in these production brigades, in which life passes in this kind of "poverty." all along has been unable to break out of this backward circle. Only 60 percent of the militia companies throughout the county completed their stipulated training missions, and a third of the militia companies have no company headquarters or weapons rooms.

The county people's armed forces department, grasping the practice of militia work, felt: If a production brigade's production does not rise, it is impossible for it to get a good grip on militia work. To get a grip on militia work it is necessary to overcome the purely military viewpoint, and, setting out from getting a grip on foodgrain and money, integrate this with getting a good grip on militia work. After the Third Plenary Session of the Party [11th] Central Committee, the county people's armed forces department changed its past method of doing militia work and helped the production brigades to give priority to getting a good grip on production. They--the armed forces department--held meetings of full-time armed cadres and militia cadres, educating all of them to concentrate on leading the militiamen to be enthusiastic about getting a grip on foodgrain and money for the collective. When engaging in capital construction of farmland, the county and communes dispatched competent personnel or deployed cadres of the commune people's armed forces departments to lead the militiamen to press the attack. Understanding the situation of militiamen when working in the countryside during peacetime, the personnel and cadres concentrated on helping the production brigades to resolve their difficulties in production. When staying at the grassroots level, they also made grasping production the central task. Department head Hou Baozhang [0186 1405 7140] and political commissar Qu Baoshan [2575 1405 0810] took the initiative of suggesting to the commune party committees that they needed to extract foodgrain and money from barrel hills, and went to every militia company and mobilized the militiamen to organize hill-transformation teams, ore-prospecting teams, and stone-extracting teams, thinking of all sorts of ways to make the commune members prosper.

In this way, owing to the fact that the armed forces departments and the masses of people were thinking along the same lines, within the space of 2 years, the appearance of many communes and production brigades underwent a big change.

The development of production opened up a new situation for militia work. There appeared in militia work throughout the county three "breakthroughs": First, the training missions were completed better than before. Formerly, the cadres in the poor communes and poor production brigades, owing to the fact that production did not rise, were very worried and, basically, could not concentrate on militia work. With the present prospect, the cadres' minds are at ease and militia work registers well with them. This year, when the season to finish hoeing had just arrived, the party committee of every commune studied the arrangements for time for militia training. By the first third of September, over 1,500 armed militiamen had completed 15 days of training. Second, many communes and production brigades have strengthened the basic construction of militia companies. Since last year, throughout the county more than 300 rooms have been built for the militia company, the majority of militia companies have headquarters, and over 90 militia companies in the production brigades throughout the county have clubs and reading rooms. Some production brigades also bought military necessities for the militiamen such as canteens and Sam Browne belts. Third, the militiamen are more enthusiastic about taking part in training. Many militiamen have said with intimate knowledge: "In the past we went to the drill ground concerned about the fact that we had no money to buy cooking oil, salt, soy sauce, and vinegar, so how could we think of crawling, climbing, rolling, and fighting? Now we have food, drink, and spending money, so that when we train we are brimming with energy." In this year's training, 90 percent of the armed militiamen have done exceedingly well. At the same time, there have emerged 200 experts in shooting, tactics, and training. The change in militia work has made the comrades in people's armed forces departments throughout the county incomparably happy and, when summing up their experiences, they say: The goodness or badness of militia work is closely related to material conditions. When poverty blocks the way, it is hard to develop militia work; by getting a grip on foodgrain and money, the militiamen have a solid material foundation and are thus able to get a grip on the rifle and the bullet.

MILITARY AND PUBLIC SECURITY

IDEOLOGICAL TRAINING OF RECRUITS FROM TOWNSHIPS

Beijing RENMIN RIBAO in Chinese 15 Oct 80 p 3

[Article: "Having Taken an Oath To Advance Education and Enlightenment Enthusiastically, One of the Military Units at Guangzhou Is Successfully Carrying Out Ideological Work Among the Fighters Who Enlist From the Townships"]

[Text] One regiment among the PLA units at Guangzhou, because of the peculiarities of the young fighters being recruited from the townships, has developed its ideological work, enthusiastically helping the recruits to establish a correct purpose in life.

In order to have complete and accurate knowledge about the new fighters, the regimental party committee especially sent people to conduct investigations in the new fighters' hometowns and mobilized all of the more than 200 cadres and fighters in the regiment to make friends with the new fighters. Everyone saw that nearly all of these youths were the sons of workers or cadres, and that ideologically they were sincere and broadminded, while their cultural level was comparatively high, with a comparatively high receptivity. But they had been born during the economic difficulties of the first 3 years of the 1960's, and during the following 10 years of disorder the concepts of law and morality had been lacking, so they do not understand the meaning of uprightness in life. The regiment's party committee recognized that you should treat this type of young persons with special warmth and enthusiastically educate and enlighten them. Only then will you be able to make them overcome their bad habits.

In the cannon company of the regiment's 2d Battalion, there was a new fighter recruited from Guangzhou who ordinarily was very disorganized and who had also joined a fighting gang. The cannon company's cadres, from beginning to end, did not discriminate against him but rather enthusiastically helped him, first letting him serve as a communicator for the battalion, while they explained to him the importance of strengthening discipline and the reasonableness of individual obedience to the whole group. When they found that he had made progress, he was publicly praised. Afterward they sent him to a gun section as a gunlayer and used examples from the defensive counterattack against Vietnam to explain to him the wartime duties of a gunner, in order to help him establish the attitude of glorious self-sacrifice in defense of the fatherland.

Recently this fighter sent home a picture of himself in his neat and correct uniform that made his mother very happy when she saw it. She sent back to him an old picture of him with long hair and a beard. On the back she wrote two sentences: "I hope you do not change back again into this 'eat, drink, and be merry' lifestyle. I want you to become a good fighter in a short time."

The 7th Company had one new fighter who, being the child of a cadre, had disorganized habits as well as mischievously playing jokes on people. The seven cadre members of the 7th Company all enthusiastically carried out their ideological work, patiently explaining to him the standards for people and telling him about their own unit's martyr, Du Xijiang [2629 6007 3068], who had bravely given his life in order to open the road to victory for his brothers in his company during the defensive counterattack against Vietnam. This made him understand that to be a man is to be one who benefits the people. After his misunderstanding had been raised, he frequently volunteered to do a lot of good within the company. Because the battalion's television set, which was kept in the commons, was not well safeguarded, he sacrificed his rest time to build a wooden case in which it could be secured. When there was a shortage of fertilizer for raising vegetables, he gave up his naps to climb the mountains to collect cow manure, for which everyone praised him for being a good fighter who worked enthusiastically for the general good. His accomplishments in military training became excellent in every course. He was honored as the battalion's best marksman, and three times he received awards.

The new fighters who this year joined the regiment from the townships have all made obvious progress, and among the 52 new fighters from Guangzhou City, 29 have received awards from their regiment, battalion, or company.

URUMQI REGIMENT PROMOTES UNITY AMONG NATIONALITIES

Beijing RENMIN RIBAO in Chinese 20 Oct 80 p 4

[Article: "In a Regiment Among the Units at Urumqi, Cadres of Each Nationality on the Party Committee Are Working Together To Raise the Unity Among the Nationalities and Are Struggling To Achieve Exemplary Unity"]

[Text] In a PLA regiment at Urumqi, cadres of each nationality on the party committee, through mutual assistance, joint study, mutual respect, and closeness, have led the whole unit's cadres and fighters to unite very well.

The regiment is stationed in the region of the Kunlun Mountains, on the edge of the Takela Makan Desert. The cadres and fighters of the regiment include elements from eight national minorities, including Han Chinese, Uygurs, Kazakhs, Chinese Muslims, and Khalkas. At the leadership level of the regiment's party committee, along with Han Chinese cadre, are also Chinese Muslim cadres and cadres from such minorities as the Uygurs. From first to last, the regiment's party committee has strengthened unity among the cadres and fighters of the various nationalities, regarding it as an important matter earnestly to improve in this and, moreover, to set a model of exemplary unity. The Han Chinese members of the regiment's party committee especially respect the customs and practices of the minority cadres. In order to cooperate and do well in their work, the Chinese earnestly study the Uygur language with the Uygur cadres. Because letters and materials from higher levels have sometimes not been translated into the minority languages, the Chinese verbally translate these documents for the minority cadres, so that they can promptly understand the spirit of the instructions from higher levels and can freely go to work. In his work, the secretary of the regimental party committee and political commissar, Yao Xincai [1202 5281 2088], a Han Chinese, emphasizes listening to the opinions of the cadres who are from brother peoples and making full use of their positive contributions. Each time a member of the regimental party committee who is a member of a brother nationality comes back from work or leave to visit his family, Yao promptly tells him of the decisions made by the regimental party committee and seeks out his opinions. Moreover, Yao takes seriously the cultivation, promotion, and use of cadres from brother nationalities. He has positively suggested to the party committee the selection of 17 cadres from brother nationalities to serve as leading cadres in their organization or company-size units, or has sent them for advanced study at the Central Institute for Nationalities or the Soldiers Institute.

Throughout, all leading cadres from brother nationalities on the regimental party committee also emphasize preserving the party committee's unity, advancing friendship in their relations with the other committee members, being forgiving in discussions, and cooperating to improve the committee's work. The deputy political commissar, Kadewushou [0595 4104 0710 1343], is a young Uygur cadre who joined the army in 1968. Once, while still in the ranks of the regiment, he was ordered to take responsibility for an urgent construction project. He forcefully shouldered this heavy burden and took the initiative in helping the Han Chinese cadres solve many difficult problems.

Under the influence of the members of the regimental party committee, the cadres and fighters of each nationality throughout the regiment also have united closely. Because the 2d Company, which is composed of Han Chinese fighters, has done well in its military training, organizational personnel from the 3d Company, which is composed of fighters from brother nationalities, went to them to seek instruction. The 2d Company, without holding back in the slightest, introduced their experience to them and, moreover, enthusiastically served as a skeleton force to strengthen training in the 3d Company. The 2d Company lacked production experience for its part-time agricultural activities, so the 3d Company, on its own, sent people to give them guidance, so that this year the 2d Company has reached self-sufficiency in vegetables, planting watermelons and canteloupes which were both big and sweet. In one squad of the 5th Company, the Uygur fighter, Kuerbanjiang [1655 3643 3803 3068], the Muslim fighter Yang Zhijiang [2799 3112 3068], and the Chinese fighter Xu Hanming [5171 3352 2494] formed a military training group to help each other, to study together, and to develop competition, with the result that all of them obtained excellent records, for which they were praised by their superiors. Together they joined the Communist Youth League, and their comrades all said that they "truly resemble three brothers."

ECONOMIC POLICIES TO CONTROL POPULATION GROWTH URGED

Shanghai SHANGHAI SHIFAN DAXUE XUEBAO (ZHEXUE SHEHUI KEXUE BAN) [SHANGHAI TEACHERS' UNIVERSITY JOURNAL (PHILOSOPHY AND SOCIAL SCIENCES EDITION)] in Chinese No 2, 25 Apr 80 pp 16-21

[Article by Gui Shixun [2710 0013 8113]: "Population Control and Economic Policies"]

[Text] Following the first scientific symposium on population theories held in November 1978, most provinces and municipalities throughout the country decided on various economic policies to control population growth, and the relevant departments of the central authority are also studying the enactment of a "Law of the PRC Governing Family Planning." Why is it, at this stage of our nation, necessary to formulate economic policies to control population growth? How are we actually to determine which economic policies are best to control growth at this stage of our nation? What are the points that must have our attention when implementing such economic policies? This article gives the result of initial inquiries into the above questions, mainly based on investigations in the Shanghai area.

Objective Grounds for Economic Policies To Curb Population Growth

In our opinion the main reason why our country at this stage must adopt concrete measures regarding economic policy to curb population growth is that contradictions still exist between the material interests of the socialist state on the one hand and the individual families among the masses as regards population control, and that it is necessary to use economic methods and adopt measures of rewards and sanctions to adequately deal with these contradictions.

As everybody knows, our country is a socialist state which is at present in the process of development. Under the system of socialism, the family is a unit that produces and nurtures the next generation as it is also a consumption unit. By following the principle of "from each according to his ability, to each according to his work," all workers in each family must, and only can receive that portion of economic income which is commensurate with the quantity and quality of work that he has contributed to society, subject to certain deductions made by society, to support all the members that belong to that particular family. According to the natural life cycle, every family member passes through three stages, namely from early youth where he has no labor capacity, to fully developed man with social work capacity, and finally to old age with no further work capacity. In stages one and three, he is obviously nothing but a consumer; only in stage two is he mainly a producer but at the same time a consumer. This causes changes in the consumption level of every family in the socialist state, changes which are of course closely related to the number and work capacity of its workers and which are also dependent on the number of small children the family is raising and the number of old people it is supporting. Under these conditions it is therefore neither feasible nor realistic to have every family in our country completely disregard the economic effects on the family when they decide to raise children.

Presently, the problem is that at the present stage of our country there still exist, to a varying degree, conditions in our cities and particularly in wide areas of the countryside, due to various objective and subjective reasons, that allow economic benefits to be derived from having more children, especially more boys, thus creating a conflict between the state and the individual family as regards material benefits from the measures to control population growth. There are two aspects, in concrete terms, of this economic condition of "many boys, much good fortune:"

One is the low level of production force at the present stage of our country and its comparative backwardness, economically and technologically; this is directly responsible for the condition that "many boys" mean "good fortune." This is most conspicuous in economically backward communes and production teams. There the rate of productivity is very low, there are little collective public welfare funds, the commune members who lose their work capacity (except at communes where the "five guarantees" have been instituted) cannot enjoy social insurance like workers in the cities, and their livelihood must still be provided by their own children. If they have many children, the expenses for caring for old parents can be easily divided and borne by the several children. Another factor is that in this stage of technological backwardness many work processes are simple manual processes so that a family spends little on bringing up a child to working capacity. It was calculated by the relevant department that at present expenses for nurturing one work force by a family in the countryside is only one quarter of what it is in the cities, on the average only a little over 6 yuan per month. Furthermore, many children in the countryside participate in some kind of work at a very early age, thus contributing to the family income. This convinces many women of child-bearing age in the countryside to have many children who will be not much of a burden to raise, but on the other hand will ensure well-being in old age. Another factor is that since our country's agricultural technology is rather backward, much of our agricultural work still depends on physical strength. The birth of boys is therefore economically more beneficial than the birth of girls, because although we have the policy of equal pay for equal work regardless of sex, men generally being physically stronger than women will earn more work points (there are of course communes who still do not even truly carry out the principle of equal pay for men and women for equal work, which is even worse in reinforcing the old mentality of valuing boys higher than girls). The same mentality is reflected in the common saying heard in the outer districts and countries of Shanghai:

100 percent for boys,
80 percent for girls,
That's the rate that's fixed
For as long as you're in this world!

Yet another factor contributing in our country to the economic consideration of "many boys, much good fortune" is the result of following certain inappropriate economic policies. This concretely shows when certain areas carry out an egalitarian policy in distributions; they distribute equally by heads, be it food grain, firewood, hay, plots of land for housing and private plots to commune members, or be it living quarters, etc. for city dwellers. In the case of the distribution of basic food grain, for example, many areas in their early stages used to fix quotas by heads, so that the ration for a baby was the same as for a strong work force. In times of comparative shortages, women of child-bearing age would produce more children and use the additional rations either to supplement the rations of the adults or to sell the grain at high prices in the market. As to the allotment of housing the cities, many places allotted housing according to the number of permanent members of the household, those with many children were allotted larger quarters. This was a very conspicuous phenomenon at times when old houses were demolished and occupants moved elsewhere. In Shanghai it was in 1976 that the housing commission started mobilization for the demolition of houses and transfer of occupants. At that time the housing department determined that a family of two parents and two children are to be allotted an apartment of 21 square meters, but two parents with one child could be allotted only one room of 13 square meters. This encouraged many women of child-bearing age to have another child. The birth rate in the area of this housing commission therefore rose in 1978 from 7 pro mille to 11.8 pro mille, and the rate of families that observe family planning went down from the past 93 percent to 84 percent. Furthermore, with regard to our policy governing salaries and wages, our state has at present not yet fully established a strict and rational system of promotions to higher grades and ranks based on examinations and a correspondingly graded system of salaries and wages. This egalitarian trend in the distriution of consumer goods, disregarding higher and lower technological work or the quality of work, can result in high incomes for families with a larger number of work forces even though the quality of their work may not be high at all. On the other hand, families with a small number of work forces but producing high quality of work will not gain high incomes. This will also, indirectly, encourage the "many boys, much good fortune" mentality and be a hindrance to population control.

We see from the above that the system now prevalent in our country will have the effect that the birth of many children will, to a varying degree, increase income, increase food grain allocation and increase housing allotment, even increase "well-being in old age." At this time when the family is still the basic consumption unit, this phenomenon, in an intricate way, becomes interwoven with the feudal views on marriage and births, expressed in such old sayings as "Have many boys, one after the other" and "Of the three sins of lack of filial piety, the greatest is to have no sons." As a consequence there are a good many people even today who still harbor this idea of "many boys, much good fortune," and a great number of families are incapable of conscientiously and voluntarily practicing family planning and in particular incapable of actively heeding the call of the party and state for each couple to have only one child. If we adopt under these circumstances administrative measures of a forcible command type, such as not registering the more than one child in the census records, not to issue food grain allocations for such children and not to allow their parents to participate in work, the outcome would be contrary to our wishes, have bad aftereffects and in fact not be admissible in a socialist state. In order to have the masses conscientiously and voluntarily practice family planning at the present stage of our country, we must therefore carry out conscientious and effective ideological education in family planning, when we must explain that the state and every single family have fundamentally the same interest in the control of population growth. At the same time we must formulate a correct economic policy and employ effective economic measures to solve the contradictions between the two, the state and the family, in an appropriate way, such measures to ensure material incentives for families to follow the call of the state for population control and to provide sanctions of a material nature against families who disobey the call of the state for population control.

Select the Best Economic Policy for Population Control

All over the country we already find a number of various economic policies and measures decreed with the purpose of curbing population growth. To further improve these policies and measures, we must now first of all start out from the realities that we find at the present stage of our country, engage in a penetrating study, sum up the lessons we have learned in the course of actual practice, study and emulate the scientifically proven elements of relevant policies and measures in foreign countries and after a detailed analysis of the many different ways to achieve population control by economic means, select the best method which are most effective economically.

How are we then to select and determine which economic policy will be the best at the present stage of our country? In our opinion we must study and give due consideration to the following main points:

First of all, we must start out by a scientific determination of the focal point in population control at the present stage of our country, to help us find a suitable policy of economic rewards and sanctions. Should we, at the present stage of our development, adopt a policy that would urge each couple to have "best only one, at most two" children, or should our policy be "best no child, at most only one?" This is a question that actually asks what the focal point really is in our population control at this stage of our country. Some comrades suggest adopting the latter policy so that we can achieve a definite reduction in our population at an early date. Consequently they propose that our economic policy should favor couples who have had no children throughout their lives above those who have had one child. However, looking at the present state of childbirths in our country, the most outstanding problem is that cases of a third or even further childbirth in a family account for approximately one-third of all childbirths. If we can strictly control this share of excessive births, we shall achieve a substantial decrease in the birthrate of our country. It will also in the long run greatly increase the ratio of cases of one child per couple (hereafter called single-child ratio) within the general reduction of births. To take Shanghai as example, in 1978 the excessive births numbered 189 in the municipal area and 1,760 in the suburban and county areas. However, after implementing on a trial basis a policy of rewards for single-birth families as of September 1979, and according to statistics up to the first 10-day period of October, 98,483 families were issued "single birth certificates" (when the child was from a full 4 to 16 years old), which is equivalent to the total annual births in Shanghai during 1974. If the rate of single births can be broadly expanded nationwide, it will undoubtedly have a very great effect on the reduction of the birthrate. Although we must gradually introduce social insurance for childless old people, we still cannot adopt "best no child" as the focal point in our efforts to reduce our birth rate. This is so because, firstly, it would not be compatible with the traditional customs of our people and would arouse much antagonism if unduly enforced; secondly if there are too many childless couples in our society, couples that could have had children, this would cause many social problems. We therefore still regard a policy of "best only one, at most two" children per couple as the best policy at the present stage of our country. Our economic policy for control of population growth must also start out from this basic standpoint and must accurately target various effective measures toward guaranteeing the realization of this policy.

Secondly, when implementing a policy of rewards and sanctions we must pay due attention to the interests involved in the control of population growth, namely the interests of the state, of the rural collectives such as communes, and brigades of the individual families. To effectively control population growth, we must adopt measures of rewards, such as paying child-rearing expenses to single-child families. However, in view of the rather backward state of our country's economy at the present stage and the existence of two forms of public ownership, the expenses for such rewards to rural commune members will still have to be borne by the commune and team to which the couple concerned belongs. A system of rewards for population control therefore not only affects the economic relations between the state and the individual families concerned, but also between the rural collectives such as communes and brigades and the families concerned. Very low awards will not be effective; on the other hand very high rewards will cause hardships to state communes in our present state of limited state income and stringent finances at the communes. We must therefore start out from the economic conditions at the present stage of our country, and that includes giving considerations to present levels of wages, work points and commodity prices, when we determine what amounts would be appropriate as rewards. This is the only way that would benefit the single-child or childless families and at the same time lighten the economic burden on the state and the rural communes. For instance, if we view payment of single-child child-rearing expenses in isolation, it will seem that these expenses are merely additional expenses for the state and the communes to bear, but viewed in overall perspective, the child-rearing expenses, if paid at an appropriate rate, will on the contrary reduce the economic burden of the state and the communes. This is so because for every less child born, the state and the communes save the expenses of rearing this child to maturity. According to estimates by the competent department, the expenses to the state for rearing a child until it becomes a work force are over 2,000 yuan in the cities, almost 1,000 yuan in townships and over 400 yuan in rural communes. And secondly, if a woman of child-bearing age has one child less, she will not need the official leave of almost 100 days for pregnancy, birth and infant feeding, but can devote this time to produce values for the state and the commune. The Shanghai Textile Mill No 12 has calculated that at the beginning of 1979 each staff and worker creates an average of 29 yuan of net value per day. If a woman bears one more child, she will have 56 days of childbirth leave and official time off of altogether 43 days for pregnancy and infant feeding and thus fail to produce almost 2,871 yuan of net value. Thirdly, by bearing one child less, a family consuming commercially sold food grain will require less rations of grain and oil from the state. In the case of a family not consuming commercially sold food grain, the production team may, after satisfying the state's grain purchases, sell the grain for one extra person to the state at the price applicable to state purchases in excess of designated prices, which would mean an additional contribution to the state as well as an additional income for the commune. Considering all these expenses, the payment of an appropriate reward to the single-child family is extremely beneficial for the state and for the communes.

Shall we then also pay an additional living expense subsidy of 5 percent of their original work earnings to single-child parents at the time of their retirement (excluding staff and workers who retire with a 100-percent retirement pay)? In our opinion, we must not decide this in the same way for all cases. According to the conditions that we have actually investigated it is indeed a necessity that the commune should pay the single-child parents a living expense subsidy of 5 percent of their original work income on their retirement when they lose their work capability. This is because at present agricultural productivity is very low throughout the country and the economic income distributed annually by the commune to each labor force unit is very small. If husband and wife are both from single-child families, and in view of the fact that communes are still not yet able to provide sufficient welfare to old members who have lost their work strength, the couple will find it very difficult to bear the living expenses for seven heads (the couple themselves, their four parents and one child). If we therefore could not determine that single-child parents on losing work capability, can count on a certain monthly expense subsidy, this would dispel their fears of the future, and the commune will also be able to bear this item of expenditure. One section of the statistics of Hengmian Commune, an advanced unit in family planning in Nanhui County, reveals that among the single-child families of that place there are: mothers 35 years or older: only one; 30 to 35 years: eight families, the rest all below 30 years. This shows that this commune will gradually start to issue living expense subsidy to single-child aged parents only after 20 years, i.e., at the end of this and the beginning of the next century. Due to the modernization of agriculture the commune will by that time certainly be in a position to carry out such a scheme. As to single-child parents who will retire as staff ans workers, it will not be necessary to pay them the additional 5 percent of their original wages on their retirement. From many investigations we know that there have been no cases where fear that difficulties in their livelihood, because of not getting the additional retirement allowance, would make staff members or workers unwilling to limit themselves to having only one child. On the contrary, after retirement staff and workers will in general still want to help their children economically and with having only one child on retirement will find themselves better off. Besides, it will add up to quite a sum if the state undertakes this expenditure. According to our present system and level of wages, the average monthly wage of a staff member or worker is about 60 yuan, but would in general be somewhat higher at the time of his retirement. If we figure the preretirement wage at 70 yuan per month, the retirement allowance of single-child parents with the additional 5 percent would be as high as 84 yuan. Estimated at our country's present retirement age for staff members and workers and average life span, the state would have to pay the two staff members or workers for 15 years retirement allowance, and that amount would be 1,260 yuan, which is about double the total expenditure paid for child-bearing expenses to single-child families as generally fixed by provinces and municipalities. If the rate of one-child families among staff members and workers in our country is to be up to 80 percent, the total amount of this item of expenditure will be quite considerable. In the first half of 1979, several provinces and municipalities did not make awards of this kind part of their economic policies for population control, and the implementation of their control policies did not suffer at all. "Some Rules Governing Family Planning," instituted by Shanghai Municipality, did include such rewards, but due to the present financial stringency of state and local finances and the present high rate of single-child families among the older staff members and workers, the detailed regulations for the enforcement of the rules stipulate: Any staff member and worker 16 years of age or older will not receive these rewards on retirement. These regulations raised much dissatisfaction among sections of the masses and caused much trouble in actual work. We, therefore, think the additional 5 percent reward to retiring staff members and workers holding "single-child certificates" should be abolished; out of the money the state had been prepared to spend on this account, a small portion should be allotted to institute social welfare for old people without children or whose children are not with them. In this way the state can save itself quite a bit and become more effective in its control of population growth.

Furthermore, in the case of self-employed workers who do not enjoy the retirement benefits of staff members and workers when they retire in old age, the state should pay a living expense subsidy of approximately 5 percent of the general staff members' and workers' wages as a reward and encouragement. To sum up: when deciding the concrete figures of the reward we must start out from the overall situation, consider past and future circumstances, consider on the one hand the effect of the reward and on the other hand the ability, at present and in the future, of the state and the rural communes to make such payments, and we must aim to achieve the greatest possible results in population control with the least possible expenditure.

Thirdly, starting out from the reality of the situation, we must decisively revise those economic policies that greatly hamper population control and that it would actually cost little to remedy. Viewed from results of investigations at Shanghai, the outstanding problem at present in controlling population growth in cities and townships is the policy of allotting housing according to the heads of permanent members of a household. Many families comment on this point: "If the policy of allotting housing is not changed and you even promise me several hundred yuan as single-child family reward, I would rather forego the reward and have a second child." We, therefore, believe that regarding the question of house allotment--apart from giving preferential consideration to late-married couples and couples marrying at an advanced age--we should speedily adopt a policy of allotting housing to single-child families as if they were two-child families. Some comrades fear though, that with the present housing shortage, if further consideration is to be given to single-child families, will that not merely increase the number of families without adequate housing and widen the gap between supply and demand? There is of course some ground in this argument if considered in isolation. But we must also realize that if we want to provide a fundamental solution for the problem of insufficient housing in cities and townships, the problem is not only one of building new houses as rapidly as our developing economic base will permit, but also a problem very much related to the question of reducing the birth rate in our country. If we do not adopt a policy in allotting housing that will encourage families to have only one child, many women of child-bearing age will bear another child merely for the purpose of better housing. This will not only increase just the same our present difficulties in allotting housing, but will also increase the demand for housing 20 years from now. It is, of course, not possible at present to satisty the housing demands of all single-child households. We only hope that all those concerned will show good sense and understanding. If only those comrades in charge of house allocations are clear and definite in their minds and conscientiously carry out a policy of house allocation which treats single-child households as if they were two-child households, and based on the development of our production and speeded-up building of new houses, which will by stages and in groups gradually solve the housing difficulties, including those of the single-child households, this will be a great factor in promoting an increase in single-child families. After the implementation of economic policies to curb population growth, there also should be absolutely no consideration shown to hardships that arise from births in excess of the desired limits per family. In the countryside the system of distributing basic foodstuffs must be changed from an equal distribution by heads to one graded according to the persons concerned; in the adjustment of private plots and allotment of land for house construction single children shall be counted as two children, and to those who hereafter exceed the number of desirable births, no extra rations shall be given. To sum up: the changes in economic policy described above are very beneficial for population control and do not require extra expenditure on the part of the state or the rural commune collectives; why then not go ahead with it?

Fourthly, in economic sanctions against families producing more children than desirable, the punishment must be severe enough and yet not endanger the health of mothers and children. To reduce administrative decrees and stop more than one birth, we must formulate a policy that would restrict and punish by economic means the families with more than one birth. In the past some localities have decreed that they will not reimburse expenses incurred by more than one birth, which include examinations during pregnancy, medical expenses incurred due to pregnancy effects, prevention of miscarriage, anaemia, midwife or hospital expenses. Leave of absence due to childbirth is to be considered as ordinary leave due to private affairs. The children born after the first child are not to enjoy medical privileges where these included the family, cooperative medical care or labor insurance as directly-related members of the family. Although these are all economic sanctions, it is our feeling that they are detrimental to the health of the mothers and children and run counter to our socialist system and the spirit of our revolutionary ethics, they should best be changed to a system of imposing charges for more children. At the same time it is our opinion that in the future the economic sanctions against families with more than one birth should be more severe, because in the present conditions of low productivity in our country, it is a conspicuous fact that families gain benefits from having an excessive number of children. Only when the sanctions are really severe, will women of child-bearing age, who will not allow themselves to be ideologically convinced and still want to bear more children, seriously start to weigh the advantages and disadvantages and think twice before bearing more children, and only then will we achieve an effective stop to excessive childbirths without the need to impose punishments on the masses. Conversely, if the economic sanctions are too light, some women of child-bearing age will still think it more profitable to have more children and then rather incur the small charges for the larger number of children. Not only would this prevent putting a stop to more than one birth, but it would also bring about punishments over a wide area. We must also realize that these children born in excess of the desirable number will increase expenditure by the state and the collectives such as communes and brigades in bringing them up to become labor force. It is, therefore, absolutely fair and reasonable to have comparatively stricter and heavier sanctions which will greatly lighten the burden of the state and the communes in this respect.

Question To Be Noted When Implementing Economic Policies

It was definitely wrong when the role of economic policies was ignored in the past in our family planning activities. However, we must also realize that success in family planning depends on many factors. Currently, when implementing economic policies for population control in order to achieve a speedy reduction in the rate of our population growth, it is furthermore important that we pay attention to the following questions:

Firstly, it is necessary to carry out an effective and penetrating ideological education for systematic control of our nation's population growth. The leadership at all levels must attach great importance to family planning work and handle it as a major issue. We must raise even higher the sense of responsibility and initiative of all engaged in family planning work, to have this work performed more penetratingly, morer meticulously and more effectively. We must get the masses to handle correctly the relationship between state, production unit and family as involved in the matter of marriage and child-bearing, to have them consciously and voluntarily carry out family planning. All this requires that we propagate with great effort the great significance of controlling population growth. We must particularly *emphasize in our propaganda the relationship between family planning and the* speedy realization of the four modernizations. After we have formulated our economic policy in support of family planning, and if we continue to do effective work in propaganda education on the significance of family planning, creating a new social custom that will regard it as honorable to have only one child, then our economic policy will certainly be turned into an even greater and more effective force. It is furthermore necessary that ideological education enable the masses to correctly approach these economic policies so that they will understand that presently state income is limited and will not allow large sums to be spent in this respect as material rewards. If we pay high rewards, we cannot achieve our aim of gaining through a reduction in population growth a corresponding increase in the country's productive accumulations and of improving the livelihood of the present population. The policy of economic sanctions against families with more than one birth is also not omnipotent; a small number of families, hopelessly imbued with feudal views on marriage and childbirth, will possibly still ignore these regulations and insist on having many children. Our success will, therefore, only come through the coordination of repeated, patient ideological education with work in other directions.

Secondly, we must raise the quality of hygienic techniques used in family planning. After implementing economic policies to reward single-child families and limit excessive births, and in order to achieve population control while at the same time reducing as far as possible induced abortions, we must effectively propagate medical and hygienic information and raise the quality of medical means of birth control. Looking at conditions in Shanghai, the number of induced abortions has been fairly large. If a woman undergoes several abortions, it will not only be detrimental to her health but also certainly detrimental to her work. In 1978 a check of induced abortions in Shanghai has shown that in the majority of cases the persons concerned did not want the pregnancy, but that pregnancy was due to their lack of birth control knowledge, skipping the medicine or having the injection, or the medicine having lost its effectiveness. Now that the rate of single-child families increases and excessive births will be strictly curtailed, many women of child-bearing age will adopt more reliable methods of birth control or even sterilization by surgery which also demands that the quality of operations for family planning purposes must be greatly improved to avoid sequelae as much as possible and have the masses safely and effectively practice family planning.

Thirdly, we must strengthen health care for infants and educational work among our youths. Many women of child-bearing age do not want to limit themselves to one child only because they fear it is "not safe." Especially the women living in the countryside, in mountainous areas or along rivers are afraid some of their children will die of acute diseases, drowning or other causes, and for that reason they want to have several children. To significantly increase the rate of single-child families it is, therefore, necessary not only to reward them by paying child-raising expenses, but also to develop medical and hygienic conditions to have effective infant care and reduce deaths of children due to abnormal causes such as sicknesses, drowning, etc. From experiences in the communes it is evident that the operation of child-care centers, kindergartens, raising the medical proficiency of barefoot doctors, are all forceful factors encouraging family planning. In his book, "Required Reading for Parents," the Soviet educator Ma-ka-lian-ke [transliteration] already expressed the opinion "that over a million cases could be cited to prove that children from families with many children are achieving great successes, while, conversely, children from single-child families very rarely achieve success." As we see it today, this way of putting it is a very one-sided one, because in many developed capitalist countries with low birth rates, the rate of single-child families is very high, but still they have produced many specialists and scholars of great achievement who are only children. Of course, in actual life in our country we also have cases where the only children are easily spoiled by the parents by making them "the center of attention of the whole family." In the present criminal rate in our country, only children also occupy a rather high position. To launch a penetrating study of the education of only children, to raise the educational quality of our schools, to guide heads of families in correctly educating only children, all these are, therefore, factors of great significance for an increase in the rate of single-child families and for effectively curbing population growth.

Fourthly, we must exert efforts to institute effective social welfare for old people without children or whose children are not with them. As family planning progresses and as the rate of single-child families greatly increases, there will in the future be more and more households with only one child. A number of these children will have to leave their parents in order to work away from them as the needs of the state may require. Many women of child-bearing age are afraid, therefore, that some day their child will be gone, they will be left alone and lonely, they will be old and weak, no longer capable to look after themselves or sick in bed with no relatives to care for them, and it is for this reason that they will not want to limit themselves to one child. To fully demonstrate the advantages of the socialist system and to alley the fears of the future in the minds of heads of families with one child or without children, the rural collectives such as communes and brigades must at this time exert efforts to institute a social welfare system for these old people, establish old-age homes and a system of welfare workers who will care for the livelihood of the old people and serve in hospitals for them. As the economic strength of the state and the communes increases, increasing amounts of funds should be devoted for these purposes, and various forms and methods should be adopted to raise the social welfare efforts on behalf of these old people who have no children or whose children are not with them anymore.

We see from the above that if we really want to control population growth, we must not only study what economic policies to draw up for the control of population growth, but will have to engage in a great amount of related work. Let us in actual practice continuously sum up the lessons gathered in our experiences and gradually make improvements to finally establish a set of Chinese-style policies and methods for the control of population growth, and make further efforts to reduce the growth rate of our population and to speedily realize the four modernizations.

SOCIOLOGICAL, EDUCATION AND CULTURE

WELL-KNOWN FIGURES DISCUSS HOW TO STIMULATE LITERARY, ART WORKS

Beijing WENYIBAO [LITERATURE AND ART JOURNAL] in Chinese No 18, 12 Oct 80 pp 2-13

[Article: "How To Stimulate Literary and Art Work"]

> [Text] Editor: The series of momentous decisions made by the Third Conference of the Fifth National People's Congress and the Third Conference of the Fifth Political Consultative Conference on China's socialist modernization construction will produce a profound impact on all realms of life. In literary and art work, how to summarize the lessons of experience of the past 30 years, adapt to the changes in the new situation and the need of the new social life, firmly implement the party's policies, reinforce and improve the party's leadership, reform the system and enliven literary and artistic work is an issue of concern to the broad masses. For this reason, we have created this special column and we asked, for this issue, some of the delegates in the field of literature and art attending the two meetings for their views. We hope that our comrades in literature and art and the broad readers will show an interest, participate in the discussions and express their opinions, understanding and suggestions. We will continue to publish manuscripts on this subject.

[Article by Ba Jin [1572 6855]: "More Encouragement; Less Interference"]

Attending the National People's Congress this time, I feel that, in view of my advanced years, I should retire. Furthermore, a writer should devote his time to writing.

Concerning literary and artistic work, it is best to hold a full committee meeting of the All-China Federation of Literary and Art Circles to discuss the matter. I have long felt that the achievements and defects of literary and artistic work in the past 30 years should be conscientiously summarized. The good points should be popularized and the mistakes should not be repeated. Though I pursue literary and artistic work, actually I do not understand it. Until now I still cannot clarify one issue, viz., the effect of literature and art. At times it is regarded very highly. One film, one play, one novel or one song can lead the young people to the road of crime and the author is held responsible. After publication, when some defects are found in a work, many people will make comments, as if one work will destroy the party and the state. Actually, how could people like us produce such a great impact? Sometimes the effect of literature and art is raised very high, while other times it is regarded as very low. In general, the living and working conditions of those engaged in literary and artistic work are very poor; some of them do not even have a desk. I know of a translator whose house was confiscated during the "Great Cultural Revolution." Now it is impossible for him to have a room where he can spread out his books and do his translation work. When the effect of literature and art is supposed to be so great, such neglect of the literary and artistic workers is truly incomprehensible. Now everyone is discussing serving the four modernizations. We must rely on knowledge and the intellectuals to promote the four modernizations, and they should produce an important effect, yet the policy on the intellectuals has not been completely implemented even today and the intellectuals have not gained trust. Since today we need them and must rely on their enthusiasm, we must furnish them with some proper working conditions. I feel that the meeting this time is excellent. But it is only words, spoken and written. As for how the words are carried out in the future, I feel that the resistance remains great. As there were too many hollow words in the past, people do not easily believe in words. More work must be done to win the confidence of the people. The supreme leaders have the determination to combat bureaucratism, but there will be difficulties in the middle level. One may not necessarily feel optimistic over many things. We must be prepared for the difficulties and the tortuosities. We must do it conscientiously and properly. In regard to whether the four modernizations can be realized by the end of the century, the people's confidence is still inadequate, and much has to be done. I feel that serious attention must be given to literature and art. Their effect is to exert a subtle influence, cultivate a noble spirit and build the ideal of serving the country and the people. We must conscientiously implement the double-hundred policy. Literary and artistic workers must be given serious attention and provided with relatively favorable working conditions. I advocate more encouragement and less interference.

[Article by Ye Shengtao [5509 5110 7118]: "Equal Discussions Advocated"]

I hear that the leaders have the idea of enlivening literary and artistic work. It is excellent, and the literary and artistic workers indeed have such a demand. Why is there such an idea? Why is there such a demand? Naturally it is because literary and artistic work today is not lively enough, but still rather rigid.

It has been 4 years since the "gang of 4" was smashed, but why is it that the spiritual shackles have not been completely removed? In the 4 years, one hears almost everyday the slogan of emancipating the mind, but why is it that the mind has not been thoroughly emancipated?

Often there are people who ask: What ideas have the "higher-ups" expressed? Is it going to be "restraint" again? Some days later, they receive words passed on from the "higher-ups," to the effect that currently it is not a question of "restraint," but the issue of inadequate emancipation of the mind.

Inadequate emancipation of the mind--the words of the "higher-ups" are very clear. Then, if one has the intention to create, one should concentrate on it. Why does one still waste one's energy to inquire about the wind direction?

It is said that one must still make such inquiries. Because in the past, many people had such an experience: The "higher-ups" would start a gentle breeze, but it would gather momentum and turn into a gale of force 7 or 8, or 10 plus, and many people were inexplicably engulfed and suffered punishment.

After one has been bitten by a snake, one trembles at the sight of a rope. Those who have never been bitten by a snake are infected with such fear. The deep and broad influence has formed, and cannot be eliminated in 1 day. Therefore, some people have acquired the habit of inquiring about the wind direction, and one cannot blame them for it.

Naturally it will be undesirable for it to continue. If it continues, literary and artistic work cannot be enlivened. How does one change the situation? In recent years, that the result of the announcements and appeals of the "higher-ups" is not apparent is a fact. To truly change the situation, appropriate concrete reforms are called for.

According to my view, literary and artistic criticism must first be reformed. In past years, the so-called criticisms were mostly launched subsequent to conclusions. The conclusions naturally came from the "higher-ups," and everyone wrote articles accordingly, making groundless accusations, quoting classics, raising the tone ever higher and intimidating with the momentum.

I feel that literary and artistic criticism is the need of the masses and should come from the masses. The masses must mutually encourage one another in practice and make matter-of-fact criticisms together, basing their views, favorable or unfavorable, on facts. The words of both, or several, sides must be heard, so that there will be equality for all and freedom from bias. Conclusions naturally can only be reached after arguments. Isn't it ridiculous to form the conclusion first and hold the arguments later? It is also alright not to reach a conclusion, or not to be in a hurry to reach a conclusion. The "higher-ups" should believe that the masses will gain something in the arguments and will naturally gradually raise their ability to comprehend and appraise literary and artistic works.

Criticisms must be aimed at helping the criticized, instead of pressuring. The right of the criticized to refute must be truly safeguarded, but he should not be required to clarify his stand. In the realm of literature and art, there should be the freedom to accept or reject criticisms and to clarify one's stand or remain silent. Besides, accepting criticisms is not a verbal thing. If they are accepted in mind and in practice, what is the necessity of announcing the acceptance in words?

Those participating in literary and artistic criticism are equal in position. While arrogance is reprehensible, nor is regarding the words and phrases of one individual as "directives" desirable. I feel that only when everyone treats others as equals will the practice of inquiring about wind directions gradually vanish and literary and artistic work become more lively than today.

[Article by Xia Yan [1115 5888]: "Emancipating the Mind; Reforming the System"]

The Third Conference of the Fifth National People's Congress ended successfully yesterday, and so will the Third Conference of the Fifth Political Consultative Conference this afternoon. Precisely as stated in the RENMIN RIBAO editorial, it has been a great meeting of democracy, of reform. The people demand democracy and reality forces us to reform. The party and the government told the people the truth, informing them of the situation in politics, the economy, culture and education, and science and technology, including the amount of deficits, the reason for the deficits and the tentative plans for their elimination. The people's delegates also exercised matter-of-factly the rights of making suggestions and criticisms, and even inquiries. By so doing, naturally we won the support of the people of all nationalities in the country and the approval of the world public opinion. Even certain foreign newspapers and publications which had always opposed China and the communists could only say: "Such reforms still cannot depart from the realm of Marxism-Leninism and Mao Zedong Thought."

To reform the party and political leadership system and to develop the socialist democracy and reinforce the socialist legal system, the party and the government, after careful consideration, took a cautious and resolute step. However, to carry out the resolutions of the congress this time, we are confronted with many difficulties, obstacles and even resistance in various forms --in the political and economic aspects and in the cultural and artistic aspects. One only has to recall the facts last year since the Fourth Literary and Artistic Delegates Congress to arrive at this conclusion. Personally I feel that, in one aspect, the achievements in the field of literature and art have been tremendous, with new works and talents, and some of the works have surpassed the level between the thirties and the sixties. However, in another aspect, we must not overlook the fact that the emancipation of the mind has lagged far behind the rapidly changing objective reality. Just before the opening of the people's congress, some people wanted to find out whether it would be "restraint" or "release." In the small group discussions, many criticisms of the literary and artistic leadership were heard. Some people said: "The hat factory has closed; the shoe factory has opened." According to what I know, utilizing power and influence to make writers and critics "wear tight shoes" remains a fairly commonplace phenomenon. Naturally, even today the editors of some periodicals are still "feeling for the spirit of the leadership." Isn't this odd? Didn't Comrade Deng Xiaoping's congratulatory speech and Comrade Hu Yaobang's [5170 5069 6721] talk at the Fourth Congress of Literary and Art Circles embody "the spirit of the leadership?" In a speech in late July, Comrade Hu Yaobang said: "We adhere to the correct direction on our theoretical and literary and artistic fronts, and we do not permit the pursuit of the class struggle as the key link. We are firm on this point!" I find that "spirit" cannot be "felt." Instead of "feeling," we must "learn" and "think!" I hope that our comrades in the field of literature and art attending the congress this time will, upon returning to their posts, conscientiously and concretely study Comrade Deng Xiaoping's speech at the inauguration of the Political Consultative Conference and Comrade Hua Guofeng's report at the National People's Congress. Besides studying, we must ponder repeatedly in conjunction with the current reality. "Studying without reflection" will not work. We must see further and think deeper. Emancipating the mind is bound to entail some hazards. Marx, Engels and Lenin all braved the hazards, without fear of failure or of being accused of heresy, pondered and practiced repeatedly before creating theories which are accurate when placed anywhere in the world. Furthermore, Marx, Engels and Lenin never regarded their theories as the final truth, forever immutable. "The Condition of England's Worker Class," Engels' famous work written in 1845, is widely read even today. Yet some 47 years later, in his introduction to its republication in 1892, Engels said that, in regard to the conditions described in the book, "at least in terms of England, many of the aspects have become obsolete." Then, in the eighties of the 20th century, can we still transplant intact the theories of the forties of the 19th century? The dialectic materialism and historical materialism of Marxism-Leninism will always serve as the sharpest weapons of the proletariat to prosecute the revolution. However, it was impossible for either Marx or Engels of the mid-19th and early 20th centuries to formulate for us an entire set of blueprint for building socialism. On 7 May, when mourning the death of the Yugoslavian president, RENMIN RIBAO published two articles, one by Comrade Hu Qiaomu [5170 0829 2606] and the other by Comrade Sun Yefang [1327 0396 2455]. They both found that Tito's greatest contribution to the proletarian revolution and the socialist construction in his lifetime was his refusal to recognize the possibility of a common mold for building socialism. I feel that only by following this viewpoint in the reforms today, i.e., reforms in the party and political leadership system and changes in the economic system, will we emancipate ourselves from China's unique feudal ideology of several thousand years and from the dogmatism installed by the CPSU and the Third International, and only thus will our literature and art flourish.

Besides emancipating the mind, the issue of reforming the system also confronts us, while the greatest obstacle to the reform of the system is China's unique bureaucratism, which is different from both the bureaucratism of the pre-liberation "Revelation of Officialdom" and that of capitalist countries. It is a bureaucratism which has a blood relationship with our feudal patriarchy and a link with the overconcentration of power in the political, economic and cultural systems directly transplanted from the Soviet Union. We must realize and understand that such deep-rooted bureaucratism is an archenemy to the introduction of the socialist democracy, to the reform of the economic and cultural systems and to the realization of the four modernizations. In his 40-page report at the National People's Congress, Comrade Hua Guofeng devoted full 10 pages against bureaucratism and, at a meeting, Comrade Deng Xiaoping listed 24 charges against it. It indicated the determination of our Party Central Committee to resist bureaucratism in order to introduce democracy, reform the systems and promote the four modernizations. Meanwhile, it has also assigned our literary and artistic workers the task of resisting bureaucratism with the weapons of literature and art. I believe that, as long as we emancipate our mind and reinforce our unity, we will perform the task successfully.

[Article by Lin Mohan [2651 7817 3211]: "The Worries of a Fool"]

One of the most important tasks of China's literature and art today and for a long time to come is to vigorously promote our socialist modernization, because without highly modernized material and cultural construction, our country will not be able to survive and our literature and art will have nothing to lean on.

Literature and art should express the great cause of building the four modernizations by the people with one heart and one mind and the victorious advance of the four modernization construction in the difficult and complex struggles. However, this does not mean that literature and art can only depict the four modernization construction, for it will be too narrow an interpretation. The four modernization construction is a matter of prime importance linked with the life-and-death of the nation. Therefore, all aspects of our people's life and struggles, their prayers and hopes, their joys and sorrows are, whether consciously or unconsciously, closely linked with it. For this reason, regardless of the subject matter, whether realistic or historical, domestic or international, as long as a work stimulates and does not depress, inspires confidence and does not demoralize, and provides healthy recreation and does not spread mediocre and vulgar interest, it is directly or indirectly beneficial to the four modernization construction and needed by it.

In recent years, many literary and artistic works have effectively exposed and castigated such evil phenomena as bureaucratism and the prerogatives of cadres. This is entirely necessary, because such phenomena seriously endanger the four modernization construction and severely damage the relationship between the party and the masses. The pernicious feudal influence, which breeds bureaucratism and the prerogative mentality, must be wiped out. However, today there exist also the influence coming from the bourgeoisie and the erroneous tendency of extreme egoism and anarchism. As such unsound trends as bureaucratism, special privileges and entering by the back door on the part of some leading cadres have not been promptly overcome, some people have lost faith in the future of the four modernizations, or even their revolutionary ideal, and become pessimistic and despondent. There is also a small number of people who feel that, since the leading cadres follow the evil trends of bureaucratism, special privileges and entering by the back door, then, it is reasonable and legitimate for them to disobey the organization, slow down on their jobs, be unscrupulous in reaching their personal goals and violate discipline, and no one may interfere. Such mentality is extremely harmful and calls for criticism and education. Each and every socialist citizen has the obligation to discharge his proper responsibilities to the socialist motherland. We must launch proper struggles against bureaucratism and special privileges, and we must not counter the wrong conduct with the wrong conduct of negative slowdown and violation of discipline, for it will only damage the interest of the state and the people, and it will not overcome bureaucratism and special privileges. In regard to such people, we should rally them, but we must not condone their wrong thinking and conduct. However, it seems that the phenomenon has not attracted sufficient attention from the writers and is seldom reflected in their works. While exposing bureaucratism, special privileges and entering by the back door, some works express understanding and sympathy for such wrong tendencies as extreme egoism, anarchism, loss of ideal, pessimism and despondency, and even beautify them. Obviously, this is also unfavorable to the four modernization construction.

The fundamental task of literature and art is to cultivate socialist new people. Socialist new people are of many types, and they definitely do not come out of the same mold. There are common warriors who quietly immerse themselves in hard work as well as combat heroes who can command the winds and the clouds, and the former constitute the majority. Today, the main criterion to determine whether an individual is a socialist new person is his attitude toward the four modernization construction: Whether he supports or opposes it; whether he is positive or negative. While those opposing the four modernization construction are naturally not socialist new people, nor are those standing indifferently on the sidelines or even making sarcastic remarks. Likewise, the main criterion to determine whether a literary work is good or bad is not the subject matter or how it is written,but its influence on the masses. Does it fill the readers with confidence and hope and make them dedicate themselves concretely and in face of the difficulties to the struggle of the four modernization construction, or does it make them retreat from difficulties, become depressed and indifferent and wallow in their personal melancholy, or "detest the world and its ways," ridicule everything and attempt nothing and accomplish nothing? I feel that both kinds of works exist. It seems that our literary and artistic publications should survey the readers in this aspect and refrain from looking only at the cash register. When we say that literature and art cannot sever themselves from politics, we mean that they cannot depart from the four modernization construction, which is the greatest politics. According to some people, "literature is only literature and has nothing to do with politics." Actually, the tendency of separating literature from politics contains itself a political goal, precisely like the saying that "literature and art are not propaganda" is, in itself, a propaganda. It is the outworn cliche of bourgeois scholars, and nothing new at all.

That the policy of 100 flowers blooming and 100 schools of thought contending must be followed in order to bring prosperity to literary and artistic creation is publicly recognized. However, the policy itself is not the goal. Any group and any class can use it to attain their own goal. When we introduce it, it is for the purpose of developing Marxism and bringing prosperity to the socialist culture and art. It is our long-range and fundamental goal. Therefore, 100 flowers blooming and 100 schools of thought contending constitute our long-range and fundamental policy. Before the "Great Cultural Revolution," we, especially I myself, did not truly understand or properly implement it, thereby causing a great loss to literary and artistic work. Today the condition has somewhat improved, but is still far from adequate, and there are all kinds of obstacles. We must not interpret the policy as something which is against socialism and unfavorable to the four modernization construction and which permits noninterference and freedom from struggle. However, as long as the people's common fundamental interest is not violated, discussions and contentions among different views should be permitted. Truth has its objective criterion; the masses are able to distinguish the right and wrong. Literary and artistic publications should publish different views without discrimination and launch vivid and lively discussions, even if the arguments become heated. Only thus will they arouse the readers' interest, enlighten their thinking and raise their theoretical level. Today there is a tendency, which is mutually accusing one another of hitting with the big stick. Actually, often the accuser himself is hitting with the big stick, and a frightfully heavy big stick at that. For instance, what a frightening political label is the accusation of resisting the spirit of the Third Plenary Session made at the drop of a hat! I feel that there is no harm for a critic to be sharp and biting. As long as he is reasonable, even ridiculing and reviling are permissible, but the evil habit of attaching political labels arbitrarily must never be repeated. If this evil habit is not eliminated, the double-hundred policy will only be an empty phrase. It has been proved by the experiences of the past.

17 September.

Two Thoughts

[Article by He Luting [6320 4845 3060]: "Two Thoughts"]

A controversial issue comes to my mind, viz., exposure and eulogy. Is it exposure or eulogy? Chairman Mao discussed it at the Yanan Literature and Art Forum. Why must there be only eulogy, not exposure? When we were in Yanan, though we had defects, as the Kuomintang was very powerful, if we followed that way, it would be equivalent to helping the Kuomintang. Today, the situation is different from the Yanan era. Our every word and every act have the attention of the world. At the National People's Congress and the Political Consultative Conference, the criticisms made by the delegates were sharp. Our open criticisms of defects and praises of new measures have not only not damaged our country's prestige, but won favorable comments. Currently, should we praise or should we criticize the defects and expose the dark side? Is there a dark side in our socialist state? When we look at it now, there is such a side. It is the feudal mentality left down through several thousand years. Though the feudal society was overthrown, the feudal mentality still survives, and it is impossible for it to be wiped out in one day. It exists even in our literary and artistic workers themselves. As a literary and artistic soldier, I feel that today we must fight a battle against feudalism and the bourgeois ideology, mainly the former. Exposure is an important fighting task of our literature and art. If we are sick, but, wearing smart clothes, insist that we are healthy, we will be out of luck when we drop dead from our ailment.

The other point is the question of whether our literary and artistic workers themselves are incompetent in politics or whether their Marxist-Leninist level is low. Why must we have an amateur who does not understand literature and art and whose political level is not high to serve as the party committee secretary and exercise leadership? This situation is not limited to any one area, but is found in every organ. Not just in literature and art, it exists in other units. An individual issues orders in ignorance, because he happens to be the party committee secretary. Today our intellectuals have been receiving the party's education for 30 years. Whether they are party members or not, their Marxist-Leninist level is not necessarily lower than the bureaucratic party members. The purpose of my words is not to knock anyone down and trample on him, but to improve and reinforce the party's leadership and change the undesirable style. As stated by Comrade Deng Xiaoping, we must be honest persons, honest in words and in deeds, for the purpose of benefiting our literary and artistic work and the four modernization construction.

[Article by Liu Baiyu [0491 4101 5038]: "Literature and Art Must Boost the Morale for the Four Modernization Construction"]

The whole world focused its attention on our National People's Congress. The congress declared solemnly: We have made decisions of a historical meaning at a historical moment. The following passage appeared in the closing address:

"We hope that the people of all nationalities in the country will rally even closer around the party and the government, raise high the revolutionary banners of Marxism-Leninism and Mao Zedong Thought and, to complete the tasks proposed at this meeting, to unify the motherland and consolidate the national defense and to promote the great cause of the four modernization construction, make new contributions."

Thunderous applause broke out at these words. Coming from the fervent heart of each and every delegate, the applauses were the pledge of the courageously advancing people on the path of the four modernizations. As a literary worker, what are my thoughts? I ponder how literature can make contributions and how to accomplish the tasks assigned by the great era to literature.

Primarily, I think literature should boost the morale for the four modernization construction.

The four modernization construction must rely on a matter-of-fact scientific attitude, without exaggeration or rashness. We have had plenty of historical lessons in this aspect. However, we must, at the same time, realize that the four modernization construction is a great revolution in the building of socialism and that we cannot make new explorations if we take a detached and indifferent attitude. The reason is because it is an arduous yet heroic path and calls for the down-to-earth effort of hundreds of millions, with firm confidence and strong determination. The sacred mission of literature and art is to boost morale spiritually, so that our people will unite and advance with their feet on solid ground, full of confidence, of one heart and one mind, and march toward the expected goal of the year 2000.

Sitting in the auditorium of the National People's Congress, my mind galloped to distant places, to the midst of the pioneers toiling day and night and dedicating their youth and lives to the four modernizations. Today, whoever unable to see the concentration in their eyes, hear their calm and painstaking breathing and feel their fervent beating hearts fails to understand our new era. Creation is the most beautiful in the world. The sculptor concentrates on carving; the poet sings with his heart; the four modernization builder creates new history, new era and a new world with his entire body and soul. Naturally, like all creators, the builder must use his wisdom as well as his strength. If one prattles about the ideal of the four modernizations, while failing to see those toiling conscientiously to build the new world, one will not be able to make contributions to the four modernization construction. The contributions of literature are to serve the hundreds of millions of creators. They are the objectives of our creation as well as our service. Naturally, creating a new world is not an easy matter. On the road of the long march, people must open path and advance simultaneously. I feel that literature must produce the effect of promoting history in two aspects: Extolling the new things, the advanced models and the positive and progressive forces in life; attacking the old things and eliminating the various kinds of desperate resistance and disruptions. However, regardless of which aspect, our literature and art must stimulate morale, fully develop the intelligence and wisdom of man and build people's confidence in victory. Without conviction, there can be no victory.

A group of new people is building the four modernizations; the four modernization construction is creating a group of new people. Their spiritual world, ethics and qualities, thinking and feelings, joys and sorrows all require the deep explorations of the writers and artists. Thus, the writers and artists must enter the rich and colorful and ever changing real life. We must consider it an honor. In our lifetime, at the start of a new milepost, we have a clearly defined responsibility: Go into the people! Our achievements today are the result of the line formulated by the party's Third Plenary Session. To be truly loyal to the line of Marxism-Leninism and Mao Zedong Thought, our writers and artists must first shift their emphasis to the midst of the pioneering people in the process of building the four modernizations. Whoever failing to make the shift has failed to truly emancipate his mind, understand the new era and new reality and dedicate himself to the new realm of life. Cherishing the outmoded and preserving the obsolete, closing the door and keeping to oneself are only manifestations of ossification and semi-ossification. A dialectic materialist will, after all, consciously realize that life is the source of creation. The view that one's own life is sufficient for a lifetime of writing will only lead us away from the advancing reality, because life is not static, but developing. For the writers and artists, without fresh life, it will be similar to being without fresh air, and life will wither away. Their works will only be like apples long left on the shelf, without the luster of life. We must create, not fabricate. Bourgeois artist (Rodin) said in his late years: "I obey 'Nature.'" So, how can our socialist writers and artists sever themselves from reality? Apart from real life, there can be no thinking in terms of images. Naturally, we must not stop at the surface of life. Only by penetrating the inner truth, i.e., the inner world of man, the spiritual realm, will one truly master man, and only then will the words, lines, movements and notes of the writers and artists truly express the people of the new generation, the people maturing in the struggles between beauty and ugliness, good and bad, light and dark. Such people have ideals, worries, excitements, silences, joys and sorrows, but the most important thing is that they, with their life and blood, strength and wisdom, are toiling bit by bit for the building of the four modernizations and advancing heroically. Only thus will there be beauty and poetry, artistic strength touching man's soul, the zeal for the new society, the enthusiasm and effort for the four modernizations. Only such literature and art will mold the soul of a generation of new people; only such literature will embody the characteristics of the new era, serve as the treasury of mankind and add a bright and dazzling new page to history.

After repeated summations of the lessons of victories and failures, the great era of socialist construction pursued by us for many years has finally arrived. In the reality of our struggle to create material wealth, we will certainly also create spiritual wealth. From the material to the spiritual, from the spiritual to the material, it is the function of our literature and art in the new era. Let the workers on our literary and artistic front unite as one, advance hand in hand and make our contributions to the four modernization construction!

[Article by Luo Chengxun [5012 2110 8133], assistant editor-in-chief of the Hong Kong DAGONG BAO and editor-in-chief of XINWAN BAO [NEW EVENING NEWS]: "Doubtlessly Spring Has Finally Arrived"]

Is it "release" or "restraint?" Since the conclusion of the Fourth Congress of Literary and Art Circles last November, the question has been in the minds of our friends in Hong Kong and abroad. All are concerned over the country and over literature and art, and happy over the democratic atmosphere and springtime panorama manifested by the congress. However, there are also some who do not feel confident, wondering whether spring has truly arrived and, if so, whether it will last.

Subsequently, it was learned that there were a playwriting forum, a national cultural bureau chiefs' meeting, a national conference of editorial workers of literary periodicals and discussions on the interpretations of the "double-hundred" policy; it was also learned that controversial plays such as "the Swindler" would not be performed again.... One feels that at times it is "restraint" and at other times it is "release." Back and forth and back and forth, one is now worried and now happy.

After attending the Congress of Literary and Art Circles, I personally felt rather confident, though also somewhat anxious. Attending the Political Consultative Conference in Beijing this time, I came with the idea of finding out just how it was, and what I personally saw and heard made me feel that I could maintain my confidence. Take the National People's Congress and the Political Consultative Conference for instance: Compared with the past, they were unprecedented. People could express themselves more freely and the democratic atmosphere was very pervasive. When there is democracy in politics, naturally democracy in literature and art is guaranteed.

It occurs to me how, in the Taiwan aspect, some people vociferously advocated "learning economics from Taipei" and "learning politics from Taipei." Recently someone proposed "learning literature and art from Taipei." Let us leave economics aside and talk about politics. How can Taipei's "Legislative Yuan" and "Yuan" and its "State Construction Study Conference" attended by overseas scholars upon invitation compare with our National People's Congress and Political Consultative Conference in democratic spirit? Naming names and airing views without reservation, criticizing certain vice premiers (not just one) of the State Council and addressing solemn inquiries to certain ministers (not just one) are things which cannot happen in Taipei. Democracy in politics will naturally assure democracy in literature and art.

As for "learning literature and art from Taipei," those proposing this slogan feel that the literary and artistic achievements of the mainland have failed to keep pace with Taiwan and that Taiwan has made achievements in literature and art while the mainland has not accomplished much. I feel that this is a prejudice which is not convincing. Take just novels alone for instance: Back and forth, they dwell mostly on Bai Xianyong [4101 0341 0516] and Chen Ruoxi [7115 5387 2569], one writing about the "Taipei people" and the other about the "Cultural Revolution." In regard to Chen Ruoxi, once our writers liberate themselves and emancipate their mind, their works exposing the 10 years of calamity, known as "scar literature," will be more profound than her writing. As for the literary and artistic achievements in the past 30 years, whether literature or art, as long as one is free of prejudice, one will understand that momentous achievements have been made on this side of the straits. Naturally, we are not indifferent to the effort and achievements of the Taiwan writers. The publication of their novels, poetry and songs, and essay collections in Beijing volume after volume is the proof. (Some people feel that the selection of novels is fairly comprehensive, but that of poetry and songs and essays is rather one-sided). I feel that we should not overlook the talented and accomplished novelists, poets and essayists. Their works naturally contain things which can serve as our reference. But generally speaking, no matter what, one cannot draw the conclusion that Taiwan's literary and artistic achievements in the past 30 years excel those of the mainland. Some outstanding individuals cannot change the overall situation. Therefore, I would like to repeat my view expressed at the Writers Association meeting during the Congress of Literary and Art Circles, and hope that our mainland writers will produce more and better new works to prove that we have made achievements, are continuing to do so and will accomplish much.

(Written after the statement at the reception of the China Literature and Art Association on 12 September).

[Article by Wang Chaowen [3769 2600 5113]: "Do Not Just Manage To Get Through the Days"]

The "eight-character policy" for economic construction stressed by Comrade Hua Guofeng is applicable to culture as well. I feel that his demand to devote our effort to "gradually improve the people's material and cultural life" is pertinent to literary and artistic work.

In our literary and artistic work, are there such "serious defects" as "actually encouraging waste rather than thrift, slipshod work rather than quality improvement, and laziness rather than diligence," etc.? I feel that they also exist in our literary and artistic leadership, creation, criticism and research. The emergence of works such as "the Flower Announcing Spring," "Flower Rain on the Silk Route," "Arriving at Middle Age," "Mayor Chen Yi," etc. has proved that many comrades are devoting their effort to improving the quality of artistic creation and have made encouraging achievements. However, works of such high caliber are inadequate in number and rather slow in coming.

The key is the leadership. Some cultural, literary and artistic leaders also discuss "democracy in art" and "leading art according to the laws of art," but actually do they act according to the demand of "opening all avenues for people of talent; making the best use of men?" Are they striving to understand the laws of art in their leadership work? There are also other problems. The broad rural villages, for instance, urgently need popular literature and art which are sound and acceptable to the masses, yet the artists who are willing and qualified to perform for the masses do not have the opportunity to do so. Is this "economy" or "waste" of talents? In the creation of literature and art, are there contradictions between production and consumption? In regard to the long existing contradictions, are the leaders doing their best for their solution, or do they refuse to acknowledge their existence? How can such leaders guide us properly in our cultural construction? How can they guide us to build a highly civilized motherland? Some leading comrades constantly express their humility: "Ah, I am an amateur!" Humility is a virtue, yet, how do they justify their amateur status after 4 years, after 30 years? Could they not have made some effort to turn themselves into experts or acquire some expertise? If they are satisfied with tolling the bell as long as one is a monk, doing the minimum possible, or even too lazy to toll the bell, is it not the bureaucraticism criticized by the comrades of the Party Central Committee and this congress? As they are amateurs, they are often baffled by the problems posed to them. As they are amateurs, they have difficulty recognizing talents, cultivating talents, and easily take a winged steed as a donkey or a mule. In short, a leader, whether old or young, must no longer share the rice in the large cauldron and manage to get through the days, but must reinforce his feeling of responsibility, making up his own deficiencies wherever necessary, and turn himself into a socialist cultural builder in substance as well as in name.

If the leadership is good, does it mean that there will be no problems? No. If those led fail to make an adequate effort, the quality of art will not improve either. After hearing the words of Comrades Hua Guofeng and Deng Xiaoping, I have the feeling that "I am not willing to die even though it is evening." It does not mean that I still have much energy and refuse to give up, but I feel that there are still many things which I have not yet learned. If it is said that "after hearing the principles in the morning, I will die willingly in the evening," there are still many "principles" which I have not yet heard! Time is life. We must, with the spirit of seizing every minute of the day, change the maladjusted conditions in ourselves and our environment. If we remain indifferent over the abnormal conditions unfavorable to our economic and cultural construction, do we have absolutely no fear of the condemnation of future generations?

[Article by Chen Dengke [7115 4098 4430]: "Systems Must Be Reformed; Creation Must Be Freed"]

How to enliven literary and artistic work? Pondering the issue, I find that there are two "must's," i.e., systems must be changed; creation must be freed.

Let us first discuss the reform of systems. The systems of our state were acquired from the Soviet Union in the fifties. In literature and art, even the royalty system was copied from it. Viewed from the practice of the past 30 years, it hampers, rather than promotes, literary and artistic creation. If we lead literature and art today according to the rules and regulations of the fifties, it will be impossible to enliven literary and artistic work, because the system is flooded with the feudal style and repetitious bureaucratic structure. When examining a film, a play, the leaders have different ideas on changes and revisions. Basically, instead of leading literature and art according to the laws of creative work, it is the amateur leading the professional, issuing arbitrary orders according to the preferences, interests, experiences or even prejudices of certain leaders, and the writers and artists are baffled. To reform the system, we must rely on the writers and artists to free themselves from the old confines and encourage them to smash the shackles. We must learn the way economic work is handled and strive for control without rigidity and liveliness without confusion. To enliven literary and artistic work, we must foster more pathbreakers who have ideals, pursuits and determination and are courageous in looking squarely at reality, facing the truth, reflecting the aspirations, feelings and desires of the people without reservation and thoroughly reforming the old systems in the practice of literary and artistic creation.

How should the old systems be reformed? I think of four points: 1. The life tenure of literary and artistic leadership cadres should be abolished and the leaders of all levels in literary and artistic work should be freely elected by the writers and artists. 2. The feudal leadership structure of the literary and artistic leading organs, including the various literary and artistic associations, must be changed. 3. The inspection system of literary and artistic works should be abolished. In other word, the feudal patriarchy and the practice of one man's word should be changed. 4. The free association of writers, artists and literary and artistic workers who are basically identical in their artistic viewpoints, interests and pursuits should be encouraged, and the free competition in literary and artistic creation of all kinds of styles, schools of thought and mass organizations should be promoted.

Let us now discuss the freedom of creation. Literary and artistic creation involves complex individual mental labor, which cannot tolerate arbitrariness, high-handedness and blind direction. The party's leadership of literary and artistic work refers only to its propaganda, guidance and influence on the writers and artists in its literary and artistic policies and theories; it absolutely does not indicate that the party committees have the right to order the writers and artists on what to write and how to write. A writer is not the secretary of the party committee, and cannot follow orders on what to write and how to write. As a writer can only write about what he sees and hears, what he feels deeply and what he believes in, it is impossible to order him to describe something of which he has no knowledge or feeling. If this is not blind direction and arbitrary interference, what else is it? During the National Conference of Editorial Workers of Literary Periodicals, we saw two films, viz., "the Dazzling Starlight Tonight" and "an Instant," which were both banned at that time. It appeared that "the Dazzling Starlight Tonight" was revised, and was permitted to be shown after cutting several scenes. When the showing of a film hinged on a few scenes, people could not help asking: Does it mean that the life of a film is determined by only a few scenes, let alone the fact that the scenes in question basically do not involve issues of principle? When they were not issues of principle, why must they be deleted? Some people arbitrarily said that too many people died. It was not good for too few people to die, and it was not good for too many people to die. Then, just how many would be good? It was truly baffling. "An Instant" is the first film directly exposing Lin Biao's small fleet counterrevolutionary plot. Reportedly it was banned after an airforce club wrote a letter. China has one billion people, and how many can a club represent? Just who gave it such great power to destroy rashly the diligent toil of so many artists and the 800,000-yuan investment of the state? Just who should pay for such a tremendous loss? Yet, even today, relying on their high position and great power, certain individuals constantly borrow the "revolutionary" banner, raise the sticks of "liberalism" and "smearing the troops" and hit indiscriminately and interfere arbitrarily in literary and artistic work. They fail to understand the equality of all before a work of art and the absence of distinction between the superior and the subordinate, between the leader and the led in the court of art. For a long time, they have no respect for the mental labor of the writers and artists and are accustomed to showing conceit, issuing haphazard orders and interfering arbitrarily in literary and artistic work. I feel that this is the reason for the failure of literary and artistic creation to flourish fully even today.

Though the condition in the field of literature and art in the past 3 plus years has changed greatly and a lively and vivid new situation, which did not exist not only in the time of the "gang of four," but also in the 17 years, has appeared, the writers and artists are at times still apprehensive and concerned. The peasants say: You discuss policies when the situation is bad, change policies when it is good and criticize policies when a movement arrives. Same as the peasants, our writers and artists are also afraid of the three items. When the situation deteriorated, when finally only eight sample plays were left from the "gang of four's" rampage and when culture was on the verge of destruction, the "double-hundred" policy, ideological emancipation and "freedom," after smashing the "gang of four," were discussed. After a while, when the situation improved and everyone wrote more freely, and some vitality appeared in the literary world, a cold wind began to blow, saying that such freedom was disastrous; that it was bourgeois liberalism and must be controlled; that the policy must be changed! Today, everyone is still worried, not knowing when another movement will be launched, and our writers and artists will again be the first to bear the brunt and suffer criticism. Why is there still such worry? It is because the law still has not clearly provided the protection of the rights of the writers and artists. Therefore, the phenomenon of arbitrary interference in literary and artistic creation still exists in a serious manner. Can one say that instances such as the Bohai No 2 case in the field of literature and art resulting from confused orders are few in number? Who is investigating the political and economic responsibilities? I feel that the Writers' Rights Protection Committee of the Writers' Association should earnestly perform its functions.

In short, I feel that, to truly carry out Comrade Deng Xiaoping's statement against "arbitrary interference" and enliven literary and artistic work, legislation is required, and concrete laws must be enacted to eradicate feudal patriarchy in literary and artistic leadership and earnestly protect the creative freedom of the writers and artists.

[Article by Xie Tieli [6200 6993 7537]: "Keep the People in Mind"]

The 10-year long-range plan for national construction makes me feel that our film industry must also formulate a long-range plan as soon as possible. It should include the unified planning and arrangement of the production, distribution and showing of films, the film industry and the training of specialized personnel.

Comrade Hua Guofeng said: "The fundamental goal of our pursuit of the modernization construction is to satisfy the people's needs in their material and cultural life." If we measure the present situation of our film enterprise with these words, I find that we give too much consideration to the cities and too little to the 800 million peasants, too much to the ticket office and too little to the influence on the young and young adults (the basic audience in the cities). Take innovation for instance: Is it innovation for the sake of innovation, or is it innovation for the needs of the cultural life of the broad masses? If we do not ponder and solve the problems in terms of this fundamental goal, I feel that we will easily deviate in our direction.

When "the Dazzling Starlight Tonight" was filmed, some people asked: "You still make this film today? Will there be people who want to see it?" After it was shown, the questions were answered in the many letters from the viewers. One young worker wrote that, after seeing the film, he yielded his quota to someone else at wage evaluation. Another youth wrote that he and other young people imitated, by their practical acts, the leading characters in the film. It has further convinced me that the characters portrayed in the film are acceptable to the young people. I feel that, as the young people of this generation will, 20 years later, take over the shift and determine the future of the state, if we can produce some positive influence on their growth, it will indicate that our work is meaningful. With such a sense of responsibility, my next creative planning is to make films on modern subject matters. Naturally, it does not mean that I do not support the breadth of subject matters and the great variety of styles in films.

One very important problem in film creation which requires solution is respect for the writers' labor and protection of their creative spirit.

The "100 flowers blooming" policy in film making should be like the chefs who each displays his own unique skill and creates his own specialty to satisfy the different tastes of the diners. However, for a long time in the past, the practice was to boil a large pot of food for the 1 billion people. Now it has been improved, and the situation has somewhat changed. Naturally, while any dish may be served, there must be a premise: The chef must consider sanitation and avoid food poisoning of the diners. Today when film creation is gradually flourishing, we must realize that it is impossible for everyone to be satisfied with a film and to have no complaint. On the contrary, when a film pleases the majority of the audience, it is possible for it to offend a part of them. This is a normalcy. Different opinions in artistic appreciation may coexist and may be discussed and debated, and it is not necessary to seek arbitrary uniformity. As long as no fundamental mistake in political principles is found in a film, even if one does not like it, one must not oppose others for liking it or decide on the fate of the film according to one's own preferences by administrative means and coercive measures. Inspection and ensuring soundness are necessary, but will it not be better to place the main responsibility on the film production plants? The current inspection system is not clear and the inspection is often too concrete. A film costs several hundred thousand to 1 million yuan. If, upon its completion, the leaders of the various levels make all kinds of comments on problems which are not fundamental and require numerous revisions, or even suspend its showing, it will result in a great waste. I advocate that, as long as the problems are not momentous and fundamental, whether to revise or not should be left to the writers themselves, and their views should be respected. The different views may be openly discussed in newspapers and periodicals after a film is shown, or they may be brought to the writers' attention for improvement in the future.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PART II OF 'XINHUA' ROUNDUP ON INTERNATIONAL EVENTS

OW261010 Beijing XINHUA Domestic Service in Chinese 0730 GMT 23 Dec 80

["Part II of Yearend Roundup by XINHUA Reporter: '1980--A Year of Changing Events'"]

[Text] Beijing, 23 Dec (XINHUA)--The Struggle of the People of Southern Africa

In 1980 the struggle of African countries and peoples for national independence and against racism continued to develop and achieved new results, of which the most outstanding is that Zimbabwe won independence. With the support of African countries, especially the support of the frontline countries, the Zimbabwean people waged a protracted and arduous armed struggle, dealt crushing blows at the racist forces and forced the Rhodesian racist authorities to reach peace agreement with the Zimbabwean nationalists. In an independent general election, the Zimbabwe African National Union won with an overwhelming majority and formed an independent Zimbabwe Government with Mugabe as prime minister. The Republic of Zimbabwe was formally founded on 14 April, thereby pronouncing the final collapse of the racist stronghold that had ruled this land.

Zimbabwe has abundant national resources and holds an important strategic position. Its independence is of great significance to the development of the revolutionary situation in southern Africa. Since independence, the government has promulgated a "minimum wage law" to protect the black people's interests, increased the purchase prices of farm products by large margins and rehabilitated and developed the war-torn economy at a rather rapid rate in order to rebuild the country. Noticeable achievements have been made in the short span of more than half a year. The government has adopted a realistic policy and declared that it will protect private capital and encourage foreign investment that will help develop Zimbabwe's economy. As a result, the country's economy is recovering step by step. Zimbabwe has also resettled more than 1.2 million refugees and is gradually forming a national army by integrating the guerrillas and the former Rhodesian security forces.

However, Zimbabwe at present is also confronted by some difficulties which cannot be ignored. For some time, armed conflicts and violent incidents have occurred incessantly between a small number of the members of the two groupings of Zimbabwe nationalist organizations, resulting in injuries and deaths and economic losses and adversely affecting social stability and the people's livelihood. Healing the economic wounds caused by the protracted war and upheaval, overcoming the difficulty of the critical shortage of capital in rebuilding the country and reorganizing the armed forces to form a unified national army are also arduous tasks. The Zimbabwean Government is taking positive measures and striving to solve these problems.

The fact that Zimbabwe has won independence has greatly encouraged the Namibian people in their struggle for national liberation. While the South-West Africa People's Organization [SWAPO] is continuing its armed struggle, African frontline countries and the international community are making concerted efforts and are engaged in frequent diplomatic activities on Namibia's independence. The South African racist authorities have been forced to agree to take part in a meeting on the issue of Namibian independence to be held early next year. However, because South Africa has changed its attitude many times before, African countries are closely watching what schemes the South African authorities may still play to obstruct a peaceful settlement of the Namibian issue.

Zimbabwe's independence has made the South African racist regime even more isolated and it finds the going very tough. To extricate themselves from the predicament, the reactionary authorities are on the one hand continuing to suppress the black masses and on the other hand making a pretense of "relaxing" their racial discrimination, attempting to deceive the masses. However, the masses of blacks and colored people, fearing no suppression and refusing to be deceived, are constantly boycotting schools, striking and demonstrating, demanding the "abolition of the system based on racial discrimination." The massive boycott of schools and strikes that broke out successively in April and June this year dealt heavy blows to the racist authorities.

With the birth of the Republic of Zimbabwe, independent African countries now number 50, and the forces in Africa against imperialism, colonialism and racism have become stronger. The African countries and peoples united under the OAU are determined to step up their struggle and advance courageously to thoroughly crush the racist system on the African continent.

[OW261340] Turbulent Central America

If we say that the situation in Central America in 1979 was characterized by the upsurge of struggle against dictatorships marked by the overthrow of the Somoza regime by the Nicaraguan people, then since the beginning of 1980 the contradictions between various political forces in this region have become more acute and the situation is complicated and turbulent.

Central America includes five countries in the long, narrow isthmus between the Caribbean Sea and the Pacific Ocean, namely, Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica. The situation is most eye-catching in El Salvador, the smallest and most densely populated of the five countries. It reflects some characteristics of the current situation in Central America.

In October last year a military coup d'etat led by young officers took place in El Salvador. The Romero dictatorial regime was overthrown, and an executive committee composed of military officers and civilians was formed. However, shortly after the government was formed, the rightwing began to criticize it for failing to energetically suppress the leftists, and the leftists regarded the new government as a change in form but not in essence. From then on, fighting between government forces and leftist guerrillas, assassinations of leftist figures by rightwing terrorist organizations and violent activities of leftist guerrillas intertwined with one another, throwing El Salvador into a state of civil war. Several thousand people have died in the violent conflicts in 1980.

This year the various antigovernment political organizations gradually joined forces with the guerrillas in El Salvador, saying that they were going to fight a "decisive battle" with the government. They engaged the government forces in frequent battles and staged three nationwide general strikes and struck at the government economically by such means as setting fire to coffee warehouses and so forth. They also sent several delegations to sell their ideas to foreign countries in order to win international support. The rightwing terrorist and assassination activities have become more rampant. Six leaders, including Archbishop Oscar Romero, who was sympathetic to the leftists, and (Enrique Alvares), general secretary of the Democratic Revolutionary Front, and four women from the United States were all victims under the butcherknife of the rightists.

The present Salvadoran government has been organized many times since the beginning of this year, and the contradictions between the "hardliners" and the "moderates" within the armed forces have also become increasingly apparent. After several contests of strength, the forces of Gutierrez, representative of the "hardliners" and member of the executive committee, are gradually gaining the upper hand, and the position of Majano, representative of the "moderates" and also a member of the executive committee, and his supporters has been weakened. This country is still in a state of unrest.

The situation in Guatemala is in many ways similar to the situation in El Salvador. Several antigovernment guerrilla forces have also formed a United Front to fight the government forces and the rightwing paramilitary organization.

In another country, Honduras, the government is striving to stabilize the domestic situation through the democratic process. However, the struggle of the masses for democracy still tends to increase daily.

In Nicaragua, since the Somozan dictatorship was overthrown last year, certain achievements have been made in healing the wounds of war and for economic and cultural construction. However, the contradictions in domestic and foreign policies between the Sandinist National Liberation Front, which holds the state power, and other parties and organizations are becoming more and more pronounced. This has resulted in the successive resignation of two well-known democratic figures in the junta: Mrs Chamorro and Mr Robelo. In November this year, 11 representatives of a number of political parties, trade unions and enterprise-owner organizations withdrew from the legislative and consultative organ, the Council of State. Then the authorities charged that the leaders of some enterprise-owner organizations were plotting to stage a counterrevolutionary coup d'etat. The extremely close relationship between the Sandinist National Liberation Front and Cuba has also caused dissatisfaction among some people in Nicaragua.

The turmoil in Central America is caused by long dictatorial rule, economic backwardness, the wide gap between the rich and the poor and acute social contradictions. In this turbulent region, the Soviet Union and Cuba, which are adept in taking advantage of others' precarious positions, have in the past few years used the revolutionary desires of the people in this region against imperialism, dictatorship and the oligarchical forces, meddled in the national and democratic movements in the region and contended for spheres of influence with the United States. This has further complicated the struggles in the region.

[OW261612] Western Countries Find Themselves in Economic Straits

The economies of the major capitalist countries of the West have experienced serious difficulties in the first year of the 1980's. Circumstances indicate that most of them will continue to face a gloomy prospect in the coming year.

At the very beginning of 1980, the United States, Britain and Canada one after another landed themselves in an economic crisis. The U.S. industrial production index began to drop in February and continued dropping for 6 months. Although in August it began to rise slowly, industrial output up to November was still 2.5 percent lower than the same period last year. Then, in the second half of this year, the economy of a number of West European countries also began to drop one after another. It is estimated that the size of economic growth of the nine countries of the West European community this year will be smaller than any year since 1975. According to a 27 November REUTERS report, some factories in various European countries had been closed down, the situation was desolate, and "the European economy is falling into a recession."

Soaring prices is another "serious problem" the Western countries find difficult to cope with at present. The ministerial conference of the economic cooperation and development organization held in Paris in early June of this year and the Summit meeting of seven Western countries including the United States, Britain, France, West Germany, Italy, Japan and Canada in Venice in late June of this year both unanimously expressed the need to control rising prices. Since the beginning of this year, these countries have also each adopted some measures, but the results are very little. It has been disclosed that prices in seven major capitalist countries including the United States in September this year increased more than 10 percent over that of a year ago, and that prices are rising most sharply in Britain and Italy. It is estimated that this year's overall price increase in these two countries will not be lower than 20 percent. In the United States, because of the constantly rising prices, what could be bought for $100 in 1967 costs nearly $254 in October of this year.

The worsening economic situation has aggravated the unemployment problem in the Western countries. As disclosed by the experts of the Economic Cooperation and Development Organization in November this year, in the 23 Western countries (not including Turkey) of that organization, the total number of unemployed reached about 2.4 million, and, in addition, there were more than 20 million semi-unemployed who could only find part-time work. Since April this year, the number of unemployed in the United States each month has hovered around 8 million, and this means there are at least 7 persons out of every 100 on the average who cannot find work. The number of unemployed in the 9 countries of the European community in November this year increased to 7.6 million, an increase of 1.6 million over a year ago. The number of unemployed in Britain and Denmark each increased by 50 percent over a year ago.

Leaders and economists in some Western countries are of the opinion that 1981 will continue to be a year in which the Western world will be confronted by political and economic difficulties. West German Chancellor Schmidt felt that the economy of the Western world will make almost no growth in 1981. A U.S. economic research organization believes that the slowly recovering U.S. economy is in danger of again falling into a recession in 1981. Some major economists in the West pessimistically predict that in the first half of 1981, the rate of economic growth in West Europe is estimated to drop to zero.

[OW262055] Reagan's Entry Into the White House

The United States holds an election once every 4 years. The year 1980 was an election year. On 4 November, Republican Presidential Candidate Reagan won an overwhelming majority of the electoral votes and was elected the 40th president of the United States. Incumbent President Carter suffered a stunning defeat. This was the first time such a thing happened in the United States in nearly 92 years.

The election was held with the United States facing serious difficulties in both domestic and foreign affairs. Domestically, the U.S. economy had been "stagnant" for a protracted period. The production of major industrial departments was stagnant or even declining. The inflation rate reached 12.7 percent. The number of unemployed people stayed at about 8 million. The actual income of the working people was dropping. Internationally, due to the Soviet Union's global aggression and expansion, the U.S. interests were in immediate danger. The U.S. Government had too many problems to tackle and felt quite helpless. Even the issue of the hostages in Iran remained unsolved for a long time. Because of all that the American people felt disappointed and angry, lacked a sense of security and earnestly hoped to change the state of affairs. This was the situation when Reagan won the election.

The Democratic Party lost 12 seats in the congressional election that was held concurrent with the presidential election. A number of liberal congressmen, who had been in Congress for a long time, lost and were replaced by conservatives. Conservative organizations were quite active during the election campaign. The conservative think tank "Heritage Foundation" proposed a 3,000-page plan for action to the Reagan group, recommending a large-scale increase in military spending, the accelerated development of nuclear weapons, suppression of "radicals in the country," and even resumption of activities of the right-wing organization in the 1930's "The Committee for the Investigation of Unamerican Activities." Indications suggest that with Reagan's election victory the conservative forces in the United States is gaining ground.

Reagan is a conservative of the Republican Party. His major election campaign slogan was: "Rebuild a Powerful America." He emphasizes the need to revitalize the U.S. economy and military strength and to restore the United States' "position as world leader." Domestically, he proposed to slash the budget of the Federal Government, cut taxes and reduce the regulatory role of the government among private enterprises. At the same time, he favors an increase in defense spending, acceleration in arms expansion and the restoration of U.S. military predominance. In foreign affairs, he believes that the Soviet Union is the "source of all turmoil in the world" and he proposes to adopt an even stronger policy in dealing with the Soviet Union to deal a heavy blow to Soviet aggression and expansion and to protect U.S. interests in various parts of the world. He also expressed his determination to strengthen U.S. relations with its allies and to support Israel.

Concerning U.S. policy toward China, on the one hand Reagan supports efforts to normalize relations with China and expresses his intention to continue developing Sino-U.S. relations. However, at the same time, he more than once advocated the reestablishment of an "official relationship" between the United States and Taiwan.

In an interview with a reporter from the French newspaper LEFIGARO on the eve of the general election, he said: Sino-U.S. relations will be "based on an overall and strategic concept." He believed that to continue developing the Sino-U.S. relations conforms with the interests of the United States, possibly "interests of a fundamental nature." At the same time, he once again said that he will seek to "maintain relations with Taiwan" according to some articles of the "Act on Relations with Taiwan."

Since the late 1960's, U.S. strength has been clearly on the decline. At present, not only its conventional strength is lagging behind the Soviet Union, but it may possibly be surpassed by the Soviet Union in nuclear weapons. It is impossible to change this situation overnight. In the United States, various political forces oppose each other. The conservatives and moderates within the Republican Party are trying to outdo each other as they have different political opinions. We have to wait and see what kind of domestic and foreign policies Reagan will advocate after he officially takes office.

At present, President-Elect Reagan is busy forming his cabinet and making preparations to take over the government. The principal cabinet members have already been appointed. Reagan's new administration will officially take over on 20 January of next year.

'XINHUA' ON RECONCILIATION BETWEEN EGYPT, OTHER ARAB STATES

OW261214 Beijing XINHUA in English 1200 GMT 26 Dec 80

[Article by Wan Guang: "Roundup: Tendency for Reconciliation Between Egypt and 'Moderate' Arab Nations"]

[Text] Cairo, December 25 (XINHUA)--Certain Arab countries, which have split because of differences over ways to deal with Arab-Israeli relations, have shown tendencies to reconcile. This was seen as a new development in the Arab region this year, against the background of the grave Soviet menace.

Egyptian Deputy Premier and Foreign Minister Kamal Hasan' Ali declared on December 21 that Egypt hoped that the year 1981 would become "a year of Arab dialogue" and "a year of Arab accord and harmony."

Antagonism between "moderate" Arab countries and Egypt has somewhat mitigated this year. These countries expressed their desire for unity after the Israeli authority adopted the law annexing Jerusalem last July. Moroccan King Hassan the Second sent a message then to Egyptian president Anwar al-Sadat, urging him to take measures which "would enable us all to embrace again Egypt." Saudi Foreign Minister Sa'ud al-Faysal indicated last August that his country wanted to see Egypt in the Arab ranks. The press here also carried articles at that time calling for solidarity between the Arab nations to oppose the enemy.

Owing to the differences between Egypt and other Arab nations including Saudi Arabia over the Camp David agreements, the voice for reconciliation was again silenced for some time.

Since the Iraq-Iran war broke out in September, Saudi Arabia and some Gulf countries have voiced more urgently than ever the need for unity in struggle as they were worried that the Soviet Union might step up its southward drive. Many Arab countries, already on the alert after the Soviet occupation of Afghanistan have strengthened their defences in order to resist the Soviet expansionists. Egypt has repeatedly declared its readiness to provide military facilities to the United States so as to defend the security of the countries in the Gulf and in the Middle East.

This year, some "moderate" Arab countries and Egypt have increased economic and cultural exchanges. Cairo newspaper yesterday reported that the board of directors of the Agricultural Development Fund has approved a 28 million U.S. dollars loan for Egypt under the support of Saudi Arabia, Sudan and Kuwait and in defiance of Libya's opposition. This was the first loan the fund has granted to Egypt since it was established in 1977. Delegates of Saudi Arabia and Kuwait also attended a number of international scientific conferences held recently in Cairo.

Egypt appointed in November new heads of its "interest offices" in Kuwait, Iraq and Jordan and promoted them from the rank of councillor to that of minister. It was said that private contacts and dialogues between Egypt and some Arab countries have taken place recently.

Observers here hold that both "moderate" Arab countries and Egypt want an early settlement of the Palestine problem so as to oppose in unity the hegemonist threat in the Gulf and the Middle East. Most of the Arab states are now in favour of the settlement of the Palestine problem through peaceful negotiations, though differences remain over ways and conditions for conducting such negotiations.

Some Arab personages pointed out that although antagonism between some Arab countries and Egypt has reduced it still takes time for them to restore full relations.

'XINHUA': MUSKIE CONDEMNS USSR AFGHAN INVASION, BACKS SANCTIONS

OW250132 Beijing XINHUA in English 0117 GMT 25 Dec 80

[Article: "Soviet Aggression Against Afghanistan Must Be Penalized, Says Muskie"]

[Text] Washington, December 24 (XINHUA)--U.S. Secretary of State Edmund Muskie today censured Moscow for its aggression against Afghanistan and called for continued implementation of sanctions against the Soviet Union as long as its forces remain in that country.

In a statement on Christmas Eve, Muskie said: "The Soviet Union launched its attack on Afghanistan a year ago this week, using large numbers of troops and armor. That attack has been met by the widespread resistance of virtually all the people of Afghanistan. Despite the continued massive use of force, Soviet forces have been unable to suppress popular resistance. They cannot impose a government and army capable of exercising effective control in Afghanistan or acceptable to the Afghan people. Over a million Afghans have fled Soviet troops and taken refuge in Pakistan.

"The Soviet invasion of Afghanistan has had major repercussions throughout the world. It has particularly affected the Islamic and Non-Aligned countries of southwest Asia whose concern over the threat to their own security has sharply increased. It has led the U.S. and its allies to accelerate measures to strengthen our capabilities to resist further Soviet aggression in that vital region of the world.

"The intervention in Afghanistan has been overwhelmingly condemned by the members of the U.N. nations of virtually every political persuasion have called for the withdrawal of Soviet forces.

"The Soviet Union continues to reject all reasonable proposals aimed at the withdrawal of Soviet forces and affirming the right of the Afghan people to live freely under a government of their own choice, secure from outside interference.

"The United States believes that aggression must be penalized. The weight of international public opinion and the continued implementation of concrete measures affecting the economy and programs of the Soviet Union will continue as long as Soviet forces remain in Afghanistan against the will of the Afghan people.

'XINHUA': BRZEZINSKI ON AFGHAN, OTHER ISSUES

OW290147 Beijing XINHUA in English 0126 GMT 29 Dec 80

[Text] Washington, December 28 (XINHUA)--Zbigniew Brzezinski, assistant to the President for national security affairs, said today that the courageous resistance to Soviet invasion and occupation in Afghanistan is a national liberation struggle which is beginning to command broader sympathy and international support.

The Soviets throughout their action in Afghanistan and elsewhere, he said, "have imposed very major strains on detente and this has caused a very fundamental shift in American public attitude" toward the Soviet Union.

It will be "very difficult to develop positive relationships with the Soviets unless they more visibly desist from their expansionist posture," he stressed.

Brzezinski made the remarks in an interview on NBC-TV "Meet the Press" program at noon today.

A year after the Soviet invasion, the national security advisor said, the Soviets control by and large the cities in Afghanistan. But much of the countryside is not subject to Soviet control and national resistance continues.

"There is no doubt that the Babrak Karmal regime in Kabul is a quisling regime maintained only because 85,000 Soviet troops are there to protect him. It is an occupied country which continues to resist," he said. He also noted that out of a country of some 17 million or so people, about 1 million to 1.2 million have been driven out of their homes, suffering as refugees because they do not wish to live under Soviet occupation.

Referring to a recent statement by John R. Block, secretary of agriculture-designate, suggesting to lift grain embargo against the Soviet Union, Brzezinski said, "It would be to my judgment a one-sided concession to the Soviet Union to lift the grain embargo and it would be a curious act of weakness on the part of the administration which is coming to power, committed to the principle of strength."

On the hostage issue with Iran, he believes that it is in the interest of the United States and Iran jointly for the issue to be resolved "On the principle of retroactivity"--the reestablishment of status quo ante. That is, the United States will release the assets frozen following the seizure of the American hostages and Iran will release the hostages.

"The independence and integrity of Iran are threatened," he said. "Iran has lost some territories. It has a neighbor to the north that traditionally, historically has been a threat to Iranian sovereignty."

He expressed the hope that Iran would "ponder the longer range consequences of this destructive feud" with the United States which at the same time "does so much to tarnish Iran's international image."

On possible Soviet intervention in Poland, Brzezinski warned the Soviet Union that a military conflict in the heart of Europe would have "totally unpredictable" consequences, not only in a security sense but more generally political. "Monolithic and dogmatic solutions can no longer be imposed on other nations by nations no matter how powerful," he said.

He spoke for a "new sense of national unity" in Poland and in favor of economic aid to Poland in order to stabilize what he said could "otherwise be an explosive situation dangerous to everyone concerned."

'XINHUA': PAKISTAN FOREIGN MINISTER REVIEWS WORLD SITUATION

OW291526 Beijing XINHUA in English 1518 GMT 29 Dec 80

[Text] Hongkong, December 29 (XINHUA)--Pakistan Foreign Minister Agha Shahi made a speech in the Foreign Correspondent Club here today, reiterating the Pakistan Government's position on the Afghan problem, the security of the Gulf region, and other international affairs.

He said that the Pakistan Government's difference with the Soviet Union is that the Soviet Union would like to see the matter settled through direct negotiations with the regime in Kabul which would imply recognition, and legitimization of a government set up through foreign intervention as the conditions for the commencement of a dialogue. Pakistan "is ready to hold talks, but seeks to do so in a manner that does not imply recognition of the Kabul regime. Recognition must be necessarily linked to the withdrawal of foreign troops."

He reaffirmed the latest U.N. resolution on Afghanistan. Speaking of the 11th Islamic Conference of Foreign Ministers last May during which a Standing Committee was set up to explore ways and means of promoting a peaceful solution to the Afghan problem, he said "though this committee made unremitting efforts, it could not make such headway, as the Soviet Union refused to cooperate with its peace making efforts."

Referring to the security of the Gulf region, he said, "Our view, which is based on the principles of the U.N. Charter, is that the security of any region is fundamentally the concern of the countries of that region, and that no outside power, great or small, has the right to violate the sovereignty and territorial integrity of those countries in furtherance of its own interests."

Mr Shahi has just finished his official visit to China and will leave Hongkong for home today.

'XINHUA': HENRY KISSINGER MEETS WITH EGYPT'S AL-SADAT

OW300734 Beijing XINHUA in English 0717 GMT 30 Dec 80

[Text] Cairo, December 29 (XINHUA)--Egyptian President Anwar al-Sadat said he had requested former American secretary of state Henry Kissinger to carry some messages to the new American administration when he received Kissinger at his home village of Mit Abul Kom today.

At a press conference held by Al-Sadat and Kissinger at the village, Al-Sadat asserted that Egypt has been helping the Afghan militants since the beginning of the tragedy on the Afghan soil and will keep helping them in every way.

Al-Sadat further said that King Husayn of Jordan "has a role in Camp David," but "I suggested that King Husayn join the agreement after we reach agreement on full Palestinian autonomy," adding that "no one should determine the fate of the Palestinians but the Palestinians themselves."

On the tough stance by Egypt against the Soviet Union, Kissinger said that President al-Sadat's ideas "are not different from the American ideas in this respect" and that U.S. President-Elect Reagan will have a clear understanding of the "strategic necessity" of this area and will be appreciative of the advice of President al-Sadat in this concern.

Kissinger arrived in Cairo last night on a week-long private visit to Egypt. It was reported that he is now on a new mission of unofficial shuttle diplomacy that will include meetings with Israeli Prime Minister Menachem Begin and the heads of state of Saudi Arabia, Morocco and Oman.

Speaking about his stand on the Middle East upon his arrival, Kissinger said he backed the peace process and the Camp David accords, while in the meantime, he said he believed the time had probably come for Jordan to be included into the peace process.

Before his departure from Washington, Kissinger's spokesman Peter Rodman confirmed that the former secretary of state will explore chances of breaking the stalemate in the Egyptian-Israeli peace talks and of broadening the Camp David initiatives to include other Arab countries.

It was also reported that sources at the administration of President-Elect Reagan said that Reagan himself as well as the secretary of state-designate Alexander Haig blessed this visit and were looking forward to knowing its results.

BRIEFS

HOSTAGES IN IRANIAN GOVERNMENT HANDS--Tehran, December 30 (XINHUA)--Iranian Minister of State and Government spokesman Behzad Nabavi confirmed at a press conference here today that the U.S. hostages are now in the Iranian Government's hands. Answering a question as to who is responsible for the hostages in Iran now, he said, "It is for security reasons that we do not allow any meeting with them, because if the place of hostages is identified, more grounds would be prepared for the United States' plots." Asked what would be the next step of the Iranian Government regarding the hostages, the spokesman replied, "We cannot please ourselves with a few sheets of paper signed by Carter or Reagan. We should have a guarantee from the U.S. regarding the return of our assets. If the U.S. could propose another solution involving some sort of surety acceptable to the Algerian Government it would be equally acceptable to us. We do not trust American statements as we have learned their insubstantiality from experience." He added: "If the U.S. procrastinates in giving the requested reply or if we consider its reply negative, we shall act in accordance with our legal duties without the least hesitation." The spokesman reiterated that "insofar as we are concerned, the question of the 52 hostages has been solved. If the conditions proposed by the Majlis parliament are fulfilled, the hostages will be released. Otherwise they will be tried." [Text] [OW310144 Beijing XINHUA in English 0109 GMT 31 Dec 80]

IRAN ON U.S. HOSTAGES--Tehran, December 30 (XINHUA)--Hashemi Rafsanjani, speaker of the Iranian parliament, ruled out yesterday the possibility of reconsideration of the U.S. hostage issue by parliament. In his regular Monday press conference here, he said, "The hostage issue has already passed," and "the Majlis has proved that the hostages would be put on trial if the U.S doesn't accept Iran's terms, but we must reasonably give them a chance to find a lawful way to settle this problem." Asked if Iran would fix a date for the trial of the hostages, he said, "I don't think it is necessary to fix a date for the trial. Nevertheless, it is us who make the final decision." [Text] [OW301308 Beijing XINHUA in English 1259 GMT 30 Dec 80]

IRAN ON SUPERPOWER RELATIONS--Tehran, December 30 (XINHUA)--"Our foreign policy is based on the principle of neither East nor West and therefore our relations with the superpowers cannot be expanded," said Behzad Nabavi, Iranian minister of state in charge of executive affairs and government spokesman, at a press conference here today. Commenting on the possibility of expansion of Iran-U.S.S.R. relations in future, Nabavi said: "These (relations) would only develop insofar as they are not harmful to our interests and independence. Otherwise they will not." When asked to comment on a recent statement of Jalaledin Farsi, a famous Islamic Republican Party member and a deputy of the Majlis, on possible purchase of arms from the superpowers, the spokesman said, "we will buy weapons if it would not be detrimental to our independence. But since the superpowers do not undertake such transactions without selfish intentions, they could not be our trade partners." [Text] [OW310142 Beijing XINHUA in English 0118 GMT 31 Dec 80]

SOVIET PROTEST REJECTION BY IRAN--Tehran, December 30 (XINHUA)--Iranian Prime Minister Mohammed 'Ali Raja'i last night rejected Soviet charges that the Iranian authorities knew in advance the December 27 attack on the Soviet Embassy by Afghan demonstrators, reported Radio Tehran today. Soviet Ambassador Vladimir Vinogradov delivered a protest note to Raja'i last night. The prime minister said on the occasion that what happened at the Soviet Embassy was a protest against the Soviet intervention in Iran's brother Afghanistan. He said, "I hope the Soviet intervention in Afghanistan comes to an end as soon as possible. In this way we can promise that such things, even if at its smallest scale, will never happen again." Addressing the Iranian Majlis yesterday, speaker Hashemi Rafsanjani said the attack represented "a homeless and helpless nation" voicing "the very minimum of its hatred. It is you who ought to answer this protest," he told the Soviet Union, adding, "You expect to make millions of human beings homeless without these oppressed people making any protest." Radio Tehran in a commentary the same day noted, "The Iranian authorities took maximum precautions to prevent the demonstrators from entering the embassy. To say the officials were guilty of negligence or had a hand in the events is a false accusation." [Text] [OW300746 Beijing XINHUA in English 0735 GMT 30 Dec 80]

GUANGDONG DELEGATION IN SYDNEY--The Guangdong Provincial People's Government delegation headed by Vice Provincial Governor Liu Tianfu, arrived in Sydney on 25 October. (Lanen), the state premier of New South Wales, greeted the delegation and Liu Tianfu handed him a letter from Xi Zhongxun. Liu Tianfu and the state premier (Lanen) held friendly talks. [Guangzhou Guangdong Provincial Service in Mandarin 2345 GMT 26 Oct 80 HK]

POLISH CRISIS--Bucharest, 10 Dec (XINHUA)--The Romanian communists and people fully believe that the Polish communists and the working class and people of Poland are determined to seek the most suitable way for overcoming their current difficulties and are capable of doing so. This was said by the Romanian paper SCINTEIA in its 10 December editorial department article on the Moscow meeting of the Warsaw Pact member countries' leaders. The article says that Romania "fully supports the Polish communists and progressive forces as well as the working class and people of Poland in their struggle to overcome their current adversity and for the development of socialism in their country. Our party has reiterated its firm belief that Poland's problems can and should be solved by the Polish people themselves so that these problems will not affect their relations with the international community and their policy of detente, independence and peace." PLA CADRES DOUBT, FEAR ECONOMIC POLICY

OW170418 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 12 Dec 80

[Text] In accordance with the instructions of the military commission of the CCP Central Committee and the PLA General Political Department, many military districts, military subdistricts and PLA units stationed in various localities have sent cadres to the countryside and enterprises to familiarize themselves with the actual conditions while simultaneously organizing them to study the central authorities' documents on new policies.

Of course, this helps people understand the new principles and policies of the central authorities. However, it must be noted that many commanders and fighters are becoming increasingly dissatisfied with the current economic policy and line. They cannot understand the ultrarightist ideas which have prevailed in recent years in all fields, and they are against these ideas. Yet, the propaganda department of the CCP Central Committee and the PLA General Political Department have so far failed to present any convincing propaganda documents to solve this problem specifically. That is why dissatisfaction is growing daily.

Therefore, when they criticize army cadres during the political work meetings at various levels and in army newspapers for sticking to bookish dogmas, for refusing to cast aside old conventional ideas and for taking what is erroneous and ultraleftist as what is correct, and when they criticize the party branch cadres at the enlarged meeting of the military commission of the CCP Central Committee for failing to correctly understand the party's major economic reforms and new economic policy and for failing to free themselves from the poisonous influence of Lin Biao and the "gang of four." 'HSIN WAN PAO' REPORTS PROGRESS OF BEIJING TRIAL

HK181441 Hong Kong HSIN WAN PAO in Chinese 18 Dec 80 p 1

[Special dispatch from this paper's special reporter in Beijing on 18 December: "Special Court Begins Debate Today, and the Trial of Jiang Qing Is Adjourned Until Next Week"]

[Text] The trial of the 10 evil persons, including Jiang Qing, which has been conducted by the special court of the Supreme People's Court, today entered the second stage which is that of debate. During the first stage, the court investigated the facts of the crimes but, due to Jiang Qing's stubborn resistance, the investigation of her crimes still remains unfinished.

The First Tribunal tried Chen Boda today. The procedure is that the judge announces the opening of the court, the procurator who is the prosecutor first delivers a speech, sums up the case and expresses the prosecutor's viewpoint, and subsequently the defendant replies to the charges. The defense counsel speaks on behalf of the defendant. The court allows the prosecutor and the defense counsel to aid their own views and to argue fully. It also allows the defendant to make the last speech.

The Second Tribunal tried Huang Yongsheng and Wu Faxian. The procedure is the same as that of the First Tribunal.

From today until Saturday, the First Tribunal tries Chen Boda, Wang Hongwen, Zhang Chunqiao and Yao Wenyuan. The Second Tribunal tries Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao. It is estimated that 3 days will be sufficient for these nine persons to conduct a debate in the court. The investigation of Jiang Qing alone remains unfinished. All charges against Jiang Qing (not all crimes she committed), except for "setting fire to the grass on the wasteland" and opposing and causing disorder in the army, have been investigated. It is reported that the court will arrange time next week to continue its investigation and to allow her to reply to the charges.

After completion of the debate stage next week, the court will enter the stage of closed-door conferences, which will be the third stage. It is said this stage will take more than 1 or 2 days. Subsequently, the full court will pass sentences--this is the fourth stage. From this, it seems that it will be impossible to conclude the trial in 20 days as originally estimated. People concerned say that the trial will be completed before New Year's Day.

The attitude of Jiang Qing and Zhang Chunqiao can be described in one sentence: Jiang Qing's attitude is "what can you do to me?" And Zhang Chunqiao's attitude is "I do not give a damn if I defy death." It was reported that Zhang Chunqiao has suffered cancer of the intestines and the date of his death is near, anyway. He is prepared to be beheaded. People are watching whether he will act like a mute to the end or whether he will speak at the last moment and issue a statement making slanderous accusations against the people.

HUANG YONGSHENG DEFENDS SELF AT COURT SESSIONS

OW201918 Beijing Domestic Service in Mandarin 1200 GMT 20 Dec 80

[Text] At court debates on the afternoons of 18 through 20 December, the special court's Second Tribunal fully entitled defendant Huang Yongsheng to make statements and defend himself. Huang Yongsheng defended himself for nearly 3 hours and refused to admit that he was a principal culprit of the Lin Biao-Jiang Qing counterrevolutionary cliques. By presenting the facts, public prosecutor forcefully refuted Huang Yongsheng's arguments and pointed out that Huang Yongsheng had never been ready to plead guilty.

Public prosecutor Zhang Zhongru was the first to speak. He said: That bunch of people with Lin Biao as the leader and with Huang Yongsheng and others as the principal culprits was a counterrevolutionary clique designed to overthrow the political power of the dictatorship of the proletariat and the socialist system in China. After recounting the serious crimes committed by Huang Yongsheng, Zhang Zhongru said: In accordance with stipulations in Articles 92 and 98 of the criminal law, it is found that defendant Huang Yongsheng is guilty of subverting the government and organizing and leading a counterrevolutionary group. He is now referred to the special court for penalty according to the law.

While defending himself, Huang Yongsheng pleaded guilty only of [word indistinct] the frameup case of Guangdong's underground party and submitting secret information to Lin Biao and Ye Qun. He refused to admit the crimes of framing and persecuting party and state leaders and shoved the responsibility onto his superiors or subordinates. He said: I have committed serious mistakes and am guilty in some cases, but I am not a principal culprit of the Lin Biao counterrevolutionary clique. I had no idea of and do not take part in the "joint fleet," the "outline of 'Project 571'" or other counterrevolutionary conspiratorial activities.

Public prosecutor Zhu Zongzheng rebutted one by one Huang Yongsheng's arguments which were meant to deny facts and shun responsibilities. Zhu Zongzheng emphatically pointed out: In view of the entire process of the crimes committed in common by the Lin Biao-Jiang Qing counterrevolutionary cliques, their framing and persecuting party and state leaders and suppressing and persecuting cadres and masses were meant to seize higher power and positions with the ultimate aim of usurping state leadership and overthrowing the political power of the dictatorship of the proletariat. These serious counterrevolutionary crimes are sufficient to sustain a charge of being the principal culprit. This charge should not be determined solely by whether he was directly involved in the assassination of Chairman Mao. Huang Yongsheng's criminal facts show that he framed and persecuted party and state leaders as well as leading cadres of the PLA General Political Department, the PLA General Staff and the Guangzhou PLA units and that he groundlessly pinned counterrevolutionary labels on them. This shows that Huang Yongsheng committed crimes deliberately.

Zhu Zongzheng also cited facts to show that Huang Yongsheng maintained extraordinary, counterrevolutionary relations with Lin Biao and Ye Qun. Huang Yongsheng absolutely denied his crimes in the conspiratorial activities to assassinate Chairman Mao. The fact is, he was not only involved but was also seriously guilty. On the evening of 6 September, Huang Yongsheng secretly reported to Lin Biao and Ye Qun the content of Chairman Mao's talk in south China. This prompted Lin Biao to make up his mind to start a counterrevolutionary armed coup to assassinate Chairman Mao.

Zhu Zongzheng said: Huang Yongsheng played the role of an organizer and leader and occupied a primary position in the crimes committed in common by the Lin Biao counterrevolutionary clique. In accordance with the stipulation in Article 23 of the criminal law, it is found that defendant Huang Yongsheng is a principal culprit of the Lin Biao counterrevolutionary clique.

FIRST TRIBUNAL DEBATES ON ZHANG CHUNQIAO'S CRIMES

OW210222 Beijing Domestic Service in Mandarin 1200 GMT 20 Dec 80

[Text] This station's reporter relates that the First Tribunal of the special court debated in the morning of 20 December on defendant Zhang Chunqiao's crimes.

Zhang Chunqiao refused legal representation. The tribunal repeatedly told him that he had the right to make a statement and present a defense according to Article 118 of the PRC's law of criminal procedure. The defendant maintained silence throughout the trial. The tribunal announced that the defendant did not make a statement and offered no defense and that this would be recorded.

In his statement, prosecutor Ma Chunyi pointed out that, through the special court's trial and investigation on three occasions, ample evidence attests that defendant Zhang Chunqiao was a chief culprit of the Lin Biao and Jiang Qing counterrevolutionary cliques. In early 1967 the defendant instigated that the leading powers at all levels, from the grassroots to the central organizations, be seized so as to usurp the party and state power and overthrow the government of the proletarian dictatorship. He advocated that the Great Cultural Revolution meant a change of dynasty, and vilified that all veteran cadres were bad. In essence, his such remarks became the program of action of the Lin Biao and Jiang Qing counterrevolutionary cliques. Based on this counterrevolutionary program, they wantonly accused, framed and persecuted party and state leaders and wantonly suppressed cadres and masses.

The prosecutor pointed out that, to realize his ambition of usurping the party and state power, defendant Zhang Zhunqiao, using Shanghai as a base in the early stage of the Great Cultural Revolution, wantonly grasped the organization of armed forces and, on the eve of their destruction, incited Xu Jingxian and others to conduct armed rebellion in Shanghai.

The prosecutor said in conclusion that Zhang Chunqiao committed the crimes of plotting to overthrow the government, inciting armed rebellion, libel, counterrevolutionary killing, causing personal injury, and making counterrevolutionary propaganda and instigation, and that these crimes directly committed by him violate PRC's criminal law.

The defendant refused to acknowledge his crimes during the trial. The prosecutor asked the court to mete out severe punishment to him.

PROSECUTION ASKS LENIENCY FOR QIU HUIZUO

OW201602 Beijing Domestic Service in Mandarin 1200 GMT 20 Dec 80

[Text] Report by station reporter: In his final statement in court this afternoon, the defendant Qiu Huizuo pleaded guilty. He said: I hang my head and admit my guilt as charged in the indictment by the special procuratorate under the Supreme People's Procuratorate. The court investigation into the facts concerning my offenses is fair because it has sought truth from facts. The investigation has enabled me to deepen my understanding of my offenses.

Qiu Huizuo then said: It is right to put me on trial and to punish me according to law because I committed crimes. My court trial is a correct measure to strictly enforce the law and discipline and to uphold justice. I admit my guilt, and that always.

The Second Tribunal of the special court conducted an argument about facts concerning Qiu Huizuo's offenses. Public prosecutor (Wang Pusheng) pointed out in court: Because Qiu Huizuo took an active part in the plot of the Lin Biao counterrevolutionary clique to usurp party, state and army leadership, he is one of the principal culprits belonging to the clique. By carrying out such criminal activities, he violated the stipulations of Article 92 and 98 of the criminal law. It is, therefore, requested that the special court punish the defendant Qiu Huizuo in accordance with the law. However, in view of the fact that the defendant Qiu Huizuo has taken a rather cooperative attitude in admitting his guilt, the prosecution requests that the court consider this when measuring penalty for the defendant.

WANG HONGWEN PLEADS FOR CHANCE TO REFORM HIMSELF

OW201853 Beijing XINHUA Domestic Service in Chinese 1152 GMT 20 Dec 80

[Text] Beijing, 20 Dec (XINHUA)--During a debate at the First Tribunal of the special court this morning, Wang Hongwen said: "The charges against me enumerated in the indictment are all facts and the abundance of evidence produced in court is conclusive." He said that "I honestly admit my guilt" and "submit to the court decision." He asked the court to give him "a chance to reform himself and turn over a new leaf."

During the court debate, Jing Yusong, procurator of the special procuratorate, pointed out: The charges against the defendant Wang Hongwen have been proven accurate through court investigation.

Jing Yusong said: The court investigation shows that Wang Hongwen for years colluded closely with Jiang Qing, Zhang Chunqiao and Yao Wenyuan in plotting to overthrow the political power of proletarian dictatorship and the socialist system, committing grave crimes. Wang Hongwen played an important role in their joint criminal activities.

The procurator said: The defendant Wang Hongwen plotted to overthrow the government and split the state, attempted to engineer an armed rebellion, organized counterrevolutionary cliques, framed and persecuted people and carried out beatings, smashings and looting for counterrevolutionary ends, in violation of Articles 92, 93, 98, 137 and 138 of the criminal law of the PRC. It is requested that the court mete out the punishment to the defendant in accordance with the law.

Jing Yusong also pointed out: I would like to call the court's attention to the fact that during the pretrial and the trial the defendant Wang Hongwen has pleaded guilty and, to some extent, has repented and shown a willingness to submit to the law.

During the court investigation conducted earlier, Wang Xiuzhen, a defendant in the same case [as received], testified in court that Wang Hongwen had said, "We have no people in the army." During the debate, Wang Hongwen explained this remark by saying: This remark quoted by Wang Xiuzhen was not true and he could not make this remark. At that time, he said that "a number of people in the army are not ours," "because at that time, we had people in the army and they held important positions. Zhang Chunqiao and I held official posts in the army at that time, not to mention others."

Following the conclusion of the court debate, Wang Hongwen made a final statement. He said: I have nothing to debate. During the "Great Cultural Revolution," I participated in the counterrevolutionary activities of the Lin Biao and Jiang Qing counterrevolutionary cliques, was an important member of the cliques and committed grave crimes. Through self-examination and confession over the past several years, especially through the pretrial by public security organs and the investigation by the procuratorate, I have been able to gradually realize the seriousness of the crimes committed by the Lin Biao and Jiang Qing counterrevolutionary cliques and by myself. The indictment has fully proved with host of facts and conclusive evidence that the Lin Biao and Jiang Qing counterrevolutionary cliques are guilty of countless monstrous crimes by causing extremely grave, immeasurable damage to the country. As an important member of the cliques, I committed a number of grave crimes, which I admit honestly. I committed grave crimes by participating in the framing of Zhou Enlai, Deng Xiaoping, Chen Yi and some other leading comrades of the central authorities, in suppressing the masses, in organizing a factional armed force and in instigating militiamen to launch an armed rebellion. I admit my guilt before the people throughout the country. I have the determination to change my stand, to reform myself, to break completely with the Lin Biao and Jiang Qing counterrevolutionary cliques and to cast off my old self and turn over a new leaf. I submit to the court decision on me.

Chief Judge Zeng Hanzhou finally announced: This court will consider the prosecutor's statement and the defendant Wang Hongwen's statement and attitude when deciding the verdict on the defendant.

WANG HONGWEN PLEADS GUILTY, WANTS TO REFORM

OW210030 Beijing Domestic Service in Mandarin 1213 GMT 20 Dec 80

[Text] According to a station report, defendant Wang Hongwen pleaded guilty to all charges at a hearing held by the First Tribunal of the special court today, and hoped that the government would give him a chance to reform himself and turn over a new leaf.

Public prosecutor Jing Yusong pointed out in his speech: The court investigation shows that Wang Hongwen is one of the principal defendants of the Lin Biao and Jiang Qing counterrevolutionary cliques, and played an important role in carrying out various counterrevolutionary activities of the cliques. After citing Wang Hongwen's serious crimes, Jing Yusong called the court's attention to the fact that defendant Wang Hongwen's every criminal action is connected with the criminal activities of the Lin Biao and Jiang Qing counterrevolutionary cliques in usurping party leadership and betraying the state. Wang Hongwen's crimes to frame and persecute party and state leaders are not aimed at any particular person, but at overthrowing all the revolutionaries of the older generation so that they may seize state power. This was the central theme of their plots to usurp party leadership and betray the state. His activities to create incidents of the use of force in struggle and set up a factional armed force were also specific steps of the above-mentioned counterrevolutionary cliques in usurping party leadership, betraying the state and committing crimes. Wang Hongwen's crimes have violated the Chinese criminal code in conspiring to overthrow the government, and split the state, in plotting an armed rebellion, in organizing and leading a counterrevolutionary group, in framing up and bringing false charges against others and in conducting "beating, smashing and looting."

The public prosecutor said: Defendant Wang Hongwen's crimes are grave and the people are furious at him. However, the defendant had pleaded guilty and to some extent repented to the court and during the inquiry period. This is also the fact that I wish to call the court's attention. It is requested that the court mete out the punishment he deserves on the basis of the offenses committed by the defendant and his attitude in pleading guilty.

Wang Hongwen made a statement, saying: The offenses enumerated in the indictment and the abundance of evidence provided are all facts. The evidence is conclusive. During the "Great Cultural Revolution," I participated in the counterrevolutionary activities of the Lin Biao and Jiang Qing counterrevolutionary cliques, was an important member of the cliques and committed grave crimes. I admit my guilt before the people throughout the country. I affirm that I will continue to examine myself and that I will inform the court if I find out any new issues.

Chief Judge Zeng Hanzhou announced: This court will consider the prosecutor's statement and the defendant Wang Hongwen's statement and his attitude when deciding the verdict. He told Wang Hongwen to await the court's verdict.

CHINA DEMOCRATIC LEAGUE OF BEIJING RECRUITS NEW MEMBERS

OW150642 Beijing XINHUA Domestic Service in Chinese 0111 GMT 15 Dec 80

[Text] Beijing, 15 Dec (XINHUA)--This year the Beijing Municipal Committee of the China Democratic League recruited 56 new members. Among them are teachers, scientists, editors and translators from publishing departments, actors and artists. Many of these people have achievements in academic research and art, such as Zhang Dainian, professor of the philosophy department at Beijing University; Zhang Guangyan, professor at the Beijing Medical College; Zhang Guangzhua, assistant research fellow at the CAS Semiconductor Institute; Liu Dehai, pipa player at the Zhongyang Philharmonic Orchestra; Ye Zi and Yang Wei, actors at the Beijing People's Art Theater; and painters Pan Su and Fan Zeng. They said that under the care of the league organizations, they are willing to heighten consciousness, sharpen their ability and wisdom, and make contributions to the modernization program and the great cause of the motherland's reunification.

On the afternoon of 12 December, the Beijing Municipal Committee of the China Democratic League held a tea party to welcome new members. Attending were Chu Tunan, vice chairman of the league Central Committee, and Wen Jiasi, chairman of the league of the Beijing Municipal Committee. They gave a warm welcome and extended congratulations to the new members.

It is reported that now in Beijing Municipality the number of members of the China Democratic League totals about 1,500.

COMMENTARY ON IMPROVING PARTY WORKSTYLE

OW102011 Beijing Domestic Service in Mandarin 1200 GMT 10 Dec 80

[Station commentary: "It Is Essential To Unswervingly Do a Good Job in Improving the Party Workstyle"]

[Text] Comrade Chen Yun recently pointed out: the issue of party workstyle is one that concerns the party's survival. At the national symposium on implementing the guiding principles convened by the central commission for inspecting discipline under the CCP Central Committee, Comrade Hu Yaobang further stressed that it is essential to unswervingly do a good job in improving the party workstyle. This is an extremely important task facing the party in the new period. The whole party and the entire people must concern themselves with building a good party workstyle and understand its great significance.

Serious unhealthy tendencies exist in our party's workstyle. They are manifested in the following ways: 1) some people take the attitude of feigning compliance with the party Central Committee's lines, principles and policies and resorting to double-dealing; 2) some abuse the power entrusted to them by the party and the people to seek personal gains by forming factions and putting their followers in various posts; 3) some, paying no heed to the party's principles, establish illicit relations by giving dinners and gifts and by asking for and accepting gifts and bribes, thus impairing the prestige of the party and the state and squandering the money and property of the state and the collectives; 4) some, instead of admitting errors, use their power and influence to smear, attack and take revenge against the good people; 5) some, in order to gain a personal reputation, practice fraud, resort to boasting and flattery to deceive superiors and delude subordinates as well as to secure personal gains by speculation; and 6) some are extremely irresponsible in their work, thus causing serious losses to the interests of the state and the people.

Our party had established a fresh, honest and upright workstyle as early as the 1940's. Why is it that many unhealthy tendencies have emerged in the party? The main reason is: our party was influenced by the ideas of the exploiting class after it took the helm of the state. Some comrades have mistakenly regarded our party's leading role as the role of a ruler. They regard themselves as lords and masters standing high above the people instead of regarding themselves as servants. Therefore, they have gradually divorced themselves from the masses. Particularly during the 10 years of turmoil, Lin Biao and the "gang of four" and company seriously undermined the party's glorious traditions and fine workstyle, thus enabling the unhealthy tendencies and pernicious influence to spread far and wide. The party's unhealthy tendencies are corrosive and can cause great harm. They undermine the relationship between the party and the people, impair the party's prestige, weaken the party's fighting capability and encourage the spread of unhealthy social values. The unhealthy party workstyle can intensify contradictions, undermine stability and unity and hinder the smooth progress of the four modernizations.

It must be particularly pointed out that for the ruling party, party workstyle is an important issue that has a bearing on whether the party and the state will degenerate. If it is not properly handled, the party and the state can perish. All communist party members and the entire people must, therefore, seriously concern themselves with building a good party workstyle.

Whether communist party members show concern for building a good party workstyle is an expression of whether they possess the party spirit and whether the party spirit is strong or weak. Many comrades within the party, however, have not yet understood the important significance of improving the party workstyle. Since the correct political line was set for the party at the third plenary session of the 11th CCP Central Committee, these comrades are content with the correctness of the party's lines and policies and do not know that a good party workstyle and the correct party lines and policies depend on each other. Without a good party workstyle, the correct lines and policies cannot possibly be carried out smoothly and thoroughly.

Some comrades who have ignored the building of a good party workstyle have set the work of improving the party workstyle against economic work. They often say that economic work keeps them too busy to pay attention to party workstyle. Such ideas are completely wrong. In fact, one of the important reasons why there are so many problems in today's economic work is that the party workstyle is unhealthy. To strictly implement the stipulations of the guiding principles is an important measure for firmly correcting the unhealthy party workstyle and for doing a good job in building the party workstyle.

The party committees at all levels must firmly promote a good party workstyle and regard it as an important item on the agenda. They must earnestly strengthen leadership, carry the work through to the end and score achievements. The leading cadres, particularly the high-ranking ones, must take the lead in studying the guiding principles, check their work against these principles and set an exemplary role in the struggle to rectify the unhealthy tendencies. They must conduct education on party spirit, party rules and regulations in a big way and firmly rectify the most salient unhealthy tendencies about which the cadres and the masses are most dissatisfied with in their respective localities, departments and units. In the struggle against the unhealthy tendencies, the comrades of the various discipline inspection departments have made marked achievements.

from now on, they must show greater courage, take a clear-cut stand, uphold principles, not be afraid of offending others and dare to promote healthy tendencies for the party and the people. Those who regard themselves as special party members and citizens, who flout party discipline and state laws and who insist on practicing an unhealthy workstyle must be seriously dealt with.

To improve the party workstyle and rectify the unhealthy tendencies is bound to encounter resistance of many kinds. This is an arduous and complicated struggle and cannot possibly be solved in a short time. However, to unite to build the four modernizations, to perfect socialist democracy and the legal system, to restore and carry forward the fine traditions of the party in order to build our nation into a modern and powerful socialist state are the eager aspirations of the broad masses of party members, cadres and the entire people. All this is also an irresistible trend which no force can obstruct. The communist party members are pioneer fighters. They must dare to stand in the forefront of the current of our time, eliminate all obstructions and positively contribute to setting up a good party workstyle and improving and strengthening the leadership of the party.

GANSU HOLDS TELEPHONE CONFERENCE ON ELECTION WORK

SK271201 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 26 Nov 80

[Excerpts] According to our sources, Gansu Province held a telephone conference on election work on the evening of 21 November. A responsible comrade of the office subordinate to the provincial electoral committee gave some suggestions concerning election work at the conference. After reviewing the current provincial election work, he called on all localities to do the following work well:

1. Continue efforts to publicize election work. Viewing it from the current situation, we can see that some cadres and the masses still have ideological problems. Some hold that elections are not their business and that elections are merely for going through the motions. In view of this situation, we must make continued efforts to publicize this work. We must lead the masses and make them understand that there is a relationship between doing a good job in election work and achieving the four modernizations, and between election work and their immediate interests, and educate them to the fact that elections are aimed at thoroughly eliminating the pernicious influence of Lin Biao and the "gang of four" and at practicing true socialist democracy in which the people are to be masters of their own affairs.

2. It is necessary to boldly mobilize the masses to nominate candidates and consult with them in a democratic way. We must encourage them to nominate more candidates because this is an important foundation for carrying out democratic consultations with the masses through elections. Furthermore, persons elected must have representative qualities. Attention should be paid to overcome the practice of nominating too many party-members, cadres and male candidates and too few non-party members, women and candidates of the masses.

3. It is necessary to adhere to the practice of voting from a larger number of candidates in electing deputies and leading bodies. By so doing, we can select the most competent and suitable ones from the nominees.

4. Strengthen leadership over election work. It is hoped that all counties and party committees will act sincerely in accordance with the central documents, all party committee members will grasp this work and the principal responsible comrades will grasp it personally.

ERADICATION OF PERSONALITY CULTS DISCUSSED

OW241545 Beijing Domestic Service in Mandarin 0900 GMT 24 Dec 80

["Excerpts" of article by Fang Wen, Li Zhenxia published in HONGQI Issue 24 of 1980: "Thoroughly Eradicate the Influence of Personality Cults"]

[Text] The article says, while the entire party and the people of the entire nation are conscientiously summing up our historical experiences, everyone is asking these questions: While efforts are being made to bring order out of chaos, why are there people who still want to persist in the "two whatevers" and oppose "practice as the only criterion for testing truth?" Why are commemorative articles sometimes tainted with a cult of the personality? Why, even after the central authorities' repeated exhortations on limiting publicity for individuals, are there still people who have time and again staged shows of personality cults? A major cause is that these people have failed to correctly assess the historical role of the masses and individuals.

For a long time, there has existed in our political life a problem of giving a great deal of publicity to individuals and practicing personality cults. For this, our party and state have suffered a great deal and paid a dear price.

Guarding against and opposing personality cults is a Marxist principle that our party used to adhere to. At the second plenary session of the Seventh Party Central Committee, the party Central Committee, acting on Comrade Mao Zedong's advice, especially adopted a series of resolutions on guarding against personality cults. For some time after the founding of new China, Comrade Mao Zedong incessantly warned the people to guard against personality cults. When China's first constitution was drawn up, Comrade Mao Zedong personally deleted improper articles that praised the leader, and said that the deletions were made not out of modesty but because the articles were improper, unjustified and unscientific.

In an article "On the Historical Experience of the Dictatorship of the Proletariat," which was adopted at a discussion meeting of the Political Bureau presided over by Comrade Mao Zedong, he scientifically summed up Stalin's mistakes in practicing a personality cult and pointed out lessons that our party must learn. The Eighth CCP National Congress further stressed the question of opposing personality cults.

In short, for a time after the founding of our republic, the party Central Committee did pay attention to guarding against and opposing personality cults.

However, amidst the lavish praise--both domestic and foreign--of the great victory of the Chinese revolution, our party's leader gradually entertained a sense of arrogance, deviated from dialectical-materialism and got bogged down in subjectivism. He then unduly exaggerated the role of the individual and overconcentrated all power into his own hands.

In the article "On the Historical Experiences of the Dictatorship of the Proletariat" published in 1956, it was correctly pointed out that the personality cult was a decadent legacy left by mankind's long history and a backward concept that harms the people's cause, and that a struggle must be launched to combat personality cults. The article "Again on the Historical Experiences of the Dictatorship of the Proletariat" particularly pointed out Stalin's mistakes in practicing a personal dictatorship and damaging democratic centralism. It was both correct and necessary when we exposed Khrushchev's political conspiracy of totally negating Stalin under the pretense of opposing a personality cult. But at that time, we overlooked a Marxist tenet of opposing all personality cults, which Marx time and again stressed, and held that there was a kind of so-called "correct personality cult."

By the time of the Cultural Revolution, we erred more seriously and even proposed that there should be a little personality cult and that there was a real need to engage in a little personality cult. This was a mistake, of course. The shift from opposing to advocating a personality cult brought on serious social repercussions. Once the leader separated himself from relations with the masses and the collective and stood above the masses and the party, he was apt to become a cat's-paw of opportunistic and favor-currying careerists and conspirators. Lin Biao, Jiang Qing, Kang Sheng, Chen Boda and their company deliberately made a stormy sea stormier via the personality cult issue. They made a fetish of the leader and regarded one's attitude toward the leader as a primary criterion for differentiating between the revolutionary and the counterrevolutionary. Anyone showing the slightest bit of disrespect for the leader was punishable as a counter-revolutionary. Under the influence of their distortions and instigations, a series of absurd theories and a serious personality cult emerged.

Lin Biao brazenly declared: With the chairman as the axle, we are the millstones. He demanded that the party and the people revolve around one man. That meant completely abolishing the party's collective leadership and writing off the role of the other leaders of the party. And this was used as a justification to do everything possible to overthrow the party's leading group as a whole.

They advertised that revolutionary theories were all created by one man. They insisted that Mao Zedong Thought was created by the brains of one individual genius, and that the development of Marxism-Leninism could be accomplished only by Comrade Mao Zedong himself. They totally negated the role of the party, the collective leadership and the masses of the people.

In our country, there was once a prevalent argument that there were two kinds of personality cults. The argument had a considerable bearing on the emergence of the personality cult. By the so-called two kinds of personality cult it meant that there was a wrong kind of personality cult and a correct kind of personality cult; that the personality cult which demands blind obedience without analysis was, of course, no good and not to be tolerated; but that the other kind of personality cult was not bad and was indispensable. For example, the correct things taught by Marx, Engels, Lenin and Stalin must be worshiped and always worshiped, because truth was in their hands. The principal responsible person in a leading collective must also be worshiped. A squad must worship the squad leader. The minds of some people are still shackled by this viewpoint even today.

The personality cult is to deify and idolize the worshiped individual and to negate the role of the masses of the people and the power of the collective, thus resulting in blind faith in the individual. This kind of blind faith is fundamentally opposed to science. Aside from dialectics, there does not exist anything that is ultimate, absolute and sacred. We have no reason to deify the role of any individual in history and practice any form of personality cult.

Any hero or great man can only play an important role in accelerating the development of history when he correctly understands the trends of social development and reflects and satisfies the desires and demands of the masses of the people. Conversely, when he attempts to change historical conditions merely on the basis of his own fantasy and against the desire and demands of the people, historical tragedies of one kind or another will ensue.

One of the arguments of those who advocate the correct kind of personality cult is that whoever has the truth should be worshiped. This argument is hardly convincing.

Marxist truth, like all other truths, is still a unity of relative truth and absolute truth. The sum total of the cognitive ability of mankind from generation to generation is unlimited, but the cognitive ability of an individual is always limited. Even in the case of an outstanding leader of the proletariat, his ideas, writings and speeches are equally limited by the conditions of the era in which he lives. Even the ideology and theory that are proven correct by practice in a given period may still show the incompleteness of truth, even errors, in some aspects when they are tested by new practices.

Marxist truth comes from the revolutionary practice of the masses of the people. It is a reflection and summing-up of the practical activities of the masses of the people. It definitely is not innate in the mind of a certain individual, and it is not something subjective or spontaneous.

For example, Mao Zedong Thought is mainly the contribution of Comrade Mao Zedong, but it is not created by Comrade Mao Zedong alone. The proletarian revolutionaries of the older generation also participated in the establishment and development of Mao Zedong Thought. Mao Zedong Thought is the crystallization of the collective wisdom of the party and the people, a proletarian revolutionary science that has emerged from the protracted struggles of the party and the people.

Therefore, the argument that whoever has the truth must be worshiped and always worshiped is a departure from the source and development of man's knowledge, for it regards the ideology of the leader as the wisdom of the leader alone and as an immutable dogma.

To thoroughly correct the mistakes of personality cults, it is necessary to find out the causes and conditions that engender them, so that proper actions for their eradication can be taken. What influences China most are harmful traditions of feudal despotism and the force of habits of small producers, which are social historical causes engendering personality cults. In China's feudal society of over 2,000 years, the basic political system was a centralized feudal monarchy. The emperor was the supreme lord over the entire nation, enjoyed absolute power and dictated all state affairs. Feudal society spared no effort to propagate emperor-ministers and father-son patriachal and ethical relations and the concept of loyalty to one individual--the emperor. The working class was powerless and was regarded as [words indistinct] whom the overlords could trample at will.

The victory of the new democracy led by our party destroyed feudal economic and political systems. But no systematic criticism has been unfolded against the ideas of feudal despotism. Therefore, feudal ideas still hold wide sway in our social life and in the political life of the party.

In the history of the party, Chen Duxiu, Zhang Guotao and Wang Ming all practiced paternalism and imperiously suppressed views that differed from their own, thus harming our revolutionary cause.

After the founding of the republic, we mentioned only combating bourgeois ideas without mentioning eradicating feudal influences. We held that in ideological struggles, there were only two schools of ideology, namely the proletarian and bourgeois ideologies, and overlooked the struggle against the pernicious influence of feudalism. At the same time, we also failed to establish a perfect socialist democratic system or to perfect the socialist legal system, which was even criticized as bourgeois democracy. The result was that the pernicious influence of feudalism spread, and the pernicious influence of paternalism and the system of "one person laying down the law" affected all aspects of political life in both the party and the state.

China's feudal system was built on an economic structure with petty peasants as the major ingredient. The small producers system was characterized by their unawareness of their own power and inability to master their own fate. They hitched their hopes to a good emperor or a savior of the world. Although China's small producer economy has essentially been cooperativized, the force of habits, such as personality cults, deifying individuals and genuinely and sincerely singing the praises of saviors, still holds extensive sway among small producers. This provides an extensive social base for personality cults.

Of course, there are causes both in ideology and in work style causing the emergence of personality cults that require us to vigorously strengthen our ideological and political work. But there are more important causes that exist in the system, because problems related to the system are more fundamental, of more overall importance and more protracted.

For a long period, a problem of overconcentration of power has existed in our leadership system. Under the slogan of strengthening the party's unified leadership, we improperly and indiscriminatingly concentrated all power in the party committee, and the power of the party committee was often concentrated in the hands of a number of secretaries, particularly the first secretary. The first secretary had to take the lead in initiating all tasks. Thus, the party's unified leadership often became the leadership of one individual. All major decisions were made by one individual. That individual could overthrow resolutions and decisions by the party and the collective.

If power is overconcentrated in the hands of one individual, then party and state power become that individual's power, and the power that serves the party and state become the power that controls the party and the state. As a result, democratic centralism will be undermined, and antidemocratic arbitrary decisions made by the individual will prevail.

In his report to the [word indistinct] NPC, Comrade Mao Zedong pointed out: If we do not fully develop democracy among the people and democracy within the party, the dictatorship of the proletariat will change into the dictatorship of the bourgeoisie or even the reactionary dictatorship of fascism. When Lin Biao and the "gang of four" ran wild, the above thesis became a reality in those places where their influence prevailed. From this bitter experience we learn a lesson. The question of system has an important bearing on whether the party and state will change political color or not. We must never lower our guard.

Fundamentally speaking, a backward economy and culture are the prerequisite for the existence of personality cults and other phenomena. Economic and cultural backwardness is inseparable from ignorance and blind faith. If we do not make efforts to raise the people's economic conditions and their cultural and scientific level, it will be difficult to thoroughly eliminate the masses' mentality toward the personality cults, which calls for the existence of a savior. Therefore, our fundamental task is to strive hard to carry out the four modernizations, rapidly develop productive forces in society and change our backward economy and culture. Along with the development of productive forces, the rise of the people's scientific and cultural level and the improvement and development of socialist democracy and democracy within the party, the question of the personality cults and giving prominence to the individual will certainly be thoroughly solved.

'RADIO BEIJING' COMMENTS ON ZHOU ENLAI WORKS

OW280421 Beijing Domestic Service in Mandarin 1200 GMT 27 Dec 80

[Station commentary: "Valuable Theoretical Treasure, Sharp Ideological Weapon"]

[Text] Volume 1 of the "Selected Works of Zhou Enlai," a book desired by the masses of people, has been published. Copies will soon be available in all parts of the country.

The first volume of the "Selected Works of Zhou Enlai" is a valuable theoretical treasure left behind by Comrade Zhou Enlai, a great Marxist and proletarian revolutionary, and it provides us with a sharp ideological weapon for advancing the socialist modernization drive. The first volume records the outstanding achievements of Comrade Zhou Enlai in waging an unyielding and heroic struggle for the revolutionary cause of the Chinese people and also sums up his experience in using Marxism-Leninism to guide China's revolution. The publication of Volume 1 of the "Selected Works of Zhou Enlai" is of great significance for the whole party and people of the whole country regarding study of Marxism-Leninism-Mao Zedong Thought and history as well as the current conditions of the Chinese revolution.

For 50 long years, from the start of the first revolutionary civil war, Comrade Zhou Enlai always held important leading posts in the party Central Committee. Comrade Zhou Enlai's works manifest not only his personal practice in revolution but also the glorious course taken by our party. Therefore, his selected works are also important documents for studying the history of the Chinese Communist Party. For instance, "On Studying the (?Sixth National Congress of the Party)," "On the Party's Relations With the Kuomintang 1924-1926," and "On the United Front" have not only provided us with greater materials for studying party history, but also made up for the party's protracted shortcomings of following a rather narrow train of thought and over-emphasizing certain individuals or things in studying our party history. His selected works will better help us to widen our vision, emancipate our minds and fully understand party history.

Comrade Zhou Enlai made outstanding contributions to promoting Marxist theory. In the past, many people only recognized Comrade Zhou Enlai as a man of practice and knew very little about his theoretical contributions.

By reading the "Selected Works of Zhou Enlai," the masses will be able to better understand his indelible and creative contributions through theoretical work to military and political affairs, economy, culture and education, united front work, armed struggle and party building. Comrade Zhou Enlai was not only a practitioner but also a theorist. He was a great Marxist, skillful in combining theory with practice, and one of our party's leaders with penetrating judgment and outstanding ability. Comrade Zhou Enlai's works and those by Mao Zedong, Liu Shaoqi, Zhu De and other older-generation proletarian revolutionaries are valuable items in the treasure house of Marxist theory.

Although the works contained in the first volume of the "Selected Works of Zhou Enlai" were written several decades ago, many of them still maintain the brilliance of truth today and provide the people with a sincere and secure feeling, as well as encouragement and education. In short, his works today are still of great significance in guiding our theoretical study, ideological study and economic construction, and for improving party work style. Therefore, we should consciously and earnestly study his works so as to raise still higher our ideological level and improve our working abilities.

As in studying the works of Marx, Lenin and Comrade Mao Zedong, we must concentrate our efforts on studying Comrade Zhou Enlai's stand, viewpoint and methods in the course of studying the "Selected Works of Zhou Enlai," and pay attention to integrating theory with practice so as to fully understand the essentials of his works.

On the occasion of publishing the "Selected Works of Zhou Enlai," we must--in connection with the new situation, new problems and new experience that have emerged in the fields of economic construction, structural reforms and education in the democratic legal system--keep a firmer grip on the study of revolutionary theory and establish a practice of reading, thinking deeply, investigating and studying. This is the best way to wholeheartedly greet the publication of the "Selected Works of Zhou Enlai."

'XINHUA' REVIEWS FIRST VOLUME OF ZHOU ENLAI'S WORKS

OW270244 Beijing XINHUA in English 0221 GMT 27 Dec 80

[Text] Beijing, December 27 (XINHUA)--The first volume of the "Selected Works of Zhou Enlai" contains 60 articles written during the period of new democratic revolution, up to the founding of the People's Republic of China in 1949.

Zhou Enlai was an outstanding leader of the Chinese Communist Party. His works provide Marxist analyses and summations of a series of important issues in the Chinese Revolution.

Two articles date back to the first revolutionary civil war (1924-1927) period. "The Chinese Communist Party in the Present Political Struggle" was written in the winter of 1926, a critical juncture when successive victories were being won in the northern expedition, and the right-wing of the Kuomintang was stepping up its counter-revolutionary activities. The article was a blow against the Kuomintang right-wing and at the same time represented resistance to capitulationist leaders of the communist party, Chen Duxiu being the chief exponent.

"On Taking Prompt Punitive Action Against Chiang Kai-shek" was written in the wake of the April 12, 1927 counter-revolutionary coup d'etat staged by Chiang Kai-shek in Shanghai, calling for prompt punitive action against Chiang Kai-shek.

The eleven works from the second revolutionary civil war (1927-1937) period deal with party building, work in enemy-controlled areas and building the Red Army and revolutionary base areas. This was an important historical period marking the development and maturity of the communist party in the course of arduous and tortuous struggle. During this period, the Chinese people's revolutionary forces were preserved, new positions established and the path to the victory of the revolution was found.

In the November 1928 article "On Firmly Eliminating Non-proletarian Ideology From the Party," Zhou Enlai reviewed the experience in party building accumulated by the communist party since its inception.

A directive he drafted for the party Central Committee in March 1929 summed up the experience in waging guerrilla war and building party organizations and doing mass work in the Soviet areas, and affirmed and recommended the practice of the Fourth Army of the Red Army in establishing party branches at the company level. The main task at that time, the directive pointed out, was to mobilize the masses and carry out in the rural areas the agrarian revolution in depth and expand guerrilla areas, instead of going beyond the strength of the Red Army by trying to take key industrial and commercial cities. It was aimed at the remnant influence of putschism.

A September 1929 directive to the Fourth Army pointed out that Red Army forces should be built in the countryside first and political power seized in the cities later--this was the characteristic of the Chinese Revolution and a product of its economic base.

Another directive dated September 1930 dealt with correcting the erroneous thinking flowing from Li Lisan's "left" line, which consisted of empty talk about major actions and armed insurrection. It pointed out that "left" deviations could obstruct and destroy the revolution just as surely as right errors could.

"Telegrams relating to the smashing of the fourth 'encirclement and suppression' campaign" (in the spring of 1933) consisted of eight telegrams sent by Zhou Enlai, then directing operations at the front, to the party Central Committee and its Soviet Bureau, and another telegram sent jointly by Zhou Enlai and Zhu De. By then, Mao Zedong had been forced out of the Red Army by the "left" opportunist leaders. These telegrams proposed the principle of concentrating a superior force to destroy enemy forces one by one in mobile warfare. The fourth counter-campaign against "encirclement and suppression" was victorious under the command of Zhou Enlai and Zhu De.

Fifteen articles in the "Selected Works" were written during the war of resistance against Japanese aggression (1937-1945). One is a cable Zhou Enlai sent to the party Central Committee from Linfen, Shanxi Province, soon after the outbreak of the war. It emphasized the need to oppose Chiang Kai-shek Kuomintang's move to seek peace through compromise and the need to persist in the war of resistance in north China It also stated that guerrilla warfare should be the main form of operations in that stage, and that the Red Army should be expanded.

"On Building a Strong and Militant Party Organization in the Southwest" (1942) expounded the guideline of the party Central Committee--long-term underground work, building up strength and biding one's time--for the work in Kuomintang-ruled areas in the face of an anti-communist campaign by the Kuomintang.

"How To Be a Good Leader" (1943) said that a correct leader should relate the party's general tasks to the characteristics of a given place and time on the basis of thorough investigation and study of concrete conditions; the experience gained by the leader and the masses should be pooled; and leaders should raise their prestige by correcting their mistakes, and not by covering them up, and by immersing themselves in hard work, not by bragging and boasting.

In a "Speech at a Meeting of Welcome in Yan'an" (1943), Zhou Enlai stressed that Mao Zedong's leadership had ensured that the Chinese Communist Party did not lose its bearings or take the wrong course at many critical junctures and on many key questions.

"On the United Front" was a speech he gave at the Seventh National Congress of the Party in 1945, systematically expounding the communist party's experience on the question of the united front during the period of democratic revolution.

Thirty-two works were written during the third revolutionary civil war (1945-1949). These cover analyses of the situation and tasks at different stages of the war; analyses of the special features of the different stages of the peace talks between the two parties; principles of work in Kuomintang-ruled areas and the strategy of the struggle; the principles and policies of land reform and consolidation of party organizations; an analysis of the characteristics of the draft common program of the people's political consultative conference; an analysis of the new-democratic economic construction; and exposition of Mao Zedong Thought and the principles of literature and art.

This period resulted in the nation-wide overthrow of the rule by imperialism and its lackeys and establishment of new China after four years of hard struggle that the Chinese people waged under the leadership of the Chinese Communist Party headed by Mao Zedong.

An outline written by Zhou Enlai in June 1948 pointed out the essential differences between the new democratic economy and the capitalist economy. It said that the new democratic economic construction was also opposed to agrarian socialism and extreme equalitarianism.

"Learn From Mao Zedong" is an excerpt from a report Zhou Enlai made at the First All-China Youth Congress in May 1949. He pointed out that Mao Zedong was a leader who had emerged from the masses in the course of a protracted revolutionary movement, and should never be regarded as a chance leader, a born leader, a demi-god or a leader impossible to emulate, and should not be turned into a deity apart. He went on to say that Mao Zedong Thought took shape as a result of a process of historical development. Mao Zedong, by integrating the universal truth of Marxism-Leninism with the practice of the Chinese Revolution, had indicated the correct orientation for the Chinese people's revolutionary struggle.

In analysing the draft common program at the first Chinese people's political consultative conference on the eve of the founding of the People's Republic of China, Zhou Enlai expounded the nature of the political power of the People's Republic of China, and its basic internal and external policies. He pointed out that new China must develop in the direction of socialism and communism.

STATE PERSONNEL BUREAU HOLDS FORUM ON CADRES

OW251738 Beijing XINHUA Domestic Service in Chinese 1541 GMT 24 Dec 80

[Text] Beijing, 24 Dec (XINHUA)—The State Personnel Bureau held a discussion meeting on professional technical cadres in Beijing 15-24 December. The meeting studied ways to implement the provisional regulations of titles for professional cadres in social sciences and discussed the question of reasonable mobility for talented people.

This year, the State Council has separately approved and promulgated provisional regulations on professional titles for cadres who are editors, news reporters, translators, accountants and statisticians. Studying how to implement these provisional regulations, the discussion meeting maintained: professional cadres in social sciences have made positive contributions to publicizing the party's line, principles and policies; disseminating and accumulating knowledge in science and culture; enriching the people's cultural life; and raising the scientific management level in economic work. To further arouse their enthusiasm, rapidly build up a contingent of social scientists who are both red and expert and to encourage them to gain professional proficiency so as to do their own work well and to contribute their share to the four modernizations, it is of tremendous significance to determine titles for professional cadres in the social sciences, evaluate their performance and give promotions.

Since 1978, the various localities have reassigned more than 173,000 scientific and technical personnel who were in jobs unrelated to their fields of study or specialities. This number accounts for 80 percent of those scientific and technical personnel due to be reassigned. This figure is much higher than the total number of China's college graduates in 1965. Therefore, large numbers of technical personnel have been assigned to the cultural, educational, scientific research, industrial and agricultural fronts. The discussion meeting maintained that the reassignment of personnel in jobs unrelated to their fields of study or specialities remained an important task of personnel departments at all levels. It is necessary to follow the principle of matching one's job with one's field of study and to make plans to reassign professional technical cadres at enterprises which have shut down, suspended operations, amalgamated or switched to the manufacture of other products in the process of economic readjustment. It is necessary to adopt a correct approach toward and conscientiously handle letters and visits by professional technical personnel who are in unrelated jobs. Units and individuals that suppress talented people should be criticized and taught a lesson.

The discussion meeting maintained: following the reform in China's economic structure and developments in science and technology, the method of having party organizations assign and appoint professional technical personnel cannot fully meet the needs of the new situation. To alter the present abnormal situation of the shortage and idling of talented people and to discover and make full use of these people so as to meet the needs of the four modernizations, it is necessary to have party organizations make assignments while permitting a reasonable mobility for professional technical personnel within certain limits and in a well-guided and planned manner.

BEIJING TRIBUNAL RECESSES FOR 2 DAYS

HK250059 Hong Kong WEN WEI PO in Chinese 25 Dec 80 p 1

[Long-distance call from WEN WEI PO correspondent Chang Ching-yun]

[Text] Beijing, 25 Dec—The No 1 court of the special tribunal will recess today and tomorrow and resume hearings on 27 December, when it will continue to carry out debate on the charges against Jiang Qing.

When the court resumes the prosecutors will systematically refute the absurd defense statements made by Jiang Qing yesterday. Jiang Qing will be able to make her final deposition after the prosecutors have spoken.

At the same time, Jiang Qing spoke in her own defense for as long as 2 hours yesterday. In the course of her speech she said certain things which the court will investigate today and tomorrow, to establish the truth of the matter. This is to insure that when sentence is pronounced it will be based on the facts, and that the defendant will be neither unjustly punished nor unjustly released.

The whole court debate will be concluded with the resumed debate on 27 December, after which proceedings will enter the stage of assessment of the cases by a collegiate bench of 35. The bench will study and analyze the cases behind closed doors, reach its judgment and set it down in writing.

The written judgment will be based on the law and the facts, and will not necessarily correspond to the indictment. There may be disputes among the group of judges, and judgment will be reached by ballot if their opinions are not unanimous.

The 35-member collegiate bench are now hurrying to carry out preparatory work for assessing the cases. They are studying the court records regarding the court investigation and debate on the cases of the 10 accused, with the exception of Jiang Qing. The judges of the No 1 court have watched the television recordings of the proceedings in the No 2 court and vice versa. This has helped them to gain an overall understanding and knowledge of the cases.

According to authoritative sources, the special tribunal will follow the principle of reaching judgment independently without interference from the "NPC" or the party. The judgment will not be influenced by speeches of former party and government leaders or by press materials.

Nor can the factor of "the people's tremendous wrath" be taken as a basis for the tribunal in reaching its judgment, because the people's anger certainly does not constitute a guiding principle for reaching judgment. China has entered the era of the rule of law and cases are heard in accordance with the law and the facts; neither power nor public opinion may replace the law.

PARTY AND STATE

'HSIN WAN PAO' ON CHEN YUN, READJUSTMENT

HK080356 Hong Kong HSIN WAN PAO in Chinese 7 Dec 80 p 1

[Social dispatch: "Chen Yun Proposes Readjustment Principle, Says China Must Act According to Capabilities in Capital Construction"]

[Text] Beijing, 7 Dec--The State Council Finance and Economics Commission headed by Chen Yun is in charge of the work of formulating the principles and policies for China to overcome her economic difficulties, carry out readjustment, and build the four modernizations.

China's economy has now run into new difficulties due to the serious sabotage done during the 10 years of turmoil and the mistakes made in the 2 years after the "gang of four" were smashed. There was a big financial deficit last year. Apart from daily essentials, prices have started to rise. Such things have been rarely seen since the founding of the state. In view of this, Chen Yun has proposed that China must resolutely cut down on capital construction, and that work on a number of projects currently under construction must be halted. It is necessary to make a sufficient retreat in this respect, in order to reduce investment and thus cut expenditure and eliminate the deficit. In capital construction it is necessary to follow the principle of acting according to capabilities. This is what Chen Yun has proposed.

Chen Yun is one of those who decide China's economic strategy. He is now vice chairman of the Central Committee and first secretary of the Central Discipline Inspection Commission. He is also chairman of the State Council Finance and Economics Commission. China's current economic readjustment and rural policy readjustment policies were formulated in accordance with his views, after study by the central authorities.

Chen Yun always persisted in following the principle of seeking truth from facts when in charge of financial and economic work in the past. In the wake of the economic difficulties caused by the 1958 great leap forward, it was Chen Yun who put forward opinions on economic readjustment; the central authorities then formulated the "eight-character principle," and the difficulties were eventually overcome and the road to victory was opened up. The national economy had basically recovered by 1963, and by 1965 it presented a scene of prosperity.

Many of Chen Yun's viewpoints of that time are still correct today. For instance, apart from having the state and collective run industry, agriculture and commerce, the existence of a certain number of individually-operated enterprises should be permitted; under the guidance of the state plans, enterprises should be allowed a certain degree of decision-making powers and freedom; in setting plan targets it is necessary to pay attention to comprehensive balance and also leave room for maneuver, and strive for proportioned development; in assigning investment, the country should provide for people's life first and production second, and for production first and for capital construction second, and in making arrangements for production and life, it is first necessary to take care of the peasants who form 80 percent of the population; and, it is much more difficult to correct adventurist trends than to correct conservative trends in economic construction, and so on and so forth. Therefore, all these views are still of practical significance today. Since the central authorities adopted his views and formulated the principles and policies, the economic situation has been advancing from difficulties towards prosperity.

'RENMIN RIBAO' DISCUSSES EMPEROR TAIZONG'S REIGN

HK050838 Beijing RENMIN RIBAO in Chinese 21 Nov 80 p 5

[Article by Ren Hanwen, Du Jingzhi and Mu Futian: "From Humbly Seeking Counsel to Arrogantly Refusing Counsel--Notes on Reading the 'Political Record of the Zhenguan Government'"]

[Text] A comprehensive probe into the various reasons for the emergence of "rule by the voice of one man" in the political life of our party and state involves a lot of things and cannot be satisfactorily accomplished in a short essay. Recently, we have had the opportunity to read the book "Political Record of the Zhenguan Government." We think that this history book can guide us to study the above-mentioned question from a specific angle. "Political Record of the Zhenguan Government" was compiled by Wu Jing, a minister in charge of admonition and arbitration and an official of the Cultural Bureau during the reign of Emperor Xuanzong in the early Tang Dynasty. Written in 10 volumes and 40 chapters, this "true record" is very easy to read. The wonderful thing about this book is that it not only gives an interesting account of how Li Shimin--Emperor Taizong of the Tang Dynasty--graciously accepted counsel during the early period of his reign but also truthfully records the historical changes--how this great emperor was able to successfully govern his country by accepting counsel and later became dizzy with success and refused counsel. These changes are by no means accidental. This is a typical case which clearly demonstrates one law: arrogance and flattery often make a politician change into the opposite.

Who was the most "democratic" emperor in the history of ancient China? Emperor Taizong of the Tang Dynasty properly deserved this laurel. During the early period of his reign, Emperor Taizong humbly accepted counsel and "let everyone have his way." In order to encourage his ministers to speak up, especially when they disagreed with him, he at one time discarded the outworn concept that the emperor is the must august and frankly admitted that he too was fallible. In the fourth year of the Zhenguan period, he fiercely criticized Emperor Wendi of the Sui Dynasty in front of all civil and military officials, saying that the Sui Emperor "decided everything" but "was not always reasonable." He then frankly admitted: "Out of 10 judgments I make in 1 day, 5 are wrong." He said: "How can we leave a myriad of state affairs to just one person?" ("Zhengti" Chapter, Vol 1) No doubt this correct understanding was what prompted him to accept counsel.

He always compared himself to a piece of mineral ore which had not yet been smelted. He said: "What is so valuable about gold when it is still deposited in the earth?" He described those ministers who dared criticize his faults as "skilled workers" adept at smelting gold. He said: "When a fine piece of mineral is forged into an instrument, it is treasured by the people." ("Renxian" Chapter, Vol 2) Therefore, he often gave handsome rewards to those ministers who dared to incur his displeasure with admonitions. In the early Zhenguan period, Emperor Taizong sentenced a minister to death. Another minister called Sun Fujia thought that "the offense did not amount to a death sentence in law" and thus criticized the emperor for "indiscriminately meting out severe punishment." Emperor Taizong not only accepted his criticism but awarded the Lanling Princess Garden to him for his honesty. ("Najian" Chapter, Vol 2) Wei Zheng, a minister, presented a total of more than 200 memorials to Emperor Taizong during his 17 years of service. In order to correct the emperor's mistakes, he often argued with Taizong in court. He never gave an inch. At times his sharp words put the emperor in a quandary. Emperor Taizong not only did not punish him but awarded him on many occasions. According to the "Political Record of the Zhenguan Government," he was awarded no less than 1,000 bolts of silk fabric in all. Because handsome rewards were given to those who made criticisms, offering counsel became a common practice. Emperor Taizong "always pasted the numerous memorials sent in by the ministers on the walls of the palace so that he could read them as he moved in and out." (Qiujian" Chapter, Vol 2) In view of the fact that people who tried to fawn on him often blocked the road of honest remonstration, he sternly criticized the evil practice of currying favors time and again and warned his ministers against such a practice. He repeatedly admonished his ministers: "obsequious persons who flatter others with their glib tongues are injurious to the country." "The orchids may prefer to grow luxuriantly, but the autumn breeze will destroy them; the king may prefer to become an enlightened ruler, but people who slander and flatter him will pull the wool over his eyes." ("Du Chan Xie" Chapter, Vol 6) He excoriated those ministers who "pandered to his whims and acclaimed his every deed" because they "did not do anything when they saw dangers and mistakes." He said that anyone can be a minister if all he has to do is pass on the emperor's words. ("Zhengti" Chapter, Vol 1) Due to his initiative in and encouragement and earnest practice of what he advocated, the ruling clique indeed presented a thriving scene in the early years of the Zhenguan period. There was a galaxy of talents and the free airing of views. Even low-ranking officials such as county magistrates could directly submit memorials to the emperor and sometimes their proposals were accepted. Because of this, the economy, which was badly injured by war and chaos during the last years of the Sui Dynasty, was quite successfully rehabilitated and developed. This period was unanimously praised by historians of past dynasties as the "enlightened Zhenguan Government."

At that time, Emperor Taizong was still in his 30's. Endless extolments of "long live the king" and "your majesty" kept pounding away in the mind of this founder of the "enlightened Zhenguan Government." From the state of being pleased with himself, he became dizzy with success and arrogant. In the ninth year of the Zhenguan period, he superciliously bragged in front of his ministers: "All ancient rulers who brought order out of chaos were aged over 40, with the exception of Emperor Guangwu who was then 33. But I, your sovereign, was only 18 when I first mobilized the troops to fight. I was 24 when I achieved stability throughout the country and 29 when I became king. This is where I surpass the ancients in the military sense.... I have been studying constantly since the beginning of the Zhenguan period. I know the roots of decency and the source of political theories. After putting these into practice for some years, I have achieved great order across the land and changed prevailing habits and customs. I have worthy children and loyal ministers. This is where I surpass the ancients in the cultural sense." ("Shenzong" Chapter, Vol 10) Arrogance was clearly shown in his utterances and manners. Wei Zheng was the first to notice this. In the 11th year of the Zhenguan period, Wei Zheng wrote the famous "10-Point Remonstrance to Emperor Taizong," in which he said sincerely and earnestly: "All rulers who received the heavenly mandate made their names in times of deep sorrows and lost their virtues when they achieved success." "In times of deep sorrows, a ruler always treated his subordinates with all sincerity; but once he achieved his ambitions, he would act as he pleased and would become arrogant." ("Jundao" Chapter, Vol 1) He said these from the viewpoint of summing up historical experience and did not make his point clear in one fell swoop, though he obviously intended to make this a dose of bitter medicine to cure the emperor's arrogance and extravagance. However, Emperor Taizong, who was becoming swell-headed, turned a deaf ear to him. In the 12th year of the Zhenguan period, Wei Zheng was forced to speak bluntly. He first submitted a memorial to Emperor Taizong criticizing him for setting himself aloft so that everyone thinks that the emperor is not to be offended. He then pointed out to the emperor's face: "Thinking that your kingdom is secure, you have become more and more arrogant." ("Najian" Chapter, Vol 2) In the 13th year of the Zhenguan period, Wei Zheng wrote the "Memorial on the 10 Habits Which an Emperor Should Not Include In." In this memorial he summed up Emperor Taizong's arrogant behavior in 10 points. The emphasis of his criticism was: "You have become slightly arrogant and extravagant these years. On account of your great achievements, you speak of the ancient monarchs with contempt. In spite of your noble wisdom, you make light of your contemporaries. This is a sign of your growing arrogance." ("Shenzong" Chapter, Vol 10) However, this far-sighted warning not only failed to touch Emperor Taizong's heart but was time and again drowned out by the chorus of "virtue singing" by the other ministers. Wei Zheng's opinions were shared by very few people. Even a loyal and important official like Fang Xuanling made no effort to correct Emperor Taizong when he was wrong and just remained docile and obedient. Clearly aware of this fact, Wei Zheng said this to Emperor Taizong in front of all ministers: "When a subject first saw his emperor, he invariably wanted to follow his master everywhere and assist him in remedying the evils of the times. Once he acquired riches and honor, he would want to keep his official post at all costs and thus he was unable to fully discharge his duty as a subject." ("Shenzong" Chapter, Vol 10) In the 18th year of the Zhenguan period, a year after Wei Zheng passed away, Emperor Taizong made a half-hearted attempt to let his ministers enumerate his "faults." Many people actually had the nerve to say: "Your majesty's reforming influence has brought about great peace. We see no fault." ("Najian" Chapter, Vol 2) At this point, Emperor Taizong's arrogance and the ministers' sycophancy were already hard to change. It can thus be seen that although the emperor was responsible for his own arrogance, the ministers did not shirk their responsibility in encouraging his arrogance. Some ministers made a fetish of the emperor's achievements, looked upon the emperor's instructions as the truth and refuted everything not said by the emperor as heresy. Some ministers pandered to the wishes of the emperor in order to preserve their official salary and rank. They praised everything said and done by the emperor and said nothing even when they knew something was wrong. These two tendencies abetted the emperor's self-satisfaction and arrogance.

The emperor was arrogant and extravagant; the ministers blindly fawned on him. Accompanying this fact was the historical change from "readily accepting good advice" in the early Zhenguan period to "imperial remarks cannot be contradicted" toward the middle and latter part of this period. If this outcome was a glass of bitter wine, then it was jointly brewed by Emperor Taizong and the ministers. Wei Zheng had on two separate occasions outlined the "trilogy" of this change: "In the early years of the Zhenguan period, you encouraged your ministers to give counsel for fear that they would not speak up on their own." "After 8 or 9 years, you still appeared to be pleased to accept counsel," (though the emperor no longer took the initiative to seek counsel). After 10 years, "you disliked blunt remarks more and more" and, and, although advice was sometimes accepted with reluctance, "you were resentful and showed your displeasure." ("Najian" Chapter, Vol 2; "Chengxin" Chapter, Vol 5) After the middle part of the Zhenguan period, Emperor Taizong roughly adopted three policies toward correct suggestions made by his ministers.

1. To "humbly" accept counsel but stall for time and continue to act as he pleased: when old ministers criticized his mistakes on reasonable grounds and he was not pleased but thought better of publicly refusing counsel, he resorted to this method and pretended to listen. He would always say something polite in return, such as: "It is nice of you to mention this. How shocking of me to have made such a mistake!" "I would correct it with an open mind." However, as soon as he turned his back, he would say: "When my ministers have suggestions to make, they can come to me. But they cannot expect me to do as they say." ("Gongping" Chapter, Vol 5) No wonder Wei Zheng made this pungent criticism in one of his memorials: "You listened far better than any ancient sages, but the way you handled things was no better than a mediocre ruler." "You talked glibly about how you disliked evils, but you loved to hear words that pleased you. You prattled about welcoming outspoken remarks, but you disliked words that were unpleasant to your ears." ("Shenzong" Chapter, Vol 10; "Gongping" Chapter, Vol 5)

2. To quote the classics and gloss over his own faults: Emperor Taizong claimed that "I have been studying constantly since the beginning of the Zhenguan period." He had quite a good knowledge of history. He showed penetrating judgment when he discussed the strengths and weaknesses of the administration of previous monarchs with his ministers in the early Zhenguan period. But later on, his knowledge became his tool when he tried to justify himself and suppress differing opinions. In the 16th year of the Zhenguan period, the minister, Liu Ji wrote in his memorial: even

when your majesty showed a pleasant countenance and humbly accepted suggestions, the ministers were too nervous to make themselves clear. Since your majesty always "used your wit and eloquence in debate justify yourself and quoted the classics to dismiss the suggestions put before you," who would dare speak up again? ("Shenyanyu" Chapter, Vol 6)

3. To condemn people on the slightest provocation and to refute sincere remonstration as "slander" and "libel": in the 8th year of the Zhenguan period, a low-ranking official submitted a memorial, saying that Emperor Taizong "tired the people by making them build the Luoyang Palace and collected too much land rent." Emperor Taizong flew into a rage and said that this official who "suggested that the state should not call on any one of its subjects to serve his country and should not collect land rent" must be punished for "slander." (footnotes in "Najian" Chapter, Vol 2) In the 11th year of the Zhenguan period, Emperor Taizong went on a hunting trip. Someone submitted a memorial to him, saying: "It seems that we are having as much compulsory service labor nowadays as we had during the Sui Dynasty." "Only an extravagant and dissipated ruler would make frequent hunting trips." Emperor Taizong flared up and said: "Such calumniation is close to a curse." ("Tianlie" Chapter, Vol 10) On both occasions, the persons who offered the sincere advice were able to escape punishment only because Wei Zheng strongly argued for them on just grounds.

Under the autocratic system, when a feudal monarch had the power to take away the life and means of his ministers, Emperor Taizong's attitude toward his counselors finally created a situation in which "ten thousand horses were all muted"--"all ministers refrained from discussing the state affairs." ("Qiujian" Chapter, Vol 2) Recalling the past and comparing it with the present, some sober-minded ministers sighed with emotion: "What a blessed thing it would be for the whole country if we could return to the early years of the Zhenguan period."

Emperor Taizong had a famous saying: "Taking a bronzeware as our mirror, we can put our garment and hat on straight; taking the past as our mirror, we can see the vissitudes; taking people as our mirror, we can figure out our strengths and weaknesses." ("Renxian" Chapter, Vol 2) Actually, he himself was a mirror of history. Through this mirror, we should be able to learn a useful lesson.

REPORT ON GOVERNMENT LEADERS AT YOUTH RALLY

OW091350 Beijing Domestic Service in Mandarin 0500 GMT 9 Dec 80

[Report by station reporter: "Carry Forward Revolutionary Tradition and Work Hard for Modernization With One Heart and One Mind"--portions recorded]

[Text] At 1500 on 6 December, more than 6,000 people, including youths and students from universities and colleges in the capital and some of the veteran comrades who took part in the 9 December and 1 December movements, held a grand rally at the Great Hall of the People to solemnly mark the 45th anniversary of the 9 December movement and the 35th anniversary of the 1 December movement. At the rally the youths and students sang aloud revolutionary songs such as "without the communist party, there will be no new China," "unity means strength," and "graduation song." The revolutionary songs echoed in the Great Hall, filling the rally with high spirits and reflecting the determination of the older and younger generation in carrying forward the revolutionary tradition and working hard for modernization with one heart and one mind. [singing in the background]

Attending the rally were Peng Zhen, Wang Renzhong, Song Renqiong, Hu Qiaomu, Yao Yilin and Kang Keqing; Niu Yinguan, Zhu Muzhi, Li Chang and Rong Gaotang, who took part in the 9 December movement; and (Zheng Boke), (Ma Shitu), (Wang Hanbin) and others who took part in the 1 December movement; and the responsible persons of the departments concerned Jia Tingsan, Han Ying and others. The rally was jointly sponsored by the Beijing Municipal CCP Committee and the CYL Central Committee. Lin Hujia, first secretary of the Beijing Municipal CCP Committee, presided over the rally.

[Begin recording] [presumably Lin Hujia): "Now Comrade Jiang Nanxiang, minister of education and one of the leaders in the 9 December movement will speak to us." [end recording]

After reviewing the serious national crisis faced by the Chinese people 45 years ago, Comrade Jiang Nanxiang said in his report:

[Begin recording] At that time, the patriotic students, imbued with profound feelings, feared no sacrifices; defied the dual oppression from the Kuomintang and the reactionaries; braved the threat of facing the guillotine, imprisonment and attacks by broadswords and high-pressure water; launched the 9 December movement, which shook the whole country; shattered the atmosphere of depression throughout the nation; and pushed forward the movement against Japanese aggression and for national salvation in China. The 9 December movement was launched under the direct and personal leadership of Comrade Liu Shaoqi. The left-deviationist influence of close-doorism was overcome to insure the healthy development of the movement. The 9 December movement aroused an upsurge of a new revolutionary movement and became a milestone between the reactionary period and the revolutionary period in the history of the Chinese Revolution. After the conclusion of the war of resistance against Japanese aggression in 1945, the Chiang Kai-shek reactionary government had relied on the support of U.S. imperialism and intensified its preparations to fight a civil war in order to continue its dictatorial rule in China. The communist party called for a struggle to establish an independent and democratic republic. In response to the party's call, the students of the joint Southwest University in Kunming held strikes and waged struggle against dictatorship and for democracy on 1 December 1945.

The Kuomintang reactionaries mobilized special agents and roughnecks to ruthlessly suppress the students. Four martyrs were mercilessly killed. This incident of bloodshed awakened the broad masses. The patriotic student movement that followed the 1 December movement had become the second frontline of the people's struggle for liberation and dealt a telling blow to the reactionary rule of the Kuomintang. During the 9 December and 1 December movements, it was absolutely correct for the vast numbers of youth and students to follow the communist party and the revolutionary road. The Communist Party of China had never fallen short of the expectations of the people and youths in the whole country. It had led the Chinese people to wage unremitting and painstaking struggles and won victories in the 8-year war of resistance against Japan and in the 3-year war of liberation. It had helped the people of all nationalities in China to remove the three big mountains on their backs and establish the People's Republic of China on the basis of the people's democratic dictatorship. This is another major historical victory in the history of mankind after the October Revolution. History has proved that the democratic revolution must be led by the communist party. History will also prove that socialist construction also needs the leadership of the communist party. [end recording]

Comrade Jiang Nanxiang again reviewed the militant course taken by the party in leading the people and youths in the whole country both in revolution and construction. He continued:

[Begin recording] The question faced by the youths during the 9 December and 1 December movements was whether the support the dictatorship and national betrayal of the Kuomintang or to support the resistance against Japan in order to save the nation and the democratic national construction advocated by the communist party. The question faced by the youths today is whether or not to uphold the four principles. Take the socialist road and realize the four modernizations under the leadership of the communist party. At present some young people still have not found a clear answer to this question. We hold that it is the choice of history and the people that China take the socialist road and follow the leadership of the communist party. After the opium war, the Chinese nation was subjected to aggression by imperialism, simply because the nation was in a state of disunity and was disorganized at all times. It longed for a strong proletarian political party to form a core of leadership. In today's actual life in China, it is impossible to find a political force more experienced, more capable and more loyal to the people than the communist party in leading China's construction. Our party has summed up the rich experiences, both positive and negative, since the founding of the nation; brought into full play the fine tradition of linking theory with practice as always promoted by Chairman Mao Zedong; and effectively solved many problems that Chairman Mao Zedong did not solve when he was alive. Politically, our party is more mature than ever before. This kind of party is trustworthy. Naturally it does not mean that the party faces no difficulties and that our communist party members have no shortcomings and commit no errors. We must admit that within our party at present, there indeed exist unhealthy trends such as bureaucracy, the practice of seeking special privileges and so on. The masses have complained about such trends. These unhealthy trends are illegal in the communist party. They have always been resisted and criticized. The commission for inspecting discipline of the CCP Central Committee had announced the "guiding principles for inner-party political life" aimed at combating such unhealthy trends. On this issue, the views of our party and the people are identical.

Dear students, to build a modern, powerful socialist country in a large nation like China, which has a population of 1 billion and an economy and culture that are very backward, is an unprecedentedly tortuous cause in the history of mankind that requires several generations of arduous struggle. The unfulfilled cause of the older generation of proletarian revolutionaries has to be continued and fulfilled by us successors. We must never shirk our responsibilities and stop halfway. Young people are the hope of the motherland. I hope that the youth and students of today will, as did the youth of the 9 December and 1 December movements, regard the fate of the country as their own responsibility, fulfill the tasks their revolutionary predecessors have been unable to fulfill, win honor for the motherland and make still greater contributions to the people. [applause] [end recording]

During the meeting, the leading comrades of the central authorities presented citations to 276 three-good students and 76 advanced collectives in institutions of higher education and secondary vocational schools in Beijing Municipality.

During the intermission of the meeting, Comrade Peng Zhen and other leading comrades of the central authorities who had acted as leaders of the 9 December movement received 21 three-good students. With sincere words and earnest wishes, Comrade Peng Zhen said: [begin recording] While we are commemorating the 9 December movement, we would like to present citations to some outstanding comrade youths and students [words indistinct] (?to express our respect). [words indistinct] but it was not like this at the time of the 9 December movement. [words indistinct] the areas occupied by

Japan and the areas occupied by Chiang Kai-shek [words indistinct] there were only 10 party members. [words indistinct] But what is the situation today? After the 10 disastrous years of the cultural revolution, tremendous difficulties were created. Since the convocation of the 3d plenary session of the 11th Party Central Committee, many problems have been solved. But there are many difficulties at present. [words indistinct] have damaged our moral practice and young people's comradeship mentality. In the past, the comrades in our communist party did not have such a relationship, and they were not like that. The CYL members were not like that either. Whether it was in the party committees, in the CYL organizations, in the people's army, in the working class contingent, or among the peasants, the whole movement (?was permeated with) comradeship and comrades' friendship. [words indistinct] what Comrade Nanxiang spoke about just now [words indistinct]. I agree with his speech. [words indistinct] what will we encounter from (?now on)? Will it be difficult or not? There still will be difficulties. [words indistinct the principle and policy of leadership of the central authorities now are correct. [word indistinct] from now on, we should inherit the revolutionary spirit of the 9 December and 1 December movements to sweep away the (?tiny) things and the gloomy things, and let us all engage in the four modernizations and socialism with one heart and one mind. [words indistinct] especially young people should rally around the leadership of the party Central Committee [words indistinct] to build (?our) socialism and (?our) communism. It is still very difficult now, and we will encounter some difficulties in the future. [words indistinct] [applause] [end recording]

Comrade Peng Zhen's speech greatly inspired the students at the meeting. They were all determined to face up to and correctly treat the difficulties our country now encounters in the four modernization, to inherit and carry forward the revolutionary spirit of the 9 December and 1 December movements, rally around the party Central Committee, do a still better job in their study and contribute their strength to the motherland's four modernizations in the future.

'GONGREN RIBAO' STRESSES IDEOLOGICAL, POLITICAL WORK

HK100750 Beijing GONGREN RIBAO in Chinese 19 Nov 80 pp 1, 3

[Commentator's article: "Ideological and Political Work Must Be Strengthened"]

[Text] Strengthening ideological and political work is the current urgent demand of the cadres and masses but some differing views on the subject still exist. Correctly understanding and solving these problems is an important guarantee for bringing every positive factor into play and for doing well in the four modernizations.

Some people have said that the ideological problems are now numerous and that it is difficult to tackle them. How should we look at this issue? If we analyze it from the dialectic materialist viewpoint, although the ideological problems are numerous, there is nothing to fear. As we are at a historical turning point, the ideological problems are now more numerous than they are during ordinary times. For example, in the history of our country, various trends of thought and various schools existed in the period of the warring states. The ideological problems of our party were particularly numerous at the outset of the period from the civil war to the war of resistance against Japan. Today the ideological problems are more numerous because our party has adopted the correct policy, everyone dares to speak out, and our ideology is more active. Is active ideology a good thing or a bad thing? Like anything else, it has a dual nature. First, it is a very good thing because it shows that the masses dare to speak out and express different views. Here we must clarify the problem of whether a pond of stagnant water or a pond of flowing water is good. Some comrades always love peace and tranquility but in fact this runs counter to the law of the development of things. It is impossible that there not be a slight rustle of leaves in the wind in the natural world and in human society. Only a pond of flowing water is full of life. Only by having active ideology and much discussion can we hear the good views and propositions of all people and discover the problems which we have not discovered for a long time. Do we hope to bring all our revolutionary enthusiasm into play? The revolutionary enthusiasm in the ideological and political aspects is the greatest and most valuable enthusiasm. A revolutionary party's greatest skill is to bring into play the masses' revolutionary enthusiasm in ideology and politics and to mobilize all of them to make suggestions and seek new ways of doing things. We are communist party members armed with Marxist-Leninist Thought, and only by relying on the masses and mobilizing their sense of responsibility as masters can we rule the world. Having summed up historical experience in this aspect, our party clearly put forward at the 5th plenary session of the 11th party congress that the general task of the party at the present stage is to build a modernized and superior democratic, civilized and powerful socialist country. This task demands that we achieve not only modernization but also a high degree of democracy and a high degree of civilization. Democracy is not only our means but also our end, and it is our country's basic system. We must give play to the superiority of the socialist system and really achieve, as Comrade Mao Zedong stated in the 1950's, "the political situation in which there are centralism, democracy, discipline, freedom and unity of wills, and the individuals have peace of mind and are vivid and vigorous." Of course, negative factors may appear in active ideology but this is not to be feared. As long as we strengthen ideological and political work and the work in the other areas, we can turn the negative factors into positive factors. The duty of our communist party members is to transform society and man. Active participation in ideological and political work has been determined by the nature of our party.

What principle then should be adopted in ideological and political work? In the history of our party, we adopted two kinds of principles: one was the erroneous principle of suppression. Speaking out was not allowed. As soon as one spoke, one received an answer. Subsequently, Lin Biao and the "gang of four" developed the so-called "investigation, criticism and struggle" and put forward a reactionary theory which was called "opening a way with mass criticism." They even regarded it as the law of ideological work. In the "Great Cultural Revolution," they implemented this erroneous principle to an absurd extent so that the cadres and masses suffered very much. Another one was the correct principle of guidance. In the course of giving guidance, the free airing of views was encouraged, collective wisdom was drawn on, and all useful ideas were absorbed. Many channels existed for us to air our views, such as speaking our minds freely at the meetings of the party and at the people's congresses. Furthermore, the five large people's organizations such as the federations of trade unions, the CYL, the women's federation, associations of literature and of the sciences; the congresses of staff members and workers; the organs of national self-government; the masses' letters and visits; reception work and so on--all were channels for the free airing of views. We must insure that all kinds of channels are left unobstructed so that we hear all kinds of criticism and suggestions at all times and improve our work. We must be good at using all forms to direct the complicated and manifold ideas and views to the positive and correct side. The present problem is that we have not done well in guiding ideological and political work. Some of our comrades have often said that they are very busy. They have, therefore, relaxed grasping ideological and political work. This is incorrect. We cannot set economic work against ideological work any more than we can separate material reward from moral encouragement. We have criticized "opening a way with mass criticism," and this does not mean that it is unnecessary to put ideology in the lead. Ideological and political work must be grasped everyday. To embark on the four modernizations, it is essential to do well in grasping ideological and political work.

Is it necessary to restore our party's glorious tradition of criticism and self-criticism in ideological and political work? It is surely necessary. There is now a view called "growing more flowers but fewer thorns." Bureaucrats shield one another and live and coexist peacefully. This is incorrect. Both the remnant poison of the left and the rightist tendency really exist in our ideological work. Some localities and units are even afraid to advocate criticism and self-criticism. How can these ways of doing things exist? The masses have a lot of complaints about the unhealthy tendencies, such as seeking personal privileges and getting in by the back door. Can we not criticize and struggle against these repulsive phenomena? Wholeheartedly serving the people without the slightest selfishness is the demand put on all party members by our party and is the oath taker by every member upon joining the party. Strictly speaking, those communist party members who have the unhealthy tendencies of seeking personal privileges and so on run counter to the aim of the party and to their original revolutionary ideal. It is a very inglorious thing. The party has now formulated certain regulations governing inner-party political life. Should they not stand out to openly conduct self-criticism and meanwhile welcome the masses' assistance in washing the dust off from their faces and souls? We must not throw away the weapon of criticism and self-criticism. Only by resolutely struggling against the repulsive phenomena, su[illegible] as violating the law and discipline, pursuing bureaucratism, committing corruption and bribery, failing to distinguish public affairs from private affairs, inviting people to dinner, giving presents, indulging in extravagance and waste, letting children and relatives in through the back door and so on, can we check the unhealthy tendencies. If we disregard these tendencies, we will seriously jeopardize the structure of the party and thus cause the party to be seriously divorced from the masses and create evil consequences. We should undoubtedly and resolutely struggle against the unhealthy tendencies.

In ideological and political work, it is also imperative to provide enlightment and guidance with examples of advanced people and ideology in our own localities and units and throughout the country. The strength of examples is inexhaustible. Although there are still some negative factors in our life, the main trend is healthy and positive, inspiring examples among the masses are numerous. By publicizing examples of advances made by the masses, we can stimulate our nation to flourish vigorously and arouse our revolutionary spirit of working hard for the prosperity of our country. The people of our country have had the tradition of plain living and hard work for a long time. Through ideological work, we must heighten the spirit of our nation so as to foster the positive factors and eliminate the negative factors.

In ideological work, we must use more frequently the method self-education of the masses. Through encountering practical problems in our daily lives, we must be good at organizing the masses to learn to analyze, compare and distinguish between what is essential and nonessential, between what is brilliant and what constitutes malpractice, between what is correct and should be advocated and what is incorrect and should be opposed. We must trust the masses' ability to make judgments. Localities which have trusted the masses have achieved better results than those which have simply instructed the masses on what to do. We must be good at discussing problems with the masses on an equal basis. Only by doing so can we mutually strengthen trust and forge ahead hand in hand with the masses.

Bad people, bad phenomena and a bad atmosphere in our country cannot be completely eliminated at once, and they will exist for a fairly long time, compared with the whole society, they are in the minority and are secondary factors. However, if we ignore them and do not struggle against them, they will spread very quickly like an epidemic, seriously threaten the party's life and jeopardize the party's cause. Ideological and political work cannot, therefore, be relaxed at any time. As long as all departments stress strengthening ideological and political work, and the cadres and masses throughout the country spontaneously establish new communist ideology and new morality and customs, our nation will surely vigorously flourish and the great aim of the four modernizations which the people of our country have yearned for day and night will surely be achieved.

'RENMIN RIBAO' HAILS CAPITAL CONSTRUCTION LOANS

HK100602 Beijing RENMIN RIBAO in Chinese 27 Nov 80 p 2

[Commentator's article: "Actively and Steadily Carry Out New Method for Capital Construction Investment"]

[Text] Recently, the State Council decided that beginning in 1981, a system of loans will be instituted whereby instead of the Ministry of Finance making appropriations for capital construction, all enterprises and units which have independent accounting and which are capable of repaying the loans are to obtain loans from the construction bank. This is an important measures for reforming the system of capital construction investment and management.

A year ago, the State Council's decision on changing from the practice of making appropriations to that of extending loans for capital construction was implemented on a trial basis in various localities and departments. At present, more than 20 trades and occupations in 28 provinces, municipalities and autonomous regions in the country have conducted experiments in this regard. Since the practice of making appropriations for investment in capital construction was changed to extending loans, and that of using funds without repayment was changed to using funds with repayment, many units requesting loans have been more careful than before in planning construction projects and in using construction funds. Some prominent manifestations are: the shift from fighting for projects to the cancellation of non-essential projects, from bragging about the economic advantages of construction projects to a realistic assessment of the economic results, and from asking for state aid to paying attention to careful planning. By carrying out this system in every detail, the capitalist construction front can thus be shortened, the result of irvestment enhanced and positive effects brought about.

Under existing conditions, units not receiving loans still have certain misgivings. Some comrades are afraid that they will be in trouble. They also fear that they will not be able to repay the loans and will thus be legally responsible for failure to repay them and so forth. This calls for continued efforts by relevant departments to vigorously publicize the significant changing from the practice of making appropriations to that of extending loans for capital construction. In the past, the scope of capital construction projects and funds invested in them were determined by the state, with enterprises using appropriated funds without repayment. Under these circumstances, the enterprises were powerless to make arrangements for the construction projects and they were not responsible for repaying the funds invested. The positive or negative economic results of the construction projects were not directly connected with the enterprises. Since the practice of making appropriations has been changed to that of extending loans for capital construction, the units receiving loans should have the power to adjust the details of construction, arrange the work order and choose their own designers and construction enterprises, provided that the productive capacity is not affected, that the total investment amount as approved is not exceeded, that the date of completion of the project is not delayed and that the quality of the work is not lowered. Those enterprises which repay the loans as scheduled and those which complete the projects early and repay the loans ahead of schedule will be rewarded, while those which delay the date of completion of the project and repay the loans after they are due will be punished. In this way, the economic power, economic responsibilities and economic interests will be effectively unified to mobilize the enthusiasm of various quarters. The present overextended capital construction front and poor investment results still constitute a prominent contradiction in the national economy. We should actively carry out the new measure of hanging from the practice of making appropriations to that of extending loans for capital construction so that the latter can operate effectively with improvements in investment and management.

Changing from the practice of making appropriations to that of extending loans for capital construction constitutes a major shift in the system of capital construction investment and management away from depending mainly on administrative organizations and administrative measures to relying on economic organizations, economic methods and legal measures. Since enterprises applying for loans and construction banks extending loans should bear economic and legal responsibilities, it follows that banks should conduct serious investigations of the units receiving the loans so that through such loans, capital construction projects can be adjusted more economically, more rationally and as practicably as possible. If it is assumed that once construction projects are included in the construction plans and investment is approved, the construction bank should extend loans, or if the construction bank extends loans without looking into the actual conditions, then this will bring greater losses to the national economy and make planning work passive. This is because once the construction of a project is in progress or after it is completed, everything, from production processes to the supply of raw and processed materials, fuel and power, must be in order. Many examples in this respect can be cited. Whether or not an enterprise participating in a construction project is capable of repaying loans is an important criterion for testing the feasibility of such a project and for determining whether or not it should be constructed at all. As to those completed construction projects which keep losing money, they should be closely examined and strictly controlled. In sum, regarding capital construction projects using appropriated funds, we should make sure that objective economic laws are respected. We should also pay attention to giving play to the role of economic organizations and economic measures and attach considerable importance to the study of the feasibility of construction projects and stress their economic results. In short, we should take a positive attitude and firm steps. From now on, various localities, departments and construction banks at all levels should conduct investigations and studies, complete all necessary preparations and carry out reform at different phases and in different groups according to the actual conditions of those units and use bank loans instead of appropriated funds.

As the national economy operates as an entity, economic reforms should be coordinated. The task of changing from the practice of making appropriations to that of extending loans or capital construction involves management systems relating to planning, finance, taxes, commodity prices, material supplies, as well as labor, construction and so forth. Before these aspects are reformed, changing from the practice of making appropriations to that of extending loans may encounter real difficulties. Relevant quarters should actively coordinate their efforts in order to create conditions for carrying out on a comprehensive scale the system of changing from the practice of making appropriations to that of extending loans.

PARTY AND STATE

JIANG QING TRIED ON CHARGE OF PERSECUTING ARTISTS

OW100819 Beijing XINHUA Domestic Service in Chinese 1504 GMT 9 Dec 80

[Text] Beijing, 9 Dec (XINHUA)--Investigation by the First Tribunal of the special court this morning proved that defendant Jiang Qing collaborated with Ye Qun, Wu Faxian and Jiang Tengjiao in plotting to search the homes of five well-known personages in the Shanghai literary and art circles and in persecuting them in order to cover up her ugly past. Two of them were persecuted to death.

The victims of this home-search incident were Zheng Junli, Zhao Dan, Gu Eryi, Chen Liting and Tong Zhiling, all well-known personages of the film and theatrical circles in the 1930's. After their homes had been searched, they continued to suffer persecution. Some of them were falsely charged as "enemy agents," "renegades" and "counterrevolutionaries" and were put in jail, suffering mentally and physically. Zheng Junli and Gu Eryi died from such persecution.

Presiding Judge Zeng Hanzhou held today's court session. Judges Gan Ying (female), Huang Liangchen and Liu Liying (female) conducted the court investigation. Gan Ying asked defendant Jiang Qing: In the summer of 1966 did you ask Zhang Chunqiao to contact Zheng Junli and to have the latter hand out your letters and pictures of the 1930's? Do you know that Ye Qun directed Jiang Tengjiao to search the homes of Zheng Junli, Zhao Dan, Gu Eryi and others? Were the pictures, letters and other materials concerning you, which had been found in the search, destroyed in your presence? At first, defendant Jiang Qing said: "I do not know." But later she said: "I know this only after I read the indictment." As to whether she asked Zhang Chunqiao to contact Zheng Junli for the letters and pictures, she said at the beginning: "I did not ask Zhang Chunqiao to do that." But later she admitted: "I entrusted this matter to Zhang Chunqiao." In quibbling over this, Jiang Qing went as far as to mention her trip to Chongqing for dental treatment at the time of the war of resistance against Japan and to describe how she first knew Zhao Dan, Gu Eryi and the others. She tried to avoid answering the essential questions and said that keeping pictures was "normal" and "did not warrant a search of the home."

The court immediately showed and read a letter in Zheng Junli's own handwriting addressed to Jiang Qing. The letter indicates that Zhang Chunqiao had a talk with him, and that he handed over Jiang Qing's old pictures in his possession to Zhang Chunqiao for disposal by Jiang Qing. Despite what Zheng Junli did, he could not avert the fate of home search and persecution.

Then the court summoned Jiang Tengjiao and Liu Shiying, codefendants in the home-search case, to appear before the court to testify. They admitted that they persecuted the five personages of the Shanghai literary and art circles under the instructions of Jiang Qing and Ye Qun. As admitted by Jiang Tengjiao, in early October 1966 he received a phone call from Wu Faxian, saying that Ye Qun wanted him to go to Beijing immediately and secretly to receive the assignment of an urgent "political task." After he arrived in Beijing, Ye Qun told him that a letter written by Jiang Qing was in the hands of Zheng Junli, Gu Eryi or the others. Ye Qun wanted him to have some people pretend to be Red Guards and search their homes so as to dig out all notebooks, diaries, pictures and written materials. He was told to keep the matter in "strict secrecy." After Jiang Tengjiao returned to Shanghai, he selected Zhang Biao, Liu Shiying and other "reliable persons" to lead the home-search task. Some PLA fighters and children of cadres were hoodwinked into disguising themselves as Red Guards, and the homes of Zheng Junli and the other four were searched in the early morning of 9 October. From the several bags of stuff obtained through the search, Jiang Tengjiao and others sorted out the materials concerning Jiang Qing, took them personally to Beijing and reported the matter to Wu Faxian. In the presence of Wu Faxian, the materials were handed over to Ye Qun. Later Ye Qun told Jiang Tengjiao that the job was well done to the satisfaction of the "high authority." Both Jiang Tengjiao and Wu Faxian knew that the "high authority" meant Jiang Qing.

Liu Shiying, who personally led the group to search Zheng Junli's home and who took part in sorting and transporting the materials obtained in the search, stated how the home search was actually carried out. In addition, he revealed that in planning for the home search Jiang Tengjiao said that this was "a very important and glorious task assigned us by the proletarian headquarters," and that Jiang told him that, as the "central leader" once said, the home search "must be kept in strict secrecy, and nobody would be allowed to tell this to anyone even if his life were threatened."

Zheng Junli's widow, Huang Chen, appeared before the court today to testify. Pointing to Jiang Qing, she said with indignation: "Do you not know me? You are Lan Ping, and I am Huang Chen. I am clear about what you did in the 1930's." She said that in June 1966 Zhang Chunqiao made the first contact with Zheng Junli and used threats to have him hand out all of Jiang Qing's pictures and stage photos and all related written materials. But after Zheng Chunqiao talked with him for the second time, Zheng Junli dared not tell her the details of the conversation, and this caused severe mental pressure on her. In addition, Huang Chen said that in October 1966 a group of people came to search their home and took away every piece of paper. She added that Zheng Junli was secretly taken away in 1967 and died in jail 2 years later. At this point, Jiang Qing turned to Huang Chen and said:

"Ah, Huang, I have not the slightest knowledge about this." Huang Chen said angrily in rebuttal: "I do not want to talk with you. You have no right to talk to me." Huang Chen said that after the death of Zheng Junli they did not even let her small son pass, and that even she, herself, was almost persecuted to death. She scolded Jiang Qing, saying: "Lan [illegible]ug, what a vicious person you are!"

The court showed and read a statement that Zhao Dan had made together with his wife Huang Zongying before he died, testifying to the home search and persecution they suffered.

Judge Huang Liangchen asked defendant Jiang Qing: "Was it true that in January 1967 you and Xie Fuzhi went to Ye Qun's house and burned the materials obtained in the home search?" Jiang Qing replied: "I do not know." Immediately the court read testimony by Wei Qiu (former section chief of the party committee office of the air force headquarters). Then Zhao Gensheng, one-time clerical secretary in Lin Biao's office and a witness on the occasion when the materials were burned by Jiang Qing, appeared before the court to testify. He stated in detail how Jiang Qing, Ye Qun and Xie Fuxhi burned the materials at the small kitchen in the backyard of Lin Biao's house in Maojiawan. He said that Ye Qun and Xie Fuzhi threw the materials, one at a time, into the stove, while Jiang Qing was walking slowly back and forth nearby and supervising the destruction of the materials.

Public prosecutor Wang Yaoqing (female) said in court: In answering questions, the defendant Jiang Qing said that she did not know about the facts concerning her crimes in persecuting personages in Shanghai's literary and art circles. But the testimony given by witnesses and the material evidence show that Jiang Qing does know the facts. The investigation made in court has proved that Jiang Qing instigated people to illegally search the homes of personages in Shanghai's literary and art circles and to persecute them for ulterior motives, thus causing extremely grave consequences. After their homes were searched and ransacked, five such personages were subjected to far more serious persecution--Zheng Junli and Gu Eryi were persecuted to death, Zhao Dan was falsely imprisoned for 5 years and Chen Liting was imprisoned under the false accusation of being an "enemy agent."

The public prosecutor said: It is a crime that Jiang Qing collaborated with Ye Qun, Zhang Chunqiao, Wu Faxian and Jiang Tengjiao in subjecting Zheng Junli and four others to bodily persecution. Their committing this criminal offense is also clear proof that Lin Biao and Jiang Qing colluded with each other in cruelly harming people.

Wu Faxian, one of the principal defendants in the same case, also appeared in court today to testify. In addition to admitting that he had joined Jiang Qing and Ye Qun in plotting to search the homes of these personages, he also confessed that Jiang Qing instructed him to commit four criminal offenses, which are as follows:

1. On instructions from Jiang Qing, he personally went to Shanghai in 1968 to bring back to Beijing the materials connected with Jiang Qing from the Shanghai Public Security Bureau and to have the public security cadres involved in this matter arrested.

2. On instructions from Jiang Qing, he went to Shanghai in 1968 to lure writer Sun Junqing to Beijing, and then Jiang Qing ordered him "taken into protection."

3. On instructions from Jiang Qing, he sent personnel to Shanghai in 1968 to lure Qin Guizhen, a maid who had looked after Jiang Qing in the 1930's, to Beijing, where Jiang Qing had her arrested.

4. In 1967, through instigation by Jiang Qing and Ye Qun, he supported the conspiracy to seize the power of JIEFANGJUN BAO.

Wu Faxian confessed that Jiang Qing was the chief culprit and he was an accomplice in the above criminal offenses.

JIANG QING TRIED TO DESTROY OWN BIOGRAPHIC INFORMATION

OW091546 Beijing XINHUA in English 1528 GMT 9 Dec 80

[Text] Beijing, December 9 (XINHUA)--How and why the homes of five artists in Shanghai were searched 14 years ago has transpired at special court sessions investigating the charge that Jiang Qing was behind the search.

The event was listed in the indictment of the special procuratorate as one of the charges against the "Lin Biao and Jiang Qing counter-revolutionary cliques." The special court has completed the investigation on the charge and evidence produced in court shows that the event was instigated by the two cliques jointly. Following is a brief account of the event based on the evidence presented in court:

In early October, 1966, Lin Biao's wife, Ye Qun, asked Wu Faxian, the commander of the air force of the People's Liberation Army at the time, to summon Jiang Tengjiao, former political commissar of the air force unit in Nanjing, to Beijing to accept an assignment.

Jiang Tengjiao came to Beijing the next day. On the same evening, Ye Qun said to him: "One of Comrade Jiang Qing's letters has fallen into the hands of Zheng Junli, Gu Eryi and company. It's not clear who has the letter now, but you can organize some people to search the homes of five persons--Zheng Junli, Gu Eryi, Zhao Dan, Tong Zhiling and Chen Liting. Bring here all the letters, diaries, notebooks and such like you can lay your hands on." She also asked him to "keep this absolutely secret."

The letter and other things Ye Qun asked him to search for had something to do with Jiang Qing's past.

Jiang Qing was afraid that her inglorious record in Shanghai in the 1930's might be exposed because this would throw stumbling blocks in her way to supreme power. So she wanted all the written and printed material about her in the 30's be destroyed.

In June 1966, when the "Cultural Revolution" had just started, Jiang Qing asked Zhang Chunqiao to have a talk with Zheng Junli, a film director, who knew something about Jiang Qing's life in the 30's, and urged him to hand over all the relevant material in his hands. Zhang Chunqiao said to Zheng: "Jiang Qing's position is different now. Some of her letters and other such things are kept in your home and this is not proper. You'd better give them back to her." Zheng Junli checked up his belongings and wrote a letter to Jiang Qing saying that he had not kept those letters but had found a few old pictures of the 30's. "It's up to you to dispose of them," he said in the letter.

But Jiang Qing was still not at ease. She asked Ye Qun for help and Ye Qun got Jiang Tengjiao to search the homes.

The targets of the search were all people who had had some contacts with Jiang Qing in the 30's and knew what she was like during that period.

After returning to Shanghai, Jiang Tengjiao first got the addresses of the five artists involved and, after repeated study, worked out a plan for action. On the pretext that "the air force had lost a confidential document" and that it was necessary to "defend the proletarian headquarters," he got some young people and soldiers who were ignorant of the truth to disguise themselves as "Red Guards" and search the homes of the five artists in the small hours of October 9. They grabbed diaries, notebooks, letters, photos and pictorials published in pre-liberation days. Two sacks filled with such materials were taken away from Zhao Dan's home alone.

The following day, Jiang Tengjiao flew to Beijing with some of the loot which he regarded as the most important. He was received by Wu Faxian and Ye Qun, who heard his report in person and took away the material. The day after, Ye Qun telephoned Jiang Tengjiao and said, "They have been submitted to the boss (referring to Jiang Qing), who is very satisfied."

Shortly after Jiang Tengjiao went back to Shanghai, Ye Qun asked him to send to Beijing the rest of the materials he had obtained. When the materials arrived, Ye Qun had them kept in her own bedroom. Later Jiang Qing ordered that these materials be put in "the safest place." On the instructions of Ye Qun and Wu Faxian, the materials were moved to the confidential room of the air force headquarters.

However, Jiang Qing was still ill at ease, no matter where the materials were kept. In January 1967, she asked Ye Qun to transfer the materials to Lin Biao's office. Under Jiang Qing's personal supervision, Xie Fuzhi, Ye Qun and a secretary in Lin Biao's office burned all the materials obtained in the search.

JIANG QING PERPETRATED SHANGHAI HOUSE SEARCHES

HK101138 Beijing RENMIN RIBAO in Chinese 10 Dec 80 p 4

[Article by RENMIN RIBAO reporter Hu Sisheng [5170 1835 0581]: "The Case of the House Searching 14 Years Ago"]

[Text] There used to be a problem which bothered Jiang Qing all the time. Her problem was she wanted to take advantage of the "Cultural Revolution" to climb to the appex of power, but her past history during the 1930's was very disgraceful and could hinder her ambition.

Thus, Jiang Qing was very sensitive about any written record, letter or picture related to her history during the 1930's.

In fall 1966, Jiang Qing suffered a serious attack of the "allergy of her history during the 1930's. During that attack of her sickness, five personages in the Shanghai literary and art circles who knew about the background of Lan Ping were victimized.

The Night at Diaoyutai

One evening in early October 1966, Ye Qun was waiting for a secret visitor--Jiang Tengjiao--at one of the buildings in Diaoyutai. Jiang Tengjiao, the then political commissar of the Nanjing Air Force Units and concurrently, first political commissar of the No 7341 Military Unit, came to Beijing alone under a secret order issued by Wu Faxian the day before.

As soon as she saw him, Ye Qun told Jiang Tengjian: "I want you to carry out a top secret mission. Comrade Jiang Qing has a letter in the possession of Zheng Junli and other people of the Shanghai literary and art circles. Now, she wants the letter back but she does not know exactly where the letter is. She wants you to take advantage of the chaotic situation to organize some Red Guards to search the houses of Zheng Junli, Gu Eryi, Zhao Dan, Chen Liting and Tong Zhiling. Seize letters, diaries, notebooks and other written materials that you can find."

Ye Qun was indeed an expert in conspiratorial activities. She personally assigned a code number to each victim of the house searching: Zheng Junli--No 1, Zhao Dan--No 2, Chen Liting--No 3, Tong Zhiling--No 4 and Gu Eryi--No 5. Jiang Tengjiao jotted them down one by one in his notebook and promised to do what he could to accomplish the mission.

'Di Ke' Fired the First Shot

In June 1966, the "Cultural Revolution" had just begun. Jiang Qing was very impatient when telling Zhang Chunqiao to meet Zheng Junli in Shanghai.

Zhang Chunqiao told Zheng Junli: "Jiang Qing's position is now quite different. In the past, she had some letters and other things in your possession. This is not good. It is better to give these things to her and let her do whatever she wants to do with them!" Then, he threatened: You had close contacts with the black line during the 1930's. You must "behave properly and make a clear break with them." How true! Both Jiang Qing and Zheng Junli came from the Shanghai motion picture circles during the 1930's. One wanted to reach the sky, while the other was to be condemned to hell; one was at the peak of her career while the other was already being designated as a member of a "black gang."

Zheng knew clearly the implications of these remarks and the seriousness of this matter. Thus, after going home to sort out things, he wrote a letter to Jiang Qing saying that he "had not kept" any of the letters and "here are some of the old pictures from the 1930's that I have sorted out. You can do whatever you want with them." He also said that "after the campaign is over, we will move to the countryside to settle and engage in the work of the cultural centers." Zheng Junli had a premonition that something bad was about to happen. What he said was actually an attempt to tell Jiang Qing that he intended to retire and live in seclusion.

However, Jiang Qing's mind could not be set at ease. Thus, she asked Ye Qun to order a thorough search for all written materials and pictures on Lan Ping in the 1930's.

Secret Planning

Jiang Tengjiao flew back to Shanghai, taking with him Ye Qun's instructions. Immediately he summoned five of his assistants including Zhang Biao and Xi Zhuxian to a meeting at the Julu Road guesthouse. He glanced at the walls from time to time, saying: "Dame it. Is this room bugged?" He bade his assistants time and again: "This is top secret. You should not tell anyone, including your wives, otherwise you may lose your lives."

This plan was decided: Zhang Biao was responsible for making clear everything about the surroundings of the five houses to be searched, and the routes by which the searchers should follow in order to break into these houses. Xi Zhuxian was to organize the Red Guards by picking more than 20 sons and daughters of army cadres and more than 20 members of the PLA guards platoon and disguising them as Red Guards.

It was late in the night on 3 October. Zhang Biao and Xi Zhuxian called the sham Red Guards to Xinhua No 1 village and assigned them their tasks in the house searches. He fabricated a lie: "The air force has lost a highly confidential document, which is in the hands of some sinister gangsters including Zheng Junli and Zhao Dan. We must find it. This is an important political task assigned by the proletarian headquarters."

From Zero to 0400 Hours

At zero hours on 9 October 1966, under cover of darkness of the night, a few trucks carrying the sham Red Guards steered out of Xinhua No 1 village and drove off in different directions. In each truck, the leader had a gun strapped to his hip and a sack in his hand (for holding things seized during the search). The trucks belonged to the air force. The number plates were covered up to prevent other people from noticing the names of the air force units to which these trucks belonged.

Zhao Dan and Huang Zongying lived on the third floor of No 8 Human Road, Shanghai. It was shortly after midnight when Xi Zhuxian together with more than 10 young men wearing Red Guards armbands and large masks stormed into their bedroom and searched Zhao Dan and Huang Zongying.

Huang Zongying cried out: "Help!" The searchers immediately took the couple to the sitting room and kept an eye on them. They emptied all drawers and threw all letters, photographs and pictorials into the sack. They broke up a piano, picture frames and desks. They even loosened the thread-bound Chinese books to see if there were things hidden between the book leaves. They searched even the chimney beside the balcony and the sugar and salt jars in the kitchen. Only one book was not taken away It was an autobiography written by Zhao Dan.

When the searchers had left, Zhao Dan told Huang Zongying: "Surely they are secret police. They acted like fascist secret agents as Sheng Shicai of Xinjiang did. They left my autobiography behind, hinting to me that in the political movement to come I should talk only about myself and no one else."

Gu Eryi was a film director in the Shanghai movie studio. His house was searched 17 times during the "Cultural Revolution." This time produced the funniest scene. As soon as the searchers entered the house, they stood guard at each of the doors and windows and lowered the curtains. They let Gu Eryi and his wife stand barefoot and in thin undergarments. They specially looked for letters, notes, diaries and notebooks. They took away even the account books and the children's exercise books.

The same also happened to Chen Liting's house. All written data and materials, including those on the film "Story of Lu Xun," were taken away.

When they searched Zheng Junli's house, they carefully looked over every page in each photo album, even the film negatives. When they left, they said threateningly: "Do not tell other people about this search. Otherwise, you may lose your life."

When Tong Zhiling's house was searched, all her written data and materials, together with almost 20 rolls of tapes of recordings of her singing, were taken away.

From zero to 0400 hours, the searchers obtained four whole sacks and one paper bag of "war trophies."

A False Alarm

When Jiang Qing and Ye Qun made arrangements for Jiang Tengjiao to search people's houses, they did not notify the authorities concerned in Shanghai. Li Wenjing, Zhang Chunqiao's wife, had assumed personal command of the liaison center in an office of Shanghai Municipal CCP Committee. On hearing that Jiang Qing's materials were being searched for, she was scared. That evening, Li Wenjing quickly wrote a letter to report this strange case to Zhang Chunqiao and Yao Wenyuan who were then in Nanjing. Later, Zhang Chunqiao and Yao Wenyuan sent her verbal message: You do not have to bother about this case. The confiscated materials have already been sent to Jiang Qing in Beijing.

Concealing and Disposing Materials Concerning the Disgraceful Past History

Jiang Tengjiao quickly flew back to Beijing carrying the confiscated materials. There, he stayed at an air force hostel on Dongjiaomin alley. That evening, Wu Faxian came. A moment later, all street lights outside the hostel went out. Ye Qun and Lin Liguo arrived in the darkness. After reading the materials and selecting some of them, Ye Qun personally put them in a suitcase and carried it away.

How did they deal with the confiscated materials?

Ye Qun suggested that they be kept at Lin Biao's residence in Maojiawan. Jiang Qing disagreed. She told Ye Qun: The present situation is chaotic. Maojiawan is not even safe. Ye Qun understood what Jiang Qing was afraid of. She issued an order to keep these materials at a secret place belonging to the air force.

In January 1967, the last scene of the house searching farce occurred. After Jiang Qing, Ye Qun and Xie Fuzhi had held a secret talk, they decided to "get it done once and for all." Ye Qun issued another order to transfer the materials from the air force to Lin Biao's residence in Maojiawan. Ye Qun, Jiang Qing and Die Fuzhi also went there. In a small kitchen at the backyard of Maojiawan, the secretary of Lin Biao's office opened the stove and started a fire. Soon the fire was blazing. Xie Fuzhi personally opened the sealed bags. Together with Ye Qun, she put one piece of material after another into the stove. In the midst of the glow of the fire, Jiang Qing paced to and fro near the stove, casting sidelong glances at the other two persons.

Concocting a 'Family History'

After the house searches in Shanghai, Jiang Qing thought she could present herself as an "outstanding" persons who had always followed the correct line.

One day in 1969, Jiang Qing called seven members of the Political Bureau to a meeting at No 10 building of Diaoyutai. These seven members were: Ye Qun, Xie Fuzhi, Yao Wenyuan, Huang Yongsheng, Wu Faxian, Li Zuopeng and Qiu Huizuo.

As soon as the meeting began, Jiang Qing said: "We will have an informal talk today. Do not write any minutes."

She then introduced herself: "I was brought up in a peasant family. I attended a school in Jinan as an observer and then joined the revolution. In the 1930's, I was engaged in literary and art work in Shanghai, standing on the side of Lu Xun..."

People could not but ask: If she "stood on the side of" Lu Xun, why did she make such a fuss and drag in so many people in the 1960's to completely destroy the records concerning her history in the 1930's?

PARTY AND STATE

'BEIJING RADIO' DISCUSSES PARTY BUILDING

OW090153 Beijing Domestic Service in Mandarin 2315 GMT 7 Dec 80

[Article by (Ye Shunkui) of the organization department of the Heilongjiang Provincial Party Committee: "Strengthening Party Building Should Start With the Provincial Party Committee"]

[Excerpts] There were many problems among party members in our province who suffered serious "internal injuries" as a result of the damage by Lin Biao and the "gang of four" during the 10 catastrophic years. Therefore, the provincial party committee has taken a series of effective measures to strengthen party building and has achieved notable results in resuming regular party activities, upholding and improving party leadership and increasing the party's fighting capacity.

We hold that the party must take care of its own affairs. This must be started by the provincial party committee. In view of a situation in which the party does not take care of its own affairs, the party is not separated from the government and party building is ignored. The second enlarged plenary session of the provincial party committee discussed the question of how to strengthen party leadership over efforts to achieve the four modernizations. At the session Li Lian, secretary of the provincial party committee, delivered a speech on strengthening party building. Since the session Yang Yichen, first secretary, and Li Lian, secretary of the provincial party committee, have personally grasped the work of party building. They have gone to lower level units to investigate the status of party building, to hear briefings and to discuss matters with comrades at concerned departments in connection with the central task. This has greatly promoted the development of work in party committees at various levels.

Education has been carried out among party members in the province in the past several years. The 10 catastrophic years brought serious damage to the party. Half of the party members are now ones. They did not receive rigorous training, lacked basic knowledge of the party and could not meet the requirements of the four modernizations. Since the 11th CCP National Congress, we have carried out education among party members throughout the province on the general task for the new period, the four fundamental principles and the principle of practice as the sole criterion for testing truth and on party rules and regulations.

Following the 5th plenary session of the 11th CCP Central Committee, the 3d enlarged plenary session of the provincial party committee decided to carry out education throughout the province on how to be a qualified communist party member. Since 1978 we have devoted a period of time every year to giving party members intensive training. About 80 percent of the party members in the province have already taken such training this year. This has greatly improved party members' political qualities and has enabled them to play their leading and exemplary role in the efforts to achieve the four modernizations.

Since the Cultural Revolution, party activities had been very irregular. It was impossible to carry out criticism and self-criticism. The practice of engaging in empty and big talk was very serious. Some leading cadres who willfully remained "special party members" did not participate in regular party activities for a long time. Therefore, the provincial party committee made the decision that no one is allowed to use the time for regular party activities for any other purposes. The Standing Committee members of the provincial party committee have been organized into party branches or groups of various departments, commissions and offices where they have conscientiously participated in regular party activities. This has a tremendous impact on party organizations at various levels, especially on leading cadres. Most leading cadres now conscientiously participate in regular party activities on time as ordinary party members.

PEASANTS, WORKERS PARTY HOLDS CONFERENCE

OW010837 Beijing XINHUA Domestic Service in Chinese 1553 GMT 31 Dec 80

[Text] Beijing, 31 Dec (XINHUA)--The Chinese Peasants and Workers Democratic Party recently held a national work meeting in Beijing to study the united front policy during the new era and to exchange experience in serving the four modernizations. The meeting also saw a wide-ranging exchange of ideas on how the party's members can render even better service to the four modernizations in 1981.

Responsible persons of 15 provincial, municipal and autonomous chapters and 3 directly subordinate chapters briefed the meeting on their considerable efforts in the medical and public health field in various localities. Some local organizations of this party have set up sparetime medical or pharmacy schools of various forms, organized medical forums and run study classes on foreign medical languages, asking experts, professors and veteran Chinese traditional medical doctors from among the party members to systematically lecture on basic theories of Western and traditional Chinese medicine, clinical experience, foreign medical languages and the new conditions and experiences in combined Western and traditional Chinese medical treatment. Others have made contributions to training middle-aged and young medical workers. Party members working in the cultural and educational field have offered their opinions on educational reform based on their practical work over the past many years.

The meeting also exchanged views on and formulated measures for strengthening ideological-political work, assisting the [communist] party and government in implementing the policy on intellectuals and recruiting new members for the Chinese Peasants and Workers Democratic Party.

Ji Fang, chairman of the party, attended the meeting. Shen Qizhen and Xu Binru, vice chairmen of the party, respectively, spoke at the opening and closing ceremonies.

KUOMINTANG REVOLUTIONARY COMMITTEE HOLDS MEETING

OW272111 Beijing XINHUA Domestic Service in Chinese 1238 GMT 26 Dec 80

[Text] Beijing, 26 Dec (XINHUA)--The revolutionary committee of the Chinese Kuomintang held a national work meeting from 17 to 26 December to sum up its work, exchange its experiences in serving the four modernizations and discuss the major tasks for its work in 1981.

After reviewing the work of the committee in the past year and more, the meeting pointed out that the organizations of the revolutionary committee of the Chinese Kuomintang in various localities have done a great deal of work, scored remarkable achievements and accumulated vast experience. They have also attained gratifying results in serving the four modernization program. They have attained fairly good results in organizing their members to bring into full play their expertise in running schools and factories and setting up service centers, translation teams, and publishing houses for painting and calligraphy.

During the meeting, an exhibition for the work of the Kuomintang Revolutionary Committee and another exhibition on the work of the committee members in serving the four modernization program were held separately.

At the meeting, deputies from Hubei, Jiangsu, Guangdong, Beijing and Shanghai made a proposal, calling for efforts to carry out activities in commemoration of the 70th anniversary of the 1911 revolution. They suggested that the committee's organs in various localities carry out activities to compile historic relics with regard to Mr Sun Yat-sen and the 1911 revolution, to study Mr Sun Yat-sen's thinking and the history of the 1911 revolution, and to sponsor a nationwide exhibition of painting and calligraphy in commemoration of the 70th anniversary of the 1911 revolution. This proposal was unanimously endorsed at the meeting.

Zhu Yunshan, chairman of the Central Committee of the Revolutionary Committee of the Chinese Kuomintang attended the meeting and delivered a closing speech.

'GUANGMING RIBAO' ON JIANG QING 12 DEC EXPULSION

HK291248 Beijing GUANGMING RIBAO in Chinese 13 Dec 80 p 3

[Report by GUANGMING RIBAO reporter Ma Yunong [7456 7183 6593]: "'Empress' During the 10-Year Catastrophe, A Rascal Now in the Dock--Sidelights of the Investigation of Jiang Qing at the First Tribunal of the Special Court"]

[Text] The door curtain rustled and was then held to one side. Looking bright and brave, two women bailiffs escorted Jiang Qing, the principal counterrevolutionary culprit, into the courtroom.

Bulbs flashed and camera shutters clicked again and again. Maintaining their positions on both sides of the corridor leading to the dock, cameramen quickly took pictures of this scene.

This took place when the First Tribunal of the special court opened its session at 0900 hours yesterday.

This was the fifth time Jiang Qing was brought in for investigation. Yesterday, she wore a black cardigan. She purposely walked slowly into the courtroom and glanced right and left, as if she did not wish to see that she had come to the end of her criminal path.

The head of the 10 evils, she behaved badly when she was investigated the last few times. Sometimes, she pretended to be muddleheaded, played the fool and refused to answer questions. At other times, she flew into a rage from shame, acted in a rascally manner and argued pointlessly. Even when exhibits were brought before her, she racked her brain to find excuses to defend herself and shift the blame to others. She was particularly vehement against the prosecutor's charge that she was the head of the counterrevolutionary clique. When she was investigated in court on 3 December, she defended herself slyly, saying that she acted "according to instructions" and was "an assistant" in the special case group. During the 5 December court investigation, she became infuriated when the prosecutor charged that she, working in collusion with Kang Sheng and Chen Boda, decided without authorization that Liu Shaoqi should be repudiated and struggled against. She unreasonably interrupted when the prosecutor was making a statement. She asked: What is meant by collusion? Kang Sheng and Chen Boda worked under my leadership. You must not say that

I worked in collusion with them.... She did not miss an opportunity to act shamelessly when exhibits were produced in the court to show that she did bad things in collusion with Kang Sheng and others. Pointing to the exhibits, she said: "The words 'I agree' were written by Kang Sheng and I just circled them." What a clumsy confession! Reportedly, Jiang Qing once grumbled before some bailiffs outside the courtroom: Lin Biao was killed in a crash. Then, am I the chief? She meant that she was "sorry" that she had been treated as the chief culprit.

During the trial yesterday, the court first investigated the crimes of Jiang Qing in colluding with Kang Sheng to frame and persecute a large group of members of the Eighth CCP Central Committee and demonstrated once again by means of the exhibits that Jiang Qing was the leader of this counterrevolutionary clique which did evil to the nation and the people.

Judge Qu Yucai questioned Jiang Qing: On 21 July 1968, Kang Sheng gave you a strictly confidential letter which he wrote at your request. Attached to the letter was a namelist of members and alternate members of the Eighth CCP Central Committee to be framed and persecuted. Is that right?

She had no alternative but to answer: "You know everything, don't you?"

She could not deny the facts but was unwilling to admit her guilt. Then, she resorted to sophistry, saying that what she did was normal and legal because she wanted to know the situation before she started preparing for the 12th plenary session of the 8th CCP Central Committee.

Judge Gan Ying questioned her sternly: Jiang Qing, you were not a member of the CCP Central Committee. How can you say what you did was justifiable and legal? The prosecutor cited facts and pointed out that after secretly compiling this sinister namelist, Jiang Qing, Kang Sheng and company openly framed a large number of members of the Eighth CCP Central Committee on various occasions. Facts showed that this strictly confidential letter which was marked "important document to be forwarded immediately" served as ironclad proof of the planned and premeditated activities of Jiang Qing and company to usurp party and state power.

The letter written by Kang Sheng to Jiang Qing was read and the namelist of members and alternate members of the Eighth CCP Central Committee who were framed by Kang Sheng as "renegades," "enemy agents" and "elements having illicit relations with foreign countries" was produced as evidence in the court. On this sinister list drawn up by Kang Sheng in his own writing were names of 194 members and alternate members of the Eighth CCP Central Committee. With the exception of 31 who were ill or dead, 89 were falsely charged as "renegades," "enemy agents" and "elements having illicit relations with foreign countries" and 7 others were classified as having been temporarily "removed from their posts but not yet included in the special cases," totaling 96 or accounting for 58.9 percent of the total number of names on the list.

All these people who had been falsely charged by Jiang Qing and Kang Sheng were brutally persecuted during the 10 years of upheaval. This strictly confidential namelist and the wrong verdicts all over the country showed most clearly the serious crimes of Jiang Qing, Kang Sheng and company in intentionally framing and persecuting a large group of leading cadres of the party and the state.

An interesting point is that this "strictly confidential" letter also clearly revealed the relationship of master and servant between Jiang Qing and Kang Sheng. Please look: Kang Sheng immediately drew up a namelist when Jiang Qing wanted it. When he sent this sinister material to Jiang Qing, he did not forget to respectfully write on the envelope the word "forward" although he always carried himself as an "elder." He occupied a high position at that time. Yet, he adopted this pose before Jiang Qing. Did this not tell of the unusual relationship between them in this counter-revolutionary conspiratorial clique? In fact, whatever their open capacities might be, Jiang Qing had long been the chief of this conspiratorial clique. A great deal of facts which have been verified in the court investigations show the reality which Jiang Qing is now unwilling to admit but cannot deny. She was the chief of this group of rebels. Please look:

Jiang Qing was the chief culprit who directly controlled and commanded the special case group which fabricated charges and forged evidence to frame and persecute Liu Shaoqi, chairman of the People's Republic of China. The instructions which Xie Fuzhi wrote years ago on a report dramatically became strong evidence which was produced in the court today: "Comrade Jiang Qing personally directs the important work on the case of Liu Shoaqi. In the future, all reports on important matters should be forwarded to and instructions sought from Comrade Jiang Qing directly." This was true. All matters, large or small, about holding meetings to criticize and struggle against Liu Shaoqi, making the decision to search his house, illegally arresting the people involved in the case, extorting confession by torture and conducting trial by shock tactics, had to be approved by Jiang Qing and subsequent reports made to her. Jiang Qing did not decline to shoulder this responsibility. She did not permit others to be neglectful of her. She flew into a rage and wrote a letter to denounce the special case group when it did not forward the originals of documents to her. This act showed her to be a completely despotic and domineering boss. It was this Jiang Qing who shouted herself hoarse while punishing Liu Shaoqi by "cutting him to pieces." So, the chairman of the People's Republic of China was brutally persecuted and died uncleared of his false charge, and the biggest frame-up was written in the history of new China.

Jiang Qing was also the behind-the-scene boss in directing the frame-up and persecution of Zhu De, vice chairman of the CCP Central Committee and chairman of the NPC Standing Committee. One day near the end of 1966, Jiang Qing summoned Qi Benyu to her residence in Diaoyutai and told him with a hidden intent: "Formerly there was rumor about Zhu De wanting to put his name before that of Chairman Mao. This was not true. But now it is true that Zhu De wante to rebel against Chairman Mao. Zhe Du is a big careerist." She also instigated Qi Benyu to go to the office of the

CCP Central Committee to ferret out and struggle against Comrade Kang Keqing. At a reception for some people from the China People's University, Qi Benyu immediately told them what Jiang Qing had said and incited them to struggle against Zhu De. Presently, big-character posters and large-size slogans which read "Down with Zhu De" were put up everywhere in Beijing.

It was Jiang Qing who engineered the "criticism of Lin Biao, Confucius and the Duke of Zhou," the criticism of the "big Confucian of our time" and the criticism of the "chief minister," in an attempt to frame and persecute Zhou Enlai, vice chairman of the CCP Central Committee and premier of the State Council. She also masterminded the plot to make a false and insinuating report on Zhou Enlai and Deng Xiaoping to Chairman Mao Zedong who was in Changsha, so as to seize power to form a cabinet. People could see that Wang Hongwen who was then vice chairman of the CCP Central Committee in charge of the routine of the CCP Central Committee, Zhang Chunqiao, a member of the Standing Committee of the Political Bureau, and Yao Wenyuan, also a member of the Standing Committee of the Political Bureau, were docile and obedient to her. When Jiang Qing launched an attack, the three of them echoed in unison. When Jiang Qing called them, they immediately gathered together to hatch a plot. When Jiang Qing made a decision, Wang Hongwen immediately carried it out. They were her docile tools, coming and going at her orders.

It was also this Jiang Qing who willfully framed and persecuted other party and state leaders and brutally persecuted large numbers of cadres. At yesterday's session, the court also investigated Jiang Qing's crimes in framing Lu Dingyi, Hu Qiaomu and Zhou Yang and also her crimes in falsely charging that Xu Xiangqian's wife Huang Jie was a "renegade," Nie Rangzhen's wife, Zhang Ruihua, was an "enemy agent," Qi Yanming was an "active counterrevolutionary," Wang Kunlun, Qian Junrui and Liao Mosha were "very serious enemy agents" and Xiao Wangdong was a "historical counterrevolutionary."

The tape recordings of Jiang Qing speeches falsely charging the innocent years ago were played in the court. However, cunning as she was, she could not deny that this was her own voice. The court announced that, after reinvestigation, these cases were found to be frame-ups and the abovementioned comrades were rehabilitated.

During the years when she ran wild, Jiang Qing, a persecuting maniac, completely showed her hatred against all revolutionaries. The number of people, including state leaders and the masses, persecuted by her defy counting. An observer in court said with deep feeling: "The trial of Jiang Qing would take a whole year if all cases of frame-ups and persecution perpetrated by her were to be listed and investigated."

In fact, Jiang Qing committed countless crimes. Many of the offenses listed in the bill of indictment were linked to her evil name.

It was Jiang Qing who colluded with Lin Biao, Ye Qun and company in instigating some people to illegally search the houses of some artists and writers in Shanghai for ulterior motives.

It was Jiang Qing who publicly instigated some people to "fix the army" and "kindle a prairie fire," so as to create confusion in the army and seize military power.

It was also Jiang Qing who called a meeting of secretaries of 12 provinces and municipalities without authorization and fanned the evil wind to criticize Deng Xiaoping.

During the years of catastrophe, Jiang Qing set up a faction and recruited henchmen to wreak havoc. This counterrevolutionary clique headed by Lin Biao and Jiang Qing was the root cause of the disaster which jeopardized and harmed our country and our nation. The 900 million Chinese people can now see the features of Jiang Qing as the chief culprit. Her gangsters have admitted this fact in court. Her accomplices, Wang Hongwen and Yao Wenyuan, have made this confession: "Jiang Qing was the mastermind" in their conspiratorial activities. Wu Faxian said even more clearly: "I committed many counterrevolutionary crimes for Jiang Qing. She was the principal and I was an accessory to those crimes." Jiang Qing also exposed her own features by her words and deeds during the decade of catastrophe. She said openly: "I am leader of the left wing." Of course, the "left wing" here meant their counterrevolutionary clique. By saying that she was the leader, she admitted that she was the principal culprit of this counterrevolutionary clique.

However, this careerist, who often "likened herself to Empress Wu Zetian" and never failed to put herself in a prominent position, assumed the posture of a rascal in court yesterday. She willfully made trouble and argued vehemently in an attempt to deny her crimes. She deliberately complicated the issue by digressing from the subject. She interrupted and shouted time and again when hearing was going on in court. In particular, when evidence was placed before her and Liao Mosha, a witness, was giving testimony in court, she wantonly put on a show of bad temper, not only interrupting the witness and disrupting the order of the court repeatedly, but also publicly framing and shouting at the witness and making a personal attack and slanderous speeches. Despite the chief judge's warning, she did not restrain herself.

The observers were infuriated at witnessing Jiang Qing's rascal behavior. Some of them were so annoyed that they clenched their fists and banged on the armrests of their chairs. Jiang Qing's contempt of court was intolerable. To maintain the solemnity of law, the chief judge announced at once: Jiang Qing makes trouble and disrupts the order of the court. She is hereby ordered to step out of the court. Three bailiffs, two women and one man, immediately carried out the order. This was followed by a thunderous applause. Jiang Qing, a rascal on the dock, was escorted dejectedly out of the courtroom.

Jiang Qing's misbehavior in the court only showed that she had come to her doomsday. She could only play tricks to evade her guilt. This betrayed her feeble nature of a counterrevolutionary. In the face of ironclad evidence, she could neither deny her crimes nor escape the net of justice. Like a diehard reactionary which she is, Jiang Qing put up an ugly performance yesterday, just to add a last page to her criminal history.

COURT DEBATE ON HUANG YONGSHENG CHARGES ENDS

OW201656 Beijing XINHUA in English 1641 GMT 20 Dec 80

[Text] Beijing, December 20 (XINHUA)--The court debate on the charges against Huang Yongsheng, one of the chief defendants in the case of the "Lin Biao and Jiang Qing counter-revolutionary cliques," ended here this afternoon after three sessions since December 18.

Huang Yongsheng spoke for some three hours in his own defence, denying he was a "principal culprit in the Lin Biao counter-revolutionary clique" and insisting that he was only "an ordinary member."

Prosecutors Zhang Zhongru and Zhu Zongzheng refuted Huang Yongsheng's arguments.

Enumerating facts to show Huang Yongsheng's important position in the Lin Biao clique, Zhang Zhongru said that the defendant had played a major role in framing and persecuting party and state leaders, engineering the overthrow of the political power of the dictatorship of the proletariat and impelling Lin Biao to make up his mind to stage a counter-revolutionary armed coup and assassinate Chairman Mao Zedong.

Quoting Articles 92 and 98 of the criminal law of the People's Republic of China, Zhang Zhongru said that Huang Yongsheng was guilty of plotting to subvert the government and split the country and of organizing and directing a counter-revolutionary clique. He asked the special court to punish the accused according to law.

Defending himself, Huang Yongsheng denied having anything to do with Lin Biao's plot to assassinate Chairman Mao Zedong in September 1971. He said he had never been aware of it, still less participated in plotting or carrying out the project. So, he said, he was only an ordinary member of Lin Biao's counter-revolutionary clique and not a principal culprit.

Huang Yongsheng said that, on the report which led to the framing and persecution of Peng Dehuai, he only wrote a notation to the effect that the report should be submitted to the higher authorities and that therefore he bore "no responsibility for that."

Prosecutor Zhu Zongzheng pointed out that, as a matter of fact, what the defendant had written on the report was "approval" and not "submitted to the higher authorities," and therefore it was impossible for him to shirk his responsibility.

Refuting Huang Yongsheng's other arguments, prosecutor Zhu Zongzheng said that in September, 1970, when the Lin Biao counter-revolutionary clique had failed in its plot to usurp party and state power through a "peaceful take-over," Huang Yongsheng had done everything in his power to cover up Lin Biao's crimes.

The prosecutor said: Several days before Lin Biao defected on September 13, 1971, he wrote a confidential letter to Huang Yongsheng, telling him that "if you have any problems, consult Comrade Wang Fei directly." Lin Biao and Ye Qun thus put Wang Fei, who was responsible for the action in Beijing of the armed counter-revolutionary coup d'etat plotted by the Lin Biao clique, under Huang Yongsheng's direct command in carrying out the coup.

On September 6, 1971, Huang Yongsheng secretly reported to Lin Biao and Ye Qun about Chairman Mao Zedong's talks directed against them during his inspection tour of southern China, thus impelling Lin Biao to make up his mind to assassinate Chairman Mao.

"In view of the above-mentioned," the prosecutor said, "it runs counter to fact for Huang Yongsheng to claim that he 'was not aware of it' and had not 'joined them in conspiring' in Lin Biao's criminal activities of plotting to stage the coup."

Zhu Zongzheng pointed out that Huang Yongsheng had framed and persecuted party and state leaders including Ye Jianying, Nei Rongzhen, Peng Dehuai and Luo Ruiqing, senior military officers, and party and government leaders in Guangdong Province. All these acts were deliberate counter-revolutionary offences, the prosecutor said.

Quoting Article 23 of the criminal law, prosecutor Zhu Zongzheng said that in the joint offences committed by the Lin Biao counter-revolutionary clique, Huang Yongsheng played a major role as an organizer and leader and therefore was a principal culprit in the clique.

Pinpointing Huang Yongsheng's denial of facts and his refusal to admit his guilt in spite of conclusive evidence, prosecutor Zhang Zhongru asked the court to take this into consideration in meting out punishment.

Finally, the presiding judge, Wu Xiuquan, announced the conclusion of the debate and told the defendant to wait for judgment to be passed by the court.

ZHANG CHUNQIAO REMAINS SILENT IN FACE OF CHARGES

OW201224 Beijing XINHUA in English 1205 GMT 20 Dec 80

[Text] Beijing, December 20 (XINHUA)—The state prosecutor in the trial of the "Lin Biao and Jiang Qing cliques" told the special court in Beijing today that Zhang Chunqiao, one of the "gang of four," had shown a "defiant attitude" throughout the trial and had refused to acknowledge his crimes in the face of overwhelming evidence.

Zhang Chunqiao has maintained silence throughout the month-long proceedings and refused to accept the indictment which lists a number of charges, including plotting to overthrow the government and inciting armed rebellion. He has refused legal representation.

The prosecutor, Ma Chunyi, called on the court to mete out "severe punishment" to Zhang.

He said the state had produced ample evidence to prove Zhang's guilt. "The facts are clear," he said.

Zhang Chunqiao is charged with plotting to overthrow the government, inciting armed rebellion, libel, homicide, causing personal injury and making counter-revolutionary propaganda, in violation of articles 92, 93, 101, 102 and 138 of the Chinese criminal code.

Prosecutor Ma said, in his statement, that Zhang Chunqiao had said in Shanghai early in 1967 that "our aim in the Great Proletarian Cultural Revolution has always been to seize power, from the grass roots to the central organizations, including powers of the party, the government, as well as in the financial, cultural and other fields."

Ma Chunyi also quoted Zhang as saying "We must seize power everywhere" and added that on a number of other occasions Zhang had said the cultural revolution meant "a change of dynasty."

Zhang regarded veteran cadres as serious obstacles to the "gang of four's" usurpation of communist party and state power, the prosecutor said. Zhang had said "All of them are bad" and "none shall be spared."

The prosecutor said that Zhang's words had become the program of action for the "gang of four." During the Cultural Revolution they had falsely accused and persecuted party and state leaders and suppressed the cadres.

Ma Chunyi said, those who were framed and persecuted included Liu Shaoqi (late head of state), Zhu De (late chairman of the Standing Committee of the National People's Congress), Chen Yi (late vice-premier), Ye Jianying (now chairman of the NPC Standing Committee), and then vice-premiers Li Xiannian, Chen Yun, Nie Rongzhen, Li Fuchun and Tan Zhenlin.

The prosecutor told the court that in October, 1974, Zhang Chunqiao, together with the other members of the "gang of four," Jiang Qing, Yao Wenyuan and Wang Hongwen, falsely charged Deng Xiaoping, now vice-chairman of the Central Committee of the Chinese Communist Party, with usurping power.

On April 5, 1976, (shortly after the then vice-premier had resumed office), the prosecutor said, Zhang Chunqiao falsely accused him of being China's "nagy," using the April protest demonstrations in Tiananmen Square as the basis of the accusation. Prosecutor Ma said this accusation was the signal for overthrowing Deng Xiaoping a second time.

Ma Chunyi said that at the instigation of Zhang Chunqiao and other members of the "gang of four," the mayor and vice-mayor of Shanghai, Cao Diqiu and Jin Zhonghua, were persecuted to death.

During the period 1967-1968, Zhang Chunqiao organized and directly controlled a special espionage group (code-named 244), the prosecutor said. The group undertook tailing, kidnapping, ransacking people's homes, taking people into custody and secretly interrogating and torturing them and gathering intelligence.

The prosecutor said that on December 28, 1966, Zhang Chunqiao instructed Wang Hongwen and others to create an armed clash in Shanghai, causing 91 casualties. Zhang and Yao Wenyuan, on May 7, 1967, instigated another armed clash in Jinan, the provincial capital of Shandong, prosecutor Ma said. A total of 388 people were arrested.

Ma Chunyi said: "Defendant Zhang Chunqiao fully understood the importance of the gun-barrel in realizing his ambition to usurp party and state power. He collaborated with Wang Hongwen to establish an armed force under their control in the early part of the Cultural Revolution. Eventually he instigated the Shanghai armed rebellion in October, 1976."

After Ma Chunyi's statement, Judge Zeng Hanzhou twice asked Zhang Chunqiao: "Have you nothing to say in your defence?" Zhang did not answer. After waiting for two minutes, the judge said: "The defendant did not make any statement and this will be recorded."

Judge Zeng, in closing the debate, again told Zhang Chunqiao that he could make a final statement. When Zhang again refused to answer, the judge told him to await the verdict of the court.

OFFICIAL LEADERS REPORTEDLY ASSESSING CULTURAL REVOLUTION

OW221052 Paris AFP in English 1042 GMT 22 Dec 80

[Text] Hong Kong, Dec. 22 (AFP)--The Chinese Communist Party leadership was today reported to be assessing the Cultural Revolution, with the implication that this included the merits and demerits of the late Chairman Mao Zedong and present Chairman Hua Guofeng.

The China News Service (CNS), which parallels the better-known New China News Agency (NCNA) and publishes features for overseas, said the assessment had been reported by the semi-monthly FORUM magazine published in Beijing.

The magazine, the agency reported, was answering a query as to why a certain problem was omitted from "crimes" with which the ten defendants--including the "gang of four"--are charged in their current Beijing trial.

The leadership was, in fact, compiling a summary of all the experiences and lessons of the Cultural Revolution, including leadership errors, the magazine said.

The indictment against the ten defendants here alleged only 48 "offences" against a former total of 60. Missing were "offences" related to the suppression of and attacks on participants in 1976 Tiananmen Square riots here.

On why these "offences" were not in the indictment, the FORUM editors said: "In this incident, the counter-revolutionary crimes of the former (heir-to-Mao) Lin Biao and (gang of four leader) Jiang Qing cliques, and the errors of the leadership, are so intertwined as to make it difficult to separate them.

"It is a task for the Chinese Communist Party and not the court to sum up the experience and lessons of the Cultural Revolution and assess the mistakes, merits and demerits of the leadership during that period."

REPORT ON TELEVISION COVERAGE OF YAO WENYUAN 10 DEC HEARING

OW111444 Hong Kong AFP in English 1428 GMT 11 Dec 80

[Text] Beijing, Dec 11 (AFP)--A purely political confrontation between Yao Wenyuan, one of the disgraced radicals on trial in Beijing and his judges was seen by millions of Chinese television viewers today.

The television showed film of yesterday's court appearance by Yao Wenyuan, the polemicist who triggered off the Cultural Revolution for Mao Zedong in 1965 and then went on to become one of the members of the "gang of four," headed by Mao's widow Jiang Qing.

Explaining his stand against "supporters of capitalism" in 1976--who now form the current leadership of the regime headed by Communist Party Vice-Chairman Deng Xiaoping--Yao said he had attacked writers of big character posters because from the ideological point of view they opposed the Central Committee and so represented the bourgeoisie."

The Communist Party Central Committee was at that time dominated by the now disgraced "leftists."

The prosecutor responded fiercely to these statements from Yao, saying that it was "intolerable to allow the accused to make use of these specious arguments."

The state prosecutor strongly reproached Yao for presenting his "counterrevolutionary crimes" as merely "mistakes, or at the most, serious mistakes."

When Yao Wenyuan said he had believed at the time of the Tiananmen riots in April 1976 that "counterrevolutionary masses were opposing the 'gang of four'" the prosecutor replied "every revolutionary action and movement the masses managed to launch the accused has described as "counterrevolutionary." [quotation marks as received]

Jiang Qing has already defended her role in the Cultural Revolution before the special court as "revolutionary."

JUDICIARY REVEALS XIE FUZHI'S CRIMES

OW231632 Beijing XINHUA in English 1603 GMT 23 Dec 80

[Text] Beijing, December 23 (XINHUA)--It was Xie Fuzhi, the former minister of public security, who first called for "thoroughly smashing the old apparatus" of the security, procuratorial and judicial organs during the turbulent decade of the "Cultural Revolution," XINHUA learned from the judiciary.

Xie Fuzhi was for many years the vice-premier in charge of security and judicial work.

The indictment of the special procuratorate under the Supreme People's Procuratorate has named Xie Fuzhi as one of the "principal culprits of the Lin Biao and Jiang Qing counter-revolutionary cliques." But no criminal liability would be pursued against him since he died in 1972. Even so, a host of facts pointing to his crimes has been brought to light at the trial of the other principal defendants in the case. The Chinese Communist Party Central Committee had earlier expelled him from the party posthumously and rescinded the memorial speech written for him.

Xie Fuzhi sounded his call for smashing the old apparatus on August 7, 1967, at a meeting in the Public Security Ministry. Then he instructed that his speech be printed and circulated round the country.

This touched off a series of grave incidents such as breaking into and smashing security and law-enforcing organs, seizing archives and case files, torturing personnel of these organs, and even breaking into prisons and loosing prisoners, the judiciary said.

Working hand in glove with Kang Sheng, formerly vice-chairman of the party Central Committee and another principal member of the cliques, Xie Fuzhi hurled false charges at his predecessor, Luo Ruiqing, alleging that he had headed a so-called "underground sinister ministry of public security."

Xie Fuzhi also labelled 226 cadres and workers in the ministry as "renegades," "enemy agents," "counter-revolutionaries," or "capitalist-roaders." Forty-seven of them were arrested and imprisoned. With the exception of Xie Fuzhi himself and one vice-minister who held other posts concurrently, all the vice-ministers of the then Ministry of Public Security were arrested and thrown into jail.

In Beijing, Xie Fuzhi trumped up the case of a "counter-revolutionary clique" in the municipal public security bureau. As a result, 1,600 people were persecuted, 72 of whom were put into prison.

A rough count made by the ministry shows that 34,400 security officers and policemen in various parts of China were framed and persecuted during the "Cultural Revolution," of whom 1,200 were hounded to death and 3,600 others wounded or crippled.

Xie Fuzhi smeared the procuratorate in China as "copied from the Soviet revisionists" and the people's courts as "taken over from the Kuomintang," and incited people to "go all out to destroy them." Large numbers of procuratorial and judicial workers, including Zhang Dingcheng, the then chief procurator of the Supreme People's Procuratorate, and Yang Xiufeng, the president of the Supreme People's Court, were thus framed and persecuted. The nation's security, procuratorial and judicial organs and their functions were practically paralyzed at the time.

Xie Fuzhi also bore serious responsibility for the disruption of public order in those years, the judiciary said. In the summer of 1966, when cases of "beating, smashing and looting" began to emerge shortly after the start of the "Cultural Revolution," Xie Fuzhi not only did nothing to stop them but, on the contrary, showed his approval. He told security personnel that "things cannot be handled according to conventions," that those guilty of beating people up should not be arrested, and that "we should keep our hands off even when people are beaten to death."

At the instigation of Xie Fuzhi and others, beating, smashing and looting became a common practice throughout the country, and public order was totally upset, the judiciary said. In Beijing, during the 40 days from late August to the end of September of 1966, 1,700 people were beaten to death, 33,600 households were searched and ransacked, and 85,000 people were driven out of the capital.

Using the power in his hands, according to the judiciary, Xie Fuzhi created a large number of false cases in collusion with Lin Biao, Jiang Qing and Kang Sheng during the "Cultural Revolution." He arrested people at will, extorted confessions by torture, and persecuted innumerable innocent cadres and ordinary people.

Under his instructions, many people imprisoned on false charges were maltreated. An investigation shows that in one Beijing prison alone, 500 senior cadres at central and local levels were jailed during the four years from 1967 to 1971. Of these 34 were tortured to death, 20 were disabled, and 60 others contracted mental disorder as a result of torment.

During the ten years of catastrophe, the judiciary said, Xie Fuzhi took an active part in, and hence bore direct responsibility for, trumping up many cases including the framing of Liu Shaoqi and Wang Guangmei as "renegades" and "enemy agents," and the fabrication of a "61-member group of renegades" including Bo Yibo.

BEIJING TO SET UP LEGAL ADVISORY OFFICES

OW260820 Beijing XINHUA in English 0807 GMT 26 Dec 80

[Text] Beijing, December 26 (XINHUA)—Beijing's municipal government has decided to open legal advisory offices in 14 of the 15 suburban districts and counties in the Chinese capital and to strengthen the two existing legal advisory offices in urban districts.

The aim at this, according to Wu Xiuyun, a spokeswoman for the Beijing Municipal Lawyers' Association, is to strengthen local judicial work, uphold the dignity of Chinese law and ensure better implementation of the criminal law and the law on criminal procedure.

"We are facing a sharp shortage of lawyers," said the spokeswoman. Only 56 lawyers are practising in Beijing with a population of eight million. The new offices will be enrolling some people who have received some education in political science and law, in addition to recalling former lawyers transferred to other jobs in the past.

Wu Xiuyun said that the number of lawyers in the capital is expected to reach some 1,000 in 1985, so that there will be one lawyer for every 10,000 citizens.

More recruits into the legal system are coming from a variety of sources. Public notice of an examination recruiting legal personnel to work in Beijing's courts and law offices was published in the BEIJING DAILY earlier this month. The city's first evening law college was opened recently by the municipal government with the assistance of the Jiushan Society, a democratic party. A cadre school of political science and law will be opened as soon as school buildings are available.

In the 1950s, Beijing has three lawyers' advisory offices. But most of the lawyers were criticized for "speaking for bad persons" in the 1957 "anti-rightist" movement. All law offices were closed down and the advisory service did not resume until the summer of 1979, when the Municipal Lawyers' Association was revived.

Wan Min, now in charge of the new No. 2 legal advisory office, said that most of the cases now are civil and criminal, but "with the development of socialist construction, the number of cases in the economic fields is expected to increase."

"People used to resort to administrative measures or appeal to higher leadership in solving such problems," he went on, "but at present, more and more people are getting used to handling economic cases according to economic laws. This offers opportunities for lawyers to provide legal guidance in economics, management, relations with foreign countries and other fields."

The office where Wan Min works, set up in August this year, already has helped solve an economic dispute between the Beijing Glassware Factory and a quarry. Wan said many more "invitations" seeking legal advice about economic affairs are flowing in. The biggest problem is, he said, we don't have enough people to meet their demands."

In addition to more legal advisory offices, Beijing also plans to set up judicial bureaus in all the urban and suburban districts and counties of the city, and preparations are underway for establishing notary public offices in two districts and one county on a trial basis.

'AFP' CITES BEIJING PAPER ON JIANG QING'S AMBITIONS

OW280951 Paris AFP in English 0940 GMT 28 Dec 80

[Text] Beijing, Dec. 28 (AFP)--The late Mao Zedong accused his wife Jiang Qing in 1974 of wanting to take over his post as chairman of the Chinese Communist Party, the Beijing daily newspaper BEIJING RIBAO reported here today.

"Jiang Qing is ambitious," Chairman Mao was quoted as saying. "She wants to be party leader. She has formed her cabinet so that she can be the boss in the wings."

The publication of Chairman Mao's alleged comment was apparently intended as a reply to Jiang Qing's repeated assertions (?at) her trial here that her actions throughout the Cultural Revolution were "legal."

She is accused of having maneuvered to prevent Deng Xiaoping, China's strongman and deputy party chairman, from becoming the top-ranking deputy premier in 1974.

"It (her action) was proper and legal," she told her judges, according to the newspapers' account of the proceedings.

Jiang Qing was also accused of having sent Wang Hongwen, a member of the so-called "gang of four" and one of her closest collaborators, to denounce Mr Deng to Chairman Mao. At that time, Mr. Wang was in charge of daily transactions of the Central Committee.

"It was perfectly legal for members of the Politburo to delegate Wang Hongwen to report their views to the chairman," the newspaper said Jiang Qing told the court.

The newspaper said, however, that Mr. Wang did not have "any mandate from the Politburo," which was proved by the fact that he went to see Chairman Mao "secretly."

Although the 1974 incident had a strongly political character, it is being presented at the trial of Jiang Qing and nine other former leaders of the Cultural Revolution as a "counter-revolutionary crime."

CCP READY TO ENDORSE DECISIONS ON MAO, HUA

OW231203 Paris AFP in English 1148 GMT 23 Dec 80

[Commentary by Francis Deron]

[Text] Beijing, Dec. 23 (AFP)--The Chinese Communist Party Central Committee is now ready to endorse major decisions concerning the assessment of the current regime of Mao Zedong's role and the political future of party Chairman Hua Guofeng.

A reliable source said today that the Central Committee--the party's "parliament"--began a week ago preparations for its plenum scheduled for early next month.

The source added preparations started with a meeting of the party Politburo December 16 at the Central Committee headquarters here.

Participants then held "urgent sessions" with their subordinates to brief them on the "agreement" reached at the high-level meeting.

The agreement concerns the formulation of a qualified judgment on Mao's role, drawing a distinction between his positive contributions, mainly before the foundation of the regime, and his "mistakes" after 1949.

The late "great helmsman," who died in 1976, will be blamed for "mistakes" from the foundation of the communist regime in 1949 until the 1957 purge of "rightists" who have now been rehabilitated.

The source indicated that for the period going from 1957 to his death, Mao will be held responsible for "serious mistakes," mainly the disastrous "great leap forward" and the Cultural Revolution (1966-76).

Mao has just been personally criticized for having "personally" launched and directed the Cultural Revolution, whose main surviving leaders, including Mao's widow Jiang Qing, are now on trial here for "counter-revolutionary crimes."

Exactly what has been decided concerning Hua Guofeng's political future is not known but a reliable source indicated that Hua had agreed to step down as party chairman, a post he assumed when Mao died.

The source named the man tipped to replace Hua at the head of the party as its secretary-general Hu Yaobang, a protege of post-Mao China's de facto ruler, party Vice-Chairman Deng Xiaoping.

Hua was today the target of a fresh implicit attack from the official PEOPLE'S DAILY which attacked the launching in 1978 of a "new great leap forward."

This formula had been used by Hua to announce the launching of a highly ambitious economic development plan, scrapped last year.

The paper said this "new great leap forward" aborted right from the start due to "ultra-leftist mistakes."

Meanwhile, the source indicated that it was decided at the high-level meeting last week to rename the Mao mauseleum, erected in 1977 on Tiananmen Square here, "memorial of the revolutionary heroes."

Inside the memorial, funeral urns containing the ashes of the regime's highest deceased dignitaries will be exposed alongside the embalmed body of the "great helsman."

Among the urns will be that containing the ashes of former President Liu Shaoqi, Moa's greatest rival who was purged during the Cultural Revolution and who was rehabilitated earlier this year.

'JIEFANG RIBAO' REJECTS 'CAPITALIST' COURSE CHARGES

OW101230 Hong Kong AFP in English 1209 GMT 10 Dec 80

[Text] Beijing, Dec. 10 (AFP)—A polemist writing in the Shanghai LIBERATION DAILY has dismissed as "groundless" charges from sectors of the regime that the current leadership was steering China on a "capitalistic" course.

Li Wen, in an article published by the Shanghai daily, in an edition received here today, said: "Some comrades say that now China is no longer saved by socialism but is (instead) being helped by capitalism."

"This is the result of a poor understanding of the differences between socialism and capitalism," he added.

According to Li, critics of the government's alleged "capitalistic" course point to the freedom enjoyed by some rural families to fix themselves farm production quotas, the thriving private small commerce and service sectors in cities and the financial autonomy granted to firms in some fields to back up their arguments.

The polemist denied that these measures, recently adopted by Chinese authorities, were "capitalistic" in nature.

Li Wen stressed that these measures were essential to revive the Chinese economy after the upheavals of the now discredited Cultural Revolution.

Quoting Lenin, he insisted that these economic moves were compatible with a centralized and planned economy.

He urged critics of the government's new economic orientations to realize that socialism as it was advocated by the now disgraced "gang of four"—currently being tried by a special court—in Mao Zedong's days was in fact nothing but a "false socialism."

Li's article, observers said, reflected the discontent within some sectors of the regime over the pragmatic policies pushed by post-Mao China's de facto leader Deng Xiaoping and his ruling associates. These policies are meeting stubborn resistance from diehard Maoists.

CCPCC WORKING SESSION PROPOSES PARTY RESHUFFLE

OW310627 Hong Kong AFP in English 0611 GMT 31 Dec 80

[Text] Hong Kong, Dec 31 (AFP)--An important working session of the Chinese Communist Party Central Committee has assessed Chairman Mao's merits as of primary importance and his demerits, only secondary, said a report from Beijing.

The session which ended on Christmas Day has also made a decision on the party's leadership system with a view to improving the leadership, said a Beijing correspondent of the Hong Kong leftwing daily, WEN WEI PO.

The report, quoting "several well-informed sources" in Beijing, said the session has also proposed a reshuffle in the personnel of the party Central Committee.

It did not specify the names of those involved in the reshuffle but observers believed Chairman Hua Guofeng who has come under veiled criticisms in the Beijing press recently may be one of them.

Mr Hua is reportedly willing to resign from his party chairmanship in favor of party secretary general Hu Yaobang, a protege of powerful Vice Chairman Deng Xiaoping.

Another important subject discussed at the session is a firm program of economic readjustment to bring the country out of the red next year.

The country's economy has been overburdened by over-ambitious, precipitous construction projects in the past few years and by over-commitment to costly imports of technology and equipment beyond the limits of the country's foreign exchange resources.

All these political and economic proposals will be submitted for discussions at the sixth plenum of the 11th Party Central Committee to be held in February, the report said.

But the resolutions on party leadership reshuffle will have to be approved by the 12th party congress to be held in mid-1981, the report added.

FURTHER REPORT ON PRC SPOKESMAN, JIANG QING

OW241003 Hong Kong AFP in English 0956 GMT 24 Dec 80

[Text] Beijing, Dec 24 (AFP)--Informed Chinese sources said today's hearing should, in principle, end the hearings involving Jiang Qing.

But it cannot be ruled out that Jiang Qing's belligerent attitude might have led to last minute changes in the special court's agenda.

This theory would seem to find some support in the fact that according to a Chinese television spokesman, today's scheduled screening of Jiang Qing's court appearance has been cancelled.

The decision had been made because the hearings had not ended, the television spokesman explained.

Jiang Qing's court appearances have been extremely stormy and she is the only one of the accused whose case is still being examined by the court.

The 67-year-old widow of Mao Zedong and former Shanghai starlet of the 30s, who came to spearhead the Cultural Revolution at the head of the "gang of four," has defied her accusers all through the trial, which began on November 20.

She justified her role during the Cultural Revolution by sheltering behind Mao's authority, thus going against the present post Maoist regime's position that while Mao committed "errors" he was not involved in his widow's "counter-revolutionary crimes."

One of Jiang Qing's court appearances came to an abrupt end when she was thrown out of the court room after calling the judges "revisionists" and the witnesses "traitors."

During another court appearance she called the members of [words indistinct].

BRIEFS

GUANGXI WORK FORUM--The Guangxi Regional CCP Committee Organizational Department held a work forum concerning old cadres from 26 November to 2 December. Members of the forum seriously studied the State Council's instruction on retirement of cadres and the Central CCP Committee and the State Council's instruction on employing advisers. The forum also discussed and adopted draft regulations concerning the settlement of retired cadres. Looking back over the years since the third plenary session, the province has been doing well with retired cadres, looking after their livelihood and health. The forum held: It is important and necessary to look after the [word indistinct] work for retired old cadres. We must employ them as advisers to guide the younger generation. [Nanning Guangxi Regional Service in Mandarin 1130 GMT 6 Dec 80 HK]

ANHUI SPECIALIZED PERSONNEL--Hefei, 12 Dec (XINHUA)--In recent county and municipal elections, some specialized persons or persons with knowledge of science and technology have been elected deputy county magistrates or deputy mayors of the 10 counties and 1 municipality in Fuyang Prefecture, Anhui. They include Jin Chongbing, deputy magistrate of Guoyang County and a water conservancy expert; Wu Youxing, deputy magistrate of Linquan County and a chemical engineer; Cao Guoyuan, deputy magistrate of Boxian County and a water conservancy engineer; Wei Jiangong, deputy magistrate of Boxian County and a soybean expert; and Su Xun, deputy magistrate of Boxian County and director of a microorganism research institute. [Beijing XINHUA Domestic Service in Chinese 0155 GMT 12 Dec 80 OW]

JIANG QING TRIAL--Beijing Domestic Television Service in Mandarin at 1130 GMT on 23 December in its "special reports on the trial of the case against the Lin Biao and Jiang Qing counterrevolutionary cliques" shows the final session of the investigation of the case against Jiang Qing in the First Tribunal on 23 December under the title "Trial of Jiang Qing Continues on the Morning of 23 December." The first segment of the film shows the court playing recordings of Jiang Qing's speeches accusing former Beijing People's University Vice President Sun Yang of being an "enemy agent," singer Wang Kun of "having illicit relations with foreign countries," writer Liu Baiyu of being a "special agent" and film critic Chen Huangmei of being a "traitor." When a woman procurator sums up the findings and concludes that Jiang Qing did try to frame Chen Huangmei, Jiang Qing shouts at her three times. Once Jiang Qing says, "That is your logic," but on the other occasions her voice is drowned by the procurator's. Apart from this explosion, Jiang Qing remains quiet and composed throughout the session. Other parts of the film contain shots of the following witnesses testifying: Shi Chunli, son of model worker Shi Chuanxiang, on how Jiang Qing framed his father and persecuted him to death; playwright Ah Jia on how Jiang Qing persecuted him because he was the author of the Beijing opera "Red Lantern," and Yang Ke on how Jiang Qing framed Zhang Linzhi, former minister of coal mining. Also shown in court are photographs of a session at which Zhang Linzhi was struggled against and of his body after he was tortured to death in 1967. The report lasts 43 minutes. [Editorial Report] [HK241110]

CHEN BODA FEARS DEATH--In replying to the charges against him at the First Tribunal this morning, Chen Boda admitted the heinous crimes he had committed. He said that whatever sentences the court might pass he would not consider them excessively severe, but he beseeched the court to spare his life. [Words indistinct] the court opened this morning, the procurator summed up the crimes which has been proved by the facts revealed by the court's investigation. He sternly reprimanded Chen Boda. The latter's two defense counsels spoke one after another, pointing out that although Chen Boda had committed heinous crimes, he did relatively well in pleading guilty. They asked the court to deal with him leniently. The court has concluded its investigation and debate with respect to Chen Boda. The special court ordered that the defendant be remanded pending the decision on the sentence. [Text] [HK181452 Hong Kong HSIN WAN PAO in Chinese 18 Dec 80 p 1]

NATIONAL COMMITTEE MEMBER DIES --Beijing, 13 Dec (XINHUA)--Comrade Huang Wanxia, member of the Fifth National CPPCC Committee and member of solidarity committee of the Kuomintang Revolutionary Committee's Central Committee, died of illness in Beining on 24 November 1980 at the age of 69. On 11 December, a memorial service for her was held at the Babaoshan Revolutionary Cemetery. [Beijing XINHUA Domestic Service in Chinese 0735 GMT 13 Dec 80 OW]

PHYSICAL CULTURE SOCIETY MEETING--The Chinese Physical Culture Science Society was founded in Beijing on 16 December. Vice Premier Yang Jingren; Wang Meng and Rong Gaotang, responsible persons of the State Physical Culture and Sports Commission; and nearly 300 representatives from over 120 departments and units in 26 provinces, municipalities and autonomous regions throughout the country attended the founding meeting. The society is an academic mass body of China's physical culture technical workers and is a component of the China Association for Science and Technology. The society will certainly play an active role in further uniting the vast number of physical culture technical workers, bringing their wisdom and talents into full play, carrying out academic exchange, popularizing scientific knowledge of physical culture and promoting and improving physical culture science and sports skills. TIANJIN LAWYER TRAINING--Beijing, December 9 (XINHUA)--Nankai University has opened a special course to train lawyers for the judicial bureau of Tianjin Municipality according to a contract signed between the two sides. Nearly 150 factory and office workers and teachers have been engaged as part-time lawyers in Heilongjiang Province, northeast China. A woman middle school teacher in Shandong Province who offered her services as a lawyer has been officially approved. These are some of the ways taken by the judicial departments at provincial and county levels to train or employ lawyers to meet the increasing demand, in addition to sending a great number of people to be trained in the central school of political science and law or in lawyer-training classes run by the local authorities. Most of the lawyers are now working in law advisory offices at and above the county level. In Heilongjiang Province, northeast China, 75 such offices have been set up in the counties except those in remote, mountainous areas. [Text] [Beijing XINHUA in English 0704 GMT 9 Dec 80 OW]

JIANGSU ELECTION REGULATIONS--The Jiangsu Provincial People's Congress Standing Committee on 24 November published the detailed rules and regulations on the election of the local people's congresses in the provinces. Endorsed in principle at the sixth meeting of the Standing Committee of the Fifth Provincial People's Congress on 20 November, the detailed rules and regulations were published in full in the 27 November XINHUA RIBAO. [OW271135 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 26 Nov 80]

TRAINING JUDICIAL CADRES--According to a ZHONGGUO FAZHI BAO [CHINESE JUSTICE JOURNAL] report, in a note on transmitting the report by the Ministry of Justice on a national forum on judicial administrative work, the State Council required governments at all levels to pay particular attention to training judicial cadres and doing a good job in running institutions of political science and law well so that judicial administrative work can play a proper role of strengthening the socialist legal system. [Text] [OW251804 Beijing Domestic Service in Mandarin 0400 GMT 25 Dec 80]

XINJIANG GROUP IN SHANGHAI--Responsible persons of the Shanghai Municipal People's Congress Standing Committee, the municipal CPPCC committee and the municipal CCP committee's united front work department met with the visiting group from the Xinjiang Uigur Autonomous Region on 28 December. Zhang Chengzong, vice chairman of the municipal people's congress Standing Committee, Song Richang, vice chairman of the municipal CPPCC committee, and other municipal leaders had a cordial conversation with the representatives of 12 national minorities from Xinjiang. [Shanghai City Service in Mandarin 1130 GMT 28 Dec 80 OW]

JUDICIAL ADMINISTRATION INSTRUCTION--According to ZHONGGUO FAZHI BAO [CHINA LEGAL SYSTEM NEWS], the State Council recently issued an instruction while transmitting a report on a national forum on judicial administration called by the Ministry of Justice. The State Council called on governments at all levels to strengthen their leadership over the reconstruction of judicial administration work, give priority to the training of cadres for the court, the procuratorate, the judicial administration and legal affairs, and do a still better job in running the schools of political science and law, so that judicial administration can play an effective role in strengthening the socialist legal system. The State Council also pointed out in the instruction: with the exception of the remote border areas, which have extreme difficulties in transport facilities, the law of criminal procedure must be completely put into effect in all parts of the country beginning 1 January 1981. The implementation of the law of criminal procedure is a matter of great importance, for it has a direct bearing on the dignity of law and the reputation of our party and country. Full preparations should be made earnestly by the public security departments at all levels to ensure the smooth implementation of the law of criminal procedure. [Text] [OW280327 Beijing Domestic Service in Mandarin 2230 GMT 26 Dec 80]

TAIWAN ELECTION CRITICIZED--According to a news dispatch from Taibei, the so-called "supplementary central parliamentary election" will be held by Taiwan authorities on 6 December. The number of parliamentarians to be elected has been increased from 122 to 204, with 403 candidates participating in the election. Among them are 253 KMT members and 142 nonparty members. The Taiwan press has pointed out that the Taiwan authorities are attempting to make use of this coming election to create a so-called new image of not taking the course of suppression by the army because the Taiwan authorities' suppression in the "Gaoxiong incident" had caused strong opposition from among the people. Taiwan papers also point out that under the current election system, the poor can only "bemoan their inadequacy in the face of a great task," for a candidate will have to spend at least 5 million dollars in new Taiwan currency. Thus, the election has become an election by money. [Text] [OW041812 Beijing Radio in Mandarin to Taiwan 1500 GMT 4 Dec 80]

SHANGHAI ZHI GONG DANG--The Shanghai branch committee of the China Zhi Gong Dang was set up on 4 December. (Kuang Ming), secretary general of the Central Committee of this democratic party came from Beijing to Shanghai to preside over the founding meeting, at which (Dong Yinchu) was elected chairman and (Ye Hongbao) vice chairman of the Shanghai branch committee. The new branch committee will establish close connection with overseas Chinese and encourage them to contribute to the modernization program and the early return of Taiwan to the motherland. [Shanghai City Service in Mandarin 2300 GMT 4 Dec 80 OW]

SICHUAN CADRE SYSTEM--Sichuan provincial party organizations have attached importance to the role of advisers and have promoted old cadres to advisory posts. These organizations have allowed advisers to take part in discussions on important issues and have provided the advisers with appropriate conditions so as to facilitate further studies and investigations. The advisers have also been allowed to pass their experiences and traditions on to the younger generation in report meetings and training classes. [Chengdu Sichuan Provincial Service in Mandarin 2300 GMT 30 Nov 80 HK]

FUJIAN CADRES PUNISHED--(Wei Jianxin), assistant manager of Agricultural Materials Company of the Fujian Provincial Supply and Marketing Cooperative and communist party member, and (Chen Qing-song), deputy director of the Agricultural Materials Department and probationary party member, took the opportunity of going to Hong Kong on official business to carry out smuggling activities while returning home. On 29 October, they were discovered by the Xiamen Customs House, and all their smuggled goods were seized. (Wei Jianxin) was fined and sent to jail according to the law. [HK120640 Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 27 Nov 80 HK]

FUJIAN CRIME-FIGHTING ACTIVITIES--Procuratorial organs at all levels in Fujian Province have set up law and discipline inspection organs one after another to inspect and struggle against violation of the law and discipline in state organs. Since the beginning of this year, they have directly accepted and investigated 495 cases of this kind. Of them, 472 have been completed. [Fuzhou Fujian Provincial Service in Mandarin 1035 GMT 27 Nov 80 HK]

JIANGXI VERDICTS REVERSED--The Jiangxi Provincial CCP Committee recently decided to reverse incorrect verdicts on two teachers who were executed for openly criticizing the Cultural Revolution at its initial stage. Although neither of them were CCP members, they devoted their lives to the revolution and to righteousness. The provincial CCP committee held that the two teachers, (Chen Yiuting) and (Xie Jizhang), were heroes who were bold enough to criticize the Cultural Revolution. Therefore, the CCP committee decided to reverse the incorrect verdicts on them and suggested that the provincial people's government give them the title of revolutionary martyrs and look after their dependents. The CCP committee also decided to conduct a meeting to redress the case and rehabilitate the teachers asking the masses, CCP members and cadres to learn from their example. [Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 30 Nov 80 HK]

JIANGSU OVERSEAS CHINESE FORUM--The forum on overseas Chinese affairs sponsored by the Jiangsu provincial office for overseas Chinese affairs ended on 14 December. The participants called for implementing the policy on overseas Chinese affairs as well as strengthening the political-ideological work among overseas Chinese returnees and dependents of overseas Chinese. Returning the houses which were built by them but occupied during the Cultural Revolution is a pressing task in current overseas Chinese affairs. [OW180523 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 14 Dec 80 OW]

ZHEJIANG PLACE NAMES--A meeting was recently held in Shaoxing to discuss how to launch a general survey of all place names in Zhejiang Province. A proposition was submitted to the meeting that the general survey should be completed by 1981 and that place names throughout the province should be standardized by 1982. Some 130 representatives attending the meeting pointed out that place names must be standardized on the basis of the historical background and exact meaning of the name of each locality. The new place names will be officially announced by the people's governments at municipal and county levels, and new road signs and house numbers will also be formulated accordingly. [Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 4 Dec 80 OW]

GUANGXI COUNTY CELEBRATION--People of Duan Autonomous County of Yao Nationality in Guangxi Region celebrated the 25th anniversary of the founding of the county on 15 December. (Guo Cheng), vice chairman of the regional people's government, attended the celebration rally and spoke. He affirmed the achievements of Duan Autonomous County of Yao Nationality in implementing the party's line, principles and policies and encouraged them to work harder and contribute their efforts to the building of the four modernizations. [Nanning Guangxi Regional Service in Mandarin 1130 GMT 15 Dec 80 HK]

HAINAN MEETING--According to a HAINAN RIBAO report, the Hainan commissioner's office held a meeting from 9 to 12 December on resettling retired cadres and servicemen. Zhao Guangju, deputy secretary of the regional CCP committee and vice chairman of the regional commissioner's office, spoke at the meeting. He said: There are now about 100,000 retired cadres and servicemen throughout the province and they play a very important role in militia building. The meeting demanded: all departments in the province must strengthen work and do a good job of supporting the army and giving preferential treatment to army dependents. They must also grasp firmly resettlement work of retired army cadres and retired servicemen. The meeting also demanded: all areas must popularize education in supporting the army and giving preferential treatment to army dependents. [Haikou Hainan Island Service in Mandarin 0300 GMT 14 Dec 80 HK]

QINGHAI WORK CONFERENCE--According to our sources, the provincial propaganda work conference urged that political and ideological work should be included into the important agenda of party work. The conference concluded 26 December following a 10-day session. Participants at the conference emphatically studied the various documents of the political and ideological work forum sponsored by the party Central Committee's propaganda department and ethusiastically and comprehensively discussed ways to strengthen our province's political and ideological work in the new period. It was pointed out at the conference: If we want to achieve the socialist four modernizations, we should unite the understanding of all cadres and masses in accordance with the party's guiding ideology--Marxism-Leninism-Mao Zedong Thought--and the party's lines, principles and policies and use them to guide our actions. The four modernizations began amid a complicated international and domestic environment. Our country has not eliminated all class struggles, feudalism, capitalism and the habitual force of small producers. Therefore, we must pay special attention to political and ideological work. It was pointed out at the conference: some localities and units ignore political and ideological work to varying degrees. This must be corrected. The participants also devised major tasks for next year's political and ideological work. Comrade Li Xingwang, deputy secretary of the provincial party committee, delivered a speech on 26 December. [Excerpts] [SK280804 Xining Qinghai Provincial Service in Mandarin 2330 GMT 27 Dec 80]

JILIN OVERSEAS CHINESE CONGRESS--The first Jilin provincial congress of returned overseas Chinese opened on 23 December in Changchun. The congress is expected to formulate and approve regulations governing the provincial federation of returned overseas Chinese. Some 134 deputies of returned overseas Chinese attended the congress. Responsible comrades of the provincial CCP committee, the Standing Committee of the provincial people's congress, the provincial people's government and the provincial CPPCC committee including Li Diping, Song Renyuan, Zhao Tianye, Yang Zhantao and Xiao Danfeng attended the congress. [SK250143 Changchun Jilin Provincial Service in Mandarin 1100 GMT 23 Dec 80 SK]

GANSU RETIRED CADRES, SOLDIERS--The Gansu Provincial People's Government held a meeting on placement of retired PLA cadres and soldiers on 8-11 December. The meeting pointed out that houses for retired cadres should be built and a special organization to handle the affairs concerning retired cadres should be established and staffed with full-time personnel. It noted that retired soldiers should be sent back to where they come from and urged efforts to strengthen ideological and political work among retired soldiers in rural areas and solve their difficulties, to arrange jobs for the retired soldiers who come from urban areas according to their specialities and to establish leading groups in districts and counties to handle the placement of retired soldiers. [SK240348 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 23 Dec 80 SK]

HEILONGJIANG LEGAL SOCIETY--The Heilongjiang Provincial Legal Society was officially inaugurated on 24 December in Harbin Municipality. The inaugural meeting opened 23 December and concluded the next day. The meeting discussed and approved the society's regulations and mapped out plans for 1981 activities. Zhao Yuanpeng was elected chairman of the society. [SK250732 Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 24 Dec 80 SK]

SHAANXI MUNICIPAL PARTY CONGRESS--The Fifth Tongchuan Municipal CCP Congress was held recently. The congress elected the Fifth Municipal CCP Committee, with (Su Zhi) as secretary. [Xian Shaanxi Provincial Service in Mandarin 2300 GMT 8 Dec 80 HK]

GANSU OVERSEAS CHINESE--The Gansu Provincial Federation of Returned Overseas Chinese recently held a meeting. The federation's constitution was adopted at the meeting. (Li Xueqi) was elected chairman of the first committee of the federation, and (Wang Hanlie), (Chen Yian) and (Chen Zhong) were elected vice chairmen. [SK120859 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 7 Dec 80 SK]

JIANGSU WOMEN'S FEDERATION MEETING--Women's federations and their cadres at all levels must focus work on protecting women's interests and be bold in speaking up on behalf of women. This is the call made by the enlarged meeting of the third executive committee of the Fifth Jiangsu Provincial Women's Federation Committee which ended on 30 November. The meeting noted that in today's society there are still many instances of preference for men and maltreatment and discrimination against women. In some places women do not enjoy equal pay for equal work and labor protection for women remains less than adequate. All these have affected women's enthusiasm for the modernization drive. The meeting called on all women's federations to act independently and responsibly under the leadership of the party committee to protect women's rights. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 1 Dec 80 OW]

SHANGHAI'S TAIWAN DEMOCRATIC LEAGUE--During the past year since resumption of activities, the Shanghai branch of the Taiwan Democratic Self-Government League has absorbed 24 new members from among the Taiwan-born compatriots residing in Shanghai. [OW091050 Shanghai City Service in Mandarin 2300 GMT 6 Dec 80 OW]

GANSU URBAN ADMINISTRATION MEETING--The Lanzhou Municipal CCP Committee and people's government held a meeting 13 December on strengthening administration and improving the appearance of Lanzhou Municipality, Gansu Province. (Wu Xiuliang), mayor of Lanzhou Municipality, spoke at the meeting on the many problems existing in Lanzhou Municipality's public order, traffic system, market management and environmental sanitation which interfere with industrial and agricultural production and disturb the people's lives. Wang Bingxiang, deputy governor of Gansu Province, also spoke. [SK151404 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 13 Dec 80 SK]

HEILONGJIANG'S HEIHE MUNICIPALITY--With the approval of the State Council, Heilongjiang Province has established Heihe Municipality. The administrative area of the new municipality covers Heihe township, in Aihui County, and several mining areas. The new municipality is under the jurisdiction of Heihe Prefecture. [Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 19 Dec 80 SK]

SHANGHAI COMBATS EVIL TRENDS--According to a WEN HUI BAO report, the Shanghai Municipal Agricultural Commission party group recently made plans for the work in the suburban areas during this winter-spring period. It urged rural party organizations at all levels to comprehensively review the study and implementation of the "guiding principles" during the past year, further straighten out party work styles and discipline and resolutely check the three evil trends most hated by the masses--the evil trend of abusing power to arrange factory jobs for one's own children and relatives; the evil trend of embezzling collective funds and construction materials in building one's private residence; and the evil trend of using public funds for excessive feasts, sightseeing tours and other extravagant and wasteful activities. The municipal agricultural commission party group urged party discipline inspection departments at all levels in the suburban areas to grasp typical cases during this winter-spring period, deal with them severely and criticize them in public notices. At the same time, it is necessary to work out and publicize regulations for combating special privileges so cadres will have rules to abide by and so the masses can supervise them on just grounds. [Text] [OW201146 Shanghai City Service in Mandarin 2300 GMT 19 Dec 80]

HUBEI ELECTION WORK CONFERENCE--On the evening of 25 November, the Hubei Provincial CCP Committee held a phone conference on direct county-level election work. Provincial CCP committee secretary Huang Zhizheo spoke at the conference, which was presided over by provincial people's congress Standing Committee vice chairman Xia Shihou. [Wuhan Hubei Provincial Service in Mandarin 1100 GMT 26 Nov 80 HK]

HUNAN JUSTICE DEPARTMENT MEETING--In order to further perfect the socialist legal system, Hunan Province has been working hard to set up various justice department organs. The Hunan Provincial Justice Department recently held a meeting on setting up various organs and future tasks. The meeting held: it is necessary to set up justice department organs to insure the implementation of the state laws, maintain social stability and unity and speed up socialist modernization. The meeting demanded that all areas set up various justice organs and conduct training classes for cadres. [Changsha Hunan Provincial Service in Mandarin 2315 GMT 2 Dec 80 HK]

HUBEI JUSTICE CONFERENCE--The first Hubei provincial conference of directors of justice bureaus concluded in Wuchang on 29 November. The meeting conveyed the spirit of the national justice administration work forum and studied and made arrangements for current work in the province. The conference called for speeding up the establishment of justice administration organs, doing a good job of next year's training of judiciary cadres, speeding up the organizational building of the force of lawyers, and strengthening leadership over civil mediation work. Provincial CCP committee secretary Huang Zhizhen spoke at the conference. [Wuhan Hubei Provincial Service in Mandarin 1100 GMT 29 Nov 80 HK]

HEILONGJIANG PREFECTURAL LEADERS--The discipline inspection commission of the Suihua Prefectural CCP Committee, Heilongjiang, recently ordered leading persons of the Machinery and Metallurgical Industry Bureau under the prefectural administration office who abused power to buy electronic calculators with public funds to make public self-examination at bureau rallies. [SK160630 Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 14 Dec 80 SK]

HEILONGJIANG CPPCC INSPECTION TEAMS--The Heilongjiang Provincial CPPCC Committee organized five teams composed of CPPCC members at provincial organizations to leave for Harbin, Qiqihar and Mudanjiang municipalities today to inspect the work there. The inspection teams will investigate how industry and agriculture are readjusted, how the price policy is implemented and how cultural, educational and public health undertakings are carried out. The inspection activities are to be completed before the third session of the Fifth Provincial CPPCC Committee convenes. [Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 14 Dec 80 SK]

JILIN CADRE TRAINING--In the past 2 years, Changchun Municipality, Jilin Province, has sponsored 91 cadre rotational training classes and restored and established 56 cadre vocational schools to raise their political ideology and vocational level. Some 70,000 cadres have been trained, accounting for 78 percent of all cadres in the municipality. Among them, 520 are leading cadres at or above county level. [Changchun Jilin Provincial Service in Mandarin 1100 GMT 20 Dec 80 SK]

QINGHAI WOMEN'S FEDERATION--The second enlarged meeting of the Fifth Qinghai Provincial Women's Federation, which concluded 22 December, outlined the federation's tasks for 1981. It emphasized that it is necessary to focus on ideological and political work, resolutely enact reforms and stress practical results to meet the requirements of the new period. (Xing Bingcai), chairman of the provincial women's federation, delivered a summation. She called on women's organizations at all levels to mobilize and give full play to the enthusiasm of women, protect women's legitimate rights and interests, work to successfully conduct ideological education among youngsters and publicize the new marriage law. [SK250735 Xining Qinghai Provincial Service in Mandarin 2330 GMT 24 Dec 80 SK]

GANSU PEOPLE'S CONGRESS MEETING--The Presidium of the third session of the Fifth Gansu Provincial People's Congress held its second meeting on 28 December. Wang Shitai, chairman of the provincial people's congress Standing Committee, presided. Feng Jixin, secretary of the provincial CCP committee, explained the provincial CCP committee's proposal on personnel arrangements. [SK291050 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 28 Dec 80 SK]

DEATH PENALTY DEMANDED--Beijing, 24 Dec (KYODO)--Prosecutors demanded the death penalty for Jiang Qing, widow of Chairman Mao Zedong, at a special court hearing Wednesday, a Chinese Foreign Ministry spokesman said. The spokesman said that the prosecutors applied Article 103 of the penal code concerning grave cases of antirevolutionary crimes. This was the first time that prosecutors have specifically demanded the death sentence during the current special trial of the purged "gang of four" and the late Marshal Lin Biao's leading followers. A total of 10 defendants, including Jiang Qing, are under the special trial in two tribunal groups. [Text] [OW240913 Tokyo KYODO in English 0904 GMT 24 Dec 80]

JIANG QING FINAL HEARING--Beijing, Dec 24 (AFP)--Jiang Qing, Mao Zedong's widow, appeared before a special court here today for her seventh hearing in the Beijing trial, an official Chinese spokesman said. According to well informed Chinese sources, the hearing was the last for Jiang Qing, former leader of the disgraced "gang of four." The spokesman, however, declined to confirm this, but indicated that the hearing was to deal with defence and prosecution in the case of Mao's widow. The hearing today was to complete cross examination and prosecution proceedings for all 10 defendants in the trial. The special court will subsequently have to hand down sentences at an unspecified date. [Text] [OW240248 Hong Kong AFP in English 0236 GMT 24 Dec 80]

QIU HUIZHOU SENTENCING--Beijing, Dec. 20 (AFP)--General Qiu Huizuo, one of the 10 co-defendants in the Jiang Qing trial, will next appear before China's special court only to hear his sentence, Chinese television announced today. This also (?applies) to eight of the "Beijing 10" who all face a possible death penalty. The special (?court) however did not complete (?their) questioning of Mao Zedong's widow Jiang Qing, who once her case is finally heard, should normally present her own defense. She has refused to be assisted by lawyers. Li Zuopeng, another military defendant, has not presented his defense either. [Text] [OW201320 Hong Kong AFP in English 1230 GMT 20 Dec 80]

MARRIAGE LAW--Beijing, December 17 (XINHUA)--The State Council has issued a circular ordering strict implementation of the new marriage law, which will come into effect on January 1, 1981. The circular asks for support and coordination from all administrative authorities throughout the country as well as from women's, youth and trade union federations. All the details of the new marriage law should be popularized among the masses. Violations will be punished, the circular says. The new marriage law stresses protection of the rights and interests of women, children and the aged, raises the marriage age from 18 to 20 for women and 20 to 22 for men, has a more definite paragraph on divorce and clarifies inheritance rights. Both husband and wife, parents and children now have the right to inherit family property. [Text] [OW171344 Beijing XINHUA in English 1308 GMT 17 Dec 80]

CULTURAL REVOLUTION, NAZISM--Beijing, Dec. 11 (AFP)--The Chinese Cultural Revolution was worse than Nazism and the inquisition, the YANGCHENG EVENING NEWS said in its latest issue available here today. The article came to this conclusion after setting out the parallels between the Cultural Revolution on the one hand and Hitler's regime and the inquisition on the other. The newspaper said that the "persecutions" inflicted on people during the Cultural Revolution (1966-76) throughout China were "unprecedented in world history" and that they would "probably remain unmatched." Citing historic examples of "persecutions" the YANGCHENG EVENING NEWS recalled the firing of the Reichstag by Hitler in 1933 in a bid to get rid of the communists and the inquisition during the middle ages in which many scholars and intellectuals perished at the stake. "With the exception of periods of war, I have never heard tell of such a large scale catastrophe throughout history," the article said, in a reference to the Cultural Revolution. The official press now refers to the 1966-76 period as "10 years of disaster." [Text] [OW111119 Hong Kong AFP in English 1104 GMT 11 Dec 80]

QIU HUIZUO HEARING--Beijing, Dec 11 (AFP)--The special court now sitting in Beijing to try 10 Cultural Revolution leaders has ended its examination of the five generals in the dock. Chinese television reported today that the special court has finished hearing evidence agaisnt one of the generals, Qiu Huizuo. Now only three members of the "gang of four" including its leader, Mao Zedong's widow Jiang Qing are still to appear in court to give evidence of their activities during the Cultural Revolution. The court has already led [as received] evidence against the four other generals on trial, Mao's former political secretary Chen Boda, and "gang of four" member Yao Wenyuan. Evidence still has be led [as received] against Mao's widow Jiang Qing and two other gang members Wang Hongwen and Zhang Chunqiao. According to recent reports published by a Hong Kong-based communist newspaper WEN WEI PO, the hearings which started exactly three weeks ago are scheduled to end on December 20. The 10 defendants all face the death sentence. Observers said the special court constituted by the post-Mao regime might not necessarily pass sentence [on] them once the hearings have ended, and do so only at a final closing session at a later stage. [Text] [OW111308 Hong Kong AFP in English 1234 GMT 11 Dec 80]

'BA YI RADIO' RECOUNTS DENG'S SUPPORT FOR LIN BIAO

OW190602 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 18 Dec 80

[Text] The main charges against our army's former principal leaders being tried at the Second Tribunal, the some 100 army cadres in custody for the trial and the some 14,000 cadres who will soon be interrogated can be summarized as follows: They closely followed and listened only to the orders of Lin Biao.

However, we could not help but ask this question to those who are interrogating our army's former leaders and those who are directing the trial from behind the scene: Are you really [word indistinct]? Did you ever miss any opportunity to shout "long live Chairman Mao" and "may deputy commander in chief Lin be forever healthy?" Why are our army's cadres put on trial apart from the historical context? Why do you avoid talking about the situation and other conditions in the country at that time? Lin Biao was the only successor and deputy commander in chief personally decided by Mao Zedong, a decision which was written in the party's principal document. Even Premier Zhou said at that time: Disobeying deputy commander in chief Lin means to disobey the party and Chairman Mao. Obeying Lin Biao's instruction was not only a requirement of military discipline but also a bounden duty for army leaders at all levels at that time. If Huang Yongsheng and the some 14,000 cadres awaiting interrogation, who merely obeyed and carried out the instructions from upper levels, are accused of committing towering crimes and subjected to the most severe punishment by the military court, how about those high-ranking party and government leaders who are not armymen and were not directly subordinate to Lin Biao? They did not dare to resist the erroneous line and (?other mistakes), as Peng Dehuai, He Long, Liu Shaoqi and Zhang Zhixin did, while unabashedly flattering Lin Biao. What crimes should they be accused of?

It should be pointed out that during the decade of chaos, a large number of cadres and people in the country, particularly young people, blindly cultivated the personality cult of Chairman Mao Zedong and army cadres obeyed ridiculous instructions from the party Central Committee's military commission and Lin Biao. This situation was created solely by the principal leaders among the central authorities. As the saying goes, "those below follow the bad example of those above," or "those below do whatever is liked by those above." On all occasions they carried the little red book with

Lin Biao's inscription and waved the little red book in front of the chairman and Lin Biao to show their boundless loyalty, respect and trust for the chairman and Lin Biao. Take Comrade Deng Xiaoping for example: In self-criticism offered at a party Central Committee work meeting on 23 October 1966, he said: I am not a good student of Chairman Mao and not competent to assume a leading post. The error I have committed in line proves that I am a petty bourgeois intellectual who has not properly transformed myself. My bourgeois outlook on the world has not been fundamentally transformed.

Comrade Deng Xiaoping's self-criticism could have stopped at this point, but he took the opportunity to fawn on Lin Biao and the "gang of four." He went on to say: It was imperative that the 11th plenary session of the 8th Party Central Committee designated Comrade Lin Biao as the assistant and successor of the chairman and promoted Jiang Qing and other comrades, who are holding high the red banner of Mao Zedong Thought, to the leading posts in the Central Committee. These important measures are of great significance for our country, as well as the world. I heartily support the idea that Comrade Lin Biao is a model for us to learn from. It is he who holds high the red banner of Mao Zedong Thought. It is Comrade Lin Biao who holds the bammer most high, studies most diligently and uses most creatively Mao Zedong Thought. He reports important questions to Chairman Mao in good time and asks Chairman Mao's instructions on them. He most understands the chairman's thinking and intent. Comrade Lin Biao has a high ideological and leadership level and thus has become Chairman Mao's closest comrade-in-arms. The liberation army under his leadership is a model for the people of the whole country to learn from. A person like myself who has made mistakes should earnestly learn from Comrade Lin Biao. Long live the great proletarian cultural revolution.

While our army's cadres are standing trial and interrogated for closely following and ("carrying out the order of) Lin Biao, you should be considerate enough to think about what you said and did at that time.

CCP MILITARY COMMISSION CONFERS HONOR ON PLATOON LEADER

OW261048 Beijing XINHUA Domestic Service in Chinese 1227 GMT 25 Dec 80

[Text] Beijing, 25 Dec (XINHUA)--The military commission of the CCP Central Committee recently issued an order to confer the honor "model in cherishing armymen" on Dang Fanshen, platoon leader of a certain unit under the Lanzhou PLA units and communist party member, for his bravery in rescuing a PLA fighter.

During grenade training on the afternoon of 24 April this year, fighter Li Liping nervously threw a grenade that landed less than 1 meter behind him. At this critical moment, Dang Fanshen dashed forward disregarding his safety, shoved Li Liping to the ground, made a swift turn and picked up the grenade. The grenade exploded and seriously injured Dang Fanshen, but Li Liping was unhurt.

The General Military Commission called on all comrades of the army, particularly the broad masses of the grassroot cadres, to learn from Comrade Dang Fanshen in showing deep proletarian affection for the PLA fighters. Under the leadership of the party Central Committee, the party's lines, principles and policies must be firmly carried out, the four principles upheld and the fine tradition of "unity between officers and men" and "respecting cadres and cherishing armymen" must be continued. The political and ideological work must be strengthened and concerted efforts must be vigorously made to build a modern revolutionary army, the commission urged.

'JIEFANGJUN BAO' URGES DISPLAYING SPIRIT

OW290238 Beijing Domestic Service in Mandarin 2230 GMT 28 Dec 80

[Text] Today's JIEFANGJUN BAO carries three reports in the column "Man Should Show Spirit." The first report states that a regiment of the Beijing PLA units changed from an intermediate state to an advanced regiment in 1 year by developing enthusiasm. The second report says that eight key leading cadres of a division of the Chengdu PLA units and its headquarters, political and logistics departments [word indistinct] on-the-job training and made outstanding scores. The last one is the story of 100 fighters of a regiment under the Kunming PLA units who did not fear hardship and arduous struggle and volunteered to be transferred to a certain frontier outpost.

The editor's note added by JIEFANGJUN BAO to these reports states: Comrade Mao Zedong once said that man should show spirit. In the long years of the revolutionary war and construction, our people's army has pursued the purpose of serving the people wholeheartedly and has made significant contributions to wiping out reactionaries and to building and safeguarding new China by carrying forward the spirit of fearing neither hardship nor death; the spirit of diligence, frugality and hard struggle; the spirit of strict discipline and self-sacrifice; the spirit of being unselfish and thinking of others first, the spirit of conquering all enemies and overcoming all difficulties; and the spirit of revolutionary optimism in surmounting every hardship to win victory. Today, in the new long march toward the four modernizations and in strengthening the construction of a modern army, we should continue to preserve and advance these spirits so that we can make still greater contributions to our motherland and people.

NANJING PLA UNITS HOLD MEETING TO PROMOTE UNITY

OW240448 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 23 Dec 80

[Text] Leading organs of the Nanjing PLA units recently called a meeting of mass work to study measures for further strengthening the unity between the army and the government and between the army and the people. The meeting held that although the relations between the army and government and between the army and the people are affected by many factors, as soldiers of the people, PLA units should strictly observe discipline and law, conduct self-criticism in work and take initiatives in promoting unity. Furthermore, in working together with the local government, the PLA units should also take the initiative to report work progress readily, to solve contradictions and disputes and to help the local people in distress.

The meeting called on all PLA units to strengthen education on state policies, laws and decrees and on the three main rules of discipline and eight points for attention among cadres and fighters so that commanders and fighters will set a good example in abiding law and discipline and cherish the state, collective and mass interests and they will see to it that all their words and actions are beneficial to promoting unity between the army and the government and between the army and the people.

The meeting asked all PLA units to launch activities to support the government and cherish the people during the new year and the spring festival and strengthen unity between the army and the government and between the army and the people in a down-to-earth way.

NEI MONGGOL SOLVES LINHE COUNTY WEAPONS THEFT CASE

SK161344 Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 14 Dec 80

[Text] According to BAYAN NUIR BAO, after 3 months of investigation by public security departments, the theft case of the Linhe County armed department's armory on 9 August 1980 has finally been cracked. The chief criminal, (Liang Dazhong), resisted arrest and was shot to death by public security personnel. Principal criminals (Wang Xingguo) and (Bai Yongsheng) and six others guilty of giving shelter to the criminals were arrested according to the law. The stolen weapons and ammunition were recaptured.

The criminal gang headed by (Liang Dazhong) planned this July to steal weapons and ammunition to arm themselves for further robberies. On the night of 9 August 1980, (Liang Dazhong) and (Wang Xingguo), carrying crowbars and lethal weapons, climbed over the walls surrounding the Linhe County armed department's armory, pried open two locks on the armory door and stole 17 pistols, 41 rounds of ammunition for semi-automatic rifle, 30 rounds of ammunition for 54-type pistol, 1 detonator and 3 holsters.

Next, (Liang Dazhong), (Wang Xingguo) and (Bai Yongsheng), carrying the weapons and ammunition, escaped to Tianjin with the help of (Liu Jianzhi) and others. They were discovered by public security personnel at Tianjin railway station on 16 August. The chief criminal (Liang Dazhong) resisted arrest and was shot to death. (Wang Xingguo) was wounded and arrested while he tried to escape. (Bai Yongsheng) was arrested on the spot.

Following the theft, public security departments immediately assigned cadres and policemen to investigate this case. They ferreted out six accomplices of (Liang), (Wang) and (Bai) who are guilty of helping and giving shelter to them. They are (Liu Jianzhi), temporary worker of the Linhe County Environmental Protection Bureau, (Shao Tiejun), (Hou Zhiyuan), (Liu Wenzhong) and (Qi Baohe), workers of the Linhe County Chemical Fertilizer Plant; and (Wang Jianguo), temporary worker of the plant. They not only concealed what they knew about the case but provided shelter to the criminals, wrote letters of introduction and used other illegal means to help them pursue criminal activities.

The Bayan Nuir Public Security Department has recently referred this case to the league's procuratorate for examination and for instituting public proceedings.

BRIEFS

VIETNAMESE MINES UNEARTHED--The headquarters of Yunnan Military District recently issued a notice commending the armed militia company of (Nadeng) Brigade of (Babu) Commune in Malipo County who bravely dug up in 8 days 279 mines sown in Chinese territory by the Vietnamese army. (Nadeng) Brigade is in the frontline on the Sino-Vietnamese border. Since November, the Vietnamese army has stepped up its provocations in this area and constantly sneaked across the border to sow mines and nail bombs. Thus, they have seriously threatened the lives and safety of the army and people on our border. On 30 November, when militiamen (Luo Shunchang) and (Zhu Zhongxiang) went up the mountain to cut grass, they discovered that the enemy has sowed many mines on our side of the international boundary. The two of them dug up one of these mines and took it back with them. The militia company organized three mine-detector teams, studied the construction and capabilities of the Vietnamese mines, looked into mine detection methods and worked out plans. From 1 to 9 December, they dug up 209 mines along a 700-meter strip of the international boundary. They also removed 49 nail bombs planted by the Vietnamese army. On 6 and 8 December alone, the militiamen of (Yicheng) production team removed 70 mines and 11 nail bombs. The notice of Yunnan Military District called on the militiamen and border defense units to learn from the militiamen of (Nadeng) brigade and make still greater contributions in defending the border and the modernization drive. BEIJING PLA PLANNED PARENTHOOD--Since the beginning of 1979, over 72,000 couples of childbearing age in the PLA Beijing military region have determined to have only one child each for all their lives. This represents a rate of over 99 percent of couples of this category. [OW091044 Beijing Domestic Service in Mandarin 1000 GMT 4 Dec 80 OW]

COMBATTING NATURAL CALAMITIES--Beijing, 31 Dec (XINHUA)--According to XINHUA reporters, our country suffered frequent floods, droughts and windstorms in 1980, with waterlogging occurring primarily in southern China and droughts occurring primarily in northern China. The broad masses of PLA commanders and fighters bravely took part in fighting natural calamities and rushing to deal with emergencies. As a result, they made tremendous contributions to protecting state property and people's lives and security. The masses in the disaster areas highly praised the armymen as most reliable friends in times of crises. According to statistics by the departments concerned, the whole army mobilized commanders and fighters a total of 543,000 times to fight calamities and engage in rescue work in 1980. The whole army also mobilized 1,882 sorties of planes and ships, some 21,000 vehicles, rescued some 31,300 people from danger and transported some 620,000 dun of various supplies. [Excerpt] [OW020827 Beijing XINHUA Domestic Service in Chinese 0323 GMT 31 Dec 80]

WUHAN CLEANUP CAMPAIGN--Wuhan PLA units commander Zhang Caiqian, political commissar Yan Zheng and other leading comrades led over 600 cadres and fighters of the organs and subordinate detachments to clean up Zhongnan and Minzhu roads in Wuchang on the morning of 27 December. On the same morning, some 300 cadres and fighters of the organs and subordinate detachments of the air force of the Wuhan PLA units also carried out street cleaning in Wuchang at the junction of Hongqi Boulevard and Zhongnan Road, led by their commander Li Yongtai. [Excerpts] [HK290222 Wuhan Hubei Provincial Service in Mandarin 1100 GMT 28 Dec 80]

ZHEJIANG RETIRED, DEMOBILIZED SOLDIERS--The recently convened provincial work conference on the placement of the army's retired cadres and demobilized soldiers ended on 3 December. Called by the provincial people's government, the conference noted that the province this year faces a heavy task in placement work while time is running out. It called on all local governments and departments to step up preparations for housing construction for retired army cadres and establish or perfect the organs managing their affairs and leading organs in charge of placement work. Demobilized soldiers should go back to the rural areas if that is where they first joined the army. The departments concerned in the urban areas are responsible for job placements of their respective demobilized soldiers without delay on any pretext. The conference also stressed political and ideological work among retired soldiers to help them realize the limited resources of the state and consciously follow the state's arrangements by taking the interest of the whole into consideration. Comrades Chen Zhuolin, Guan Junting and (Li Chaorong), responsible comrades of the provincial CCP committee and military district, came to the conference to deliver speeches. [Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 3 Dec 80 OW]

ZHELIANG SOLDIER ENLISTMENT--The 1980 winter plan for enlisting new soldiers has now been completed in Zhejiang. The number of those who applied to join the PLA was 10 times more than the present quota. Most of the enlisted men are party and CYL members, and 99 percent have an educational background of middle school or higher. [OW091055 Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 6 Dec 80 OW]

HEILONGJIANG MILITARY DISTRICT--A mass work conference sponsored by the Heilongjiang Provincial Military District concluded on 23 December. In connection with support-the-government and cherish-the-people activities, the conference decided to launch a rectification drive on discipline and workstyle at affiliated units during the month between the new year and spring festival. [Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 24 Dec 80 SK]

HENAN CONFERENCE--The Henan Provincial People's Government held a conference from 20 to 23 November in Zhengzhou on the resettlement of retired army cadres and demobilized armymen. Dai Suli, secretary of provincial CCP committee and provincial vice governor, and Xu Qian, deputy commander of provincial military district, attended the conference. Dai Suli gave the summation speech at the closing session of the conference. The conference held: governments at all levels must attach importance to the resettlement of retired army cadres and demobilized armymen. On the whole, the province has been doing well in resettling retired personnel, and most of the armymen who retired in 1980 have been resettled. However, work has been progressing at a relatively low pace. All local areas should popularize education on supporting the army and giving preferential treatment to their dependents. The conference stressed that resettlement of retired army cadres is a political task and must be done well. [Zhengzhou Henan Provincial Service in Mandarin 1100 GMT 2 Dec 80 HK]

SHENYANG PLA UNIT MEETING--A 5-day meeting of the Shenyang PLA units, which have distinguished themselves in carrying out the campaign on supporting the government and cherishing the people, was concluded on 15 December. Participants studied the state directive and the guidelines of the forum held by the military commission of the CCP Central Committee on strengthening unity between armymen and civilians and drew up plans for future work. Twelve advanced units gave their experiences in this regard. Attending the meeting were Liao Hansheng, first political commissar of the Shenyang PLA units, Li Huamin and (Fu Zhenhua), deputy commanders, and Zou Yan, Zhang Wu and Fu Kuiqing, deputy political commissars. Liao Hansheng, Zou Yan and Fu Kuiqing spoke at the meeting where 55 advanced collectives and 5 advanced individuals were commended. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 15 Dec 80 SK]

XINJIANG BURGLARY GANGS--A local police station under the Urumqi Municipal Public Security Bureau recently arrested 17 criminals belonging to 2 burglary gangs, recovering some 9,000 yuan worth of loot. [Urumqi Xinjiang Regional Service in Mandarin 1620 GMT 19 Dec 80 OW]

SYMPOSIUM URGES IMPROVING EDUCATIONAL WORK

OW231331 Beijing XINHUA Domestic Service in Chinese 0742 GMT 21 Dec 80

[Excerpts] Beijing, 21 Dec (XINHUA)--The central task of educational work at present is to do a good job in readjusting, improving and strengthening the school leading groups, replenishing and raising the standard of the contingent of teachers, improving conditions for running schools and conscientiously raising the standard of education.

These remarks were made at a national symposium on educational work held by the Ministry of Education in Tianjin 1-13 December. Up to 1985, educational work must focus its attention on earnestly implementing the principle of readjusting, restructuring, consolidating and improving educational work, with particular emphasis on readjustment.

How can the principle of readjustment, restructuring, consolidation and improvement be implemented in educational work? The meeting held that education is a weak link in the overall national economy. Due to the lack of proper attention given to education for a long time and the havoc wrought by the "Great Cultural Revolution," educational work at present fails to meet the requirements of the four modernizations. By readjustment we mean strengthening educational work in order to enable education to develop proportionately with economic construction. At present we need to firmly promote universal primary education, reform the middle school education structure and develop vocational and technical education.

The meeting held: Since primary education is the foundation of education, efforts to improve the quality of education and raise the nation's scientific and cultural level must begin with primary education.

The meeting also proposed that at present it is essential to strengthen ideological and political work in all types of schools and at all levels. Party work, CYL work and political teaching in schools must be further improved and strengthened, not weakened. To this end, the contingents of ideological and political work must be improved and perfected. The position and role of the contingents of political work in school education must be fully recognized and matters concerning their pay must be rationally resolved.

Attending the symposium were vice governors, vice mayors and vice chairmen [of people's congresses] of various provinces, municipalities and autonomous regions in charge of educational work. Also present were responsible comrades of cultural and educational (science education) [brackets as received] departments, cultural and educational (public health education) [brackets as received] offices, as well as bureau directors and department heads of various educational departments and institutes of higher education; responsible comrades in charge of educational work of concerned departments under the CCP Central Committee, the State Council and the PLA; and responsible comrades of institutes of higher learning directly under the Ministry of Education. Altogether some 300 people attended the symposium.

'RENMIN RIBAO' COMMENTS ON NATURE OF YIHETUAN GROUP

HK170545 Beijing RENMIN RIBAO in Chinese 15 Dec 80 p 5

[Article by Qi Qizhang [2058 0366 4545]: "Different Views on the Appraisal of the Yihetuan"]

[Text] At the recent symposium on the history of the Yihetuan movement held in Jinan, over 200 Chinese and foreign scholars discussed problems related to the Yihetuan. Given below is a brief introduction to the main subjects discussed.

1. The Nature of the Yihetuan Movement

It was generally admitted that the Yihetuan movement was of a patriotic anti-imperialist nature. But views on whether or not the Yihetuan opposed feudalism greatly differed.

One view was that the Yihetuan movement opposed only imperialism and not feudalism, because no slogan or program for opposing feudal ownership of land was ever put forward by it. Nor was there any demand for reforming the feudal landlord class regime. The Yihetuan movement was a product of the intensification of national contradictions; the main objective of its struggle was "getting rid of foreign things." The Yihetuan's "support for the Qing government" was aimed at maintaining the Qing Dynasty and its "getting rid of foreign things" was prompted by "support for the Qing government." This explained why the Qing government could deceive and use the Yihetuan. The Yihetuan rose against the Qing regime only under unavoidable circumstances. This was entirely an act of self-defense. Until then, the Yihetuan had not shown any inclination to attack it.

Another view was that the Yihetuan movement was not only of a patriotic anti-imperialist nature but of an antifeudalist nature. The Yihetuan movement was a mass struggle, with the peasants as its mainstay, and fell into the category of old-style peasant warfare. Opposition to feudalism meant that the peasants spontaneously opposed feudal economic exploitation and political oppression. The Yihetuan's "getting rid of foreign things" chiefly took the form of "harassing the missionaries to obtain grain." It not only opposed the feudal way of economic exploitation and political oppression practiced by the missionaries, but also attacked the "well-off families attached to missionaries" and typical rich landlords. A concrete analysis must also be made of the Yihetuan's slogan of "support for the Qing government": 1) Only some, not all, members at the Yihetuan turned the slogan of "support for the Qing government" into practical action; and 2) Apart from the slogan of "support for the Qing government," the Yihetuan also put forward such slogans as "arrest foreign missionaries for the sake of China's prosperity"; "the collapse of the Qing regime will bring prosperity to China"; "distribute grain equally to help the poor" and so forth. We cannot make a sweeping statement based on just one aspect. The claim that the Yihetuan was only passive in its resistance against the Qing regime without ever making an attack on its own initiative also contradicts history. The fact was that after June 1900, the Yihetuan took the initiative to launch many attacks against the Qing army.

Those comrades who held the latter view can be divided into two differing schools of thought, as far as concrete matters are concerned. The first believed that the Yihetuan's antifeudalist efforts were on an equal basis and that such efforts permeated through the Yihetuan movement from beginning to end. The second held that in the early and last stages of the development of the Yihetuan movement, its spontaneous antifeudalist tendencies were relatively noticeable and that at its height, its antifeudalist nature disappeared.

2. The Problem of "Getting Rid of Foreign Things" as Related to the Yihetuan

There were chiefly three views on the Yihetuan's slogan of "getting rid of foreign things."

The first held that the Yihetuan's "getting rid of foreign things" meant an exclusion of everything foreign, or the "extermination" of all foreigners and opposition against everything "foreign." As far as moral principles were concerned, the Yihetuan's sweeping exclusion of foreign things and foreigners had its just side. From the angle of historical development, this sweeping exclusion of everything foreign was an indication of both ignorance and backwardness and was "not in line with the fundamental interests of the Chinese people."

Another view held that the core or essence of the Yihetuan's "getting rid of foreign things" was anti-imperialist and showed a tendency toward the sweeping exclusion of foreign things and foreigners, only in regard to form and methods. This was a manifestation of backwardness. But we can never take this as a basis for the argument that the Yihetuan's sweeping exclusion of foreign things and foreigners was "not in line with the fundamental interests of the Chinese people." Fundamentally speaking, the Yihetuan's sweeping exclusion of everything foreign was just resistance precipitated by the intensification of contradictions between imperialism and the Chinese nation.

3. The Historical Role of the Yihetuan Movement

The Yihetuan movement had a smashing impact on the feudal rule of the Qing regime. It helped to expose the extreme decadence and impotence of the

Qing ruling group. There was unanimous agreement on this. But views differed on the problem of the Yihetuan movement's connection with the prevention of imperialism from dividing China.

One school of thought believed that the Yihetuan movement impinged on imperialist attempts at dividing up China but not with sufficient force to "smash" or "prevent" imperialism from doing so. The main reason that China had still not been divided up then was that the contradictions and struggle among imperialist powers had forced them to follow a policy of maintaining the status quo to avoid the intensification of contradictions among them and the outbreak of war.

Another view was that of the two factors helpful in preventing imperialism from dividing up China, the primary one was the Yihetuan's struggle and the secondary one was the contradictions and struggle among imperialist powers. This can be proved by the statements from the power-holders and other people of many imperialist countries. Proof is also provided by the ebb and flow of the Yihetuan's sustained struggle.

4. The Origin of the Yihetuan

The Yihetuan can be traced far back in history. Its origin is a complicated issue in the study of the Yihetuan. There have traditionally been many arguments about its origin. No final conclusion has been reached on this matter. There are generally three views which are summed up as follows:

One view is that the Yihetuan was closely linked with the "eight diagrams" branch of the "White Lily" sect. It started out as a ramification of the "eight diagrams" branch but ended up as a combination of such divinatory symbols or groups as represented by the Chinese characters "Qian," "Kan," "Dui," "Xun" and so forth. It also combined many boxing societies which became collectively known as "Yihe Boxing."

Another view is that the Yihe Boxing, the Dadao Society and the Meihua Boxing provided the main foundation for the Yihetuan established in Shandong in the year of the Guangxu emperor. But the Yihetuan was not clearly related to the Yihetuan and the Ligua sect prevailing in the year of Jiaqing. As far as religious rites and the object of struggle are concerned, it greatly differed from the White Lily sect. to avoid the strong pressure of the Qing government, many followers of the White Lily sect later became converts to Christianity. Such a peculiar situation arose in the welter of complicated class struggle and national struggle. Therefore, there were potential grounds for the Yihetuan's opposition to the White Lily sect. Thus, as an organization, the White Lily sect could not have directly produced the Yihetuan.

Still another view is that the Yihetuan or Yimin Society had the Xiangtuan as its origin. The claim that the Yihetuan originated from the White Lily sect dating from the Southern Song Dynasty, or from a branch of the White Lily sect, is hardly credible. It is also not based on evidence. If the Yihetuan has any origin, it is traceable to boxers who practiced the art of attack and defense with fists and clubs in defense of their group.

NATIONAL FORUM ON TEACHING SCIENTIFIC SOCIALISM

HK270649 Guangzhou Guangdong Provincial Service in Mandarin 2345 GMT 23 Dec 80

[Text] A national forum on teaching scientific socialism in party schools was held in Guangzhou from 10 to 22 December. During the forum the representatives unanimously pointed out: Like Engels, we must regard socialism as a science and study it with an extremely serious attitude. It is now over 100 years since Marx and Engels proposed their theory of scientific socialism. Socialism has won very great victories throughout the world. China, too, has gained 31 years of practice in socialism.

During the 10-year catastrophe, Lin Biao and the "gang of four" preached sham socialism and exercised feudal, fascist dictatorship on a large scale. The image of socialism thus became distorted in some people's minds. Since the "gang of four" were smashed, sham socialism has continued to hamper in politics, economics and ideology, the onward advance of the party and people, because the pernicious influence of its theory has not been eliminated well. As a result some people harbor unnecessary suspicions about the party's current [word indistinct], principles and policies, and have even lost confidence in socialism. Hence, summing up China's experiences and lessons in socialist revolution and construction and seriously probing the theory of scientific socialism have become an extremely urgent task for the whole party, and especially for comrades carrying out the party's ideological and political work and the party schools at all levels.

To treat socialism as a science, we must clearly understand what are the superior features of socialism and the socialist system, and how to bring socialist democracy into play and strengthen the socialist legal system, and have a clear idea of the topics and system for study in scientific socialism.

During the forum, experts and representatives from all 29 provinces, municipalities and autonomous regions emancipated their minds, brought democracy into play, and freely aired their views on these questions. Over 130 theses and materials were submitted to the forum.

BEIJING UNIVERSITY STUDENTS COMMEMORATE MOVEMENTS

OW100216 Beijing XINHUA Domestic Service in Chinese 1216 GMT 9 Dec 80

[Text] Beijing, 9 Dec (XINHUA)--Teachers and students at institutes of higher learning in Beijing, including Qinghua and Beijing universities, carried out a range of activities to commemorate the 45th anniversary of the "9 December" movement and the 35th anniversary of the "1 December" movement. Glass-front billboards, painted corridors and news bulletins on the campuses of various universities all featured special commemorative columns on these two patriotic movements. Commemorative meetings, report meetings and small-scale forums were also held at many schools. On 30 November afternoon, more than 1,600 teachers and students of Qinghua University held a commemorative meeting at which an entertainment program was jointly presented by old comrades who participated in the "1 December" movement. Teachers and students in the packed auditorium gave uninterrupted applause to the 150 old comrades who sang songs of the past that had inspired the youths to take the revolutionary road at that time. The songs included "Let's Sing Together," "Pick Ourselves Up From Where We fell," and "Ode to Brightness." A warm atmosphere of unity and militancy to move ahead persistently prevailed.

Beijing University sponsored a soiree on 5 December at which the students' art troupe staged a drama entitled "Destiny" depicting the "9 December" movement. Beijing University also featured a pictorial exhibition in its library on the "1 December" movement. The exhibition displayed 150 historical pictures showing the entire course of the "1 December" movement and how, under the leadership of the party, students of the Southwest Associated University waged a struggle against the Kuomintang reactionary rule at that time.

On 9 December, Qinghua University and Beijing Teachers University invited old comrades who participated in the "9 December" and "1 December" movements and some students to a forum. The students unanimously pledged to emulate the young students in the past and to unite around the party to get on with the four modernizations programs with one heart and one mind.

Braving the cold winds, students of the Beijing Iron and Steel Institute also held a meeting at the sports ground today. They staged a "torch relay race" in commemoration of the 45th anniversary of "9 December" and pledged to carry on the torch and advance courageously in the new long march.

GUANGZHOU RALLY ON IMPROVING CITY APPEARANCE, CONDITIONS

HK240157 Guangzhou Guangdong Provincial Service in Mandarin 1120 GMT 22 Dec 80

[Excerpts] The Guangdong Provincial People's Government and the Guangzhou Municipal Revolutionary Committee held a mobilization rally in the Zhongshan Memorial Hall on 22 December to launch the cadres and masses to rapidly take action to straighten out prices, do well in supplying the markets for the festivals, tidying up the appearance and sanitation of the city, beautifying the environment, tidying up traffic order and doing a good job of maintaining law and order in society, to enable the masses to spend the festivals in ease of mind amid a clean environment. Present at the rally were Liu Tianfu, secretary of the provincial CCP committee and vice governor; Qu Mengjue, vice chairman of the provincial people's congress Standing Committee; Wang Chun, director of the political department of Guangzhou Military Region, Lu Deyao, adviser to Guangdong Military District; Vice Governor Huang Jingbo, and a number of responsible comrades of the party, government and army in the province and municipality. Liang Lingguang, secretary of the provincial CCP committee, first secretary of the municipal CCP committee and chairman of the municipal revolutionary committee, delivered a mobilization report.

Liang Lingguang said: stabilizing prices, doing well in supplying the markets for the festivals, improving the city's appearance and sanitation and straightening out traffic and public order constitute the major guarantee for the masses to spend a Happy New Year and spring festivals. These are issues that currently cause the masses great concern. If we handle these matters well, we will give the masses tangible benefits during the festivals under present conditions.

XIZANG TIGHTENS CONTROL OVER CULTURAL RELICS

OW100839 Lhasa Xizang Regional Service in Mandarin 0015 GMT 10 Dec 80

[Text] According to a XIZANG RIBAO report, the Xizang Regional People's Government recently approved and circulated a report by the departments concerned on strengthening market control and banning cultural relic smuggling, speculation and profiteering. The report asked departments concerned to strengthen protection and management of cultural relics and to take effective measures to stop all illegal activities harmful to the preservation of cultural relics. It asked them to stop the outflow of cultural relics and to deal resolute blows to cultural relic smuggling, speculation and profiteering.

Xizang is noted both at home and abroad for its rich cultural relics. Recently it has been found that a small number of [words indistinct] and pilgrims from various localities illegally sell various cultural relics, gold, silver and other treasures, as well as local handicrafts and valuable medicinal herbs, to foreign tourists and visitors. This has not only disrupted social order and led to market disorder but also damaged our country's honor and its valuable cultural heritage. Such activities, which violate state law and government decrees on cultural relic protection, cannot be condoned and must be stopped. Those who commit serious offenses shall be punished by law and discipline. Units and individuals that have helped protect important and valuable cultural relics shall be properly rewarded.

The regional people's government asked local governments and foreign trade, commerce and cultural departments to coordinate with each other in purchasing cultural relics and valuable articles. The department in charge of cultural relics shall purchase at a certain price all cultural relics that are still privately kept. The Foreign Trade Department shall purchase gold, jade and other treasures. The Commercial Department shall purchase local handicrafts. Banks shall be responsible for purchasing gold and silver. No historical relics shall be traded in black markets. Selling of cultural relics, smuggling, speculation and profiteering by individuals or organizations are strictly forbidden. Private selling of cultural relics to tourists is prohibited. People who possess family heirlooms may sell them only to the State Cultural Relics Department.

The regional people's government also asked foreign affairs departments to brief foreign tourists on China's law and policy on cultural relics protection. Together with the customs office, cultural relics departments improve their work in identifying and appraising cultural relics in order to protect them from being removed.

BRIEFS

MAN NATIONALITY ACADEMIC CONFERENCE--Shenyang, 13 Dec (XINHUA)--The 1980 annual academic conference on the history of China's Man Nationality literature was held recently in Shenyang, Liaoning, attended by more than 70 professors and specialists. Since the smashing of the "gang of four," the work of exploring and collating the Man Nationality culture and art has been speeded up. A committee for compiling the history of the Man Nationality literature has been established in Liaoning Province, where half of the nation's Man people live. At the annual academic conference, 39 theses were exchanged, which separately expounded the historical origin, current situation, culture and art, politico-economy, customs and habits and religious belief of the Man Nationality. [Beijing XINHUA Domestic Service in Chinese 1241 GMT 13 Dec 80 OW]

CHINA RHETORIC SOCIETY--Wuhan, 13 Dec (XINHUA)--China Rhetoric Society was inaugurated in Wuhan, Hubei, recently. Professor Zhang Gong, a linguist, was appointed honorary chairman of the society. Guo Shaoyu, Sun Changxu, Zhu Xing, Yang Ping, Zhou Zhenfu, Hu Yushu, Huang Borong and Zhang Gonggui were appointed advisers. Linguist Zhang Zhigong was elected chairman of the society. NEW LAW SCHOOL--Zhengzhou, 4 Dec (XINHUA)--With approval from the CCP Central Committee and the State Council, the Second Central Institute of Political Science and Law was founded in Jiyuan County, Henan. The institute has admitted over 300 cadres of political science and law at and above the county level. On 1 December the responsible comrades of the Supreme People's Procuratorate, the Supreme People's Court and the Henan Provincial CCP Committee attended its opening ceremony. Li Yunchang, first vice minister of justice, addressed the ceremony. He said that the founding of the institute is to strengthen construction of the legal system and train a strong, high-standard contingent for administration of justice. [Beijing XINHUA Domestic Service in Chinese 1302 GMT 4 Dec 80 OW]

CIRCULAR ON MAGAZINES--Beijing, 2 Dec (XINHUA)--The State Bureau of Commodity Prices and the State Publication Administration Bureau issued a joint circular recently asking all departments and localities to strengthen control over magazine prices. The circular notes that many readers have sent letters complaining about price rises of a number of magazines. The circular pointed out that the price of specialized science and technology periodicals and periodicals in minority languages should not be made too high despite their relatively small circulation. The circular asked all departments and localities to conduct a general checkup on the prices of magazines and to readjust their prices reasonably. [Beijing XINHUA Domestic Service in Chinese 1400 GMT 2 Dec 80 OW]

XINJIANG ON MONGOLIAN LANGUAGE—A plan for trial use of the Mongolian language phonetics in selected areas was published on (?29) November in the Mongolain lanauge page of the XINJIANG RIBAO by the Xinjiang Autonomous Regional Committee for the work of spoken and written languages of nationalities with the approval of the regional people's government. The committee will vigorously popularize the standard pronunciations and phonetic symbols of the Mongolian language among the Mongolian people in the region. The standard pronunciations and phonetic symbols were adopted in a special meeting on the Mongolian language attended by the representatives of eight provinces and autonomous regions. This popularization will have a great significance in unifying the spoken and written Mongolian language and raising the science and culture level of the Mongolian people for the cause of the four modernizations. [Urumqi Xinjiang Regional Service in Mandarin 1620 GMT 1 Dec 80 OW]

GUANGXI PASSENGER BOAT CAPSIZE--The passenger boat "Guilin 302" sank in a thunder squall on the evening of 26 November. Responsible persons of the regional CCP committee and people's government rushed to the spot on hearing the news to organize rescue and relief work. The boat had sailed from Wuzhou that morning in calm weather. The accident occurred in Pingnan County, when the boat rapidly filled with water and sank 2 to 3 minutes after being hit by sudden violent winds--estimated at force 11--and high waves. Next day Xiao Han, deputy secretary of the regional CCP committee and vice chairman of the regional people's government, and (Zhang Xiulan), deputy secretary-general of the regional people's government, and other local leaders went to the spot. A salvage vessel dispatched by the Wuzhou navigation branch company reached the place on the evening of 27 November. According to investigations, the majority of the boat's passengers survived the disaster, and 162 of them have been sent back to their units by vehicle and boat. [HK040822 Nanning Guangxi Regional Service in Mandarin 1130 GMT 29 Nov 80 HK]

SHANGHAI YMCA, YWCA ACTIVITIES--The national committees of both the Chinese Young Men's Christian Association and the Chinese Young Women's Christian Association as well as the Shanghai YMCA AND YWCA officially resumed activities today. The YMCA and the YWCA were established in 1901. After liberation, these two associations, under the party's leadership, had engaged in uniting people from various circles that had made certain contributions to the socialist revolution and construction. During the Cultural Revolution, the YMCA and YWCA were labeled as "time-bombs of imperialism" and their activities were suspended. After resuming their activities, these two associations will launch various activities to unite youths from religious and other circles to make contributions to the four modernizations. This afternoon, the four organizations jointly held a tea party to celebrate the resumption of their activities. [Text] [OW061703 Shanghai City Service in Mandarin 1130 GMT 6 Dec 80]

COMMUNICATIONS PUBLICATIONS CONFERENCE--The national conference on publication of books and journals about sciences of communications was held in Shanghai from 25 to 27 December. The conference decided to publish a journal of modern communications [XIAN DAI TONG XUN ZA ZHI 3807 0108 6639 6061 7177 6125] next year, improve the quality of books about sciences of communications and expand their publication so as to promote China's modernization in communications. [Text] [Shanghai City Service in Mandarin 2300 GMT 27 Dec 80 OW]

WRITING RESEARCH SOCIETY--Wuhan, 27 Dec (XINHUA)--The China Writing Research Society was inaugurated and held its first annual meeting from 24 to 27 December at Wuhan, Hubei. Taking part were 130 representatives from 96 colleges and universities in 15 provinces and municipalities. They are all college instructors and researchers in Chinese composition. [Beijing XINHUA Domestic Service in Chinese 1715 GMT 27 Dec 80 OW]

OVERSEAS CHINESE ARTS PERFORMANCE--In order to greet the New Year, artists among the returned overseas Chinese and their dependents in Beijing staged arts performances in the capital on 27 and 28 December. Liao Chengzhi, vice chairman of the NPC Standing Committee and chairman of the State Council's committee on overseas Chinese affairs, attended the performance. [Beijing Domestic Service in Mandarin 1600 GMT 28 Dec 80 OW]

FOREIGN LITERATURE SOCIETY--Beijing, 28 Dec (XINHUA)--The Foreign Literature Society of China recently held its first annual meeting in Chengdu, Sichuan. The conference participants pointed out: it is imperative to objectively study and appraise foreign literature and eliminate the "left" influence of negating and belittling foreign literature. Since its inauguration in 1978, over 400 foreign literary works have been translated and published and over 400 periodicals on foreign literature have come into being. [Beijing XINHUA Domestic Service in Chinese 0321 GMT 28 Dec 80 OW]

FOREIGN LITERATURE PUBLISHED--Shanghai, 16 Dec (XINHUA)--"Selections of Modern Foreign Literary Works" are being successively published in Shanghai. They introduce the representative works of the 10 major schools of modern literature having an international impact since World War II. This is the first time that modern Western literature has been introduced in China. The editor says in the preface that ideologically and artistically, modern Western literature's nature is twofold. In selectively introducing the representative works of modern literature, we intend to understand and recognize them in the first place and then scientifically analyze and appropriately criticize them, pointing out where they are harmful while keeping what is useful for reference. [Text] [OW210635 Beijing XINHUA Domestic Service in Chinese 0345 GMT 16 Dec 80 OW]

FOREIGN LITERATURE TRANSLATIONS--Chengdu, 11 Dec (XINHUA)--China translated and published about 300 foreign literary works in 1980. They included those by Balzac, Dumas, Stendhal, Dickens, Homer and Shakespeare. Some of them were translated by famous translator-writers such as Ba Jin, Bing Xin, Feng Zhi and Zhu Guangqian. [OW180557 Beijing XINHUA Domestic Service in Chinese 0221 GMT 11 Dec 80 OW]

GUANGZHOU ZHOU ENLAI'S WORK--The Guangdong XINHUA Printing House and the Guangzhou Municipal HONGQI Printing House have fulfilled the tasks of printing the first edition of the "Selected Works of Zhou Enlai" in recent months. These two houses received these tasks in early November this year. They were told to print 150,000 copies of the "Selected Works of Zhou Enlai" and have now fulfilled the tasks on time. [Guangzhou Guangdong Provincial Service in Mandarin 1120 GMT 25 Dec 80 HK]

JIANGSU STUDENT MOVEMENT COMMEMORATION--The Jiangsu Provincial CYL Committee and the provincial students association held a discussion meeting on the afternoon of 8 December to mark the 45th anniversary of the "9 December" movement. Responsible persons of CYL committees and students associations of the 22 schools of higher learning in the Nanjing area attended the meeting. (Hua Chengyi), vice chairman of the provincial CPPCC committee and chairman of the provincial scientific and technological commission, and (Wu Wei). secretary of the party committee of Huadong Water Conservancy College, took part in the "9 December" student movement in 1935. [OW111115 Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 8 Dec 80 OW]

JIANGSU RURAL CULTURAL MEETING--The Jiangsu provincial rural mass cultural work meeting was held from 4 to 10 December in Nanjing. As of now the province has built about 100 rural cultural centers. Zhou Weizhi, vice minister of culture, was present and spoke at the meeting. The meeting was attended by over 200 responsible comrades from cultural departments throughout the province and representatives of some advanced cultural stations. The meeting summed up and exchanged rural mass cultural work experience and studied and discussed new problems facing rural mass cultural work during the new period. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 12 Dec 80 OW]

SHANGHAI YOUTH PHYSIQUE--Physique of Shanghai youngsters has generally declined. A survey of college and primary and middle school students among 16 provinces and municipalities shows that the physique of Shanghai youngsters falls far behind other fraternal provinces and cities. The Municipal Physical Culture and Sports Committee, the Health Bureau, the Higher-Learning Education Bureau and the Education Bureau this morning called a meeting to discuss questions of how to improve the health of Shanghai youngsters. The meeting pointed out that Shanghai youngsters are too thin and not strong enough. The meeting urged schools and parents to understand the importance of keeping youngsters in good health and take effective methods to reduce the unnecessary burdens of students in school and provide them with sufficient physical exercise. [OW180339 Shanghai City Service in Mandarin 1130 GMT 10 Dec 80 OW]

SHANGHAI UNIVERSITIES--This year Jiaotong University in Shanghai has sent some 300 faculty members to work in other institutions of higher learning and in various factories and research units. In the meantime, it has received teachers and technicians transferred from other units. To meet the needs of teaching and research, many institutions of higher learning in Shanghai have made cooperative arrangements, including the exchange of faculty members. [Shanghai City Service in Mandarin 2300 GMT 4 Dec 80 OW]

JIANGSU WINTER TRAINING--The experiments of the winter training program have basically come to an end at 28 selected communes in 26 counties. Recently, the propaganda department of the Jiangsu Provincial CCP Committee held a meeting in Nanjing on exchanging experience of experimental winter training. The meeting stressed the importance of education in dialectic materialism and the discussion on practice being the sole criterion for testing truth. It called on the cadres and party members to pay particular attention to studying the documents issued by the CCP Central Committee on perfecting the system of personal responsibility in agricultural production. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 11 Dec 80 OW]

JIANGSU PROTESTANT REPRESENTATIVES' MEETING--The third provincial meeting of representatives of protestants was held in Nanjing from 4 to 11 December. Ninety-eight representatives from all prefectures and municipalities in Jiangsu attended the meeting. Ding Guangxun, chairman of the three self-patriotic movement committee of protestant churches of China and president of the Chinese Protestants' Association, attended and spoke at the closing ceremony. The meeting established the Jiangsu Provincial Protestants' Association and approved the constitution of the association. The meeting also elected the third three self-patriotic movement committee of protestant churches in Jiangsu and the First Jiangsu Provincial Protestants' Association Committee. The meeting noted: The future task of the three self-patriotic movements includes organizing religious personnel, clergymen and protestants to combat infiltration by anti-China forces in churches abroad. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 12 Dec 80 OW]

GANSU LITERACY CLASSES--The Gansu Provincial People's Government issued a circular on 18 November urging leaders at all levels to educate peasants and herdsmen by running literacy and technical classes during this winter and next spring. Emphasis should be placed on general knowledge courses, primary school education and technical skills. Part-time teachers should be quickly trained and properly paid. [SK141238 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 10 Dec 80 SK]

HUBEI YOUTH FORUM--The Hubei Provincial CYL Committee held a forum from 2 to 6 December in Wuchang on the application of scientific methods to youth ideological work. The forum exchanged experiences in youth work and analyzed the present ideological situation of youths. The forum held: more people have now attached importance to the application of scientific methods to youth ideological work. The provincial CYL committee has made an effort to study psychology and sociology in order to approach the youths more easily. The forum proposed promoting ideological education for youths by means of: 1) launching profound education on the party's line, principles and policies; 2) grasping education in communist morality; and 3) launching general education in being a well qualified CYL member. Jiao Dexiu, a member of the provincial CCP committee Standing Committee and director of the provincial propaganda department, attended the forum and spoke. [Wuhan Hubei Provincial Service in Mandarin 1100 GMT 6 Dec 80 HK]

HEILONGJIANG PEASANT EDUCATION WORK--The provincial conference on peasant education work concluded on 15 December. The conference called for efforts to eliminate illiteracy and to organize part-time primary school education courses so that the basic education level of peasants will be at primary school level. It also called for running technical courses for peasants. [Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 15 Dec 80 SK]

JILIN NEW COLLEGES--The Jilin Provincial Government on 4 December approved the establishment of 4 peasant universities and 10 peasant secondary vocational schools. All these schools were originally county-run "7 May" universities. [SK100307 Changchun Jilin Provincial Service in Mandarin 2200 GMT 5 Dec 80 SK]

SHANGHAI POPULATION ASSOCIATION--The Shanghai Municipal Population Association held an inauguration meeting on 2 December. The first board of directors was elected at the meeting. (Wu Beidan) was elected chairman and (Gu Li), (Yang Jufu), (Wang Jianming) and (Zhang Kaiming) were elected chairmen of the board. [Shanghai City Service in Mandarin 2300 GMT 2 Dec 80 OW]

LIAONING LIBRARIES--Liaoning Province has established some 70 commune or small-town cultural centers, and 25,000 brigade and production team cultural rooms this year. In addition, libraries in rural areas have increased to 6,000. [Shenyang Liaoning Provincial Service in Mandarin 2200 GMT 12 Dec 80 SK]

TELEVISION SCANNING SYSTEM--The Shenyang Automation Research Institute and the Beijing television equipment plant succeeded in developing a television scanning and survey system to detect flying objects. The system is of national advanced standard. [Shenyang Liaoning Provincial Service in Mandarin 2200 GMT 12 Dec 80 SK]

BROADCAST TIME READJUSTED--Listeners of radio stations at various localities: the third transmission times of the Kazak-language and Mongolian programs of the Xinjiang People's Broadcasting Station will begin and end 30 minutes earlier beginning Monday, 15 December. Namely, they will begin at 1930 and end at 0050. Some programs in the Mongolian broadcast will accordingly begin 30 minutes earlier. The transmission time of some programs in the third Kazak-language broadcast will also be readjusted. Please pay attention to this station's program previews. [Text] [OW140952 Urumqi Xinjiang Regional Service in Mandarin 1300 GMT 13 Dec 80]

GUANGDONG NEW PERIODICALS--Recently, the Guangdong Provincial CCP Committee Propaganda Department Publications Bureau authorized the Hainan Federation of Art and Literary Workers, the Hainan People's Art Gallery, and the Hainan Li-Miao Nationality Cultural Bureau to run two periodicals. These two periodicals are literary publications which are expected to raise the people's cultural standard. [Haikou Hainan Island Service in Mandarin 0330 GMT 9 Dec 80 HK]

GUANGDONG SCHOOL PRINCIPALS' MEETING--The meeting of Guangdong provincial key middle school principals closed in Guangzhou on 11 December. The meeting proposed that it is necessary to do things according to the regulations on education, improve the quality of education in an all-round way and train more qualified people more quickly for the four modernizations. This meeting was held by the provincial education department and attended by the principals of provincial, prefectural and county key middle schools and education bureau directors of all prefectures and some counties and municipalities, some 160 people altogether. [Guangzhou Guangdong Provincial Service in Mandarin 2345 GMT 11 Dec 80 HK]

'XINHUA' BOOK NEWS--Beijing, January 3 (XINHUA)--The People's Publishing House is to publish two more volumes this year of the "History of the 1911 Revolution." The first volume was published in 1980. The revolution of 1911, led by Dr Sun Yat-sen, overthrew the Qing dynasty. The work covers the development and characteristics of capitalism in China and records the struggles waged by the Chinese people, the sufferings of the minority nationalities and the contributions to the revolution by overseas Chinese. A dictionary of Chinese calligraphy is to be published jointly by the China Guanghua Publishing House and the Hong Kong C. and W. Publishing Company. The dictionary, comprising 47,000 characters collected from 430 volumes of rubbings from stone tablets throughout China, contains the handwriting of 360 noted calligraphers from past dynasties. Apart from explanations of the characters, the dictionary will give the source and date of the characters and the names of calligraphers. About 100 popular science titles have been published in Inner Mongolia in the past two years, of which 40 were in the Mongolian language. These included some works by Mongolian authors. The best-selling books in this field were those on Mongolian medicine. [Text] [OW031208 Beijing XINHUA in English 1200 GMT 3 Jan 81]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

YEAREND ROUNDUP OF INTERNATIONAL EVENTS

OW231800 Beijing XINHUA Domestic Service in Chinese 0716 GMT 22 Dec 80

[Yearend Roundup by XINHUA reporter: "1980--A Year of Changing Events (I)"]

[Text] Beijing, 22 Dec (XINHUA)--The Poland Incident Captures World Attention

The Poland incident, which started in early July, has lasted for more than 5 months. With the danger of Soviet intervention, the incident has captured the attention of the whole world and has become a major event in international politics.

On 1 July, the Polish Government announced the expansion of sales of meat and meat products at negotiated prices, which triggered a workers' strike. More than 30 big and small cities and more than 4,000 plants were affected by the strike, which lasted for over 2 months and was joined by more than 600,000 people. This was the largest and longest strike with the greatest number of strikers since the founding of Poland. The striking workers had the support of peasant, intellectual and religious circles.

The striking workers did not take to the streets, parade nor resort to violent actions. They raised 21 political and economic demands, the most important of which was the establishment of an "independent and self-governing trade union."

The Polish authorities were very discreet and restrained in handling the strike. It was officially declared that the strike was "a large-scale protest by the workers. It does not oppose socialism, but opposes the disruption of socialist principles." It was stressed that "there is no way to settle the conflict other than by political solution."

This strike led to a major reshuffle in the Polish party and government. Gierek, first secretary of the Polish United Workers' Party Central Committee, and Premier Piotr of the government were forced to step down and were replaced by Kania and Pinkowski. In late August and early September, the Polish authorities made an important concession and reached an agreement with the workers to basically satisfy the workers' demands, especially the demand for establishing an independent and self-governing trade union.

This incident showed that the errors in economic construction principles and policies in the past 10 years since Gierek took power had resulted in serious economic difficulties and that the various malpractices in the political and economic systems in the past--lack of democracy, overconcentration of power, bureaucratism and cadres' special privileges--had led to serious political, economic and social crises of the nation. The people demanded that this situation change.

The new Polish party leadership headed by Kania has, since it took over power in September this year, gradually settled scores with the previous leaders for their errors, summed up experiences and lessons over the past 10 years and initially presented a line for reformation, the main substance of which is, reforming the economic system, expanding social democracy, consolidating the party organization, formulating new party rules and restoring the people's faith in the party.

The previous Polish trade union--the Central Council of Trade Unions--has decided to stop its activities. The newly established independent and self-governing "Solidarity" trade union now boasts a membership of 10 million. (Poland has 12 million workers.) To shake off the crises and safeguard social stability, "Solidarity" has repeatedly asked workers not to go on striking and has stressed that "it is time for the people to compromise and be reconciled."

Recently, atmosphere in Poland has relaxed somewhat. No strikes have been reported. However, Poland still faces many difficulties, a pileload of social problems and a serious economic situation. The turmoil in recent months has resulted in new economic losses. Poland cannot effectively and thoroughly extricate itself from the crises within a short period. It will have to make arduous efforts. For some time, however, the dark clouds of foreign intervention have loomed in the sky above Poland. There even exists the threat of an armed intrusion. The Soviet Union has massed large quantities of troops around Poland, blocked the borders, carried out military exercises and made frequent military movements. Meanwhile, it has mobilized its propaganda machine to concentrate its attack on the "antisocialist forces" in Poland. Arbitrarily referred to the process of trade union reform in Poland as "having an antisocialist trend" and quoted by other remarks to threaten that it would not "remain indifferent to the fate of people's Poland."

In the face of the threat of armed intervention, the Polish people have taken a stand of "uniting to safeguard their national sovereignty and survival." The political parties, the government, the church and the "Solidarity" trade union in Poland have appealed one after another for maintaining the stability of the country and for "being responsible to the fate and future of the nation." They have explicitly stated their stand that Poland "has the right to solve its own problems by itself" and opposes any foreign interference. "This is because we are Poles first"--this remark has become the common voice of the Polish authorities, trade unions, church and people of all walks of life. All countries in the world have shown great concern for the situation in Poland, and many of them have warned against interference in Poland and have stated that Polish affairs should be handled by the Polish people themselves.

The Flames of War in the Gulf

In the Middle East 180 was a turbulent year. The Arab-Israeli dispute has continued, and the flames of war have been kindled in a Gulf region that abounds in petroleum. The Soviet Union has seized this opportunity to infiltrate into this strategic area step by step, and the United States has been doing its best to mediate the Arab-Israeli dispute in an effort to secure its position in the Middle East. New contradictions have cropped up among the countries in the Middle East. They have complicated the crisis-ridden situation even more.

A war broke out between Iraq and Iran 3 months ago, and the flames of war have not been extinguished yet. The Iraqi-Iranian war is not accidental, for there are longstanding antagonisms between them. Iraq announced the abrogation of the Iraqi-Iranian boundary agreement on 17 September 1980 and launched an air attack on Iran's 10 airfields and air force bases at the same time on 22 September, thus starting the military clash between the two countries. In this war the focus of which is on the control of the Shatt al-'Arab, both sides have used ground, naval and air forces and various types of modern weapons to concentrate their attacks on each other's military bases, industrial cities and major oil-producing areas. The war has not only caused enormous economic losses to both sides but has provided an opportunity for the two superpowers, especially the Soviet Union, to meddle in this region. This has caused great concern among the Gulf countries, as well as in the whole world.

Since it invaded Afghanistan at the end of last year, the Soviet Union has been pressing on toward the oilfields along the Gulf. Moreover, the crisis in U.S.-Iranian relations resulting from the problem of the American hostages in Iran and the Soviet attempt to exploit this crisis have made the Gulf countries and the Western countries, whose interests are related to those of the Gulf countries, increasingly feel a threat to the security of the oilfields. This has forced them to take a series of measures to safeguard their own interests by stabilizing the situation in the Gulf. The United States has increased its military presence in the Middle East, and Western Europe has strengthened its relations with various Gulf countries. Despite all this, the Soviet Union has been pressing on step by step toward the Gulf oilfields and the United States has continued to suffer setbacks in this region. There is no indication that the Iraqi-Iranian war will end soon.

U.S.-Israeli-Egyptian negotiations on the issue of Palestinian self-government first reached an impasse and then were suspended. In the past year Israel has brazenly announced its annexation of Jerusalem, has strengthened its occupation of Arab territories and has launched one large-scale attack after another on southern Lebanon, thus wrecking the peace talks. U.S. President Carter is partial to Israel. President-elect Reagan has announced a policy which is yet more partial to Israel--this has cast a shadow over a solution to the Middle East issue, especially the Palestine question. The initiative of West European countries in seeking a solution to the Middle East issue is restrained by the United States, and new contradictions have cropped up among some Arab countries in finding new ways to solve this issue. One example is that Syria which had just signed a "Friendship and Cooperation Treaty" with the Soviet Union massed troops along the Jordanian border, causing tension between the two countries for a time.

The 11th Arab Conference of heads of state was held in Amman in November, but the members of the "Rejection Front" as well as Lebanon and five other countries refused to attend. This has reflected new divisions and new associations in the Arab world. In the situation in which the two superpowers have been intensifying their rivalry with each passing day, the question of unity among the Arab states has become an increasingly serious one. The turbulent year of 1980 will soon be over. Looking forward to the next year, the Middle East will be still full of intranquility. The rivalry between the Soviet Union and the United States in this region will be more intensified. The struggle by the people in the Middle East, including the Palestinians, will not cease.

Unyielding Afghanistan

Soviet troops have invaded and occupied Afghanistan for 1 full year. The Soviet aggression has brought a catastrophe to the Afghan nation. In the country with a population of only 16 million, tens of thousands of people have been killed in cold blood, and more than 1 million people have become destitute and homeless and have fled abroad as refugees.

With a glorious tradition of resistance against aggression, the Afghan people who cherish freedom and independence have waged a heroic and tenacious struggle against the Soviet occupation troops. The Soviet Union has used 100,000 troops, aircraft, artillery, tanks and even gas to brutally suppress the Afghan people, but it still cannot wipe out the latter's resistance. When Soviet troops equipped with heavy weapons failed to prevail, they have changed their tactics by bringing in troops trained in antiguerrilla warfare, light weapons and equipment and more light tanks and armed helicopters. They have divided Afghanistan into eight war zones. In each a certain number of "commandos" is deployed.

In addition, the Soviet Union has also instructed the Karmal regime to organize a "security force" and send secret agents into the guerrillas to carry out sabotage activities. In the face of people's war, however, the Soviet Union has fared worse and worse for all its scheming and has not been able to change the situation on the battlefield. On the contrary, the Afghan resistance forces have become stronger and stronger through fighting and their scale of fighting and the range of their operations have continued to expand. Up to now, the Soviet troops have only controlled some cities, bases and the main lines of communication. Even those heavily guarded localities have often been attacked or harassed by guerrillas, not to mention the vast rural and mountainous areas where the guerrillas are very active.

The Afghan guerrillas have been organized on the basis of their religion and tribes. The guerrillas, with a broad mass base, have resistance against Soviet aggression as their common objective. Afghanistan is multinational Muslim country, and each nationality consists of a number of tribes. Almost every tribesman has a gun with which he or she defends himself or herself and goes hunting. A tribe is virtually an armed group. Since Soviet troops invaded Afghanistan, those tribes have risen in resistance against Soviet aggression. Officers and men of the Karmal regime have also defected to the guerrillas one after another. The activities of the guerrillas have extended to nearly all the 28 provinces of the country. They have coordinated with one another and have fought side by side, gradually strengthening their unity in the struggle.

In the past year Afghan Muslim guerrillas, taking advantage of favorable terrains and adopting flexible tactics, have frustrated Soviet troops' attacks and mopping-up operations one after another, have continuously raided their airfields and bases and have destroyed highways and bridges, thus wiping out a part of the enemy's strength and capturing large quantities of enemy weapons and supplies. According to statistics, Soviet troops have suffered more than 10,000 casualties.

the Karmal regime, even with the backing of Soviet bayonets, is very weak. All the departments of the regime are under the direct control of "Soviet advisers," and even Karmal himself is guarded by Soviet troops. There are numerous contradictions within the regime. The Parcham faction headed by Karmal excludes and hits at the Khalq party of former Prime Minister Taraki and Amin, which used to have greater strength in the government and the armed forces. The struggle between the two factions has often turned into bloody clashes. In their war against the guerrillas, Soviet troops have forced the government army to fight in the van. Unwilling to die for the Soviet Union or to slaughter their own compatriots, officers and men of the government army have revolted and crossed over or have deserted one after another. As a result, the government army has declined to 30,000 or 40,000.

By occupying Afghanistan and supporting the tottering puppet regime, the Soviet Union must spend several million U.S. dollars a day. The Soviet Union is bogged down in a protracted war of attrition in Afghanistan. The struggle by the Afghan people has thrown the Soviet Union's strategic plan into confusion. Thus, the Soviet Union has suffered setbacks in its attempt to advance south toward the Indian Ocean and the Gulf region, and the Afghan people have made contributions to the international struggle against hegemonism.

The Afghan people's struggle has won wide sympathy and support in the world. The United States and some Western countries have taken economic and trade sanctions against the Soviet Union. They also boycotted the summer olympic games in Moscow. The meetings by foreign ministers held in January and May of this year by the 43-member Organization of Islamic Countries' Conference adopted two resolutions supporting the Afghan people's struggle and calling for the immediate and unconditional withdrawal of all Soviet troops from Afghanistan. This year's UN General Assembly, with the majority of 111 votes, once again adopted a resolution calling for the immediate withdrawal of Soviet troops from Afghanistan. The Soviet Union is now isolated diplomatically.

The Soviet Union has fallen into the mire in Afghanistan, but it still has no intention of giving up. During his recent visit to India, Brezhnev once again said that the Soviet Union was not planning to withdraw its troops from Afghanistan. The Afghan people will certainly continue to wage their struggle against aggression ever more tenaciously in the coming year. With the support of the people of various countries, they are bound to win the final victory of the struggle against aggression.

A Year During Which Vietnam Has Been Beset With Difficulties Both at Home and Abroad

In 1980 the Kampuchean people made important progress in their persistent struggle against Vietnamese aggression. The Lao people have also taken up arms to resist the Vietnamese aggressors. As a result of its aggression and expansion, Vietnam has been beset with difficulties both at home and abroad and has found the going tougher and tougher. At the beginning of the 1979-1980 dry season, a large number of Vietnamese aggressor troops in Kampuchea were massed to launch large-scale "mopping-up" operations in an attempt to wipe out Democratic Kampuchea's resistance forces at one stroke. At that time, some people in the world worried lest Democratic Kampuchea's armed forces would not be able to withstand the Vietnamese offensive and to hold on. The facts over the past year have proved that the Kampuchean national army and guerrillas have gone through another rigorous test and that they have not only withheld the Vietnamese offensives but have grown in strength.

While leading the guerrilla war against Vietnamese aggression, the government of Democratic Kampuchea has also taken a series of measures to correct its past erroneous policies, has set forth the political program of the patriotic and democratic front of the great national union and has reorganized the government. These measures have received support from people of all walks of life and strengthened national unity with the objective of making concerted efforts to resist Vietnamese aggression. These measures have also received international support.

What Vietnam now faces in Kampuchea is increasingly strong resistance forces. The main force of the Kampuchean national army and guerrillas has expanded to 50,000 to 60,000, whose fighting capacity has continually increased. They have not only wiped out platoons and companies of Vietnamese troops on the march, but attacked and occupied one stronghold after another guarded by platoons or companies of Vietnamese troops since the beginning of the 1980-1981 dry season. Guerrilla activities have now spread throughout Kampuchea, and guerrillas in the southwestern, northwestern, northern, central and northeastern areas have gradually linked up. Guerrillas have also launched surprise attacks on enemy troops in Phnom Penh, Kompong Chan and other cities.

By invading Kampuchea and occupying Laos, Vietnam has set up the "Indochina Federation" without hanging out its shingle in an attempt to dominate Southeast Asia. However, prospects for its hegemonistic cause are not so bright. It has already bogged down in a protracted war in Kampuchea, and its 200,000-odd aggressor troops have fallen into a mire. Even Laos, which is occupied by 50,000 Vietnamese troops, is not a paradise where the Vietnamese hegemonists can do as they please. Since early this year, the Lao people's struggle against Vietnamese occupation and the Lao authorities, which have further thrown themselves into the laps of the Soviet Union and Vietnam, has made tremendous progress. Guerrillas fighting against the Vietnamese aggressors are very active in various areas from upper to lower Laos. The anti-Vietnamese armed forces of various groups are gradually strengthening their unity. This is an inevitable trend in which the Lao people are safeguarding their national independence and opposing colonial rule.

As a result of its wantonly carrying out military aggression and expansion, the Vietnamese authorities have been beset by unprecedented difficulties both at home and abroad. In its war of aggression, Vietnam has been expending large amounts of its limited manpower, material and financial resources. As a result, the Vietnamese economy, which had already been riddled with gaping wounds, has been facing a yet worse crisis. Vietnam's military spending for 1979 accounted for 47 percent of its total expenditure. The 5-year plan for post-war economic recovery has failed. Vietnam originally planned to have its grain output reach 20 million tons. But in recent years, it has remained at 12 or 13 million tons a year. Its industrial production has remained stagnant or even dropped. In Vietnam, all business has languished, commodities are in very short supply, the market is slack and prices are soaring. The broad masses of people are suffering tremendously. Cases in which people rise to oppose the war of aggression abroad and the oppression and exploitation of the people at home have occurred frequently.

Vietnam's policy of aggression and war has not only aggravated its political and economic crises at home but has made itself notorious and extremely isolated in the world. This year the UN General Assembly, with the overwhelming majority of 97 to 23, once again adopted a resolution calling for the immediate and unconditional withdrawal of all Vietnamese troops from Kampuchea. This is effective proof. (To be continued).

UN PRESIDENT ASSESSES CURRENT SESSION

OW180712 Beijing XINHUA in English 0704 GMT 18 Dec 80

[Text] United Nations, 18 Dec (XINHUA)--The UN General Assembly "has significantly proven the fact that the United Nations has become a mirror of the harsh realities of our world today, reflecting obvious political, economic, national and ideological differences," said Rudiger Von Wechmar, president of the current session of the UN General Assembly, at a press conference here today.

Sizing up the current session which suspended yesterday, he said "in many important fields, this assembly has given proof that it was able to come to grips with problems that at the outset may have seemed insurmountable. In trying to solve these problems, a greater degree of consensus was reached than expected."

"Certain recent developments in different parts of the world including the war between Iran and Iraq, the situation in Afghanistan and in Southeast Asia gave rise to our concern," he noted.

He said "the question of the Middle East ranks among those that continue to carry a potential threat to international peace and security. Renewed efforts are still to be made in order to bring about a just and equitable solution to this problem."

On the question of Namibia, he said "the decision of the General Assembly to postpone the debate on Namibia hopefully has contributed substantially towards an independent, sovereign Namibia through free elections supervised by the United Nations," he held.

Turning to global negotiations on international economic cooperation for development, he said that he was not in a position to offer a final text on procedures and agenda. But he hoped that "it will be possible to bring about a solution to the remaining questions."

OAU SECRETARY GENERAL REVIEWS 1980

OW011627 Beijing XINHUA in English 1617 GMT 1 Jan 81

[Text] Beijing, 1 Jan (XINHUA)--Edem Kodjo, secretary general of the Organization of African Unity (O.A.U.), expressed his deepest conviction that Africa would succeed in attaining its development objectives for the decade of the 1980s, according to a report from Addis Ababa.

Kodjo made the statement in a New Year message issued on 30 December 1980, by the secretariat of the O.A.U.

The secretary general noted that the target of setting up an African economic community by the year 2,000 as prescribed by the Lagos summit is an exercise that calls for a better organisation of Africa's regional spaces.

On the year's achievement, he cited the "resounding rebirth of Zimbabwe" which, he said, came as an irrefutable proof that the decolonisation policy is bearing its fruits. In this regard, he stated that Namibia and South Africa are where this same objective should be achieved.

Reviewing the situation in the past year, he expressed concern about the fratricidal fighting in Chad which imposed useless sacrifices on the people of Chad and their neighbors, and noted that in South Africa and Namibia, the racist Pretoria government still turns a deaf ear and is consolidating its inhuman regime of terror.

He hailed the initiatives of the African oil producing countries that have decided to earmark five percent of their production for Africa on account of its difficulties in supplies.

HUSAYN ON PALESTINIANS, CAMP DAVID

OW201942 Beijing XINHUA in English 1926 GMT 20 Dec 80

[Text] Damascus, 20 Dec (XINHUA)--King Husayn of Jordan has declared that Jordan is "of the Arabs and for the Arabs," and that its destiny and its honour lie in waging "all the battles of the Arabs nation in defence of its character," according to a report from THE JORDAN TIMES today.

In an interview with the Paris-based Arabic magazine "AL-WATAN AL-'ARABI," Husayn said Jordan is "for Palestine and its people" and for the "central cause" of the Arabs, namely the Palestinian cause. Jordan would maintain this position until the Palestinian people regained their rights, the king affirmed.

Asked whether a date had been fixed for his meeting with U.S. President-elect Ronald Reagan and whether at that meeting he would speak on behalf of a group of Arab officials, King Husayn replied: "The only thing that has happened is that President-elect Reagan has expressed his desire to meet with me soon after he assumes office as president of the United States. Naturally, I welcomed this. But no date has been fixed for this meeting. And we have not discussed with the new U.S. administration any political questions or anything else, but if I go to the United States, I will speak about my country and on bilateral relations. As I have always done, I will defend the position of my nation, its causes and rights as much as I can."

The king added: "In my opinion, the Camp David process is finished after failing to achieve anything in the way of establishing a just and durable peace in this part of the world. Continuation of the attempts to revive Camp David can lead to absolutely no positive results."

Asked if he envisaged a particular way to resolve the Middle East crisis, the king said: "There is no specific visualisation. However, my position has been constant and clear since the beginning: namely that the Palestinians should exercise their right in formulating a just and durable peace in this area through their sole, legitimate representative--the Palestine Liberation Organization (PLO). Furthermore, the Palestinian people should exercise their full rights on their national soil, and choose what they want in an atmosphere of freedom after the elimination of the occupation. These are the bases upon which peace in this part of the world can be built. And I cannot find any other alternative."

"We believe that the Palestinians should be the basic and major element in any solution of the Palestinian issue. We will help them and cooperate with them. This is a duty but we will not replace them," he added.

FOREIGN OFFICIALS' COMMENTS ON USSR'S GULF PROPOSAL

Omani Paper Scores Proposal

OW191328 Beijing XINHUA in English 1312 GMT 19 Dec 80

[Text] Beijing, 18 Dec (XINHUA)--"It is hard to see the Brezhnev declaration as anything else than window-dressing designed to deflect criticism from the invasion of Afghanistan and the genocidal campaign now being waged there by the Soviet forces and those remaining in the Karmal puppet government," says "TIMES OF OMAN" in an editorial today.

The editorial, commenting on Brezhnev's Gulf security proposal put forward last week, points out, "Brezhnev has made similar proposals before, and has signed treaties promising to bring them into effect... If he is honest in his claim that the USSR has no ambitions whatever in the region round the Gulf, let him back it by a unilateral removal of all Soviet forces from the region."

It goes on to say, "The greatest threat to the Gulf states is the huge Soviet base in South Yemen....Next comes the Soviet force presently occupying Afghanistan, which could be rapidly reinforced and which is even now a grave threat to the stability of Iran and Pakistan. Even the Soviet bases in Caucasia are within very brief flying time of the Gulf."

The editorial notes, "All who live in the Gulf well know that the Soviet Union has made considerable progress in the encirclement of the Gulf region and now threatens, unless checked, to complete the operation within the foreseeable future."

It considers, "What the people of the Gulf would like to experience, rather than mere words, would be a Soviet withdrawal from Afghanistan and South Yemen and the complete dismantling of the bases in Socotra and near Aden."

"The states of the Gulf would be wise to continue their efforts to strengthen their own defences, and to reinforce the ties which bind them in cooperation for self-preservation," it concludes.

Muskie, FRG, French Comments

OW121700 Beijing XINHUA in English 1650 GMT 12 Dec 80

[Text] Beijing, 12 Dec (XINHUA)--U.S. Secretary of State Edmund Muskie Thursday rejected Brezhnev's proposal on peace in the Persian Gulf area, according to Western press reports. Now in Brussels to attend the NATO foreign ministers and defence ministers meetings, Muskie described the proposal put forward by Brezhnev in New Delhi as "a fox in the chicken coop proposal."

"What he is saying to us in effect," Muskie said, "is now if you people will just leave the Gulf, forget your bases, eliminate your navies, and just leave the Gulf in our hands, we'll protect your security interests."

West German Foreign Minister Hans-Dietrich Genscher said in an interview with Deutschlandfunk yesterday that the Soviet Union should get out of Afghanistan before making peace suggestions for the Gulf.

"Anyone who wants to make suggestions for this region to guarantee security must surely first end the occupation of Afghanistan," he said.

He added that the Soviet presence in Afghanistan did not fit into the picture of a regional settlement based on self-determination for all countries, and without self-determination there could be no solid peace.

Alois Ertes, foreign affairs spokesman of West Germany's opposition Christian Democrat parliamentary group, pointed out that Brezhnev's proposal is "old hat" aimed to deflect attention from the "war in Afghanistan" and from threats to the Gulf region by the Soviet Union itself, and to block access of the U.S. and its allies to the sea.

French Foreign Minister Jean Francois-Poncet told reporters in Brussels yesterday that the proposal was "not new." Afghanistan was in the Gulf region too, so "the two things (Western bases near the Gulf and Soviet troops in Afghanistan) cannot be considered separately," he said.

IRAN SUBMITS FINAL REPLY TO U.S. 18 DECEMBER

OW192016 Beijing XINHUA in English 1920 GMT 19 Dec 80

[Text] Tehran, 19 Dec (XINHUA)--The Iranian Government submitted its final reply to the current U.S. proposition on the hostages' issue to the U.S. administration via the Algerian special envoy here yesterday, the PARS News Agency reported today.

The news agency quoted Behzad Nabavi, Iranian minister of state in charge of executive affairs as saying that the U.S. was asked to correlate its statements with one of the Iranian conditions regarding non-interference in the internal affairs of Iran.

In connection with the other three conditions of Iran the proposed undertakings of the U.S. Government had been recognised as generally acceptable, he added.

However, from the point of view of the Iranian Government, written promises with the signature of the U.S. president is not sufficient, the minister stressed, and adding, "It is required of the U.S. Government by the current proposition to deposit the frozen assets and gold of Iran in the Central Bank of Algeria in addition to signing the document."

"The endeavors and transfer of the assets to the Algerian Government must be prior to the release of the 52 hostages by the Iranian nation," the reply said.

As to other properties and assets of the government of Iran and those plundered by the ex-shah and his relatives, acceptable assurances must be given to the Algerian Government regarding the fulfillment of the undertakings.

CLASH BETWEEN IRANIAN GROUPS REPORTED

OW251847 Beijing XINHUA in English 1837 GMT 25 Dec 80

[Text] Tehran, 25 Dec (XINHUA)--A clash occurred here yesterday between followers of "Mojahedeen" and "an offensive group," causing one person dead and several others wounded, PARS News Agency reported today.

The violent conflict happened at 11 o'clock yesterday morning when the offensive group attacked one of the offices of the "Mojahedeen."

The revolutionary guards hurried to the scene and tried to separate the conflicting sides by shooting into the air.

Iranian leader Khomeyni, referring to the incident, condemned here today the "deviated groups" for "serving the United States and the Soviet Union."

Mahdavi-Kani, minister of the interior, denied the involvement of the revolutionary guards and the revolutionary committee in the clash. He said to the state radio's reporter this noon that it is the enemies who instigated the people to clash.

He added that it is up to the government to solve the problem. He asked the people to coordinate and make frequent contacts with the authorities.

POLAND'S LECH WALESA HOLDS PRESS CONFERENCE

OW180800 Beijing XINHUA in English 0714 GMT 18 Dec 80

[Text] Warsaw, 17 Dec (XINHUA)--Lech Walesa, chairman of the National Consultative Committee of the "Solidarity" independent trade unions, did not rule out the possibility of Soviet intervention in Poland, at a press conference today in the Polish port city of Gdansk.

Asked if he thought that the possibility of Soviet intervention no longer existed, Walesa said, "No, how can I know, just as I wouldn't know whether I am going to fall down before I go out of the door. If somebody wants to have a go, let him do it." He said that "Solidarity" did not pose any threat to anybody, adding, "We are in favour of socialism." He followed this up with the comment, "I do not worry about outside intervention, because I'm not afraid of anything."

Asked about his union's attitude towards the dissidents, he said, "We are trade unions and cannot be too politicized. We are opposed to those who seek for other goals by making use of the trade unions. But we cannot allow any groundless and unreasonable arrests."

He then went on to say that Jacek Kuron (head of the social self-defence committee) was an adviser to the trade unions, but was doing much more than the trade unions had asked him to do. Walesa then said, "We should protect him when he is working for us and we cannot do so when he is doing something private."

Asked about the attitude of "Solidarity" towards the "Solidarity" Farmers' Union, he stated that the new independent T.U. Organisation fully supported the farmers' demand for the establishment of a union, and hoped that its registration would be approved.

Referring to the relations of "Solidarity" with other trade unions, Walesa said that the other trade unions had only 10 percent of the total number of workers and employees whereas "Solidarity" has 85 percent. He said, "We will not contact them for the time being. We do not want to quarrel with them. In principle, we should have talks with all the unions, no matter how big their membership, as long as they are serving the workers. The pre-condition is that we must clearly know their stand."

Walesa declared that "Solidarity's" tasks for next year are to organize trade unions and for each factory to work out its own programme of action.

About the accessibility of the "Solidarity" to the mass media, the union leader said that within a month, "Solidarity" will produce its own nation-wide weekly newspaper, each big district will have its own printing-house for the publication of small newspapers, and the radio and television will run weekly trade union programmes.

PZPR'S KANIA REVIEWS SITUATION IN POLAND

OW311746 Beijing XINHUA in English 1646 GMT 31 Dec 80

[Text] Warsaw, 30 Dec (XINHUA)--Stanislaw Kania, first secretary of the Central Committee of the Polish United Workers' Party [PZPR], said today that "1980 is a difficult and disturbing year which has given much food for deep thought." He expected that 1981 would be a year when "the factors contributing to our national security and independence would grow stronger."

Kania made these remarks at the "Paris Commune" shipyard in the harbour city of Gdynia.

He inspected cities of Gdansk and Gdynia and laid a wreath at the newly-unveiled monument to shipyard workers killed in the 1970 strikes. Visiting the "Paris Commune" shipyard Kania met party's activists there.

The first secretary of the Party Central Committee told the ship-builders that the situation in Poland was still complicated and difficult. "In 1980" he said, "national income has fallen for the second year running and we should be prepared for a similar trend next year too." In order to maintain the people's present living standard, the government will cut investments drastically."

Kania declared that renovation in domestic politics and social life will continue. "The Seventh Plenary Session of the Central Committee of the Party warned that there was a danger threatening the socialist renovation. This warning is still now of practical importance."

Dealing with the matters of trade unions, Kania said that the trade union "solidarity," as an organization, was a link of the chains of socialist democracy. The Polish authorities "unequivocally affirm its constructive attitude towards the trade unions and will seriously heed their voices."

He stressed that one should not forget the December incident in 1970. "Every effort should be made to see that no conflict between the authorities and the society will crop up and that no conflict should be solved by resorting to force," he added.

On the international situation, Kania said: "With every aggravation of the situation, the inner weakness of Poland will weaken the community," and "the socialist community constitutes the guarantee of the security of the Polish nation." Meanwhile, he continued, "Poland is interested in expanding its ties with other countries."

CALMER SITUATION IN POLAND VIEWED

OW191342 Beijing XINHUA in English 1321 GMT 19 Dec 80

["Round Up--Situation in Poland Calms Down"--XINHUA headline]

[Text] Warsaw, 19 Dec (XINHUA correspondent)--The situation in Poland as a whole has relaxed with no more strikes taking place throughout the country, production in some areas returning to normal and the people pledging to remain united, in trying to overcome the crises.

Since early last September, the new Polish leadership headed by Stanislaw Kania had begun to rectify errors committed by the former party leadership led by Edward Gierek and sum up the experiences and lessons of the past decade. It put forth a line of "socialist renovation" designed to overcome the political, economic and social crises. The new line has won support from party members and those outside the party who embrace the move to correct errors and carry out renovation in society and the economy.

To push through the line of renovation, the party and government set up an economic reform committee, strengthened the supervision of the National Assembly and the Supreme Control Committee over the government, improved relations between the United Workers' Party on the one hand and the democratic parties and the church on the other; relieved corrupt leading cadres of their posts; restored democratic centralism; fixed an 8-year term for state leaders, reorganised the trade unions and increased the role of workers, peasants, youth and women organizations. All these measures have been favourably received by the public.

To tide over the economic difficulties at an early date, the Central Committee of the United Workers' Party on 3 December appealed to the people for higher production and stability. Workers building the "Berhatof" power station, the largest in Poland, urged fellow workers to unite and respond to the party's call with concrete actions. The Organization of Farm Producers also pledged to produce more grains and meat for the state.

The United Workers' Party, the United Peasants' Party and the Democratic Party in a joint declaration called on all patriotic forces and the entire Polish people to form a broad action front. The government and the Catholid episcopate on 8 December called upon the entire Polish people to unite for the survival of the sovereign nation. Addressing the Congress of the United Peasants' Party on

13 December, leaders of the National Assembly, the United Workers' Party and the United Peasants' Party all reiterated that the Poles were able to solve their problems by themselves.

The independent and self-governing "Solidarity" trade union also urged the workers time and again not to hold strikes. Lech Walesa, leader of the trade union, said at a meeting that the time has come "for the people to compromise and reconcile." He said, "All those who are sincerely concerned about the country's interests and the socialist ideal, no matter whether he is a party member or not, atheist or theist, have something to do," "after all, we are Poles."

POLISH UNITED PEASANTS' PARTY CONGRESS CONCLUDES

OW161352 Beijing XINHUA in English 1302 GMT 16 Dec 80

[Text] Warsaw, 15 Dec (XINHUA)--The Eighth Congress of the Polish United Peasants' Party was held here from 13 to 15 December.

In a report delivered to the congress, Stanislaw Gucwa, chairman of the Supreme Committee of the United Peasants' Party, pointed out that "to safeguard Poland's sovereignty and defence should always be regarded as our supreme task." "It is impermissible for any outsider to intervene in our country or interfere in our internal affairs. This includes supplying false information about the situation in Poland and carrying out political manoeuvres by taking advantage of our present difficulties. The Polish problems can only be solved by the Polish people themselves," he added.

He listed two major tasks in coping with the current difficulties: first, to normalize the work and life in the country and on this basis to seek social and political stability in order to promote the smooth progress of socialist renovation; second, to work out a concrete and reliable programme to tide over the crisis.

A resolution adopted at the conclusion of the congress said: "The United Peasants' Party recognizes the leading role of the working class and the Marxist-Leninist party in Polish state and society." It pledged "to work together with them and other forces supporting socialism for the strengthening of the socialist system and the unity among various social forces."

Attending the congress were Stanislaw Kania, first secretary of the Polish United Workers' Party; Tadeusz Witold Mlynczak, chairman of the Democratic Party; Henryk Jablonski, president of the Council of State, and Jozef Pinkowski, chairman of the Council of Ministers.

Stanislaw Gucwa was reelected chairman of the Supreme Committee of the United Peasants' Party.

GREECE TO BECOME FULL MEMBER OF EEC

OW011521 Beijing XINHUA in English 1503 GMT 1 Jan 81

[Text] Athens, 31 Dec (XINHUA)--Greece becomes the 10th full member state of the European Community tomorrow.

Greek President Konstandinos Karamanlis in a recent interview with La Societe Nationale de Television Francaise 1 said that the decision of Greece to join the EEC was made with a "United Europe" as the point of departure and it was an important decision politically and economically. He added that a Europe united will consolidate its security and independence and enable it to deal effectively with the various emergencies it faces. He pointed out: "If Europe has failed to promote its own unity it will be subjugated by the existing superpowers and power groups." The aggressive superpower hegemonism in the past 20 years has compelled Greece to consider seriously as to how certain historical events can be prevented from repeating themselves. It is both the historical lessons and the harsh reality today that have induced Greece's decision to accede to the EEC.

Economically Greece is the weakest of the EEC countries, with its per capita national income standing at 4,197 U.S. dollars in 1979, which is less than one half of that of West Germany and 60 percent of the EEC average. In joining the EEC, Greece is counting on the help of community funds to quicken its own economic development and on a protected international market for its relatively under-developed industry and agriculture. Greece's trade volume with the other nine EEC countries totalled 4,300 million U.S. dollars in 1979, accounting for 42 percent of its foreign trade total. But for the existence of some restrictions, Greece incurred an unfavorable trade balance of 2,700 million U.S. dollars with these countries. Greece's entry into the EEC means the removal of these restrictions and the granting of price subsidies to its farm products.

Greece also has to pay for its entry into the EEC. It should contribute 270 million European counting units (equivalent to 350 million U.S. dollars) to the community budget in the first year. The exemption of tariff among the member countries, while undoubtedly benefiting export of Greece, can also open the flood gate to products from other member countries. While receiving subsidies for its farm products, Greece is asked to reduce correspondingly the output of some of its farm products and to raise their prices to the required level. This will lead to price rises in Greece.

GREEK FOREIGN MINISTER ON RELATIONS WITH TURKEY

OW301306 Beijing XINHUA in English 1254 GMT 30 Dec 80

[Text] Ankara, 30 Dec (XINHUA)--Greek Foreign Minister Konstandinos Mitsotakis in an exclusive interview to the Turkish daily MILLIYET, published in Istanbul yesterday, said: "The development in the region and in the world are forcing our two countries to speed up their efforts for a reconciliation and bring about cooperation which is needed among (NATO) allies."

"Turkey and Greece should put aside the incidents of the past which caused frictions between the two countries and strive for long-term policies," he said.

"The Greek side believes that Turkey is ready for meaningful dialogue for better relations," he added.

"The western allies are pleased to see positive developments between Ankara and Athens," he said.

On the Cyprus problem, Mitsotakis said, "both Turkey and Greece can aid the two communities of Cyprus in achieving mutual understanding. I believe that they will be able to resolve their differences in the near future. The Cyprus problem is the great wall between Turkey and Greece. If this problem is solved, the two countries can enjoy better relations."

For long years Turkey and Greece have had disputes over the sea and air control in the Aegean Sea. Since the Cyprus dispute in 1974, the relations between the two countries have further deteriorated.

ITALY'S FORLANI ON ECONOMY, OTHER ISSUES

OW280716 Beijing XINHUA in English 0705 GMT 28 Dec 80

[Text] Rome, 27 Dec (XINHUA)--Italy is suffering from a mounting inflation and there are more and more signs that the economic situation in the country is in recession.

Italian Prime Minister Arnaldo Forlani intimated at a year-end news conference held by the Italian Journalists' Association here today.

"The economic situation in all parts of the world does not fair well. Many countries we export our products to are practising an austerity policy to cut back expenditures in an effort to maintain a balance of payments," Forlani said.

He continued, "Rising oil prices have added to the burden of countries like ours depending almost entirely on imported oil as the only energy source: runaway inflation results and economic recession worsens."

"This year, we have spent a staggering sum of money on oil and the figure for next year is expected to reach 21,000 billion liras. Deficits totalling 9,000 billion liras were incurred in our national expenditure this year," he said.

To cope with the crisis, maintain employment and curb inflation in order not to lag behind other industrialized countries, the prime minister pointed out: "We have to boost production and cut back consumption so as to raise the competitive power of our products on the international market. At the same time, we also have to curb spending at home in order to reduce imports, especially that of consumer goods."

Asked how Italy takes Greece's participation in the European Community, Forlani said, "Italy is behind Greece's entry into the EEC," in spite of the unfavourable effects on the country's business and trade. "Political significance comes first in our consideration," he noted.

In answer to a question about Italy's attitude towards Poland, he said that his country "is worried and is ready to offer aid if Poland so requests. He urged noninterference, whether direct or indirect, in Poland so as not to suppress the free expression of the Polish people."

ROMANIA'S CEAUSESCU ADDRESSES FOREIGN DIPLOMATS

OW310750 Beijing XINHUA in English 0722 GMT 31 Dec 80

[Text] Bucharest, 30 Dec (XINHUA)--Nicolae Ceausescu, president of the Socialist Republic of Romania, received diplomatic envoys of various countries and representatives of a number of international organizations here today.

Present also were Elena Ceausescu, Ilie Verdet and other Romanian leaders.

N. Ceausescu spoke after a speech by Soviet Ambassador V. I. Drozdenko, chief of the Diplomatic Corps.

The president said that the ten years that have passed were ten years of labour and struggle. The country has achieved many successes and, at the same time, met many difficulties and made many mistakes. "We had to pass through roads still unknown to us. But we should say that the policies of the Romanian Communist Party have proved to be completely correct," he said.

He pointed out that the summaries [as received] they are making have a positive effect. The Romanian party and state leadership will try their best to ensure the fulfillment of the new plan for 1981, thus building a solid foundation for the new five-year plan and raising the material and spiritual welfare of the people to a new height.

Referring to the country's foreign policy and international situation, he said that his country hopes to have the broadest possible cooperation with all countries and will pay special attention to the relations with neighbouring countries in the Balkan and in Europe. His country will work for extensive cooperation with these countries with a view to realizing security and cooperation in the continent.

He noted that there are too many conflicts in the world today. He hoped that all these conflicts would be settled through negotiation. "We will contribute to the realization of this goal together with all peace- and cooperation-loving countries."

He pointed out that it is a regret that in the past ten years the gap between rich and poor countries, between developed and developing countries has widened. That is why the developing countries are expecting that certain progress would be made in solving the problem of under-development and in establishing a new international economic order in 1981 or the coming decade.

The president said that in fact, a special feature of 1980 was that the world economic crisis had deteriorated. He said, "we should point out frankly that the economic crisis beginning from developed capitalist countries has much stronger repercussions in the developing countries and has made their economic situation much worse. This crisis has also affected in one way or another the socialist countries. So it is actually becoming a crisis affecting all countries, thus bringing great deterioration to international relations."

"Therefore," he said, "we hope that measures would be taken to solve the crisis through cooperation based on the principles of equality and mutual benefit. Do not shift all the difficulties onto the poor countries. The rich should have a share. The crisis should be shaken off through close cooperation between all countries, and economic activities should be restored through settling the problems related to disarmament and the new international economic order."

YUGOSLAV PRESIDENCY ISSUES MESSAGE TO NATION

OW310728 Beijing XINHUA in English 0717 GMT 31 Dec 80

[Text] Belgrade, 30 Dec (XINHUA)--The outgoing year shows that the Yugoslav people have the capability and confidence to further consolidate socialist, self-managed and non-aligned Yugoslavia--the cause of Josip Broz Tito.

This is stated in a New Year message issued here this evening by the Federal Presidency of Yugoslavia.

Reviewing the international situation in 1980, the message says, "the world is confronted with endless unrest and conflicts, and the outgoing year has brought no tranquillity to the people. The international situation has markedly deteriorated and the threat to world peace kept growing. What is heartening, however, is the mounting resistance to the main causes leading to such a situation--inter-bloc rivalry, policy of strength, pressures, interference in the internal affairs of others, and all sorts of menaces to the sovereignty, freedom and independence of the peoples."

Turning to the situation at home, the message says, "in spite of the complex and grave economic problems in the past year, initial, remarkable results have been achieved in the policy to bring about economic stability. The working class and all laboring people firmly believe that this policy is the only way to tide over the existing difficulties. The coming year will not be an easy one and the whole world is greeting a new year with unstable economies and growing burdens. Our tasks ahead is to remove firmly and in an organized manner the basic causes of the economic instable economy and strive to curb price rises and deficits, thereby creating conditions for improving living standards on the basis of higher productivity and efficient management.

HOXHA LETTER ON CHINESE REVISIONISM PUBLISHED

AU041521 Tirana ATA in English 0900 GMT 4 Dec 80

["There Is No Communist Party in China, But Clans and Factions Striving for Power"--ATA headline]

[Text] Tirana, 4 Dec (ATA)--Under the above title the newspaper ZERI I POPULLIT publishes today excerpts from a letter that Comrade Enver Hoxha has sent to Comrade Hysni Kapo on 30 July 1978. It analyzes the policy of the Chinese leadership and many of the events that had occurred in China at that time. It makes clear the true political and ideological motives lurking behind the farce of the trial which is taking place in Beijing against the so-called "gang of the four." The trial of the so-called gang of the four and of the group of the top military leaders of the period of the cultural revolution is going on in Beijing according to the scenario composed long since. The newspapers of the Chinese capital as well as the XINHUA Agency publish every day a judicial correspondence, which reiterate the same accuses of the attorney, the same admissions of the witnesses, the same few and rare words of the accused who reject the accuses. It is precisely a Chinese comedy with terrible dragons and wise monkeys, with old illegible hieroglyphs and ancient undecipherable symbols. It is spoken of assassination of people, economic damage and destruction of property, of confusion and anarchy. But which has been the political line on behalf of which these things have occurred, who has elaborated it, who has launched and led the cultural revolution, who has led the "gang of the four," Lin Biao and Cheng Boda, who overthrew Deng Xiaoping and brought him again to power, who brought Hua Guofeng to power? Whom have the latter acted against, which was their line? The Beijing trial has not been organised to give explanations. It does not conform to the rules of logic and reason because it does not want to convince any one. It wants only to take revenge and settle accounts. Such acts need no facts and argumentations, witnesses and assertions. Therefore, it fully resembles a tragic farce which although was very carefully prepared cannot conceal the old struggle between the various Maoist groups for power and privileges, to dominate China each for its own account and according to its own desire.

The ZERI I POPULLIT board was composing an article devoted to the Beijing trial, when it got acquainted with a letter of Comrade Enver Hoxha addressed to Comrade Hysni Kapo on 30 July 1978. Comrade Enver Hoxha handed over this letter to the museum of Terbac on the occasion of its inauguration. It was a reply of a letter Comrade Hysni Kapo had sent to the Political Bureau of the Central Committee of the party and Comrade Enver Hoxha through which he condemned the anti-Marxist and

and anti-Albanian activity of the Chinese leadership and was in full solidarity with the correct stands of our party and government. At this time Comrade Hysni Kapo, being still sick after an infarct he had suffered from could not have attended the meeting of the Central Committee, where there was approved the rebuff of the Albanian Party and government to the Central Committee of the Communist Party and Chinese Government, on the cutting off credits and all economic relations with the PSR of Albania by China, and which was published in our press on 29 July 1978.

Follow some extracts from the letter of Comrade Enver Hoxha which has not been published so far. It analyses the policy of the Chinese leadership and many of the events which had occured in China. It clarifies very well even the true political and ideological motives which lurk behind the farce of the trial being held in Beijing now.

Dear Comrade Hysni,

The Chinese received the deserved rebuff. Our party and its leadership acted correctly on the Marxist-Leninist road. They exposed through facts another major enemy, Chinese revisionism, which had been hiding behind the guise of Marxism-Leninism for a long time...

> The ideological, political and organisational principles of the CPC and Mao Zedong are principles of a pronounced pragmatic philosophy with clear aims of transforming the "eternal" China into a superpower to dominate the world.

The Communist Party of China, especially Mao Zedong, who has been an idealist dreamer and visionary, without general culture (except that of Chinese antiquity) have followed the course of the history of mankind as the most xenophobic diletantes. Their ideological, political and organisational principles, especially since the time of the founding of the Communist Party of China and onwards, are principles of a pronounced pragmatic philosophy, which interest China alone and with clear aims of transforming "eternal" China into a superpower to dominate the world, to make the law, to dictate its will and culture.

In the analysis that we have made of their actions, we have come up against this Chinese ideology and we have seen and see that the forms of their organisation and action are concentrated in the direction of this ideology which they want to make "universal."

The figure of Mao Zedong has been inflated into a divine figure of a Chinese emperor. And in fact this modern emperor operates with all omnipotence over his courtiers who have created a swollen and terrible bureaucracy which applies the "ideas of genius" of the "great helmsman." He has subjugated the CPC and whenever he "deems" it necessary according to the "dialectical development of the opposites," seen from the angle of Maoism, topples people from power, attacks and liquidates the party, carries out the occasional "revolution," balances the power of courtesans. He explains all this with allegedly revolutionary formulas, but which are nothing other than more "cultured" actions than those of the Emperor Bokasa, of the shah of Iran and of the king of Nepal whom Mao Zedong loved so much, welcomed and farewelled not only because he was urged on by the material profit, the profit in politics to make them China's satellites but because Mao's philosophy was in conformity with theirs.

> Mao Zedong should be described not as a "prophet" of the revolutions, but a "prophet" of the counterrevolutions. He is a Chinese bakunin.

In these conditions, with these concepts the CPC could never be a Marxist-Leninist party.

The philosophy which guided it was idealist bourgeois, retrograde, because China itself, its society despite its democratic bourgeois revolution, has remained a closed society, with old beliefs and mentality dominated by mysticism and by philosophical and organisational state principles archaic in essence but which have allegedly evolved superficially. We can see this in the construction and form of the state, in the development of the economy, in the way the education and cultural system has been built, in the organisation of the army, etc. Everything bore the specific Chinese seal, from ideology literature down to the slogans.

The slogans had their source and everyone in China from the youngest to the eldest had to repeat them without making the slightest mistake in any letter or comma. This was a struggle to benumb the creative thinking, this trampled underfoot every form of democracy, this was nothing other than the cult of the "helmsman" and the domination of bureaucracy.

Such an aberrant development at given moments could and will only suffer defeat, which Mao Zedong has preached as "revolutions and counterrevolutions" in every 7 years.

Mao Zedong should not be described as a "prophet" of the revolutions, but a "prophet of the counterrevolutions." He represents the type of an anarchist who has confusion in his blood, chaos, the undermining of the dictatorship of the proletariat and socialism, but on the condition that this permanent anarchy be led by him or by his typical Chinese anarchist ideology. Mao Zedong is a Chinese bakunin. The cultural revolution was an illustration of the ideas and actions of this Chinese bakunin.

> The chaos created in China before the cultural revolution by the treacherous anti-Marxist line of Mao Zedong and that of his courtiers was combatted by the "great helmsman" with the anarchy of the cultural revolution.

The chaos created in China prior to the cultural revolution by the treacherous, anti-Marxist line of Mao Zedong and that of his courtiers, chaos in politics, ideology and economy replete with defeats was combatted by the "great helmsman" with the anarchy of the cultural revolution.

This anarchic revolution both saved the Maoist autocracy, but also risked undermining it. The "prestige" of the "helmsman" had to be saved, anarchy must not be allowed to eradicate myths, therefore military measures were used, the essence of bureaucracy incalcated in the courtier Zhou Enlai-Confucius was preserved and so-called "new" "revolutionary" elements were pushed onto the stage of propaganda and agitation, whom the "helmsman" charged with the role of illustrating anarchy as a "revolution within the revolution," allegedly to liquidate the bourgeoisie which had been admitted to the party. In fact, there was no party, but the bourgeoisie existed everywhere, clans and factions which fought for power. It was the Trotskyist "permanent revolution" which was led by Mao Zedong Trotsky.

> The so-called gang of the four acted as Mao instructed them. They lived as long as a spring flower, with the only exception that this "flower" was putrid, filled with the poison of all the other "flowers and schools" which flourished and are flourishing in China.

The so-called gang of the four had acted as Mao instructed them. He was their only support so this is why they lived as long as a spring flower, with the only exception that this "flower" was putrid, filled with the poison of all the other "flowers and schools" which flourished and are flourishing in China.

"The gang of the four" was a group of gossips with no principles, megalomanic, ambitious intriguers, like all the other factions of the bourgeoisie who swim in swampwater. But the latter controlled "swampwaters," while the "gang of the four" had the keys which were not worth a straw and did not make any organisational, state or economic move. They only wrote articles and organised ballets. They were suspicious people, just like all the others. Their heads were in the clouds like that of Mao, while the faction of Zhou, Deng and Yeh worked systematically to seize power.

"The gang of the four" thought that through its bombastic words it would raise the millions to their feet under "Mao's banner." But Deng, "overthrown" temporarily brought one million out of Tienanmen, shouting against the "gang of the four." Later on "the gang of the four" rose one million against Deng. The same people cheered for both of them. Deng came to power, one million came out and cheered for Deng. They were the same people who shouted against him before. This is the bitter and sinister "mirror" of Mao Zedong thought.

The bourgeois world describes the gang of the four as "radical." It is no accident that they add the word "socialist" to this epithet and make it "radical socialist." But they have never been radical, or socialist. In France there used to exist a powerful party of the bourgeoisie, which was called a radical-socialist party, which was led by bourgeois elements, outstanding politicians and literary men, such as Herriot, Daladier, etc. But this party, which suffered complete fiasco, left some traces, while the "radical" "gang of the four" was liquidated and disappeared without traces, just as Mao Zedong thought died or is dying.

> The black reaction of Hua Guofeng Deng Xiaoping will fight for power until savage state of fascist dictatorship is established.

The black reaction of Hua Guofeng-Deng Xiaoping, which has seized power, will fight for power until a savage state of fascist dictatorship is established.

The fight is for world hegemony. The strategy they follow is natural. The alliances with American imperialism and world reaction are natural, are normal. Just as normal are the antagonisms and the eruption of predatory wars which will arise from all this embracing between bandits.

> Maoism is in agony. It will suffer the same fate as the other theories invented by the world capitalism and imperialism in disintegration.

The analyses we are making of the Chinese revisionists are correct, objective and made in the light of Marxism-Leninism...

Maoism, as an anti-Marxist theory is in agony. It will suffer the same fate as the other theories invented by the world capitalism and imperialism in disintegration.

The current team ruling in China or the other teams which will most certainly come to power later on as a result of the internal struggle of the factions for power, will use Maoism, but as an antihistoric cadaver, to unscrupulously and shamelessly build up a powerful imperialist Chinese state in unity and divergencies with the other imperialists and through the oppression and exploitation of the peoples who aspire to, and fight for liberation, independence and socialism.

For the Chinese revisionists all the evil means are good means just as they are good for their friends, American, Soviet and other imperialists.

> Terrible waves have passed and will pass on the Chinese people but the day will come that there, too, the theory of Marx, Engels, Lenin and Stalin will triumph.

Our just struggle will be long and protracted and this is why it is necessary that our party be very strong, in a militant revolutionary unity, that is why we must temper it every hour and every day in the ceaseless political, ideological and economic battles, we must make it as vigilent as possible, cherished and united with the people like flesh to bone through proletarian democracy, isolated from every diseased and undermining manifestation of opportunism, sectarianism and bureaucracy. The correct Marxist-Leninist line of our party will be supported and backed by the revolutionary Marxist-Leninists in the world. It will be supported by the world proletariat, by the peoples. The day to day life of the struggle of our party proves this. Through propaganda and all other means the Chinese fascist-revisionist cliques will do their utmost to arouse indignation amongst and enrage the Chinese people against us, deceive the world opinion. But they "cannot deceive all and at the same time." Terrible storms have and will pass over the Chinese people, but the day will come when, even there the theory of Marx, Engels, Lenin and Stalin will triumph. The present and coming generations of China will understand and will say: "The party of Labour of Albania opened our eyes, it acted correctly, it exposed Mao Zedong thought because it loved the Chinese proletarian revolution, because it wanted to dispel the destructive myths created in China, which hindered the happiness of this great people, who wants to live in genuine socialism."

I embrace and kiss you with longing,

Enver Pogradec,
30 July 1978

'XINHUA' VIEWS PEACEFUL TURKISH NEW YEAR

OW020736 Beijing XINHUA in English 0722 GMT 2 Jan 81

["Round-up: First New Year After Military Takeover in Turkey"--XINHUA headline]

[Text] Ankara, 1 Jan (XINHUA correspondent Liu Kaichen)--The Turkish people are passing their New Year today with a sign of relief for the first time for many years, as street violence has been basically checked and the security situation has much improved since the 12 September 1980 military takeover in Turkey.

Curfew throughout the country was put off today from midnight to 2 a.m., ending at 5 a.m. This extra two hours allowed many Turkish people to enjoy New Year's eve to their hearts' content, going to cinemas, theatres, and other entertainment spots. A special New Year TV program began from 5 p.m. yesterday evening and ended at 4 o'clock this morning. Usually it ends before midnight.

During the festival, additional train and bus tickets are available from Ankara to other cities to meet the increased demands.

In Ankara today, all public services operated normally without any interference. No water, electricity or gas cuts were made in order to guarantee the happy life of the New Year's Day.

The calm and joyful atmosphere prevailing in Ankara and other parts of the country today testifies to the outstanding achievement of the military authorities in the field against terrorism. Housewives in Ankara now are not so afraid of opening their doors to strangers as before the military takeover and the streets of Istanbul are not deserted after dusk for fear of terrorist attacks.

In the past few days, many housewives here were shopping for the New Year's celebrations. An abundance of foodstuff, clothes and many other goods, apart from cigarettes, are found in the market, although with some price increases.

This reflects some improvement in the economic field after the military takeover.

The Turkish daily GUNAYDIN said in a commentary yesterday, "Turkey is entering a new year with some hopes and positive developments for the first time in many years."

'XINHUA' ROUNDUP REVIEWS ARMENIAN-TURKISH ENMITY

OW271644 Beijing XINHUA in English 1601 GMT 27 Dec 80

[Text] Ankara, 27 Dec (XINHUA correspondent Liu Kaichen)--Funerals for Sarik Ariyak, Turkish consul-general in Sydney, Australia, and his bodyguard Engin Sever were held here yesterday.

On the early morning of 17 December, while Sarik Ariyak and his bodyguard were taking a car in the suburb of Sydney, two Armenian gunmen on a motorcycle drove past and shot them dead.

Turkish diplomats abroad have long been targets of Armenian terrorist organizations. Since 1973 Armenian terrorists have launched numerous bomb attacks against Turkish missions and offices abroad and claimed the lives of three Turkish ambassadors, two consuls-general, one first secretary, one press attache and several other Turkish people.

Armenian terrorism is the result of national discord in Turkish history. Armenians are a minority nationality in the country. Under the rule of the Ottoman empire, a part of the area inhabited by the Armenians was occupied by Czarist Russia, many Armenians were forced to live in what is eastern Turkey today. During the First World War, especially in 1915, the Ottoman government ordered all the Armenian population (about 1.5 million) to move from eastern Anatolia close to the Russian border to Syria and Lebanon (then a part of the Ottoman empire), under the excuse that the Armenians were serving the interest of a hostile power--Czarist Russia--in time of war. In the course of the exile, about one million Armenians died by violence and of famine and diseases.

After the end of the war, the exiled Armenians revenged themselves on the "Young Turk (Party)" leaders who helped the Ottoman government to expel Armenians. They killed Talat Pasa and Cemal Pasa, two of the party leaders, in Germany in 1922.

The Turkish revolution led by Mustafa Kemal overthrew the Ottoman empire in 1923. However, the exiled Armenians did not give up their vengeance. They continued to give vent to their anger on Turkish diplomats who had nothing to do with the "Armenian massacres" at all.

The exiled Armenians and their descendants now scatter over the United States, Australia, Lebanon and many European countries. In France alone, there are 200,000 Armenians.

They established "the Armenian genocide justice commandos", "the Armenian secret army", "the Armenian genocide revengers army" and several other terrorist organizations to wreak vengeance on Turkish diplomats abroad.

In recent years, the Soviet Union used Armenian terrorists to serve its own interest. According to the Turkish daily HURRIYET, "the Soviet secret service KGB is running the Armenian terrorist movement."

The spiritual leader of the Armeanian community in Istanbul, Archbishop Ohannes Colakyan, recently urged the Armenians all over the world not to become involved in such "shameful actions" and not be tools of any organization.

JAPAN'S PREMIER HOLDS NEW YEAR'S PRESS CONFERENCE

OW311622 Beijing XINHUA in English 1600 GMT 31 Dec 80

[Text] Tokyo, 1 Jan (XINUUA)--Japanese Prime Minister Zenko Suzuki told a press conference on the New Year's Day here that he chose the ASEAN member countries as his first visit abroad from 8 to 20 January since he took his office in July 1980.

"The purpose of my visit is to show by deeds Japan's basic desire to further develop friendly and cooperative relations with ASEAN," he said.

On his scheduled 13-day visit to five ASEAN countries--the Philippines, Indonesia, Singapore, Malaysia and Thailand--Suzuki said he would exchange views with the ASEAN leaders on both bilateral and international problems. He said he would observe the two proposals made by former Japanese prime ministers for extending economic assistance to five big ASEAN projects and for promoting the cooperation between Japan and the ASEAN.

Referring to the Kampuchean problem, he expressed support for ASEAN's stand toward the Democratic Kampuchea. He held that the regime of Democratic Kampuchea should be respected.

Suzuki said he will visit Washington on his way home from Mexico City, where he will attend the north-south summit meeting in June. He added that he planned to dispatch Foreign Minister Masayoshi Ito to visit the United States prior to his meeting with President Reagan. He said "Japan's diplomacy is aimed at establishing close and matured relationship with the United States."

On the Japan-Soviet relations, Suzuki said that it is absolutely necessary to settle the four-northern island territorial dispute before concluding a peace treaty between the two countries. However, he said that Japan would promote relations with the Soviet Union in the field of economic cooperation.

On the newly approved defense budget, Suzuki said that Japan's 1981 defense budget was set at 2,400,000 million yen (some 11,428 million dollars), or up 7.8 percent from the current fiscal year ending 31 March. He added that the defense spending is aimed at modernization and qualitative improvement of equipment.

He said "it is a matter to be decided by the Japanese Government and I believe the United States will have a full understanding of this."

Suzuki stressed "Japan cannot play a big international role militarily but will do as much as it can politically through economic and technological cooperation."

THAI PAPER REPORTS SOVIET ARMS IN KAMPUCHEA

OW270829 Beijing XINHUA in English 0816 GMT 27 Dec 80

[Text] Bangkok, 27 Dec (XINHUA)--The Soviet Union has poured large quantities of armour, heavy weapons and ammunition into Kampuchea to strengthen the Vietnamese troops, said the BANGKOK POST today in a report quoting a high-ranking military officer in the Supreme Command of Thailand.

The officer told the BANGKOK POST yesterday that the Heng Samrin regime in Phnom Penh ordered the Kompong Saom seaport closed to all foreign and unauthorised vessels between the 13th and 20th of this month while Russian cargo ships were unloading war materials.

Thai field military sources said one Vietnamese troops battalion and another engineers' battalion were sent to reinforce the forces at the O-Salao area.

In Paoy Pet yesterday, the Vietnamese troops started burning shrubs and elephant grass around the border town to prevent the Democratic Kampuchean troops from using them as cover. The blaze touched off a string of explosions from landmines planted in the area.

As a precaution against a possible spillover of the fighting in Kampuchea, Thai reinforcements have been sent to the border, said the Thai officer.

Meanwhile, in Ta Phraya and Aranyaprathet districts of Thailand's Prachin Buri Province, a 7 pm-6 am curfew imposed by the first army region against travelling on the Thanavithi road from Aranyaprathet to Ta Phraya went into effect yesterday.

Informed military sources here said the Thai troops, border patrol and local police stationed in the border areas throughout the entire eastern front from Ubon Ratchathani to Trat provinces have been placed on full alert since Wednesday.

'VODK' CLAIMS RECENT GUERRILLA VICTORIES

OW270823 Beijing XINHUA in English 0728 GMT 27 Dec 80

[Text] Beijing, 27 Dec (XINHUA)--The national army troops and guerrillas of Batdambang Province, Kampuchea destroyed several dozen metres of railway line on the Svay Prey-Kraum Phluk section of Koas Krala district on the night of 21 December, according to Radio Democratic Kampuchea.

On the same night they attacked a Vietnamese post at Sophi station west of Sisophon, killing 15 Vietnamese soldiers and wounding 17 others. Also on this night, they attacked a Vietnamese company guarding Bridge No 8 on the road linking Sisophon and Thmar Puok. Twenty-eight Vietnamese were killed and the rest fled.

At ten o'clock on the morning of 22 December, the national army and guerrillas destroyed three Vietnamese military trucks moving from Rovieng to Reach district, Pouthisat Province in an ambush. They wiped out 35 Vietnamese and captured a quantity of materials. On the same day, they ambushed a battalion of Vietnamese troops on the road from Peam Prous to Anlong Reap, west of Reak district, wiping out 22 of them.

On 10 December guerrillas killed two Vietnamese soldiers in the Dol Tapung Market in Phnom Penh.

The guerrillas captured six Vietnamese posts in Samlot district, Batdambang Province after fierce fighting from 10 to 17 December. They wiped out 58 Vietnamese invaders and once again cut off Samlot from Highway No 10.

On 20 December, they twice ambushed a company of Vietnamese aggressor troops in Dei Kraham, Kaoh Kong Province, killing 27 and wounding 29 Vietnamese.

THAILAND PERMITTING ONLY MEDICAL AID TO PHNOM PENH

OW281236 Beijing XINHUA in English 1224 GMT 28 Dec 80

[Text] Bangkok, 28 Dec (XINHUA)--The National Security Council (NSC) of Thailand has informed the International Committee of the Red Cross (ICRC) that it is permitted to fly only medical supplies to Phnom Penh, not foodstuffs, for humanitarian reasons, Prasong Soonsiri, secretary-general of the council, said yesterday.

ICRC delegate Francois Perez was called to Prasong's office and handed a letter informing his agency of the Thai Government's stand.

The NSC has also indicated to the United Nations Children's Fund (UNICEF) that if it reduces the quantity of food supplies to Khmer refugees across the "Land Bridge," the government will also require the amount of food shipped to Kampong Som to be cut by the same proportion.

The action was reportedly taken because the ICRC has notified the Thai Government that it will stop giving food aid to more than 150,000 refugees around the "Land Bridge" areas and provide them only with medicine. UNICEF informed the Thai Government that from 1 January, it will reduce the amount of food given to the refugees at the Thai-Kampuchean border area.

Thailand has always maintained that the refugees encamped in Thailand and living at the Land Bridge areas must be given equal amounts of, if not more, food aid.

He said the Thai Government has also told other international relief agencies that if there is any new military incursion into Thailand from the Kampuchean side, it will not permit ICRC planes or UNICEF ships to go to Phnom Penh and Kompong Som through Thailand.

THAI LEADERS URGE VIGILANCE, UNITY, FRUGALITY

OW311755 Beijing XINHUA in English 1642 GMT 31 Dec 80

[Text] Bangkok, 31 Dec (XINHUA)--Thai leaders in their New Year radio addresses here tonight called on the whole nation to be vigilant, strive to overcome all difficulties and unite as one to build the country and safeguard its liberty, sovereignty, independence and prosperity.

King of Thailand Phumiphon Abunyadet said that in the past year, the Thai people have managed to deal smoothly with a number of extraordinary events with endurance, unity and wisdom.

In the coming new year, he continued, the whole people should at least be as vigilant as in the past and go all out in their joint effort to build a strong and all-round Thailand.

Prime Minister Prem Tinsulanon in his New Year address said that from the very beginning, his government has adopted various measures for solving the problems the country is facing, particularly the problem of increasing the personal income of the people. However, he added, the country still has to face the world-wide shortage of fuel oil in 1981. All the compatriots of the country should get united and strive to help overcome the difficulties of the country with coordinated action and the meeting of minds, for from unity comes the solid strength with which to safeguard the independence of the nation.

Harin Hongsakul, speaker of the Thai National Assembly, urged the whole people to help one another in the forthcoming year which will be another year of difficulties, and practice thrift and frugality, eliminate extravagance and discard all ill practices.

FORMER INDIAN OFFICIAL HITS INDIA'S FOREIGN POLICY

OW291757 Beijing XINHUA in English 1644 GMT 29 Dec 80

[Text] Beijing, 29 Dec (XINHUA)--Former Indian Foreign Minister A.B. Vajpayee said yesterday that the recognition of Kampuchea's Heng Samrin regime in Kampuchea "propped by the Vietnamese Army" had created serious misgivings about the independence of India's foreign policy.

THE TIMES OF INDIA today quoted Vajpayee as adding that independent observers could not be blamed if they infer that Indo-Soviet friendship was being transformed into Indo-Soviet alignment.

Vajpayee voiced the criticism while delivering an address at an open session of his Bharatiya Janata Party's national convention in Bombay yesterday.

Deploring India's acquiescence in the Soviet military intervention in Afghanistan, he pointed out that India's stand on this issue had tarnished its own image and isolated itself completely from its neighbors, the non-aligned group and the Islamic world.

He said that the Soviet intervention in Afghanistan had precipitated in this part of the world a situation which should have prompted both India and Pakistan to forget the past and try to open a new chapter in their relations. But it was a matter of regret that the leadership in both countries failed to achieve this aim. India, he stressed, should realize that it was in its own interest to have a strong and stable Pakistan between itself and the Soviet Union as a buffer. Any temptation to take advantage of Pakistan's present difficulties could in the long run prove very costly to India, he warned.

INDIAN FARMERS DEMAND HIGHER PRICES

OW281220 Beijing XINHUA in English 1207 GMT 28 Dec 80

[Text] Beijing, 28 Dec (XINHUA)--Farmers in India's western state of Maharashtra have staged a 365-km march for better government-support prices for their crops, according to reports from New Delhi.

The march, which began in Nasik on 7 December and ended in Nagpur on 26 December, enjoyed the support of six opposition parties. The farmers wanted to present a memorandum to the state legislature on 26 December, the final day of its present session in Nagpur. But the police turned them back before they reached the state lawmakers meeting.

Earlier, the state authorites had announced a ban on the march to try to prevent it. When the marchers were on their way, the police harassed them all along the route, arresting 5,000 farmers and politicians taking part in the march, including opposition leader former External Affairs Minister Y. B. Chavan, other former ministers and members of Parliament.

Opposition leaders in the Indian Parliament raised a storm of protest on 22 December over the arrest of Chavan. The Executive Committee of the opposition Bharatiya Janata (Indian People's) Party released a statement in Bombay, capital of the Maharashtra state, saying: "We regret that a peaceful march was sought to be disrupted by all sorts of arbitrary tactics."

Similar agitations also took place in the southern state of Tamil Nadu. About 1,000 demonstrating farmers were arrested in a 3-day blockade of food supplies to urban areas ending 26 December. Farmers in another southern state of Karnataka pledged to have their own march next week. The Karnataka state officials moved quickly to ban strikes and demonstrations Saturday and ordered reserve police and paramilitary home guards to strategic rail, communication and road links.

PHILIPPINE'S ROMULO HAILS UN RESOLUTIONS

OW150305 Beijing XINHUA in English 0255 GMT 15 Dec 80

[Text] Manila, 15 Dec (XINHUA)--Philippine Foreign Minister Carlos P. Romulo yesterday described the UN resolution on Kampuchea as a success of ASEAN in its efforts to uphold the principles of the United Nations Charter.

Romulo, who arrived here yesterday from New York, said in a prepared statement that "of utmost importance to us in the region is the festering conflict in Kampuchea. As chairman of the ASEAN Standing Committee, I had the responsibility of drawing up the strategy and leading the fight to defend one of the sacrosanct principles of the United Nations Charter--that of nonintervention and self-determination. Through the concerted efforts of the ASEAN countries, we not only succeeded, by overwhelming majority votes, in having the credentials of Democratic Kampuchea upheld once again, but also in convincing the world body to reiterate its call for the total withdrawal of foreign forces from Kampuchea, and the convening of an international conference with a view to finding a political settlement to the problem."

"The question of Afghanistan remains a focal point of danger. As I have often said, with minor alterations, the situation in Afghanistan bears a strong similarity to the one in Kampuchea. Both cases violate the principle of nonintervention and self-determination. Recognizing this, the assembly once again demanded the withdrawal of foreign forces from that country prior to a political solution to the problem," he said.

CARTER VIEWS AFGHAN, HOSTAGE SITUATIONS

OW250728 Beijing XINHUA in English 0701 GMT 25 Dec 80

[Text] Beijing, 25 Dec (XINHUA)--U.S. President Jimmy Carter yesterday urged the Soviet Union to withdraw its military forces from Afghanistan, according to Washington reports.

In an impromptu interview in his hometown Plains, Georgia, where he is spending his Christmas holidays and in a formal statement issued by his office in Washington, the president marked the first anniversary of the Soviet invasion of Afghanistan with the call that the Soviet Union respond to those nations urging the withdrawal of its military forces.

He said the Soviet Union made "a serious mistake" by invading Afghanistan. The Soviets have not been able in the last year to establish a government that has the support of the Afghan people though "massive firepower and increasingly brutal tactics" have been employed with the result that more than 1.2 million Afghans have fled to Pakistan alone.

He noted the "brave resistance of the Afghan people who have continued their struggle for independence and the right to determine their own political future."

"The suffering of the Afghan people must be brought to an end," he stressed.

Carter reiterated the United States' willingness "to join in the effort to find a political solution involving a Soviet withdrawal."

Referring to the U.S.-Iranian relations, the president said prospects are "quite dim" for the hostages' release before he leaves office on 20 January next year.

The U.S. position on the hostage question has been explained "very clearly" and "we will not pay any ransom," Carter declared.

INTERNATIONAL AFFAIRS

AL-SADAT ASSERTS EGYPT'S SUPPORT FOR AFGHAN PEOPLE

OW271855 Beijing XINHUA in English 1838 GMT 27 Dec 80

[Text] Cairo, 27 Dec (XINHUA)--Egyptian President Anwar al-Sadat reasserted today that Egypt is determined to double its support and assistance to the Afghan people against the Soviet invasion until the unbending Afghan people retrieve their full freedom. He appealed to all Arabs and Muslims "to establish their solidarity with the sacred national struggle of the Afghan people, to renounce their disputes and close their ranks."

Al-Sadat gave these remarks in his message to a public conference here marking the day of solidarity with the Afghan people. Al-Sadat's message was read out by Egyptian Deputy Premier and Foreign Minister Kamal Hasan 'Ali.

The president said that "the Soviet military occupation constitutes a threat to the security of the Gulf, the Middle East as well as to our security." This invasion calls upon "every Moslem to stand up in material and political solidarity with the valiant Afghan holy warriors."

Al-Sadat pointed out that the Soviet invasion of Afghanistan has topped a multitude of adventures during the past years in Africa, the Arab world, the Far East, East Europe and Latin America.

The president stressed that "if the Soviet Union is determined to pursue its policy of colonialist invasion and illegitimate interference in the Middle East and in the vital Arab and Islamic causes, it will certainly face active and joint resistance" and "eventually face the inevitable fate of the ancient empires which depended on tyranny and the use of force."

Today's public conference was organized by the constituent assembly of the Leage of Islamic and Arab Peoples, at which four visiting Afghan resistance leaders strongly condemned the Soviet aggressive atrocities in Afghanistan. They said that the Afghan people are determined to continue their struggle until final victory, which is not only the cause of the Afghan people but also one of all Muslims. President al-Sadat received these representatives at his residence in his home village yesterday.

The conference ushered in a week of solidarity with the people of Afghanistan, with the TV station giving a series of special programmes on Afghanistan. People in the city of Port said and in other places are reported to have started a campaign of donation to support the Afghan people's struggle against Soviet occupation.

AFGHAN REFUGEES DENOUNCE SOVIET INVASION

OW271659 Beijing XINHUA in English 1650 GMT 27 Dec 80

[Text] Peshawar, 27 Dec (XINHUA)--Speaking at mass rallies held in refugee camps here today on the occasion of the first anniversary of the Soviet invasion of Afghanistan, Afghan Islamic leaders strongly denounced the Soviet aggression against their motherland.

Burhanuddin Rabbani, leader of the Islamic Alliance for the Liberation of Afghanistan said that the Russian invasion of Afghanistan is not only aimed at enslaving the Afghan people and plundering their natural resources but is also against Islam.

Rabbani, who is also president of the Afghan Islamic Society, noted: "The Afghan people remembered many kinds of plots and tricks which came from the West. But now this time they came from the East (Russia). All these plots and tricks are played to colonize us."

Speaking at the Warsak refugee camp, Gulbuddin Hekmatyar, president of the Islamic Party of Afghanistan, pointed out that the Russians thought that they could occupy Afghanistan in a few hours or several days as they did in Czechoslovakia. They were absolutely wrong. Afghanistan is not to be subdued. Today everybody knows that Russia is the symbol of aggression and invasion of the poor countries and nations, he stressed.

Similar mass rallies were also held today in refugee camps near Peshawar.

An exhibition of captured Russian weapons and ammunition as well as photographs of captured Soviet militarymen sponsored by the Islamic Alliance for the Liberation of Afghanistan will open here tomorrow.

DEMONSTRATORS IN WEST PROTEST AFGHANISTAN INVASION

OW281224 Beijing XINHUA in English 1213 GMT 28 Dec 80

[Text] Beijing, 28 Dec (XINHUA)--Afghans and other people in Sweden, West Germany and Norway held rallies or demonstrations yesterday to mark the first anniversary of the Soviet invasion of Afghanistan. The demonstrators demanded immediate withdrawal of the invaders from Afghanistan.

In Stockholm, some 800 people, holding banners reading "Russians out of Afghanistan!," marched to the Soviet Embassy yesterday afternoon.

At a rally there, Chairman of the Swedish Liberal Party Lars Leijon Berg said that the Swedes abhorred the Soviet invasion of Afghanistan. He called for broader public denunciation of Moscow's aggression and voiced support for Afghan people's resistance against the Soviet invaders.

A resolution on the withdrawal of Soviet troops from Afghanistan was adopted at the end of the rally.

In West Germany, some 600 Afghan students of the Bonn University held a protest rally near the Soviet Embassy on 27 December. The students passed a resolution cursing the Soviets for their "barbaric crimes" and their bombardment of Afghan villages and towns. They demanded the West German Government "not to accept the Soviet invasion of Afghanistan as a fait accompli."

On the same day, a separate rally was held in Paulsplatz, Frankfurt. The demonstrators burned an effigy of Soviet President Leonid Brezhnev.

In Oslo, about 100 Norwegians demonstrated outside the Soviet Embassy. The Afghanistan Committee in Norway, organizer of the demonstration, issued a resolution, addressed to Soviet President Brezhnev, demanding immediate withdrawal of Soviet troops from Afghanistan.

PAKISTAN PAPER ON AFGHAN RESISTANCE

OW241318 Beijing XINHUA in English 1309 GMT 24 Dec 80

[Text] Islamabad, 24 Dec (XINHUA)--"If the Russians are allowed to have their way in Afghanistan, a precedent will be set that could be repeated anywhere with impunity and nobody's freedom will be safe," says the "PAKISTAN TIMES" in its editorial today.

The editorial says, "The world community has by and large stood by the Afghan people in their hour of trial, but some governments, particularly in the West, have not yet taken the kind of economic and diplomatic action strong enough to deter the aggressor. There is also the need for larger and more organised international assistance to enable Pakistan to look after the 1.3 million Afghan refugees who have fled Soviet military terror."

It notes that the blatant violation of the independence and sovereignty of Afghanistan "marked a new stage in the Soviet use of armed forces as an instrument of its global strategy."

It stresses that Moscow has achieved neither its military nor political objective. Despite the massive inflow of arms and men into Afghanistan, Moscow failed to break the Afghan spirit of independence. The Mujahideen, lacking both weapons and mobility, continue to offer active resistance to Soviet troops.

The Afghan army, it says, has almost disintegrated and now it is the Soviet forces doing all the fighting. Neutral military observers, however, say that the Soviets are being gradually cornered into a no-win position, the editorial writes.

AFGHAN RESISTANCE LEADERS IN CAIRO ISSUE STATEMENTS

OW260712 Beijing XINHUA in English 0700 GMT 26 Dec 80

[Text] Cairo, 25 Dec (XINHUA)--Three visiting leaders of Afghan Islamic resistance organizations cited many successes scored in their resistance against Soviet aggressors over the past year.

In a statement carried in the Egyptian paper "AL AHRAM" today, they said that the Soviets and their henchmen could only stay in the capital and big cities while freedom-fighters and revolutionary tribes are in control of the vast countryside, hilly regions and forests.

Despite insufficient weapons and shortage of food and medicine, they said, the resistance forces are in high morale, resolved to free their country from the Soviet occupation.

The threat posed by the Soviet invasion, they noted, is directed not only to Afghanistan alone, but also to the Islamic world as a whole, for Afghanistan is serving as a wall shielding other Islamic countries from foreign attacks.

These leaders voiced their determination over the radio here yesterday to wage struggles, political or military, and employ all means available to completely free Afghanistan from Soviet domination.

They also appealed to Arab and Islamic countries for more material and moral support to the Afghan resistance forces.

AFGHAN GROUPS URGE FIGHT AGAINST SOVIET INVADERS

OW261620 Beijing XINHUA in English 1614 GMT 26 Dec 80

[Text] Peshawar, 26 Dec (XINHUA)--The Afghan Islamic society "Jamait-i-Islami of Afghanistan" called upon heroic Mujahideen on the occasion of the first anniversary of the Soviet invasion of Afghanistan to demonstrate their strong condemnation of the barbaric aggressor by intensifying their crushing attacks.

The call was issued by Professor Burhanuddin Rabbani, president of the Islamic society, in a statement yesterday.

The statement said: "The anniversary of the shameful aggression by the Russian imperialists on our country is the most tragic catrastrophe in the history of mankind." "They burned, killed and looted and brought about the catastrophe which still continues," it added.

The statement called upon the whole nation to hang up black flags over their homes as a symbol of mourning.

The statement urged the Muslim nations and all the people throughout the world to come to their help and to condemn the Soviet invaders wherever they are and by whatever means they can use.

A communique issued by another organization, the Islamic Party of Afghanistan (Hezb-i-Islami of Afghanistan) noted: "27 December is one of the black days in the history of the Muslim people of Afghanistan."

The communique said that the party condemns this bloody day and will participate in the demonstration against Russians and their puppets.

SOVIET SETBACKS IN AFGHANISTAN REPORTED

OW261616 Beijing XINHUA in English 1610 GMT 26 Dec 80

[Text] Peshawar, 26 Dec (XINHUA)--Soviet occupation forces in Afghanistan have suffered 27 casualties and losses in tanks, trucks and helicopters in their week-long attack on Panjshair Valley, Parwan Province, which started on 11 December.

According to a report of the Islamic Alliance for Liberation of Afghanistan here today, Afghan freedom-fighters have also killed some 40 puppet troops and captured some weapons in the valley.

Another report said that guerrillas destroyed some Soviet tanks in Khost, Paktia Province, on 17 December and in Laza Mangal of the same province. Twenty Afghan soldiers and an officer in Laza Mangal crossed over to join the resistance.

Soviet and Afghan puppet troops attacking guerrilla positions in Dishu, Helmand Province, have fallen back after sustaining a number of casualties.

The report added that the trunk road between Kabul and Kandahar was blocked for several days in the middle of this month. Guerrillas continued to be active in the city of Kandahar.

Casualties and other losses were inflicted on the Soviet troops in Yarghali Mountain, Samangan Province, on 10 December.

Freedom-fighters ambushed an enemy convoy in Gul Taipa, Kunduz Province, and captured two truckloads of wheat and sugar and destroyed two jeeps and one truck.

PROBLEMS FACING KABUL REGIME REVIEWED

OW281928 Beijing XINHUA in English 1859 GMT 28 Dec 80

[Text] Peshawar, 28 Dec (XINHUA)--The economic situation of Afghanistan under the Soviet-backed Babrak Karmal regime is deteriorating day by day, according to a report from Kabul received here today.

The regime is faced with great difficulties of famine and has no way to provide daily necessities. The Soviet Defence Ministry had to pay the salary of the military and civil officials of the Karmal regime.

In spite of a great number of Russian troops stationed in Afghanistan they have not been able to control the situation. The report says that Russian advisers concerned have been recalled to Moscow to assess the serious situation.

Some members of the Parcham faction of the People's Democratic Party said that they disagreed with the Russians who had made the situation more serious. It was reported that a deputy minister of the interior had been arrested in Kabul by Russian secret police.

The situation in Kabul has become more critical. The Karmal regime often arrested and imprisoned residents of the city without any investigation. They even arrested pedestrians on the streets. Russian police and troops are plundering the houses of the people under the pretext of search.

AFGHANS IN U.S. PROTEST SOVIET AGGRESSION

OW280251 Beijing XINHUA in English 0238 GMT 28 Dec 80

[Text] Washington, 27 Dec (XINHUA)--Some 300 Afghans demonstrated near the Soviet Embassy here this afternoon to mark the first anniversary of the Soviet invasion and occupation of Afghanistan.

They marched in freezing cold to a place about 200 meters away from the Soviet Embassy to join some Afghans already on hunger strike for 5 days in protest against the Soviet occupation of their country. The demonstrators carried placards reading: "Russian killers out of Afghanistan," "Down with Russian imperialists" and "They can kill us but they cannot conquer us."

A leaflet issued by the Afghan community here during the demonstration said that the Afghan people rose empty-handed against the Soviet invaders in the last year and have frustrated Kremlin's efforts for the control of their homeland.

The leaflet said that all that has happened in Afghanistan "contradicts the Kremlin's claims of limited objectives of ensuring stability on its southern border. It is a clear example of the Soviet expansionist policies for greater military thrust in control of the world."

It exposed the Soviet suppression of the Afghan people. "There is an abundance of evidence that they have used both chemical and biological warfare in violation of all human rights and international laws," the leaflet said. "Because of their indiscriminate bombing and shelling, many parts of the country have been transformed into piles of (?rubble) which have forced more than 1.5 million people to flee to neighboring Pakistan and Iran and seek refuge," it added.

"If the Soviet military advances are not checked in Afghanistan today," the leaflet went on, "the geo-political advantages that accrue to the Soviet Union will certainly enable the Kremlin to coerce, one by one, the countries in the Gulf area...to fall into the Soviet orbit."

The freedom fighters in Afghanistan, however ill-prepared and poorly equipped they may be, are determined to fight to the end, the leaflet said. It appealed to the world for support to the Afghan resistance to the Soviet invasion.

JAPAN PRESS MARKS SOVIET INVASION OF AFGHANISTAN

OW271650 Beijing XINHUA in English 1634 GMT 27 Dec 80

[Text] Tokyo, 27 Dec (XINHUA)--Many Japanese newspapers noted in their editorials issued today on the first anniversary of the Soviet invasion of Afghanistan that the Soviet big power behaviour has made it increasingly isolated in the world.

"MAINICHI SHIMBUN" pointed out in an editorial that in the past year fighting between Afghan guerrillas on the one hand and the Soviet occupation forces and the Karmal government troops on the other has been unfolding. The more the Soviet Union tries to prop up the Karmal regime, more Afghans would be killed and deeper hostility and hatred would be created, thus landing it into a Viet Nam-styled quagmire. The Soviet Union's stupid acts have once again made it a target of public denunciation.

The editorial said that in the fighting in Afghanistan, casualties of the Soviet troops have surpassed ten thousand. Internationally the Soviet Union is more isolated and at home criticisms have been levelled against it. It has paid a higher price.

ASAHI SHIMBUN said in an editorial today, "One year after its invasion of Afghanistan, the Soviet Union today still deploys 80,000 to 90,000 armymen there, and possibly will send more reinforcements. The Soviet Union, which tries to bring Afghanistan into its sphere of influence by force of arms, has met determined resistance from the people of the moutainous state and has been bogged down in an inextricable quagmire."

"Even for such a big power as the Soviet Union," it added, "it is very difficult to quell resistance from the people of a small nation by force. This is the lesson of the present world."

"One year after its military intervention in Afghanistan, the Soviet Union began to take the bitter path the U.S. had walked during the Viet Nam war," it says.

It pointed out, "Two resolutions of the United Nations General Assembly and a resolution of the Islamic Foreign Ministers Conference, representing overwhelming public opinion, demanded the withdrawal of foreign troops from Afghanistan and the realization of national self-determination. The Soviet Union should not ignore such public opinion." It must withdraw its troops from Afghanistan, it stressed.

U.S. OFFICIALS ASSESS AFGHAN SITUATION

OW260832 Beijing XINHUA in English 0821 GMT 26 Dec 80

["Yearender: Afghanistan--How Washington Sees It"--XINHUA headline]

[Text] Washington, 25 Dec (XINHUA)--The Soviet Union is floundering in a quagmire, miserably failing in most of its objectives during the course of a year of brutal military invasion of Afghanistan. U.S. official and other sources all recognize that the resistance movement has put up such stiff resistance that as far as the Kremlin is concerned there is no light at the end of the tunnel.

During the course of the past year in Afghanistan, one State Department senior official has said, "they have had little success in building support for the Babrak Karmal regime, which faces widespread and growing alienation and resistance within Afghanistan. There is also almost a universal hostility to the Soviet presence which has intensified its problems, and although the Kremlin has been able to keep Karmal in power, he is regarded throughout Afghanistan as a mere Soviet puppet."

Thousands of Afghan soldiers have defected. The Afghan army force has dropped from 100,000 prior to the Soviet invasion to about 25,000. The continuing flow of refugees is another indication of the failure of the Soviet effort to subdue the Afghan countryside. A U.S. official has stated that one out of every ten of the population of the country is a refugee, and that more than one million have left their homeland for Pakistan and elsewhere.

According to U.S. Government sources, a noteworthy development during the last few months has been the indications of better cooperation between nationalist groups in actions against the Soviet invaders. There are signs of some intertribal coordination and cooperation in a number of key provinces. The resistance is mainly focused on the Soviet intruders, and it is ironical that the resistance is combatting the intruders with equipment, small arms in particular, which they have wrested from Soviet troops or from defected Afghan soldiers.

A year after the invasion, reported the press here, 75 percent of the countryside is outside the effective control of the regime. The nationwide nature of the resistance is making it very difficult for the Soviet troops to succeed in their efforts to suppress it.

The Soviet invasion is a matter of concern not only to the United States and the West, for it seeks to ensure that the Soviet Union domination extends to the oil bearing areas of the Persian Gulf and the Indian Ocean. U.S. officials are worried that it might lower the threshold for the exercise of Soviet military power in pursuit of its expansionist foreign policy objective and create a very dangerous situation.

U.S. PROFESSOR URGES SUPPORT FOR AFGHAN RESISTANCE

OW270122 Beijing XINHUA in English 0108 GMT 27 Dec 80

[Text] Washington, 26 Dec (XINHUA)--Zalmay Khalilzad, professor of political science at Columbian [as received] University, today called for support by the United States and its allies for the Afghan opposition to Soviet invasion and for endeavours to achieve a Soviet withdrawal from that country.

Writing in THE WASHINGTON POST today on the anniversary of Soviet invasion, he recalled that immediately after the invasion, many people argued that the Soviet purpose in invading was limited. But Soviet policies since the invasion indicated that they at least wanted to integrate Afghanstain into the Soviet satellite empire, the article said.

The article said that Soviet behavior underlines its determination to maintain its grip on Afghanistan. Indiscriminate bombing, the exploitation of internal conflicts--all the familiar tactics of a colonial war are being employed to break the resistance.

"From a Western perspective," it said, "it should also be clear that Moscow's continued and unhindered occupation of Afghanistan, and a possible Soviet move in the direction of the Persian Gulf, constitute a threat to American and Western credibility and, more immediately, to vital economic and security interests in the Gulf."

The article held that whether the Soviets attempt other Afghan style operations in the region will depend on many factors, but a major one is likely to be the Western ability to contain Soviet power. Without such a Western capability, the Soviets may well be tempted to become more adventurous. Soviet policy in the larger region may well depend on its experience in Afghanistan, it noted.

'XINHUA' REVIEWS SITUATION IN SOUTHERN AFRICA

OW291854 Beijing XINHUA in English 1840 GMT 29 Dec 80

["Southern Africa after Zimbabwe's Independence by Correspondents Xia Ze and Guan Yunqui"--XINHUA headline]

[Text] Beijing, 29 Dec (XINHUA)--Southern Africa has taken on a strategically new look following the independence of Zimbabwe last April, leaving the racists a lone foothold in the southernmost part of the continent.

The independence of Zimbabwe has fortified the confidence of the peoples still struggling for liberation. Black students in South Africa boycotted classes for several months in protest against the apartheid policy and won sympathy and support of the black population. Sam Nujoma, president of the South West Africa People's Organization, has said that Zimbabwe's victory came as a tremendous support to the Namibian people and an assurance that they would eventually win in the struggle against South African domination.

Zimbabwe has rapidly rehabilitated its economy since independence. Crops are growing well. It is estimated that the output of corn will reach 1.6 million tons this year and the country will be able to export more to its grain-deficient neighbours. Some manufactured goods are also available for export. These achievements will improve the economic strength of the country and serve as an impetus to regional development.

Independent Zimbabwe has secured for its neighbouring independent states a peaceful environment which is another factor in favor of regional economic cooperation and development. Encouraged by the progress in Zimbabwe, the independent Southern African states are working out plans for this cooperation to reduce their economic dependence on South Africa. To this end, nine Southern African states held their first conference on coordinated development, at which they signed agreements on cooperation in communications and transport.

Zimbabwe's independence represents a rebuff to the Soviet expansionist designs in Southern Africa. Since its success in putting Angola under its control, the Soviet Union has tried to extend its influence to Zimbabwe--an important target in Southern Africa for Moscow's strategy. This Soviet drive was thwarted thanks to the Zimbabwean government's independent policy of active non-alignment. However, Moscow will not taking its reverse lying down and will miss no chance for a renewed attempt in Southern Africa.

'XINHUA' EXPLORES 'SHABA TODAY'

OW310712 Beijing XINHUA in English 0700 GMT 31 Dec 80

["News in Depth by Correspondent Yang Qi: Shaba Today"--XINHUA headline]

[Text] Kinshasa, 31 Dec (XINHUA)--Mining and life in Shaba, the southern, copper and cobalt rich province of Zaire, have recovered from the ravages of two invasions by Soviet and Cuban-trained mercenaries in 1977 and 1978. And there are signs of new progress.

The Shaba region is called by the local people the "lungs of Zaire". Mines and factories of the General Mining Company of Zaire sprawled along a stretch of 300 kilometers from the southeast to the northwest of the copper belt where several cities, have sprung up.

The General Mining Company, Zaire's biggest enterprise vital for the country's economy, has overfulfilled the target of copper and cobalt output in the first three quarters of this year and is expected to produce 420,000 tons of copper and 15,000 tons of cobalt this year, surpassing the output of 1978 or 1979.

The soaring price of cobalt on the world market last year enabled the company to earn a large sum of hard currency and its turnover reached to 1.54 billion U.S. dollars, 164 percent over that of the previous year. According to the estimate of a leading personnel of the company, the company's sales proceeds would go up further this year if the world prices of copper and cobalt remain at the present higher level. Sixty-one percent of its hard currency earnings or more than half of the nation's hard currency revenue, was handed over to the government. This helped the government much in the repayment 450 million U.S. dollars of debt this year.

During the two Shaba wars, large numbers of refugees had fled to Angola and Zambia. Since 1978, with the help of the office of the U.N. High Commission for Refugees, nearly 170,000 refugees have returned home.

Vice-Governor Salum told this correspondent that self-sufficiency has been achieved in meat, eggs, checken and vegetables, thanks to the local government's agricultural program. In the towns we visited, there was abundant supply of consumer goods at prices no higher than in the capital.

We were told that the two invasions of Shaba had brought untold suffering to both the local people and the neighbouring countries. Former Katanga gendarmes, who once served as Soviet-Cuban mercenaries, now live in exile in Angola and Zambia and lead a precarious existence.

Considerable progress has been made in the negotiations between Angola and Zaire with the participation commissioner of the U.N. High Commission for the return of these gendarmes. Local military and administrative authorities said that they were ready to welcome home their brothers who had gone astray. Eluki Monga Aungu, commander of the First Military Region, said confidently that Shaba is safe as since the government has adopted a series measure to ensure its security.

COMOROS' FOREIGN MINISTER INTERVIEWED 17 DECEMBER

OW171640 Beijing XINHUA in English 1610 GMT 17 Dec 80

[Text] Moroni, 17 Dec (XINHUA)--Comoro Minister of Foreign Affairs and Cooperation Ali Mroudjae denounced the Soviet aggression against Afghanistan and the Vietnamese occupation of Kampuchea in an interview with XINHUA here this morning.

On the Afghan problem, he said: "The aggression against Afghanistan and its occupation by Soviet troops have shocked the whole world, the Islamic countries including Afghanistan in particular. For us, this aggression constitutes a flagrant violation of the fundamental principles of the UN charter by a superpower pursuing its hegemonic designs." "The Comoro delegation (to the 35th UN General Assembly session) condemned the Soviet aggression in Afghanistan and the presence of foreign troops in this non-aligned Islamic country," he added. "There can never be a political solution to the problem of Afghanistan so long as the Soviet troops remain in that country," he stressed.

On the Kampuchean problem, the minister said: "We condemn the presence of Vietnamese troops in Cambodia and so long as these foreign troops are not withdrawn, we cannot recognize a regime installed by a foreign power against the will of the Kampuchean people."

Mroudjae also appealed for an immediate ceasefire between Iran and Iraq, and voiced strong opposition to any form of foreign intervention in the conflict, especially Soviet or U.S. intervention.

ANGOLAN MPLA-PARTY OF LABOR HOLDS CONGRESS

OW251947 Beijing XINHUA in English 1848 GMT 25 Dec 80

[Text] Beijing, 25 Dec (XINHUA)--The first extraordinary congress of the People's Liberation Movement of Angola (MPLA)-party of labour ended in Luanda recently, according to reports from that city.

The congress approved a report made by Jose Eduardo dos Santos on behalf of the Central Committee of the party, and the main directions of economic and social development of Angola in the period from 1981 to 1990. The congress also elected Dos Santos president of the party.

In his report, Dos Santos pointed out that in the past three years, the industrial sector was recovering steadily, with the total mining production increased by 450 percent of the oil output reaching 21 million tons. However, the goal of meeting the people's essential needs set forth in 1977 has failed to be realised. The situation in the fields of education and public health, especially in food supply, is far from satisfactory.

This was because of indiscipline and the continued war conditions, the report said. There remained the serious problem of the lack of a new setup which makes the leadership vigorous and efficient, the report maintained.

On foreign policy, the report reaffirmed support of the stand of the South West Africa People's Organization and the African National Congress of South Africa on liberation struggle, and condemned the South African racialist regime's successive armed attacks against Angola.

The resolution on social and economic issue approved at the congress stressed the need to take the improvement of the people's life as one of the party's most important tasks.

The resolution stressed the gratitude to the Soviet Union and Cuba for their "internationalist assistance and support".

OAU CONFERENCE ON CHAD OPENS

OW231854 Beijing XINHUA in English 1839 GMT 23 Dec 80

[Text] Lagos, 23 Dec (XINHUA)--The Fifth Conference on Chad opened here this morning under the auspices of the OAU to assess the situation and seek a "lasting peace" in that war-ravaged country.

The conference was called after last week's civil war victory of Libyan-backed Chadian President Goukouni Oueddei's forces over the former Defense Minister Habre's forces.

In his opening speech, the current chairman of OAU, President Siaka Stevens of Sierra Leone said that the meeting is intended to "help our brothers in Chad reconcile themselves one to the other, and provide for that territory a stable and effective government necessary for the stability and the development of Chad."

He added that "foreign presence complicates the Chadian problem and make its resolution much more difficult." "We need the exclusion of foreign influence in Chad which had been recognized all along as a pre-requisite to the solution of the Chadian problem," he declared.

Stevens appealed for the mobilisation of material and financial assistance to Chad for its national reconstruction and the repatriation and rehabilitation of its refugees. But "these are measures which can only be carried out effectively without foreign intervention in whatever form in Chad," he noted.

President Shagari of Nigeria in his welcome address called for the implementation of the other aspects of the Lagos Accord which deal with pacification, reconstruction and the rehabilitation of the Chadian people.

Also present at the conference are the presidents of Senegal, Benin, the Congo, Cameroon, the Central African Republic, Guinea, Niger and Togo, Minister of Industry of Sudan Izadin Ham Ahmed [name as received] on behalf of President Numayri, and Secretary-General of the OAU Kodjo.

Foreign Minister 'Ali at-Turayki of Libya arrived here after the opening ceremony, President Goukouni Oueddei of Chad and Defense Minister Hissein Habre are reported to have arrived here but not appeared at the conference.

NATO COUNCIL MINISTERIAL SESSION ENDS

OW121922 Beijing XINHUA in English 1851 GMT 12 Dec 80

[Text] Brussels, 12 Dec (XINHUA)--The ministerial session of the North Atlantic Council wound up here today unanimously condemning the Soviet occupation of Afghanistan and warning against a possible Soviet invasion of Poland.

A communique issued at the end of the conference says that the continuing military buildup of the Soviet Union, its clear willingness, as seen in Afghanistan, to use force in disregard of the principles of the United Nations Charter, the Helsinki Final Act and international law, and the Soviet menace which hangs over Poland give cause for grave concern to the members of the alliance and to the entire international community.

It points out that detente has been seriously damaged by Soviet actions. Poland, it declared, should be free to decide its own future and the Soviet Union must observe the principle of nonintervention.

The ministers at the session stressed that allied strength and cohesion are thus essential to the maintenance of stability and peace. United in purpose, their countries are determined to meet any challenge and to react in the manner which the gravity of this development would require.

Under present circumstances, the communique emphasizes, there is particular need to look to deterrence and defence. The allies will therefore take, individually or collectively, the defensive measures to meet the growth of Warsaw Pact capabilities and to deter any aggression. They reiterate the continuing implementation of various programmes and measures aimed at strengthening the allied defence.

The communique states further that the Soviet occupation of Afghanistan is unacceptable. The use of military force by the Soviet Government to impose its will on the people of a neutral and nonaligned country belies its oft-repeated professions of friendship for the nations of the Third World, creating distrust about its future intention.

The ministers also deplored the war between Iraq and Iran, which caused further concern for the stability of the affected region. They underline the importance of maintaining freedom of navigation.

At a press conference this afternoon, U.S. Secretary of State Edmund Muskie said that the ministerial session was one of the most satisfactory and positive he had ever attended. There is no doubt that relations between the U.S. and its allies are excellent, he added.

WORLD CLIMATOLOGISTS URGE COOPERATION

Asian Climatology Conference

OW200810 Beijing XINHUA in English 0757 GMT 20 Dec 80

[Text] Guangzhou, 20 Dec (XINHUA)--The First Regional Technical Conference on Climate called here by the World Meteorological Organization (WMO) today appeals to nations in Asia and the Western Pacific to facilitate close cooperation among meteorologists, agricultural scientists and economists and others involved in food production and the use of water and energy resources.

The appeal was made in a statement issued at the end of the Technical Conference on Climate for Asia and the Western Pacific, which was attended by many of the world's most well-known meteorologists and climatologists as well as experts from some UN specialized agencies and other international bodies.

Cooperative projects between nations in the region should be developed so that mutual benefit may be obtained by the exchange of expertise and resources in meteorology and climatology, the statement says.

It stresses full advantage must be ensured to be taken of the knowledge of climate influence in food production and the use of water and energy resources.

The statement appeals to nations in the region to encourage research and development for the adaptation of available methodologies to suit local conditions and for the improvement of methodologies.

All possible measures, the statement says, should be taken to ensure that climate information relating to food production and to the use of water and energy are identified, processed and made available, preferably in computer-compatible form.

The statement points out that those responsible for decision-making in food production, management of water resources and energy supply in the nations in the region must be fully aware of the dominant influence of climate.

"The use of climate knowledge will only be effective if meteorologists and climatologists work in direct association with hydrologists, agriculturists, economists and soil scientists as well as scientists and users in related fields," the statement says.

Government officials and scientists should work together as a close-knit team too, the document adds.

The week-long conference also appeals to UN specialized agencies and other international bodies to increase their assistance to nations in Asia and the Western Pacific in improving the application of climate knowledge particularly in the fields of food production and the use of energy and water resources. "Continuing close collaboration" should be ensured between relevant UN specialized agencies and other international bodies in these activities.

Speaking of the reasons for the appeal, the document states that there are about 2,000 million people at present living in the region and this number will increase to about 3,000 million by the year 2000. A substantial increase in food production will be necessary if the goal of adequate nutrition for all people in the region is to be achieved.

Water resources in the region are inadequately utilized at present and considerable improvement will be necessary if the demands in the year 2000 are to be satisfied, the statement continued. "A massive increase in energy consumption in the region is likely to occur between now and the year 2000."

Climatologists Meet in Guangzhou

OW190746 Beijing XINHUA in English 0720 GMT 19 Dec 80

[Text] Guangzhou, 19 Dec (XINHUA)--World climatologists meeting here agree that it is still too soon to tell whether the globe is going to be getting warmer or cooler.

It might take them two decades or even longer to see a preliminary general trend, they say, for the climate fluctuations involve both natural and human factors, which are very complicated.

However, heated discussions on the present world climate trend have been going on here at the Technical Conference on Climate for Asia and Western Pacific since it opened on Monday.

Some climatologists say that the growing increase of carbon dioxide released into the air in recent decades with the development of industry and other factors seem to lead to a global warming. The carbon dioxide layer in the atmosphere, they say, has a sort of greenhouse effect, that is, stopping the release of the heat on earth.

Others say that the global temperature is declining because of the increased volcanic ash in the air, the sun spot activities and the vapour changes in the atmosphere, which have impacts on solar radiation.

Bert Bolin, 55, professor of the University of Stockholm, Sweden, who is one of the world's several well-known meteorologists, said that the general trend is that the global climate seems to get warming and the leading factor is the release of huge amounts of carbon dioxide into the atmosphere.

He said, the carbon dioxide released into the air this year might reach 8 billion tons and in 1979 the amount was 5.4 billion tons. By the year 2025, the figure is estimated to be around 14 billion tons. The average annual emission of carbon dioxide into the air in the past decade was about five billion tons, he added.

The Swedish professor, who has been doing research in this field for 25 years said that among the total emission, 50 percent stays in the air, about 28 to 40 percent is absorbed by plants and the rest goes into the sea.

According to some specialists here, carbon dioxide in the atmosphere has increased by 15 percent since the beginning of the industrial revolution in the early 18th century. Calculations show that if carbon dioxide in the air doubles, the average global temperature will go up one degree centigrade.

And this may be possible by the middle of the next century if the estimated average annual increase of the fossil fuels like oil and coal consumed is two percent, according to a U.S. Government report issued on 24 July 1980. This may happen earlier than estimated due to the growing felling of trees, the report says.

If that being the case, the report continues, the temperature in the polar regions may perhaps go up by as many as 5 to 10 degrees centigrade, for the "greenhouse effect" of the carbon dioxide in these areas is obvious.

Then the ice in the polar regions will melt and the sea will rise and people will have to abandon many of the coastal cities, the report claims.

"I don't think that the carbon dioxide will double by the middle of the next century," argued Koichiro Takahashi, 67, professor of Waseda University, Japan.

He said, if it should be the case, countries the world over will take various measures now to cope with this and cut down the carbon dioxide to be released. They may also turn to developing solar energy, wind and water power resources, he added.

Besides, he stressed, reports have already said that the reserves of oil and coal today are limited on earth.

"My research shows that there seems to be a global cooling," the well-known Japanese professor stated. He noted, the temperature began to decline in Asia in the 1960s and in Europe, in the 1940s.

Factors behind the temperature declining are several, he explained. One is the increased airborne volcano ash in the recent decades. Before the 1940s, he recalled, few volcanoes erupted and this has also been noted by British, West German and some American specialists too. This, plus the sun spot activities and the vapour changes in the atmosphere have affected the solar radiation onto earth.

But, he said, the cooling is not what is felt in the Ice Age or the Little Ice Age but may have impacts on crops. In Japan, he said, the average temperature decrease in the past 20 years or so was one degree centigrade and in some areas the decrease was bigger, hence, the output of rice, a major crop in Japan, went down 4 percent.

Chinese meteorologists state that global cooling seems to be the general climate trend. There has been a temperature decrease in the north polar region, Africa, southern China and eastern Atlantic in the past decade, said Wang Shaowu, associate professor of Beijing University.

China has experienced cool summers in 1957, 1964, 1969, 1972 and 1976, the 48-year-old Chinese professor recalled. Besides, he said, the average temperature from 1971 to 1980 is lower than that from 1931 to 1960 despite the increased carbon dioxide released.

"We all agree that the increase of carbon dioxide may lead to a temperature increase, but it's hard to say that the reason for the rise in temperature is the increase of carbon dioxide," Wang Shaowu said.

Basing themselves on extensive studies in Chinese meteorological records, navigational logs, annals of various localities and ancient literary works over the past 5,000 years, Chinese meteorologists maintain that the "changes" in the past decade are similar to those which had repeated in the past 500 years.

"Never before did we dream of the human activities' impact on climate. We said that or this is 'independent of nature'," an American professor commented.

Besides, they noted, cooling or warming seems to have varied from place to place in terms of timing and period.

But, they all stressed, it is an important issue to consider and research efforts must be encouraged and intensified so as to provide better meteorological service for the future development.

PLANS FOR MORE MOUNTAINEERING EXPEDITIONS BY FOREIGN TEAMS

More Mountaineering Expeditions

OW291214 Beijing XINHUA in English 1205 GMT 29 Dec 80

[Text] Beijing, 29 Dec (XINHUA)--Two mountaineering expeditions from Austria and Japan and three American trekking teams will come to China next year, the Chinese Mountaineering Association (CMA) said here today.

A 16-member expedition from the Austrian Alpine Club will challenge the northwest face of the 7,546-meter Mount Muztagata, one of the high peaks in northwest China's Xinjiang Uygur autonomous region from 31 August to 26 September next year.

A trekking team from the American Mountain Travel Inc. will tour the same area in June next year, but their highest climb will be to a point at an altitude of 5,600 meters.

The CMA said that a Japanese expedition, organized by the Japanese National Railways Mountaineering Federation, will climb the 5,445-meter Mount Bogda also in Xinjiang in July next year. The team will be led by Ken Kambayashi and the climbing route will be decided later.

Two trekking teams from the American Mountain Travel Inc. and another from the Mountain Travel Nepal Inc. will also trek the mountain in autumn next year after touring the well-known scenic spot Tianchi, or "Heavenly Lake," near Mount Bogda in the eastern part of the Tianshan Mountains.

Mount Bogda is one of the half a dozen peaks over 5,000-meters high and dozens more exceeding 4,000 meters in the vicinity hitherto unclimbed, the CMA said. The snow-capped Mount Muztagata, known as the "father of the icy mountains," was ascended for the first time by a combined Sino-Soviet expedition in 1956. Three Americans reached the top on skis in July of this year.

Since the opening of eight mountains to foreign expeditions earlier this year, more than 70 protocols have been signed for climbing and trekking in 1981, the CMA said. In addition to the groups mentioned, other visiting teams from Australia, Britain, France, Italy, New Zealand and Switzerland will also assay the peaks.

U.S. Team to Climb Qomolangma

OW130818 Beijing XINHUA in English 0807 GMT 13 Dec 80

[Text] Beijing, 13 Dec (XINHUA)--Two American trekking teams will tour the area of Mount Qomolangma (known abroad as Everest) in China's Tibet autonomous region next year, it was learned from the Chinese Mountaineering Association (CMA) here today.

In November 1981, a team organized by the company Mountain Travel Nepal Incorporation, composed of both mountaineers and tourists will climb to 5,000 meters where expeditions used to establish their basecamps. The team will be led by Albert Read, managing director of the company. It will not attempt to reach the 8,848-meter summit.

The CMA said the team will come to the Mount Qomolangma area after touring the area of the world's 14th highest peak, Mount Xixabangma, also reaching 5,000 meters.

Another Qomolangma team from American Mountain Travel Inc., 30 people in all, will divide into two groups and trek the mountain area between September and October next year. Their highest climb will also be to the 5,000-meter basecamp.

These tours will follow an Australian Qomolangma team, which plans to climb a 6,600-meter glacier on the world's highest peak between 20 April and 20 May.

The CMA said that American Mountain Travel Inc. also will send an eight-member trekking team to the 7,556-meter Mount Gongga area in southwest China's Sichuan Province between May and June next year. The team will be led by Leo le Bon.

MADRID SECURITY CONFERENCE ADJOURNS 19 DECEMBER

OW192020 Beijing XINHUA in English 1925 GMT 19 Dec 80

[Text] Madrid, 19 Dec (XINHUA)--The European Security Conference adjourned here today after 6 weeks of fruitless debate. The next session is scheduled for 27 January next year.

This followup European Security Conference, opened on 11 November, was attended by delegates from 35 countries from Europe (with the exception of Albania), the United States and Canada. A 2-month preparatory session was held before the conference.

The conference was called in a rush without an agenda which was scheduled to be worked out at the preparatory session. During deliberations on the execution of the final act adopted at the 1975 Helsinki Conference, delegates from the Western, neutral and non-aligned countries censured the Soviet Union for its invasion of Afghanistan and human rights violations. They pointed out that the Soviet action "constitutes a serious infringement on the principles of the Helsinki Final Act," "has pushed detente to an abyss" and that "there cannot be separate detente in Europe" under the current situation. The Soviet delegate resorted to sophistry at the meeting to avert accusation and blamed the West instead for sabotaging detente.

As the conference entered its fifth week, delegates from the East and the West had put forward over 80 proposals on East-West relations, ranging from European disarmament, security in the Mediterranean, human rights and energy to what joint actions are to be taken against terrorism.

Western officials said they were pessimistic about these proposals, since at the 1977 Belgrade Conference only 3 out of the 106 proposals advanced were adopted.

Western news agencies reported that the Western countries are uneasy over rumours that the Soviet Union is about to intervene militarily in Poland. Under such a situation, public opinion in the West is skeptical over what results the next European security session will produce.

BEIJING HOSTS NEW YEAR'S PARTY FOR FOREIGN STUDENTS

OW291716 Beijing XINHUA in English 1618 GMT 29 Dec 80

[Text] Beijing, 29 Dec (XINHUA)--Over 700 foreign students from some [number indistinct] countries and 500 Chinese teachers and students celebrated the coming new year at a party given this evening at the Beijing Institute of Languages.

The party, sponsored by the Beijing Municipal Bureau of Higher Education, started off with music and refreshments and ended with the showing of a new Chinese feature film "The Mysterious Buddha".

Like all gatherings of young people, the party was livened up by the students' animated chats and laughters. Foreign and Chinese students discussed their views on things and shared their experiences in studies.

A 23-year-old student from Madagascar, Johanesa, who majors in traditional Chinese medicines, told XINHUA that he wanted to bring this ancient Chinese culture back to his country to serve his motherland, however, he said, the only thing that worried him was whether these herbal medicines were available in his country or not.

A very young Kampuchean girl student Matieng who came to China from guerrillas areas last March said she was now preparing herself for her future task of liberating and building up her motherland. She said that the teachers and schoolmates were good to her and she felt very much at home here. "War has deprived me of a proper education and I will do my utmost to catch it up here," she added. Twenty-two-year-old Vernon K. Fowler, a graduate student from Leeds University in England is now studying classical Chinese literature at Beijing University. He said he liked his study and his teachers and wished for more contacts with other Chinese students.

Pu Tongxiu, vice-minister of education, attended the party and extended greetings to the students on behalf of the ministry.

Bai Jiefu, vice-mayor of Beijing, also addressed the party. He said he hoped students of all countries present would join hands to work for world peace and progress.

There are now 930 foreign students studying in 15 Beijing universities and colleges. Many of them have left Beijing to spend their Christmas and New Year holidays elsewhere.

BRIEFS

IRANIAN PREMIER DISCUSSES HOSTAGES--Tehran, 18 Dec (XINHUA)--Iranian Prime Minister 'Ali Raja'i said here today that "the U.S. Government can take the hostages before the Christmas holidays if they can give the necessary guarantees," reported the PARS News Agency. During a meeting with the ambassador of Sweden here, the prime minister said: "Our final reply to the explanations that the U.S. requested has been prepared and will be sent to the U.S. in the near future. After that, every measure to speed up the release of the hostages depends on the U.S. Government." Raja'i also told PARS on 16 December that Iran now only required a financial guarantee from the U.S. to be given to the Algerian Government, which is responsible for Iranian interests in the U.S., and then the U.S. could take the hostages. [Text] [OW181527 Beijing XINHUA in English 1504 GMT 18 Dec 80]

AFGHANS RESIST SOVIET TROOPS--Islamabad, 21 Dec (XINHUA)--Twenty-five Soviet soldiers were killed on 15 December during a fighting between Afghan freedom fighters and the Soviet aggressive troops in Ganikhin district of Paktia Province, according to the spokesman of Hizb-i-Islami of Afghanistan in Peshawar today. The spokesman said that in another fight in Solicoat district of Paktia Province the same day five Soviet soldiers were killed while two freedom fighters lost their lives. On 10 December freedom fighters made attacks on the Soviet troops in Khost and Kani in the province. As a result, 6 Soviet military trucks were destroyed and 50 machine-guns and 5,600 bullets captured. Resistance movements, he said, are very active in Nangarhar Province. The freedom fighters recently destroyed in Nazyan district three Soviet tanks and killed all those aboard. According to another report, the Afghan freedom fighters in an action against Soviet troops in Kesham area of Badakhashan Province caused heavy casualties for the invaders. [Text] [OW211628 Beijing XINHUA in English 1618 GMT 21 Dec 80]

AFGHAN GUERRILLAS CONTINUE FIGHT--Islamabad, 22 Dec (XINHUA)--The Afghan Moslem fighters (Mojahedin) have carried on a heroic struggle in the rural areas of Afghanistan against the Soviet occupation troops and the Soviet-backed Karmal regime, said Maulvi Mohammad Khalis, leader of Hezb-e Eslami (Islamic Front) in an interview with Pakistan Radio in Peshawar yesterday, according to press reports here. With the help of the local people, the Afghan guerrillas have made surprise attacks on the Soviet aggressors and the Karmal regime's army, he said. In face of the recent Soviet economic offensives, he added, the Afghans, though living in poverty, refused to accept the Soviet distribution of food stuff, cash and other goods and described them as "bribes." [Text] [OW221208 Beijing XINHUA in English 1200 GMT 22 Dec 80]

AFGHAN DELEGATION VISITS CAIRO--Cairo, 21 Dec (XINHUA)--The Afghan resistance delegation which arrived here yesterday said that despite scanty arms and the shortage of food and clothes, the resistance fighters have enjoyed high spirits and continued their struggle against the Russian invaders. A member of the delegation, Sanatallah Mujaddidi, said that despite the difficulties faced by the patriots, they have succeeded in inflicting heavy losses on the Soviet invaders. He dwelled on Soviet forces' atrocities in Afghanistan. [Text] [OW211220 Beijing XINHUA in English 1215 GMT 21 Dec 80]

IRAQ OPPOSES INTERVENTION--Bangkok, 19 Dec (XINHUA)--"Iraq is strongly against interference by any country in the internal affairs of another as in Kampuchea and Afghanistan," said Iraqi Foreign Minister Sa'dun Hammadi at a press conference here yesterday. Hammadi, who left here today after a 4-day official visit to Thailand, also declared that Iraq supported Thailand's and ASEAN's proposal for an international conference on Kampuchea adopted by the UN General Assembly. He expressed his country's readiness to increase oil export to Thailand and other ASEAN countries. He said Arabs were willing to provide the countries in the region with more business and trade opportunities. He believed that a dialogue between ASEAN and the Arab League would help pave the way for closer economic cooperation between the two groups. It could also be used as a means to formulate a common stand on major political issues of mutual concern such as Arab-Israeli confrontation and the Kampuchean conflict. [Text] [OW191224 Beijing XINHUA in English 1215 GMT 19 Dec 80]

IRAN PREPARES REPLY TO U.S.--Tehran, 16 Dec (XINHUA)--Iranian leader Khomeyni has given permission to preparing a reply to the United States on the hostages. He hoped that in the near future there would no longer be a hostage problem, Prime Minister Mohammed 'Ali Raja'i told the PARS News Agency this morning after meeting with Khomeyni. "As we have repeatedly said," he said, "the issue has become a dead subject for us. So in order to get rid of this hindrance and save our time, we have prepared a final answer that will be conveyed to the U.S. Government through the representative of the Algerian Government who has come to Iran for this purpose." He added that it was now up to the United States to take the hostages back any time, any day. "We have only asked for financial guarantees from the U.S. for our interests. Then they can take the hostages," the prime minister concluded. [Text] [OW161600 Beijing XINHUA in English 1519 GMT 16 Dec 80]

COMMENTS ON U.S. RESPONSE--Tehran, 13 Dec (XINHUA)--"The reply and the position of the United States to the conditions (for releasing the U.S. hostages) set by the (Iranian) Islamic Consultative Assembly have been basically positive," said Ahmad Azizi, director of American hostage affairs in the office of the prime minister, the PARS News Agency reported today. The discussion between the Iranian authorities and the Algerian mediation team is still going on, he said, and added that the results will be published soon after the Algerian team leaves Tehran. The Algerian team arrived in Tehran 9 days ago, bringing with them the U.S. response to the conditions of the assembly for the release of the hostages. Meanwhile, Azizi indicated that the trip of four American clergymen to Iran had been realized without prior planning. [Text] [OW131559 Beijing XINHUA in English 1537 GMT 13 Dec 80]

BANI-SADR DISCUSSES U.S. HOSTAGES--Tehran, 15 Dec (XINHUA)--"If the U.S. returns the money deposited by the Iranian Government in U.S. banks and other banks under the U.S. control, the problem of the U.S. hostages will be solved," Iranian President Bani-Sadr announced at a press conference here this morning. He stressed that "I am not referring to the money brought out by the late shah." On the economic difficulties, Bani-Sadr admitted that Iran was facing great economic difficulties because the country was engaged in a war under the condition of an economic blockade. Iran could solve these problems by relying on the efforts of its people until it wins the war, he said. The president reiterated that "so long as the enemy troops do not withdraw from our land, we cannot accept any solutions." [Text] [OW150840 Beijing XINHUA in English 0832 GMT 15 Dec 80]

BANGLADESH-UAE JOINT COMMUNIQUE--Dacca, 28 Dec (XINHUA)--Bangladesh and the United Arab Emirates in a communique today demanded an immediate withdrawal of foreign troops from Afghanistan. The communique, issued after a 3-day visit to Bangladesh by UAE State Minister for Foreign Affairs Rashid 'Abdallah al-Nu'aymi, also demanded Israeli withdrawal from all occupied Arab lands and reiterated support for the Palestinian people's right to an independent state in their homeland. Both sides appealed to Iraq and Iran to immediately cease hostilities and seek a just solution to their dispute. They stressed, "The Gulf and the Strait of Hormuz should be kept free for safe navigation in the interest of global peace and security." The two sides pledged cooperation in upholding the principles of the Organization of Islamic Conference, and underscored the need for unity and solidarity among Muslim countries. They also pledged to cooperate in oil and gas explorations. The UAE expressed willingness to invest in mutually beneficial projects in Bangladesh. AFGHAN REBELS' SOLIDARITY VIEWED--Islamabad, 26 Dec (XINHUA)--S.M. Zafar, a former federal minister, siad at a public meeting held in Lahore today that the people of Afghanistan were putting up tough resistance against the well-equipped Russian forces in what was a demonstration of their force of self-determination, according to APP tonight. The public meeting, held to express brotherhood and solidarity with Afghan refugees and Mojahedin, called upon the Soviet Union to withdraw its armed forces from Afghanistan by respecting the UN charter. Mayor of Lahore Mian Shujaur Rahman said at the meeting that the war of the Afghan people was the war of the entire Muslim world. They were fighting for righteousness and justice, he added. He appealed to all Pakistanis to donate one rupee each every month to the Afghan refugees. Some other speakers at the meeting also condemned the Russian aggression on Afghanistan and expressed their confidence that the Afghan people would finally emerge victorious in their war against the Russian occupation of their homeland. [Text] [OW270115 Beijing XINHUA in English 0105 GMT 27 Dec 80]

AFGHANS PROTEST IN DELHI--Beijing, 27 Dec (XINHUA)--Braving the chilly weather, about 100 Afghans began a 24-hour fast outside the Soviet Embassy yesterday evening in protest against the Soviet invasion of Afghanistan, reports "THE TIMES OF INDIA" today. The demonstrators, including men, women, children and youth were led by Said Mohammed Maiwand, a former representative of Afghanistan in the United Nations. Displaying banners with such slogans as "death or freedom" and "Russians quit Afghanistan," the demonstrators sat on the dew-drenched grounds opposite the Soviet Embassy. A spokesman for the demonstrators said their protest marked the first anniversary of Soviet invasion of Afghanistan. He said the hunger strikers will be joined by other Afghans in Delhi today to hold a protest demonstration outside the embassy. [Text] [OW270738 Beijing XINHUA in English 0732 GMT 27 Dec 80]

AFGHAN OFFICIAL'S DEFECTION NOTED--Islamabad, 27 Dec (XINHUA)--Yaboorrashid Arian, deputy prime minister in Babrak Karmal's regime, has fled from Afghanistan, the daily "THE MUSLIM" reported today. Arian, who was Kabul's ambassador to Islamabad during the governments of Nur Mohammad Taraki and Hafizollah Amin, was called back home by Karmal and appointed justice minister. He became deputy prime minister and a member of the revolutionary council after he visited Moscow last June. [Text] [OW270807 Beijing XINHUA in English 0748 GMT 27 Dec 80]

AFGHANS PROTEST IN NEW DELHI--Beijing, 27 Dec (XINHUA)--Some 400 Afghans shouted anti-Soviet slogans in front of the Soviet Embassy in New Delhi today, according to reports received here. On the first anniversary of the Soviet occupation of their country, about 300 Afghan demonstrators today joined some 100 of their fellow-countrymen on an overnight hunger strike in front of the embassy. The demonstrators carried banners inscribed with the words, "Down with the Kremlin's criminal regime!" and enlarged pictures of Afghan victims of the Soviet invasion. They also chanted slogans "Down with Soviet imperialism!" "We want justice, we want freedom, and we will die for freedom!" [Text] [OW271518 Beijing XINHUA in English 1510 GMT 27 Dec 80]

EGYPTIAN PRESS SUPPORTS AFGHANS--Cairo, 26 Dec (XINHUA)--Solidarity with the Afghan people against the Soviet invasion is the thesis of today's editorials of both "AL-AKHBAR" and "AL-GOMHURIA." "AL-AKHBAR" pointed out that the Soviet crime in Afghanistan has alarmed peoples and nations all over the world. They all expressed their support to the Afghan people against the invasion. "AL-GOMHURIA" said that the Afghan people were exposed over a full year to the most abhorrent crimes of the Soviet invasion ranging from murder of women, children and old people, destruction of whole villages with their population, air raids, to profanation of sacred places of Islamic worship. In spite of this, the paper added, the Afghan people stood steadfast in the face of invasion and waged the noblest battle against the superpower. They have made the Soviet Union in a plight [Text] [OW261510 Beijing XINHUA in English 1504 GMT 26 Dec 80]

AFGHANS PROTEST IN TEHRAN--Tehran, 27 Dec (XINHUA)--A demonstration was held here today on the occasion of the first anniversary of the Soviet invasion of Afghanistan. The march began at 8 am and the crowds were mostly Afghan residents. They marched first to the Afghan Embassy and then the Soviet Embassy in Tehran, shouting slogans such as: "Russia will be defeated," "Afghanistan hates Soviets as well as Americans" and "The Red Army should be pushed back." Scores of demonstrators succeeded in entering the Soviet Embassy compound where they caused some damage, according to a PARS News Agency report. They pulled down the Soviet flag and burnt it, the report added. They read a 14-article resolution condemning the Soviet military occupation of Afghanistan. The demonstrators were dispersed by police reinforcements. The PARS also reported that Afghan residents in the city of Mashad in northwestern Iran on the same occasion demonstrated and burned pictures of Babrak Karmal and Brezhnev. [Text] [OW271513 Beijing XINHUA in English 1507 GMT 27 Dec 80]

SWISS PRESS MARKS INVASION--Geneva, 27 Dec (XINHUA)--On the first anniversary of the Soviet military intervention in Afghanistan, Swiss newspapers came out today with commentaries, pointing out that the prolonged Soviet occupation of Afghanistan has indicated Moscow's ambition for further expansion in the world. A commentary in "TRIBUNE LE MATIN" of Lausanne said, "The occupation of Afghanistan represents an important step of Soviet expansion towards the Indian Ocean and the Persian Gulf. Starting from the Afghan plateaux, Moscow directly menaces Iran and Pakistan, and keeps a close eye on the petrol passage lane which the West depends on." "Since the time of cold war, Soviet menace has never been so real as it is today," it added. "24 HEURES" in its commentary held that because of the strategic importance of Afghanistan, the Soviet Union has not shown the slightest intention of giving up its occupation of that country. "LA SUISSE" in an article wrote that "In the last 12 months of tough battles (in Afghanistan), soldiers of the Kremlin have failed to diminish the ever raging resistance put up by Islamic people of all circles throughout the Afghan nation." [Text] [OW281516 Beijing XINHUA in English 1507 GMT 28 Dec 80]

KARMAL DEFENSE MINISTER SHOT--Stockholm, 23 Dec (XINHUA)--Mohammad Rafi', minister of defence of the Karmal regime in Afghanistan, was gunned down by an officer of the Soviet occupation troops and hospitalized recently, according to a Kabul report by Anna-Maria Lantz, correspondent of the Swedish paper "EXPRESSEN." Rafi' was wounded on 17 December when he was visiting the Bagram Soviet Air Force base on the outskirts of Kabul. He did not come to until 21 December. He is known to have vehemently criticized the commanders of the Soviet occupation troops for failure to stop Soviet soldiers from raping Afghan women, and demanded the withdrawal of Soviet troops from Afghanistan. There have been reports of cases of violence in Kabul in the past few weeks. Of the three schoolgirls who fell victim, one succeeded in taking flight but the two others were found lying dead in the fields. The wife of an Afghan officer also became a victim. [Text] [OW240748 Beijing XINHUA in English 0733 GMT 24 Dec 80]

DACCA PEOPLE PROTEST AGGRESSION--Dacca, 27 Dec (XINHUA)--About 2,000 people from all walks of life held a demonstration here this afternoon, protesting against Soviet armed invasion of Afghanistan. This was organized by the Bangladesh Youth Resistance Front on Soviet aggression in Afghanistan. The demonstrators marched through the main streets, carrying placards and streamers with slogans: "Down with Soviet social-imperialism" and "Soviet aggressor troops should withdraw immediately from Afghanistan." After the demonstration, they held a mass meeting. Speaking at the meeting, leaders of several political parties, including the communist party (ML), and mass organizations strongly condemned the Soviet action and demanded that the Afghan people be free to determine their course and destiny without any foreign interference. They expressed firm support to the Afghan people in their struggle against the Soviet aggressors. They also called on the Third World countries, non-aligned countries and peace-loving people all over the world to unite in opposing Soviet hegemonism and expansionism. A similar demonstration was held here this morning by 1,500 students. [Text] [OW280120 Beijing XINHUA in English 0110 GMT 28 Dec 80]

IRAN LISTS U.S. ALTERNATIVES--Tehran, 27 Dec (XINHUA)--Iranian Prime Minister Mohammad 'Ali Raja'i summoned foreign ambassadors and charge'd affairs in Tehran this afternoon and announced that Iran will keep the 52 U.S. hostages before the United States gives back all the money Iran requested. He said that the U.S. has three alternatives: First, to hand over a guarantee to Algeria as Iran suggested earlier; second, to give Iran part of the money on which there is no difference between the two sides, and before the U.S. succeeded in solving the differences on the other part of the money requested by Iran, Iran will keep the hostages in good condition as before; third, to play plots, to intervene, to cooperate with Saddam. In this case, Iran will defeat it. He criticized the U.S. for entering into a war with Iran more frankly by claiming that "Iran was blackmailing to solve the hostage issue" after Iran gave its last answer to the U.S. through the representative of Algeria. [Text] [OW271930 Beijing XINHUA in English 1923 GMT 27 Dec 80]

KHOMEYNI RECOMMENDS AGAINST DEMONSTRATIONS--Tehran, 17 Dec (XINHUA)--Iranian leader Ayatollah Khomeyni today cancelled the nation-wide demonstrations scheduled for tomorrow, reported the PARS News Agency today. Iranian religious leaders and Moslem societies have arranged massive protest demonstrations throughout the country following the recent events in the country, and invited the people to participate in the demonstrations. Incidents between Islamic militants and supporters of President Abolhasan Bani-Sadr have taken place recently at Isfahan and other places during which portraits of the Ayatollah were torn up. An announcement released by Khomenyi's office here today said, "Due to the present critical situation when we are engaged in war with the enemies of Islam, and as I have repeatedly announced, in order to preserve unity, if I or my picture were insulted, the people should show no action. It is hereby recommended that the public holiday and marches which are due to be held for this purpose should be cancelled." "Revolutionary institutions which have announced a 3-day holiday should return to their normal work," it added. [Text] [OW171658 Beijing XINHUA in English 1643 GMT 17 Dec 80]

USSR PROTESTS ATTACK ON EMBASSY--Moscow, 28 Dec (XINHUA)--The Foreign Ministry of the Soviet Union today handed to the Iranian ambassador here a note, lodging a "resolute protest" with the Iranian Government against yesterday's "piratic attack" on the Soviet Embassy in Iran. The note complains that the Iranian authorities "did not take urgent and effective enough measures to prevent such an attack" and "it is only after numerous and insistent demands of the Soviet ambassador that the Iranian authorities interfered and took measures to turn the attacking persons out of the embassy's territory." "The Soviet Government," the note adds, "reserves the right to make claims to the Iranian Government for the restoration of the damage caused to the Soviet Embassy and to consider the question of appropriate measures to protect lawful interests of the Soviet Union in connection with the hostile actions of the Iranian side against the USSR Embassy in Tehran." According to a BBC report, Tehran residents staged a demonstration in front of the Soviet Embassy yesterday to mark the first anniversary of the Soviet armed intervention in Afghanistan. [Text] [OW290808 Beijing XINHUA in English 0717 GMT 29 Dec 80]

SRV LOSSES IN KAMPUCHEA--Beijing, 30 Dec (XINHUA)--Some one hundred Vietnamese troops were wiped out by the Kampuchean National Army and guerrilla units in Siemreap and Koh Kong provinces recently, according to Radio Democratic Kampuchea. On 24 December, the national army and guerrillas in Siemreap Province destroyed a Vietnamese truck on the Siemreap-Banleay Srel highway, killing or wounding 24 Vietnamese troops on board. A few minutes later, they wiped out five more when the enemy rushed to the rescue from Banleay Srel. On 21 December, they assaulted and captured a Vietnamese stronghold in Banleay Srel district, killing nine enemy soldiers. On 22 December, a commando unit of the national army in Koh Kong Province attacked a stronghold near the Meteuk River which was garrisoned by a Vietnamese company. Thirty-four enemy troops were killed. Over 30 Vietnamese troops were also annihilated from 18 to 20 December by the national army and guerrillas in Preah Vihear Province. [Text] [OW300816 Beijing XINHUA in English 0808 GMT 30 Dec 80]

SINGAPORE'S NEW YEAR MESSAGE--Beijing, 31 Dec (XINHUA)--Prime Minister Lee Kuan Yew of Singapore said today: "We have to take defence seriously for there are always expansionist and aggressive people like the Vietnamese." In a New Year message, Lee said, "we have spent several thousand million dollars on the Singapore armed forces. We will be spending more on new generation of weaponry." He pointed out that the only way to ensure that Singaporeans did not become "boat people"--a reference to the hundreds of thousands of Vietnamese who fled their homeland in precarious, leaky boats--was to take defense seriously. He noted that the United States and its allies had to increase defense spending or "become increasingly vulnerable to superior Soviet strength both in strategic and conventional weapons". [Text] [OW311644 Beijing XINHUA in English 1634 GMT 31 Dec 80]

NEPAL'S CONSTITUTION MADE PUBLIC--Katmandu, 15 Dec (XINHUA)--The third amendment of the constitution of Nepal was made public today on the constitution day of the country. The constitution was worked out by the special committee of the Constitution Reform Commission which was set up in accordance with the results of the national referendum last May that Nepal will retain the Panchayat system with appropriate reforms. The amendment containing 21 articles stipulates that a general election of the members of the National Panchayat will be held every 5 years on the basis of adult franchise and his majesty the king will appoint as prime minister the member elected at least by 60 percent of the total membership of the National Panchayat and recommended by the national legislature. The prime minister also can be removed by reason of failure to fulfill his work by a majority of 60 percent of the total membership of the National Panchayat. The National Panchayat shall be composed of 112 elected and 28 nominated members whose tenure of office will be 5 years. Regarding foreign policy, the revised constitution stipulates that the objective of the Panchayat system is to work towards making Nepal a zone of peace by adopting the basic ideals of the United Nations and the principles of non-alignment. GEOLOGIST'S SWISS DOCTORATE AWARD--Geneva, 29 Nov (XINHUA)--Well-known Chinese geologist, Professor Huang Jiqing, was awarded an honourary doctorate of natural science by the Zurich Federal Polytechnic School yesterday. Professor Huang received his certificate at a ceremony which was also a celebration of the 125th anniversary of the school. Ten other famous scientists were also awarded honourary doctorates. Professor Huang is the president of the China Geological Society and vice president of the Academy of Geological Sciences. [Text] [OW030651 Beijing XINHUA in English 1850 GMT 25 Nov 80]

IMPORTANT 1980 EVENTS LISTED--Beijing, 27 Dec (AFP)--The wave of strikes in Poland this summer was rated the most important world event of 1980 by the Chinese youth newspaper, ZHONGGUO QINGNIAN BAO today. Listing the 10 most significant happenings of the year, the newspaper put the death of Yugoslav President Josip Broz Tito in second place, followed by the boycott on the Moscow olympics. In fourth place came the Iraqi-Iranian crisis, then the American commando bid to rescue the 52 embassy hostages in Iran. A Chinese event was rated sixth in order of importance, the trial launching of an intercontinental ballistic rocket in May, and in seventh position was the Kwangju uprising in South Korea. Numbers eight and nine were space events: the photos of the planet Saturn beamed back to earth by Voyager-1, and the Soviet cosmonaut who set the world record for spending the longest time in space. In tenth place was Zimbabwe independence. Another Chinese newspaper, BI-MONTHLY FORUM, also ran a rating of the year's 10 most important world news items. It gave first place to the appointment of Hu Yaobang as Chinese Communist Party secretary general. [Text] [OW270854 Paris AFP in English 0804 GMT 27 Dec 80]

ANTHOLOGY OF U.S. SHORT STORIES--Beijing, 23 Nov (XINHUA)--An anthology of American short stories translated into the Chinese language has been published by the China Youth Publishing House. One of several similar anthologies available in China, the new book contains 31 short stories spanning a century and a half, but with the emphasis on more recent works. Among the authors included in the anthology are Washington Irving, Nathaniel Hawthorne, Mark Twain, Henry James, O. Henry, Jack London, Theodore Dreiser, Ernest Hemingway, Albert Maltz, William Faulkner, Langston Hughes, Isaac Bashevis Singer, John Updike and Joyce Carol Oates. Each story is preceded by a brief introduction by the editor, Wang Zuoliang, a professor of English in the Foreign Languages Institute of Beijing. In the preface, Professor Wang, who visited the United States of America earlier this year, says that he finds the American short stories particularly vigorous. He foresees that the strong tradition of American literature--close attention to American realities, dissection, criticism and even protest--is being maintained. Short biographies of the 31 authors are appended to the book. [Text] [OW2370739 Beijing XINHUA in English 0717 GMT 23 Nov 80]

NEPAL'S KING ADDRESSES RALLY--Katmandu, 15 Dec (XINHUA)--Tens of thousands of Nepalese people from all walks of life held a mass rally here today to mark King Mahendra's memorial day and the constitution day. Addressing the rally, King Birendra expressed his conviction that "our existence as a sovereign independent nation warrants a steady economic growth in the country for which a firm political structure seems no less than a resolute will to progress." "In keeping with the expectations as reflected in the referendum," he said, "we rouse the people to be active, to be disciplined, and to be united above all so that they can really contribute to the shaping up of our national economy." Earlier, a mass procession was staged through the streets of the capital. [Text] [OW151708 Beijing XINHUA in English 1707 GMT 15 Dec 80]

KAMPUCHEAN GUERRILLAS ATTACK VIETNAMESE--Beijing, 19 Dec (XINHUA)--A Vietnamese motorboat was sunk by the Kampuchean National Army and guerrillas on 13 December on its way to Chaytach from Kaoh Kong City. One hundred and seven Vietnamese troops on board were killed, according to Radio Democratic Kampuchea today. In Preah Vihear Province, guerrillas attacked a Vietnamese position near Phnom Dach district on the same day, wiping out 23 enemy men and capturing a number of weapons. According to another report, a section of the railroad east of Veal Renh station, Prey Nob district in Kampong Saom area, was destroyed on 14 December and a dozen or more Vietnamese troops were killed or wounded. [Text] [OW200114 Beijing XINHUA in English 0104 GMT 20 Dec 80]

ANGOLA DENOUNCES S. AFRICAN INVASIONS--Kinshasa, 19 Dec (XINHUA)--The Defence Ministry of Angola in a communique yesterday condemned the South African racist regime for its fresh invasions of Angola, the Angola National Radio broadcast today. On 15 December, the communique said, two South African fighter bombers from Namibia invaded the air space of the Angolan province of Cunene and fired on a bus on the Shaagonogo-Mongua road, killing one passenger on board and wounding four others. On 17 December, it added, 15 South African armoured cars attacked an Angolan border post at Santa Clara in Cunene Province, causing some damage. On the same day, a company of South African troops intruded into the Angolan territory along Melunga-Muluemba. Simultaneously, South Africa troops in armoured personnel carriers entered the Angolan territory in the area of Onangue while two military transport planes dropped paratroopers there. Calling world public attention to these new provocations, the communique demanded that South Africa stop its aggression against Angola. [Text] [OW200713 Beijing XINHUA in English 0706 GMT 20 Dec 80]

SPANISH, U.S. DELEGATES ON POLAND--Madrid, 19 Dec (XINHUA)--The Spanish and U.S. delegates to the European Security Conference now in session here expressed concern today over the intensifying Soviet troop movements along the Soviet-Polish border and condemned once again the Soviet invasion of Afghanistan. Speaking at the closing session of the first half of the conference, Spanish chief delegate Javier Ruperez pointed out that "cooperation and security would be gravely damaged if some people, being reckless or caught in a hysterical fit, violated the Helsinki regulations." He added that the criticism by Western and neutral countries would help make Moscow think twice before intervening in another country. U.S. delegation head Max Kampelman expressed grave concern over the troop movements of massive, alerted Warsaw pact forces in central and eastern Europe in the past few weeks. He also condemned the Soviet human right violations and invasion of Afghanistan as leaving serious effects on international relations and East-West dialogue. The British and Canadian delegates also denounced the Soviet aggressive policy at the meeting. The Soviet delegate, Ilichev, resorted to sophistry and accused the delegates of some Western countries of waging a psychological warfare in their speeches. [Text] [OW201636 Beijing XINHUA in English 1604 GMT 20 Dec 80]

FRENCH OFFICIAL ON CHAD, POLAND--Paris, 19 Dec (XINHUA)--French Foreign Minister Jean Francois-Poncet declared in the foreign affairs committee of French assembly here yesterday that France would support all efforts of African countries to restore peace in Chad, preserve its unity and independence. He said, "France has always supported the efforts made internally in Chad and the initiatives offered by its neighbouring African countries, particularly Togo, for promoting national reconciliation and restoring civil peace in Chad in the framework of the OAU. France will continue to provide cooperation and humanitarian aid to Chadian people wherever possible." He also said, "France takes such an attitude out of its respect for the sovereignty of Chad." However, he added, "this attitude of respect for Chad's sovereignty does in no way mean indifference." Turning to the issue of Poland, he said, "Poland is a sovereign state and the Polish people are a great people. Polish people should choose their own destiny free from any menace, pressure and external interference. It is the Polish people and the Polish people alone who have the right to manage the affairs they are engaged in. To do otherwise will surely have grave consequences for the future East-West relations." [Text] [OW201256 Beijing XINHUA in English 1249 GMT 20 Dec 80]

RETURN OF JAPANESE TERRITORIES--Tokyo, 21 Dec (XINHUA)--A committee for the reconstruction of the seven villages in Japan's northern territories was formed in Nemuro, Hokkaido, yesterday, Tokyo press reported today. Before the Second World War, 16,700 people lived in the seven villages on the four northern islands. They were forced to leave their homesteads and move to Nemuro following the Soviet military occupation of the islands. Since 1976 they have even been forbidden to visit the graves of their ancestors on the islands. The committee appealed to the former islanders to register and it said that all Japanese who take the interest of the northern territories at heart could also apply for status as islanders. Executive organs for these villages will be elected. The committee attempted to push forward the movement for the return of the northern territories by means of these activities. [Text] [OW210312 Beijing XINHUA in English 0257 GMT 21 Dec 80]

JAPANESE DIET CONVENES--Tokyo, 22 Dec (XINHUA)--The Japanese Diet convened its 94th session today with the emphasis on the examination of the state budget for 1981. The session was adjourned after the adoption by the House of Representatives and the Senate today of a protocol on the extension for a year of the provisional Japanese-Soviet fishery agreement. According to an agreement between the ruling party and the opposition parties, the session will be resumed on 26 January and concluded on 20 May next year. [Text] [OW220828 Beijing XINHUA in English 0822 GMT 22 Dec 80]

KAMPUCHEANS OVERRUN SRV STRONGHOLDS--Beijing, 21 Dec (XINHUA)--The Kampuchean national army and guerrilla units in the provinces of Preah Vihear, Battambang and Pursat recently put out of action nearly 100 Vietnamese troops and seized control of two Vietnamese strongholds, according to Radio Democratic Kampuchea. On 14 December the army and guerrillas in Preah Vihear Province wiped out 16 Vietnamese, captured some weapons and ammunition and overran the Trapeang Teum stronghold in Vqhep district garrisoned by a Vietnamese platoon. The army in coordination with guerrillas assaulted Vietnamese occupation troops in various parts of Pursat Province, on 12, 14 and 17 December. They killed or wounded 40 Vietnamese troops, destroyed three barracks and captured one stronghold. Forty Vietnamese troops were killed or wounded by Kampuchean regular army and guerrilla fighters in Sisophon district of Battambang Province on 18 December. In Samlot district in the same province, 10 Vietnamese soldiers crossed over to the national army and guerrillas on 13 December, Radio Democratic Kampuchea broadcast yesterday. [Text] [OW210728 Beijing XINHUA in English 0718 GMT 21 Dec 80]

BANGLADESH-BURMA BORDER AGREEMENT--Dacca, 19 Dec (XINHUA)--Bangladesh and Burma signed an agreement on border arrangement and cooperation yesterday to ensure peace and stability along their common border, according to the Bangladesh National News Agency. Under the agreement, representatives from the two countries, civilian or military, can hold meetings whenever needed. The agreement provided for guarding against illegal movement of people from either country with a view to checking smuggling and preventing criminals from fleeing their countries. The agreement was signed by visiting Burmese Minister for Home and Religious Affairs Brigadier General Sein Lwin and Bangladesh Home Minister Mustafizur Rahman. The Burmese minister arrived here on 17 December at the head of a four-member delegation for a week-long visit. [Text] [OW201254 Beijing XINHUA in English 1247 GMT 20 Dec 80]

KAMPUCHEAN GUERRILLAS CLAIM VICTORIES--Beijing, 23 Dec (XINHUA)--Kampuchean guerrillas ambushed a Vietnamese 21-vehicle convoy which was moving from Kompong Saom Port to Phnom Penh on highway 4 on 17 December destroying 7 and damaging 10 trucks and a great quantity of military materials. Fifty-five Vietnamese troops were killed or wounded, Radio Democratic Kampuchea reported today. The Kampuchean national army and guerrillas ambushed a company of Vietnamese troops 2 days earlier in Anlong Veng district, Otdar Meanchey Province, wiping out 44 enemy troops and capturing many weapons and ammunition. On the same day, they attacked the Vietnamese troops which were on a mopping up operation in Bavel district, Battambang Province. They killed or wounded more than 40 Vietnamese intruders and seized a batch of military materials. The radio broadcast a communique today saying that the Vietnamese aggressor troops fired on 8 December gas projectiles in Sala Krau Village, Pailin district, causing the death of four villagers and the poisoning of many others. The communique called the UN and governments and political organizations of all countries to denounce the Vietnamese crimes. [Text] [OW230740 Beijing XINHUA in English 0728 GMT 23 Dec 80]

YUGOSLAV TRADE DELEGATION GREETED--Yang Di, vice mayor of Shanghai, hosted a banquet on the evening of 19 December in honor of (Basch), assistant to the federal secretary for foreign trade of Yugoslavia, and the trade delegation led by him. [Text] [OW200608 Shanghai City Service in Mandarin 2300 GMT 19 Dec 80]

FRG MINISTER VISITS CZECHOSLOVAKIA--Prague, 20 Dec (XINHUA)--The Federal Republic of Germany (G.F.R.) has identical views with the European Economic Community and NATO countries on the assessment of the urgent issues in the international situation, stated Hans-Dietrich Genscher, G.F.R. minister for foreign affairs at a press conference here today after a 3-day official visit to this country. He said only by firmly carrying out the Helsinki final accords could there be a basis for cooperation between East and West. He told newsmen that he had had talks with Czechoslovak leaders on the political, economic and cultural relations between the two countries and on international issues. He noted that West Germany's ties with Czechoslovakia should be expanded in an all-round way to a level not lower than with the rest of CMEA (the Council for Mutual Economic Assistance) countries not bordering on G.F.R. The foreign minister said his meeting with Czechoslovak leaders was held under "very complicated international political situation" and talks were processed in a grave atmosphere. [Text] [OW210113 Beijing XINHUA in English 0101 GMT 21 Dec 80]

SWEDISH COMMUNISTS HOLD CONGRESS--Stockholm, 12 Dec (XINHUA)--The Third Congress of the Communist Party of Sweden was held here from the end of last month to the beginning of this month, says a press communique issued by the party today. The congress adopted the party's program, a new party constitution and a political report by the Central Committee. It re-elected Roland Pettersson chairman of the party. The congress also approved of a recommendation on the party's merger with the Marxist-Leninist League of Struggle of Sweden. The documents adopted at the congress are a summing up of the experience of the party since its formation in 1967. They stress the need to unite with all political forces in the struggle for peace, independence, democracy and the interests of the working people. The political program points out that the Soviet attempt to gain global supremacy and control Western Europe increases the possibility of a new world war. Therefore, the party makes the defence of peace and national independence its most important task. [Text] [OW120718 Beijing XINHUA in English 0708 GMT 12 Dec 80]

SPANISH LEADER ON SOVIET INTERVENTION--Beijing, 13 Dec (XINHUA)--"The Communist Party of Spain will break off relations with the Communist Party of the Soviet Union if Soviet armed intervention in Poland takes place," executive committee member of the Communist Party of Spain Manuel Azcarate warned Friday, according to Madrid reports. Azcarate stated that military intervention in Poland would be "a severe blow to peace, European security and the development itself of socialism." He added that "a very dangerous and complex situation" has been created over Poland. He said his party held that "workers' strikes were not directed against the socialist order in Poland, but against big mistakes of the country's leadership." He stressed the party's total independence from Moscow and called on other communist parties to "react independently" as well. [Text] [OW131651 Beijing XINHUA in English 1536 GMT 13 Dec 80]

SPANISH LEADER ON DEFENDING SOCIALISM--Madrid, 14 Dec (XINHUA)--General Secretary of the Spanish Communist Party Santiago Carrillo said here today that the people of every nation should be allowed to defend socialism themselves. Addressing a rally commemorating the 85th birthday of Dolores Ibarruri, chairman of the Spanish Communist Party, the general secretary noted that the policy of defending communism does not mean going beyond the frontier of a nation to occupy another nation. The way to defend socialism should be left to the labouring people of a nation to choose and defend it with blood, he added. Speaking about the danger of a new war, he said that unfortunately, war is possible so long as tanks, with whatever marks on them, advance, there exists a danger of war. Referring to D. Ibarruri's role in the Spanish Communist Party, S. Carrillo said: Although her son had shed his blood to defend the Soviet Union, yet she still urged the party to take its own stand when the Soviet Union occupied Czechoslovakia. D. Ibarruri made a brief statement at the rally. Chinese Ambassador Zhang Shijie was among the 1,000 people present at the rally. [Text] [OW151210 Beijing XINHUA in English 1205 GMT 15 Dec 80]

ITALIAN WARNING ON POLAND--Rome, 12 Dec (XINHUA)--A leader of the Communist Party of Italy today reiterated that any outside intervention in Poland is "absolutely unacceptable." In an interview published in the daily "PAESE SERA" today, Paolo Bufalini said: "We have made it very clear that defense of socialism and the struggle for reforms and against the danger of anarchism are the duty of the Polish working class, people and party, and that an outside intervention is unacceptable from the viewpoints of international principles and defense of socialism and is dangerous for peace and detente." "We do not agree to the tendency which ascribes a decisive weight to the danger constituted by hostile elements and the assistance rendered to them from without," he declared. "Any external pressure poses an obstacle to the battle (for reforms) as it hurts the legitimate feelings of national independence." "It is our view that the press in certain countries of the East are depicting the situation in Poland as one that gives rise to fears of an eventual outside intervention and this fact alone is a form of improper and harmful pressure," he noted. [Text] [OW130710 Beijing XINHUA in English 0701 GMT 13 Dec 80]

UK STRESSES NATO DETERRENCE--London, 16 Dec (XINHUA)--British Defense Secretary Francis Pym said today that the importance of Britain's strategic nuclear force is that "we can independently control the nuclear weapons we have," not the huge stockpile of weapons. He noted: "Independence in control" is a key factor in deterring the Soviet Union. Speaking at the Royal United Services Institute in London, Pym said: While the Soviet Union maintains its vast nuclear arsenal and is still expanding conventional forces, only NATO's strategy of deterrence can insure nuclear weapons never need be used. He said: "This is our entire purpose and objective." Asked about the dangers of a tactical nuclear attack on Britain, Pym said that he was more concerned about the threat of Soviet chemical warfare. He emphatically pointed out: To deter the Soviet Union from using nerve gas, we must have a "retaliatory capability." But he said Britain has not come close to a settlement of this question yet. Pym also reiterated the stand on approving Britain's deployment of 160 U.S. cruise missiles. [Text] [OW190608 Beijing XINHUA Domestic Service in Chinese 1530 GMT 17 Dec 80]

FRG DEFENSE BUDGET INCREASED--Bonn, 17 Dec (XINHUA)--West German Finance Minister Hans Matthoefer announced the fiscal budget for 1981 at a press conference here today. The budget adopted by the government yesterday will be submitted to parliament for approval in January next year. The 1981 budget totalling 224,700 million marks will register a 4.3 percent increase over the current year. Defence spending will rise by 6.2 percent to 41,200 million marks. In view of the rising prices, increase in the defence budget in real terms is expected to fall short of NATO's target of 3 percent. To make up for the budgetary deficit, the federal government has decided to borrow 27,400 million marks, raise the taxes on mineral oils and strong drinks, and reduce the state subsidies in some fields next year. The West German finance minister held that the financial situation in 1981 would be most worrisome. But he anticipated a turn for the better in his country's economy in the second half of next year. [Text] [OW181222 Beijing XINHUA in English 1211 GMT 18 Dec 80]

NORWEGIAN MINISTER CONCLUDES USSR VISIT--Moscow, 23 Dec (XINHUA)--A Soviet-Norwegian joint communique made public by TASS here today says: "The two sides confirm that there is divergence of positions on a number of problems between the USSR and Norway." The communique was issued at the end of a 3-day official visit to the Soviet Union by Norwegian Foreign Minister Knut Frydenlund. Frydenlund had an exchange of views with his Soviet counterpart Gromyko on international issues and bilateral relations. It was reported that no concrete agreement was reached between them. [Text] [OW240118 Beijing XINHUA in English 0107 GMT 24 Dec 80]

EEC ECONOMIC SITUATION DECLINING--Brussels, 18 Dec (XINHUA)--The nine countries of the European Economic Community (EEC) are grappling with an unfavourable economic situation with more people out of jobs, prices rising and trade deep in the red, according to figures released by the EEC Commission today. The downward trend of industrial production since last April is continuing. The industrial production index of the third quarter dropped by 2.9 percent compared with that of the second quarter. The employment situation continues to worsen. The unemployment rate of the community as a whole was up 0.2 percent in October, bringing the total number of the jobless to 7.4 million, or 6.6 percent. Prices continue to soar. Prices of consumer goods in the community rose by 0.9 percent in October, bringing the total figure in the 12 months ending last October to 13.1 percent. Meanwhile, external trade deficits of the community in September increased by 200 million European units of account from August with the total deficit figure standing at 4.1 billion European units of account (5,210 million U.S. dollars). [Text] [OW191646 Beijing XINHUA in English 1524 GMT 19 Dec 80]

EUROPEAN TROOP REDUCTION TALKS--Vienna, 18 Dec (XINHUA)--Nineteen nations from NATO and the Warsaw Pact ended here today the 22nd round of their talks on troop reductions in Central Europe with no progress made. The latest round of their talks started on 15 September. This year the two blocs have held three rounds of talks lasting more than 7 months. Up to now, both sides still remain where they started. A representative of the Warsaw Pact said that they had made a number of new proposals during the past year. He asserted that the West should be responsible for "no real progress" in the talks. NATO complained that the

Warsaw Pact countries had failed to provide an accurate number of their troops stationed in Central Europe. NATO estimated they have 150,000 more troops than NATO's. The next round of the talks will begin on 29 January 1981. The talks will thus enter the 8th year since they started in 1973. [Text] [OW200836 Beijing XINHUA in English 0824 GMT 20 Dec 80]

PYM DENIES TROOP REDUCTION--London, 22 Dec (XINHUA)--British Defence Secretary Francis Pym today denied reports that the government was preparing to save money by reducing the number of British troops stationed in West Germany. It was reported last weekend that the strength of the British army of the Rhine was under review as the Defence Ministry grappled with spending cuts in its budget next year. In a press statement Pym emphasized that Britain's commitment to NATO, including the Rhine army, was "central to our whole alliance contribution." There was no thought in his mind, he added, of "going back" on that contribution. It was essential to the alliance's forward defence strategy, which the United Kingdom supports "wholeheartedly," he said. But Pym maintained that it was necessary for the alliance as a whole to take a periodic look at itself, to see whether it was using its collective resources to the best effect. That was why he had recommended a review of the alliance's cost-effectiveness, he said. A Defence Ministry spokesman said Pym's idea is not to reduce NATO spending but to get better value for the money spent. [Text] [OW230736 Beijing XINHUA in English 0721 GMT 23 Dec 80]

NATO EXERCISES IN NORWAY--Stockholm, 11 Dec (XINHUA)--The armed forces of NATO countries will stage a series of winter military exercises during the period of winter training in southern Norway, the Norwegian paper AFTENPOSTEN reported. The exercises to be held by stages from January to early March next year will involve some 2,400 men of NATO allied forces including ground, naval and air units. The purpose of the exercises is to make the allied forces adapted to the cold winter climate and improve the speed of moving allied forces to Norway from sea and air, the report said. [Text] [OW120220 Beijing XINHUA in English 0208 GMT 12 Dec 80]

YUGOSLAVIA'S MIJATOVIC MEETS ITALY'S PERTINI--Rome, 17 Dec (XINHUA)--Italian President Alessandro Pertini today once again denounced the Soviet invasion of Afghanistan during talks with President Ovijetin Mijatovic of the presidency of the Socialist Republic of Yugoslavia who arrived here this afternoon for a 3-day visit as guest of Pertini. Pertini also voiced support to the Polish people, saying that they have the right to defend their freedom. Referring to the Soviet intervention in Afghanistan, President Pertini said that the Afghan people "are fighting for their own independence and against the invasion of their country by foreigners." Pertini paid tribute to the late President Tito for his contribution to the non-aligned movement. At a banquest in his honor, President Mijatovic said, "Europe and the whole world have been shocked by grave crises and various unresolved problems." The problems and crises, he said, "can only be settled through political means. The independence of peoples and their right to decide their domestic and foreign policies should be respected." [Text] [OW180736 Beijing XINHUA in English 0702 GMT 18 Dec 80]

WALESA SAYS POLES FEAR NOBODY--Beijing, 14 Dec (XINHUA)--According to a Rome dispatch, ANSA 13 December reported that Walesa, chairman of the Polish independent and self-governing "Solidarity" trade union, said in an interview with a reporter of the Roman TIMES: "The Polish workers are not afraid of anything, nor anybody."

Walesa said that what was clearly written on paper would not necessarily be carried out immediately. He said: "Our responsibility is to push the government to carry out its promises." In talking about efforts in mediating the strike at the Warsaw steelworks, he stressed that the Polish workers of today were capable of doing anything and they would make nothing of even facing cannons, tanks or missiles. However, no matter what we would do, we must make preparations and have organizations. When asked by the reporter to comment on the provocative actions taken by the "Solidarity" trade union, Walesa replied: "I will repeat once again what I have said when you asked me about the Russians--we are afraid of nobody." [Text] [OW162142 Beijing XINHUA Domestic Service in Chinese 1142 GMT 15 Dec 80]

UNION HOLDS FIRST CONGRESS--Warsaw, 14 Dec (XINHUA)--The first congress of the independent and self-governing "Solidarity" peasants union was held today. Over 600 delegates from all over the country attended the congress and discussed the peasants rights, unity in the peasants' movement, the government's agricultural policy and methods to improve the material and cultural life in the countryside. A resolution adopted at the congress concerning the reform of life in the countryside points out that the aim of the "Solidarity" peasants union is to safeguard the interests of the peasants and promote the development of agriculture through peasants struggle. The "Solidarity" peasants union was formed on 7 September on the basis of the independent peasants' association. In mid-September the union applied for registration with the Warsaw court, but so far the application has not yet been approved. [Text] [OW150754 Beijing XINHUA in English 0747 GMT 15 Dec 80]

POLISH CHURCH CALLS FOR PEACE--Warsaw, 13 Dec (XINHUA)--What Poland needs first of all at present is "domestic peace," says a communique issued at the end of a 2-day meeting of the Polish episcopate yesterday. According to a PAP report, the communique says, "no actions will be tolerated which might expose the homeland to the danger of losing her independence and statehood." It says that with "deep concern about the future of the motherland," the bishops "have studied the extremely complicated domestic social, economic and political situation." They held that "there is a decisive need to counteract all attempts to stop the national renewal, set the community at variance and abuse existing difficulties for aims alien to the nation's good." The communique adds that "all actions of the entire Polish people must take as a starting point the already started renewal and the creating of conditions for the implementation of the social agreements between the authorities and the society." [Text] [OW140253 Beijing XINHUA in English 0243 GMT 14 Dec 80]

GDR 1981 ECONOMIC PLAN--Berlin, 17 Dec (XINHUA)--The 7th People's Chamber of the German Democratic Republic held its 12th session here today. Willi Stoph, chairman of the Council of Ministers, delivered a report on the country's 1981 national economic plan. Under the draft plan, national income will register an increase of 5 percent. Meanwhile, 175,000 flats will be built or rebuilt to improve the housing conditions for 500,000 people. Finance Minister Werner Schmieder reported to the chamber on the 1981 state budget. The country's revenue will be 164.5 billion marks while the expenditure 164.43 billion marks including 10.2 billion marks spent on national defence, an increase of 0.8 billion over 1980. The 1981 national economic plan was drawn on the basis of mass discussions involving two million people. Both the economic plan and the state budget were passed at the session. Party and state leaders Erich Honecker and Horst Sindermann were present on the occasion. [Text] [OW180309 Beijing XINHUA in English 0301 GMT 18 Dec 80]

HUNGARY, GDR STATEMENTS ON POLAND--Beijing, 11 Dec (XINHUA)--The Politburo of the Hungarian Socialist Workers Party Central Committee on 9 December issued a statement on the recent conference of the Warsaw Pact member countries' leaders. Hungary believes, the statement said, "under the leadership of the United Workers Party of Poland, the Polish working people are capable of overcoming their country's present difficulties." The statement declared: "The Hungarian communists and people actively support the communists of Poland and the Polish patriots who are loyal to the cause of socialism. We welcome their hard work which aims at guaranteeing their country's continuous development along the socialist road and in the socialist community." According to ADN reports, the Politburo of the Central Committee of the Socialist Unity Party of Germany held a meeting on 9 December. It expressed the hope that "the Polish United Workers Party and the working class and other people of Poland will settle their domestic crisis in the interest of peace and socialism." The reports declared that the Polish party and people "can have fraternal help and support at any time from the Socialist Unity Party of Germany and the German Democratic Republic." [Text] [OW131411 Beijing XINHUA Domestic Service in Chinese 1524 GMT 11 Dec 80]

MAURITANIAN LEADER SUPPORTS KAMPUCHEA--Nouakchott, 13 Dec (XINHUA)--Mauritanian head of state Ould Hayda's today reaffirmed his country's support to the Democratic Kampuchean people's just struggle against foreign invasion while receiving the credentials of the new Democratic Kampuchean ambassador to Mauritania. Ambassador Hing Un told the press after the presentation that Haydala said that Mauritanians "support the struggle of the Kampuchean people under all circumstances." The Mauritanian leader also expressed the conviction that the just struggle of the Kampuchean people will be crowned with victory over the aggressors, he said. The ambassador vehemently denounced the Soviet expansionists for backing Vietnam in its aggression against Kampuchea and its massacre of the Kampuchean people. Hing Un is the first ambassador of Democratic Kampuchea to Mauritania after the country's embassy here was closed down in September 1976 to curtail expenditure. [Text] [OW141238 Beijing XINHUA in English 1231 GMT 14 Dec 80]

OBOTE'S PARTY WINS ELECTIONS--Kampala, 13 Dec (XINHUA)--Former President Milton Obote's party, the Uganda People's Congress (UPC), has won the general elections in Uganda. The National Electoral Commission announced over Radio Uganda this afternoon that Obote's UPC party won 65 seats, a simple majority of the 126-seat National Assembly. The rival Democratic Party has so far won 44 seats, and the Uganda Patriotic Movement had one seat, with results from 16 constituencies to be expected this evening. The current general elections were held on 10 and 11 December. Under Uganda's electoral laws, the party that wins simple majority in the parliament forms the government and its leader becomes the president of the country automatically. Therefore, the UPC party has become the ruling party of Uganda, and its leader Obote will assume the presidency. According to electoral commission sources, Obote will be sworn in next Monday. Obote ruled the country from independence in 1962 until he was overthrown by Idi Amin in 1971. For the next 9 years he lived in exile in Tanzania and returned home after Amin's downfall. [Text] [OW131703 Beijing XINHUA in English 1629 GMT 13 Dec 80]

SFRY LEADER VIEWS CRISES--Conakry, 11 Dec (XINHUA)--"The existence of sources of crisis in certain regions of Asia due to foreign intervention and interference has constituted a serious menace to peace," said Fadil Hodza, member of the presidency of the Socialist Federal Republic of Yugoslavia. At a rally held here on 9 December, he said "we consider it necessary to end foreign armed interventions so that the people of every nation can settle their own internal problems in accordance with their own desire and interests." Hodza was concerned about the deteriorated international situation, constant foreign interventions, military conflicts and invasions of sovereign states. He reaffirmed that Yugoslavia always supported the peoples of Palestine and southern Africa in their just struggles against Zionist and racism. He called on non-aligned nations to make their contributions to end the war between Iraq and Iran and find a solution to their disputes. Speaking at the meeting, President Toure said that the Yugoslav guests' visit will contribute to the development and promotion of the historical links between the peoples of the two countries and the non-aligned movement. Hodza left here for Ghana today at the end of his 3-day visit to Guinea. [Text] [OW121926 Beijing XINHUA in English 1832 GMT 12 Dec 80]

LUNS HOLDS NEWS CONFERENCE--Brussels, 10 Dec (XINHUA)--NATO Secretary General Joseph Luns said today that "As was pointed out recently by many leaders in the West, a Soviet military intervention in Poland would surely sound the knell for detente and bring other consequences to East-West relations." The secretary general was speaking at a news conference on the eve of a foreign ministers' meeting of the North Atlantic Treaty Organization. Luns said, "Events in the past year have proved in a spectacular way that we are living in a dangerous world subject to crises which cannot necessarily all be brought under control." Under such conditions, he emphasized, "to maintain the collective security of the West depends, more than any time in the past, on the power and vitality of NATO." He did not rule out concerted action by NATO if the situation in Poland requires it. Turning to the situation in the Middle East and Southwest Asia, Luns said, "The Soviet invasion of Afghanistan, the turmoil in Iran and the war between the latter country (Iran) and Iraq have now combined to provide ample evidence that the area is fraught with potential menaces both to regional stability and to vital Western interests." Concluding, the secretary general expressed his desire to enhance the solidarity of the alliance. [Text] [OW111630 Beijing XINHUA in English 1618 GMT 11 Dec 80]

OAU REAFFIRMS RIGHT TO SELF-DETERMINATION--Beijing, 14 Dec (XINHUA)--The Organization of African Unity (OAU) has reaffirmed the inalienable right of colonized peoples to struggle for "the exercise of self-determination and the attainment of independence and national sovereignty," the Ethiopia News Agency reported today. In a press release issued on the occasion of the 20th anniversary of the UN declaration granting independence to colonial countries and peoples, the OAU said "the quantitative change brought about to the UN through the advent of the African countries to the society of free and independent states in the 60s resulted in the progressive move towards the democratisation of that world body." The press statement went on: "In defiance and complete disregard of the historic declaration of 14 December 1960, Namibia is still illegally occupied by the racist regime of South Africa. Likewise the black majority of the people of South Africa is still languishing under the repugnant and abominable system of apartheid." The OAU renewed its appeal to the international community to continue to give special attention to the struggle for the attainment of the independence of the people of Namibia and South Africa and the total eradication of apartheid. [Text] [OW150150 Beijing XINHUA in English 0142 GMT 15 Dec 80]

CEAUSESCU RECEIVES YUGOSLAV LEADER--Bucharest, 13 Dec (XINHUA)--Nicolae Ceausescu, general secretary of the Central Committee of the Romanian Communist Party, received Aleksandar Grlicikov, member of the Presidency of the Central Committee of the League of Communists of Yugoslavia, here yesterday, the local press reported today. The two sides reviewed the close friendship and cooperation between the two countries, two parties and the two peoples and expressed the wish to further strengthen the cooperation between the two parties and the multilateral relations between the two countries. Referring to the present situation in Poland, the two sides expressed the belief that the Polish working class and the entire people in Poland are capable of seeking an appropriate political solution to their present difficulties and ensuring Poland's continued advance on the socialist road. [Text] [OW140714 Beijing XINHUA in English 0708 GMT 14 Dec 80]

SFRY OPPOSES INTERVENTION IN POLAND--Accra, 15 Dec (XINHUA)--Any intervention in Poland would be harmful and caretaking about Polish matters, irrespective of which side it does come from, is a sort of pressure on Poland, a Yugoslav VIP told a press conference here today. The VIP, Fadilj Hodza, member of the Presidency of the Socialist Federal Republic of Yugoslavia, is on a visit to Ghana. He said: "We in Yugoslavia are convinced that the Polish people have enough strength to settle their own problem by themselves in a peaceful way." Asked about his country's stance on the Polish crisis, Hodza noted that his country is worried about the situation in Poland. He added that Yugoslavia is willing to extend cooperation with Poland in all fields. [Text] [OW170748 Beijing XINHUA in English 0728 GMT 17 Dec 80]

BULGARIA'S RELATIONS WITH YUGOSLAVIA--Sofia, 13 Dec (XINHUA)--A. Lilov, member of the Secretariat of the Bulgarian Communist Party, has said that both Bulgaria and Yugoslavia wish to promote their relations in which positive signs have appeared recently, according to the Bulgarian Telegraph Agency today. Interviewed by the agency after his return from a visit to Yugoslavia from 2 to 10 December, Lilov said, "It may be pointed out with satisfaction that positive and major steps have been taken recently to improve our relations and cooperation." The two countries, he pointed out, "have increased political contacts and talks." But he also noted that there are still difficulties and differences between the two sides. "However," he said, "we are optimists." He pointed out, "It is in the fundamental interests of the two peoples to maintain goodneighborliness between Bulgaria and Yugoslavia." [Text] [OW140742 Beijing XINHUA in English 0730 GMT 14 Dec 80]

IRANIAN MINISTER ON OPEC CONFERENCE--Tehran, 12 Dec (XINHUA)--The foremost objective of Iran's participation in the forthcoming OPEC conference is to press for the release of the Iranian Oil Minister Mohammad Javad Tondguyan captured by the Iraqi forces near Abadan last month. This was stated by Iranian Deputy Oil Minister Sayed Hasan Sadat, head of a 7-man Iranian delegation to the OPEC conference to be held in Bali, Indonesia, to the PARS News Agency today before his departure. The second objective of the delegation is to defend Iran's doctrine that oil should be used as a political and economic weapon, the deputy minister said. "From the point of view of the Iranian delegation the discussion on crude oil production and pricing is of secondary importance," he added. Speaking about the possible sale of Iranian natural gas to the Soviet Union, he said that the USSR has expressed interest in purchasing gas from Iran, but as long as it does not accept the new prices proposed by the Iranian Government, the exportation of gas to that country would not be resumed. [Text] [OW140725 Beijing XINHUA in English 0716 GMT 14 Dec 80]

AWACS FLY DURING HOLIDAYS--Beijing, 25 Dec (XINHUA)--The four U.S. Airborne Warning and Control System (AWACS) planes stationed in West Germany will continue manoeuvers throughout the Christmas and new year holidays to monitor Soviet moves along the Polish border, according to a report from Bonn. A spokesman at the American air base in Ramstein was quoted as saying that all the 210 AWACS personnel, including flight crews and maintenance workers, are under order to stay on duty in West Germany and will not return home for the holidays. [Text] [OW250756 Beijing XINHUA in English 0748 GMT 25 Dec 80]

'PRAVDA' DENOUNCES POLISH STRIKES--Moscow, 26 Dec (XINHUA)--The Soviet paper PRAVDA today carried a long article on the role of trade unions, denouncing the recent workers' strikes in Poland as "serving the interests of anti-socialist elements." The article said: "The incident which happened in Poland not long ago has confirmed that a halt of work in state enterprises, whatever the causes might be, will only serve the interests of anti-socialist elements who have turned economic protests into a totally different nature, and led the society astray from the road of socialist development." [Text] [OW261630 Beijing XINHUA in English 1624 GMT 26 Dec 80]

BREZHNEV RECEIVES POLISH MINISTER--Moscow, 26 Dec (XINHUA)--Soviet President Leonid Brezhnev met with Polish Foreign Minister Jozef Czyrek here today. The two men discussed questions "linked with further development and perfection to all-round cooperation" between the two countries as well as some "urgent international problems," according to a TASS report. In their talks, the two sides expressed satisfaction with the result of the 5 December summit meeting of Warsaw Pact leaders in Moscow. They attacked attempts by other countries to interfere in Poland's internal affairs and relations with its allies. Czyrek arrived here yesterday on a visit at the invitation of the Soviet Government. [Text] [OW261628 Beijing XINHUA in English 1622 GMT 26 Dec 80]

POLISH MINISTER ENDS VISIT--Moscow, 26 Dec (XINHUA)--Foreign Minister Jozef Czyrek of Poland left here for home today after a 2-day official visit. He held talks with his Soviet counterpart A. Gromyko, TASS reported. He said during the talks that "the people's Poland are able to overcome the difficulties that have cropped up and ensure the country to continue to develop along the road of socialism." A press communique issued after the visit said that the Polish foreign minister gave an account of the development of the internal situation in Poland. It said: "The two sides stressed the significance of the Soviet-Polish treaty of friendly cooperation and mutual assistance which serves as a solid foundation for all-round coordination between the two countries." The communique also called for closer cooperation and more coordinated actions between Poland and the USSR "within the framework of the Warsaw Pact and the COMECON." [Text] [OW270259 Beijing XINHUA in English 0243 GMT 27 Dec 80]

JAPANESE SANCTIONS AGAINST USSR--Tokyo, 29 Dec (XINHUA)--Japanese paper KEIZAI SHIMBUN in an editorial today stressed that all sanctions so far adopted against the Soviet Union must be maintained so that the Kremlin could learn a hard lesson from its invasion of Afghanistan that the present-day world is one in which no country could impose its rule over others by force of arms with impunity. The Soviet invasion of Afghanistan, the editorial said, entered its second year yesterday. Despite worldwide condemnation, Moscow has remained so obstinate as to refuse to make any indication of a troop withdrawal. The editorial said that the

Afghan guerrillas have been conducting protracted harassment warfare in almost every part of the country. A vaunted 100,000-man government army has now been reduced to only 30,000 men because of innumerable cases of desertion and mutinies. The Karmal regime with unending internal strife has become a puppet, pure and simple, which could hardly exist without the Soviet backing, the editorial pointed out. [Text] [OW290810 Beijing XINHUA in English 0754 GMT 29 Dec 80]

INDIAN-PAKISTANI BORDER REPORTED QUIET--Beijing, 25 Dec (XINHUA)--There is nothing unusual on the Indo-Pakistan border, the INDIAN EXPRESS said in a report today quoting official sources of both countries, according to a report from New Delhi. Pakistan ambassador to India Abul Sattar told the EXPRESS news service yesterday that the border was quiet as usual and there was no concentration of forces on either side. He said that he was in Lahore 2 days ago and even the tension that followed former Prime Minister Morarji Desai's statement on the eve of Brezhnev's visit that "the Soviet Union wanted India to teach Pakistan a lesson," had subsided. In reply to a question whether there was any tension on the Indo-Pakistan border, an official of the Indian Foreign Ministry said yesterday that there was nothing unusual happening and the border was calm. When it was questioned on the same day whether there is any concentration of troops on the Indo-Pakistan border, the Indian Defence Ministry answered: "No. There are usual annual exercises on both sides these days. They and we know about them." [Text] [OW250834 Beijing XINHUA in English 0814 GMT 25 Dec 80]

THAILAND REINFORCES EASTERN BORDER--Bangkok, 25 Dec (XINHUA)--Thai Prime Minister Prem Tinsulanon disclosed today that reinforcements had been ordered to the border city Aranya Prathet 2 days before to strengthen the defensive capability on the eastern border front, according to local press reports today. Prime Minister Prem, who is also commander-in-chief of the Royal Thai Army, told newsmen recently that the situation on the border area of Aranya Prathet had become more and more tense. "We have to be prepared for combat at any moment," he said. He added that "we have to pay close attention to the fighting and Vietnamese military moves in Kampuchean territory and their impacts on Thailand." Commander of the Thai First Army Region Lt General Vasin Issarangkun told reporters that forces had to be deployed at every point on the border where an enemy invasion might take place. Spokesman of the supreme command of the Thai armed forces Lt General Som Kataphan told reporters yesterday that Vietnam had sent the 317th division to the Thai-Kampuchean border to replace the exhausted 75th division. In the meantime, the Heng Samrin regime has driven a lot of people to build the Thmar Puok-Ban Khok Han highway to facilitate the transport of Vietnamese armored cars and heavy weapons to Phnom Melai. All this signals an impending Vietnamese offensive on the border areas, he said. [Text] [OW251632 Beijing XINHUA in English 1606 GMT 25 Dec 80]

VIETNAMESE SUPPORT THAI DEFENSE--Bangkok, 24 Dec (XINHUA)--A donation of 214,400 bahts to help strengthen Thailand's border defence was presented by representatives of the Vietnamese residents in Thailand to San Chitpatima, deputy commander-in-chief of the Thai Royal Army, here yesterday, according to a press report here today. Banchong Vacharaprapa, one of the 20 representatives who called on the Thai general, told newsmen that the donation to the Thai army is to support the struggle against Vietnamese aggression. In a statement distributed by them, they condemned the Vietnamese authorities for practising hegemonism and carrying on military expansionist moves against neighbouring countries. The exodus of Vietnamese refugees from their country was caused by these expansionist moves. [Text] [OW241218 Beijing XINHUA in English 1212 GMT 24 Dec 80]

LEE KUAN YEW ELECTION VICTORY--Beijing, 24 Dec (XINHUA)--Singapore's ruling People's Action Party (PAP) of Prime Minister Lee Kuan Yew won all 75 parliament seats in a general election yesterday, according to reports from Singapore. "This is a watershed election," Lee Kuan Yew told the nation in a televised news conference after the results were announced. He described the triumph as an "overwhelming vote of confidence." The Ruling Party has won four successive elections without losing a single seat, the other three were in 1968, 1972 and 1976. He said about 75 percent of popular votes went to the PAP candidates while about 22 percent to the 43 candidates entered by the seven opposition parties of Singapore. The general election this year was held one year early because the PAP leaders said the Singapore Government wanted a fresh mandate before tackling expected economic problems caused by rising oil prices and other international uncertainties. Voting was compulsory for all citizens in the 38 constituencies in Singapore which has a multiracial population of 2.4 million people. [Text] [OW240712 Beijing XINHUA in English 0704 GMT 24 Dec 80]

ENVOY TO NEW ZEALAND'S TOUR--Wellington, 7 Dec (XINHUA)--Chinese Ambassador to New Zealand Qin Lizhen and his wife Li Huawen made a week-long visit to Rarotonga, Cooks Islands, from 28 November to 4 December. During the visit, the Chinese ambassador called on Chief Justice Gaven Donne, representative of the Queen; Thomas Davis, premier of the Cooks Islands; D. Hosking, speaker of the Legislative Assembly; and met with all the cabinet members. The ambassador had friendly talks with them. The government of the Cooks Islands held a reception for the ambassador on 29 November. The Cooks Islands Premier Thomas Davis hosted a luncheon for him on 1 December. While in Rarotonga, the Chinese ambassador visited a hospital, a college, a fruit cannery, a handicraft factory and an agricultural research station. The ambassador and his wife were warmly received everywhere. The ambassador was seen off by Minister of Internal Affairs Iaveta Short on his departure on 4 December. TIANJIN-MELBOURNE PROTOCOL--Tianjin, 19 Dec (XINHUA)--Official bonds of friendship between the Chinese port of Tianjin and the Australian port of Melbourne were established at a signing ceremony here today. A protocol of understanding to this effect was signed by Liu Shusen, head of the delegation of the Tianjin port under the Ministry of Communications and director of the Port Administration, and A.S. Mayne, head of the delegation of the Melbourne port and executive chairman of the Port Administration. Tianjin and Melbourne became sister cities in May this year. The establishment of official links between the two ports is expected to promote friendly relations between the two ports and the two countries and enhance exchange and cooperation in port construction and management. The Melbourne delegation arrived in Tianjin on 18 December and had technical discussions with the Tianjin delegation. This evening, Vice-Mayor of Tianjin Li Zhongheng met with all members of the Melbourne delegation and gave a banquet in their honour. He warmly welcomed the establishment of official ties of friendship between the two ports. Mr Mayne and his party will leave Tianjin tomorrow for a tour of harbors in Southern China. GYMNASTS IN BRITAIN--Beijing, 6 Dec (XINHUA)--A group of Chinese gymnasts left here today for the Coca-Cola international gymnastics competition on 12-13 December in London, Britain. All four members are 17 years old. Among them are the current national men's individual all-round runner-up, Xu Zhiqiang, and individual all-round third finisher Li Ning, they were placed first and second respectively in the floor exercist event at the national gymnastics championships last October in Changsha, Hunan Province. Women gymnasts Zhou Xiaolin and Zhou Jingjing finished fifth in the individual all-round title and fourth in the uneven bars event respectively at the national championships. The Chinese team is led by Chen Zhenhua, vice-president of the Chinese Gymnastics Association. [Text] [Beijing XINHUA in English 1302 GMT 6 Dec 80 OW]

FINNISH EMBASSY RECEPTION--Beijing, 4 Dec (XINHUA)--The Finnish ambassador, Mr Pentti Suomela and Mrs Suomela gave a reception here today marking the 63rd anniversary of the independence of the Republic of Finland. Among the guests were Chinese Minister of Forestry Yong Wentao and Vice-Minister of Foreign Affairs Han Kehua, as well as leading members of government departments, Beijing Municipality and the Chinese People's Association for Friendship with Foreign Countries. Members of the Diplomatic Corps were also present. [Text] [Beijing XINHUA in English 1841 GMT 4 Dec 80 OW]

SOVIET CHEMICAL WEAPONS--London, 28 Dec (XINHUA)--The Western allies might have to develop its own nerve gases to counter a Soviet build-up of chemical weapons, British Secretary of State for Defence Francis Pym said in a radio interview here today. He pointed out that no progress had been made towards negotiations with the Soviet Union on a ban on chemical weapons. "Are there any ways, short of holding it ourselves in the alliance, we can prevent their use of it?" Francis Pym asked. He disclosed that he personally had begun to think about a Western chemical deterrent. It was the third time this year that the defence secretary had publicly expressed his fears of a Soviet chemical armoury. Earlier this month he said he was more concerned about a Soviet chemical attack than other possible strike. [Text] [OW290148 Beijing XINHUA in English 0136 GMT 29 Dec 80]

FRG WARNS USSR ON POLICY--Bonn, 31 Dec (XINHUA)--The Soviet Union "should make the Afghan event and the world's reactions to it as a turning point to change its policy" warned Foreign Minister Hans-Dietrich Genscher of the Federal Republic of Germany in a New Year message today. Genscher said: "The hegemonist policy has no future. The West will not accept the Soviet dominant position." He censured any actions weakening the European Community and opposed to weakened cooperation with the United States. [as received] This, he noted, would menace the security of West Germany. He pointed out that the foreign policy of West Germany in 1981 is still aimed to reinforce its relations with the European Community and the North Atlantic Treaty Organisation, promote friendship with the United States, and strengthen defence cooperation of the West. [Text] [OW011214 Beijing XINHUA in English 1202 GMT 1 Jan 81]

LAO REFUGEES FLEEING TO THAILAND--Bangkok, 30 Dec (XINHUA)--Driven beyond their forbearance of the oppression by the Vientiane authorities, Lao people have fled into Thailand en masse and sought refugee in its northeastern border areas, the Thai paper MATICHON reported. Lao refugees reaching Nong Khai Province totalled 505 in the past week. Those who waded across the Mekong River and entered the Nong Khai district yesterday numbered 230, the biggest daily influx since the beginning of this year. Usually the number of refugees fleeing to the said district ranged from 80 to 120 daily. Among the Lao refugees, many were youngsters and students. They reported that many had been forced to do hard labour, including felling trees in the mountainous areas, before they were taken to Vietnam. [Text] [OW301236 Beijing XINHUA in English 1231 GMT 30 Dec 80]

SRV CASUALTIES IN THAILAND--Bangkok, 30 Dec (XINHUA)--Altogether 173 Vietnamese aggresser troops were killed and 145 wounded by the Thai army in counter-attacks against Vietnamese invasion from 1 January to 19 December this year, reported the BANGKOK POST today quoting a spokesman for the Supreme Command of the Thai armed forces yesterday. In the counter-attacks, 31 Thai troops were killed and 40 wounded, the spokesman added. [Text] [OW300740 Beijing XINHUA in English 0725 GMT 30 Dec 802

'GONGREN RIBAO' ON IMPLEMENTING 'GUIDING PRINCIPLES'

HK020647 Beijing GONGREN RIBAO in Chinese 15 Dec 80 pp 1, 3

[Contributing commentator's article: "Strive to Raise Consciousness in Implementing the 'Guiding Principles'"]

[Text] Since the "guiding principles for inner-party political life" was officially announced, there has been marked improvement in our party style, but the implementation of these principles varies from place to place.

Many comrades have set good examples, put strict demands on themselves, unswervingly implemented the party's line and policies, strictly abided by the party's organizational principles and discipline, shared the people's weal and woe and been conscientious in preserving their qualities as public servants of the people. Such comrades are growing in number. The masses love and respect these comrades. From their deeds, one can see the restoration and the carrying forward of the party's fine tradition, and this fortifies our confidence in engaging in the building of the four modernizations.

Some comrades have been basically good in implementing the "guiding principles" but they have indeed violated the "guiding principles" on this or that question. However, once they found out about their own errors, they were able to give top priority to the will of the party and the people, humbly accept the party organizations' and the masses' criticism and supervision and seriously rectify their errors. The masses welcome these comrades' attitude of correcting mistakes as soon as they become aware of them. They continue to trust them and to support their work. [words indistinct] actions have not lived up to their words. They continue to do things in violation of the "guiding principles." Some of them have even been infected with a despicable decadent style. They often find excuses to stall, refute and deny other people's exposure and criticism. Some even use their official powers to seek opportunities to carry out revenge. These actions which undermine the party style and discipline have adversely affected the party's prestige and created a very bad influence among the masses. They have often been the cause of the failure of the party's propaganda and education work to achieve desired results. Many comrades are quite worried that the socialist cause pioneered by the revolutionaries of the older generation will be ruined by these people.

To most comrades, problems appearing in the implementation of the "guiding principles" mainly reflect the discrepancies in their training in and mastery of the party spirit and the differences in their level of consciousness in following the "guiding principles." Then, how do we change the situation of low level of consciousness? First, it depends on the comrades' constant remolding of their subjective world in the process of transforming the objective world; second, it depends on the masses' strict supervision; third, it depends on the party organizations' constant education and inspection.

Our party is a political party of the working class. Every member of the party is a vanguard fighter for the people's interests. This requires that all party members, particularly party cadres, strive to cultivate the noble quality of being willing to be the people's public servant and not the people's overlord. This is the ideological basis for conscientiously implementing the "guiding principles." There are many comrades who might not be able to memorize specific stipulations in the "guiding principles" but their actions comply with the requirements of the "guiding principles." The most important reason for this is that they wholeheartedly devote themselves to serving the people. They joined the party not in order to become officials or to fish for "benefits" for themselves, their family, relatives and friends but to better work for the greatest interests of the greatest number of people. Therefore, at all times and under any kind of circumstances, they always place themselves in the position of an ordinary worker, maintain close contacts with the masses, faithfully do good things for the people and do not do anything which harms the people's interests. Precisely because they do not pursue selfish interests and do not worry about personal gains and losses, they are openhearted and guileless, are able to seek truth from facts, dare to conduct self-criticism and dare to struggle against all kinds of unhealthy tendencies, against bad people and bad things in political life and strictly abide by the rules in their material life. However, we cannot overlook the fact that there are some comrades who are selfish. As their positions get higher and as the power they hold grows greater, the distance between them and the masses grows wider. Bureaucratism and the privilege-seeking mentality grow in them. They forget that they are public servants of the people and often consider themselves as above the restrictions of party discipline and state laws. When it comes to these comrades, to seriously follow the "guiding principles," the most important thing is for them to get rid of the distracting thoughts of seeking selfish interests, to always think of the people's interests and to strive to raise their consciousness as public servants of the people.

It is necessary to encourage and support the masses in conducting criticism inside and outside the party from the grass roots level to the top in order to make the cadres heighten their consciousness in abiding by discipline and obeying the law. This is not only because our position as the ruling party can easily make some of our comrades look at themselves as special and forget to rely on the masses and make some people with unhealthy thinking abuse their power, but also because the Lin Biao and Jiang Qing counterrevolutionary cliques have seriously damaged the party's fine tradition and corrupted many party members. Some of these party members are still violating laws and discipline, and they are not only unashamed of what they are doing but take pride in their deeds. To heal the internal injury inflicted on the body of the party by the 10 years of turmoil, we must strengthen criticism and supervision by the masses inside and outside the party and we need the force of public opinion in society. At present, some comrades in the party are still worried about the masses' conducting open criticism. This attitude has objective causes. During the "great cultural revolution," the method of "great democracy" was advocated and "the broad masses of people were openly and extensively mobilized from top to bottom to expose the darker side of our party." Yet in the end, this was used by the Lin Biao and Jiang Qing counterrevolutionary cliques to create chaos in the party and state, to usurp party power and to attack and persecute a great number of cadres. We must firmly bear in mind this painful lesson. Today, by stressing the importance of encouraging and supporting criticism and supervision from the bottom to the top, we are certainly not repeating the erroneous methods used during the "great cultural revolution." On the contrary, we are striving to guide the masses to correctly use the weapon of criticism under the guiding principle of socialist democracy, to be realistic and tactful and to adopt the attitude of doing things for others' good and curing the illness to save the patient. At the same time, in terms of methods, we have been careful in distinguishing among different situations and dealing with problems rationally. For example, some people are criticized within the party organization, some in their own units; some are criticized in documents circulated within the party, while others, whose deeds constitute very serious cases or are typical and have great significance for educational purposes, can also be openly exposed in newspapers. We must see that the masses long for the four modernizations, that they pin their hopes on the party's leadership, place strict demands on the party's cadres and dare to criticize the cadres' shortcomings, errors and unhealthy practices. As for their direct criticism of and supervision over the leaders of the party and state, this is a good thing. It shows their enthusiasm in cherishing the party's cadres and caring for the cause of the party. This enthusiasm is very commendable. We must safeguard it and never defeat it; we must direct it and never suppress it. Of course, in the process of conducting criticism, there are bound to be a few people who desire nothing but chaos and who will take the opportunity to create confusion or even totally negate the party's leadership on the pretext of criticizing the shortcomings of party cadres. There is nothing to worry about. We need not be scared and panic-stricken. As long as our guidance is correct, even this kind of behavior will be helpful in educating and training the cadres and masses in the process of carrying out socialist democracy and conducting criticism and self-criticism.

Aside from criticism and supervision from the bottom to the top, there must also be education, inspection and supervision by the party organization in order to achieve better results in the effort to heighten the consciousness of party members and cadres in abiding by the "guiding principles." In some departments and units, the reason why the "guiding principles" have not been implemented is because the party organizations in those units have been lax in their work in this aspect. These party organizations usually do not take the initiative to solve the problems involving leading cadres in their units. They have to wait until the higher organizations intervene, until the leading comrades issue instructions or until the masses are infuriated and the contradictions have intensified before reluctantly solving the problem in a passive way. That is very improper. This phenomenon exists mainly because leading cadres in those units cannot do without considering personal feelings. They only care about saving "face" but not about the influence of their deeds on the party. Some of them are under the influence of the old idea of "one merit covers up a hundred demerits." They think that as long as a person is a good cadre, even his mistakes must be "forgiven." Some are afraid to involve many people or are afraid that once they stir up the "hornet's nest," they will not be able to handle it. Others sympathize with each other. They are afraid that once they offend others, they themselves will be exposed to attack. These cadres protect each other. We must resolutely change this situation and help the party organizations in those units to regain their vitality, to dare to uphold principles, promote justice, conduct criticism and self-criticism and strengthen education and supervision of party members and cadres, particularly the leading cadres. Those who show contempt for party discipline and defy the law, no matter who they are, must be exposed. Those who refuse to repent must be subject to party disciplinary action. Does this mean "punishing without education"? No. The "gang of four" was smashed more than 4 years ago; it has been 2 years since the Third Plenary Session of the Party Central Committee put forth the task of rectifying party style and upholding party discipline, and almost a year has passed since the Fifth Plenary Session officially announced the "guiding principles" to the whole party. During this period, internal party documents and leading cadres of the Central Committee have discussed the problem of rectifying party style at length. There has also been a great number of criticisms and appeals from the masses. They have been urging us time and again with good intentions. Under such circumstances, how can we say that it is "punishing without educating" to subject those who are not conscientious to disciplinary action? Besides, criticizing in circulars cadres' mistakes in violating discipline and punishing them is not meant to overthrow them and make their names stink, but to save them and educate everyone. During the time Lin Biao, Jiang Qing and company were wreaking havoc, criticism inside and outside the party was very abnormal. Until now, people still have the misconception that once certain mistakes of a cadre are openly criticized, it means that this cadre has made other serious mistakes and that he must naturally be dismissed and overthrown. Some comrades even think that only "people to be overthrown" should be openly criticized or that it is only when these errors have developed to a hopeless stage that they should be exposed. Otherwise, they must not be exposed or criticized. At present, we are attempting precisely to change this abnormal method. We are advocating timely, realistic and well-intentioned criticism in order to prevent minor problems, from developing into serious ones.

The quality of party style of the ruling party is a matter of life and death for the party. Negligence of this problem or setting the rectification of party style against the building of four modernizations and stability and unity is erroneous and harmful. Today, there are many conditions favorable to the rectification of party style. As long as the broad masses of party members, particularly the party cadres, strive relentlessly and firmly to uphold the sanctity of party discipline, it is absolutely possible to induce a basic change in party style within a short span of time.

CSO: 4005

PARTY AND STATE

DISCIPLINE AGAINST OFFICIAL CORRUPTION ASSERTED

Seeking Private Gain Denounced

Haikou HAINAN RIBAO in Chinese 19 Aug 80 p 1

[Editorial by staff commentator: "Under No Circumstances Is It Permissible To Use One's Office To Seek Private Gain"]

[Text] The party committee of the Hainan District has made the decision and, with the approval of the provincial party committee, dealt severely with the erroneous conduct of the former secretary of the party committee and chairman of the revolutionary committee of Chengmai County Wang Yueqing [3769 1471 7230], deputy secretary of the county party committee and vice chairman of the revolutionary committee Zeng Xiangji [2582 4382 6549], and former member of the standing committee of the county party committee and vice chairman of the revolutionary committee Wu Xianming [0702 7359 2494] in using their office to seek private gains; in doing so, it has upheld the party's discipline, asserted the forthright spirit of the proletariat, and reflected the demands of the vast ranks of the masses, and was therefore very popular.

As leading cadres of the county party committee and in a situation in which the Party Central Committee repeatedly stressed the restoration and exaltation of the party's fine tradition and working style, Comrades Wang Yueqing, Zeng Xiangji and Wu Xianming should ordinarily have followed such discipline and obeyed the law and done a good job in exemplifying the party's working style, thus guiding the masses well in carrying out our four modernizations construction with one heart and one mind. But they somehow chose to ignore the interests of the party and the state and overlook party discipline and state law, and exhibited, instead, a yen for using their office to seek private gains. They illegally expropriated people's land, and made use of the state's three major construction materials to build their private houses; they approved at random the use of foodgrain, the establishment of households, and the use of workers beyond the planned figure, and thereby sabotaged the party's relevant policies and prescriptions. Their muddle-headed conduct seriously ruined the party's working style, damaged the party's authority and credence, and exerted a very bad influence so that it became a custom for cadres of Chenghai County to use their office to build their own private houses and for agricultural households to enter the city, resulting in hampering the four modernizations construction and causing vehement dissatisfaction on the part of the vast ranks of the masses. In order to educate these comrades themselves, educate the vast ranks of party members and cadres, do a good job in exemplifying and enforcing strict party discipline, and salvage the party's influence, it was entirely necessary for the provincial party committee and regional party committee to deal with them severely.

Our party is the advanced contingent of China's working class; every Communist, irrespective of the post he occupies, is a public servant of society and a servant of the people. He has only the duty to serve the people diligently and no right to seek privilege in politics and in his life. At any and all time he must place the interest of the people, and the interest of the state in the foremost position, and prepare at any and all time to sacrifice his individual interest or even life to defend and protect the interests of the party and the people; under no circumstances it is permissible for them to use the office conferred upon them by the party and the people to seek private gains, to damage the public in order to benefit himself, he is not going to be accommodated by party discipline and state law and should hence be punished accordingly.

The fact that comrades such as Wang Yueqing and others have made such mistakes tells us once more that we can definitely not underestimate the remnant poisons of Lin Biao and the "gang of four." Out of their need to usurp party and state power, Lin Biao and the "gang of four" unscrupulously trampled party discipline and party law under their feet, spread corrupt ideas to poison our party members and cadres, and hence caused the working style of our party to sustain serious damage. After the smashing of the "gang of four," the party's fine traditions and working style were restored and exalted. But the remnant poison of Lin Biao and the "gang of four" has still not been eliminated entirely; the corrupt ideas they spread, such as "power is everything," "power does not become defunct after a certain period," etc., are still functioning in the minds of some of our comrades; the erroneous conduct on the part of comrades such as Wang Yueqing and others is an example. There are also people who have made mistakes similar to those of Comrades Wang Yueqing, etc. In our party there are indeed some comrades in whose minds the word "self" swells to especially inflated proportions; they want to take advantage of the status of the party in power to reap some "benefits," thinking that "when one is in office, one usually has many friends, but when one is out of office, one does not even have too many relatives; thus they take the office conferred upon them by the party and the people as their capital to make private profits, to fatten their own pockets at the expense of the public, feeling no shame but even assuming a sense of glory. Whatever might be the interest of the party, the interest of the people, or the interest of the state is not at all registered in their eyes. No matter how often the party Central Committee repeats its prohibition against using one's office to seek private gains, they hear nothing and continue to do what they please. Some use their power to grab materials, connive with people at home and abroad, and turn around to sell the goods of the state in order to make instant profits. Some take advantage of their authority to approve the use of money, the use of materials, the use of foodgrains, the establishment of households, the recruitment of workers, and their power to approve the departure from ports and trips abroad to accept gifts and bribes. Some illegally occupy people's land, and use the materials, vehicles and manpower of the state and the collectives to build their own houses at the official prices or even gratis. Some violate established policies and regulations to move relatives and and friends from the countryside into the towns and cities to establish their households there, to have them consume commercial crops, to help relatives and friends get admitted into schools and obtain jobs, or get promotions and obtain special privileges. Some appropriate public funds to invite people and buy gifts, wine and dine to their hearts' content. Some turn public into private possessions, make use of public things, etc. We must discover and expose such lawless conduct detrimental to the interests of the party and the state, deal with it severely with no appeasement or accommodation whatsoever.

To rectify the party's working style, make the party's discipline strict, strengthen and improve the party's leadership, and elevate the party's fighting stamina is an urgent task that lies before us. "Some Regulations Concerning Inner-Party Political Life" requires that "comrades of the whole party must exert their revolutionary spirit, thoroughly eliminate the remnant poison of Lin Biao and the 'gang of four,' stamp out various interferences, and do a good job in this great undertaking of maintaining party discipline and party law and exemplifying well the party's working style which concerns the success or failure of the four modernizations and the future and destiny of the party and the state." For this reason, party organizations at all levels must convey to all our party members the decision of the provincial party committee and regional party committee to deal with the mistakes made by Comrades Wang Yueqing and others, combine with the substantiation of the spirit of the Fifth Plenary of the 11th Party Central Committee and the study of the "Regulations" and the revised draft of the Party Constitution, and develop relevant discussions, so as to carry out an education on party style and discipline among the vast ranks of the party members and cadres. Every Communist Party member, especially the party's leading cadre, must absorb a lesson from the mistakes of Comrades Wang Yueqing and others and take it as a warning, and proceed to check against and inspect his own work, thinking and style according to the requirements of the "Regulations." Whatever is not in accord with the requirements he must take the initiative to correct, so as to do his best to become a qualified party member. Those who have made serious mistakes but insist on going on without repentance must be severely dealt with.

Wang Yueqing, Others Punished

Haikou HAINAN RIBAO in Chinese 19 Aug 80 p 1

[Report by the Reporting Group, Regional Party Committee for Inspecting Discipline: "Ignoring Party Discipline, Using Office To Seek Private Gains: Former Secretary of Chengmai County Party Committee Wang Yueqing and Others Are Severely Dealt With"]

[Text] The Hainan Regional Party Committee recently made a decision and, with the approval of the Guangdong Provincial Committee of the Chinese Communist Party, proceeded to deal severely with the mistakes on the part of former secretary of the county party committee and chairman of the revolutionary committee of Chenghai County Wang Yueqing, deputy secretary of the county party committee and vice chairman of the revolutionary committee Zeng Xiangji, and former member of the standing committee of the county party committee and vice chairman of the revolutionary committee Wu Xianming in becoming, while in office, seriously oblivious of organization and oblivious of discipline, and in violating the party's policies, using their office to illegally expropriate other people's land, making use of the three major materials of the state to build their private houses, and approving at random the use of foodgrains, the establishment of households, and so on: 1) The punishment of dismissal from the office of secretary of the county party committee was meted out to Wang Yueqing; the punishment of serious inner-party warning was meted out to Zeng Xiangji and Wu Xianming. 2) The private houses built by Wang Yueqing, Zeng Xiangji and Wu Xianming were confiscated and put under the control of the housing and property departments; their construction expenses were given back to them by the housing and property departments according to actual expenditure. 3) The question as to Chengmai County's approval, in violation of established policies and regulations, of households that were moved into the city and coverted to the consumption of commercial crops and of workers recruited beyond the planned figure, it should be properly dealt with according to the spirit of the provisions of pertinent central and provincial documents. 4) The situation about how mistakes of Comrades Wang Yueqing, Zeng Xiangji and Wu Xianming were dealt with was circularized within and without the party, so that it could be combined with the study and carrying out of the "Regulations" in the conduct of a serious education among the vast ranks of the party members and cadres to arrest this devious wind and to exemplify well the party's good working style.

Comrades Wang Yueqing, Zeng Xiangji and Wu Xianming originally lived in separate public apartments; yet they still took advantage of their office to illegally expropriate other people's land and made use of the state's three major materials to build their separate private houses. Comrade Wang Yueqing occupied 339.56 square meters of land and built 228.17 square meters of housing; Comrade Zeng Xiangji occupied 328.9 square meters of land and built 157.55 square meters of housing; Comrade Wu Xianming occupied 387.79 square meters of land and built 254.8 square meters of housing.

In 1971, the Guangdong provincial revolutionary committee already prescribed: an expropriation of 10 mu and more of farm land must be submitted to the provincial revolutionary committee for approval. But after only a little discussion among members of the standing committee, Comrades Wang Yueqing and others immediately took it upon themselves to use the pretext of "constructing dormitories for the cadres and staff members and workers: and set the condition of an exemption of the purchase of 4,052 jin of public grains, and illegally expropriated 42.49 mu of land (of which 15 mu were water fields) from the Zhongzhai Brigade in Chengcheng Commune to build private houses for themselves and other cadres (while collecting the prices on the lot areas allocated). Only afterwards did they submit reports to the provincial and regional revolutionary committees. The provincial and regional revolutionary committees both gave clear replies expressing disagreement with their expropriation of the land; but they still ignored the opinions of the superior levels and did as they pleased. When their houses were still not built and when they were just getting started in construction, in March 1979, the principal leading cadre of the regional party committee sought repeatedly to criticize and stop them. But they were oblivious of organization and discipline; on the one hand, they conveyed the opinion of the leading cadre of the regional party committee to cadres from the bureau and upward at the county level of organs, and even issued a circular in the name of the county revolutionary committee to request the cadres to stop constructing private houses on the expropriated land; yet on the other hand, they continued to build their own houses. During the construction they took advantage of their office to fatten their own pockets at the expense of the public; through various channels and in the name of public use, and according to the prices for public use or even gratis, they appropriated the three major materials, vehicles and manpower of the state and the collectives. Comrade Wang Yueqing requested 29 tons of cement, 1.27 tons of steel bars, and 9.44 cubic meters of lumber. Comrade Zeng Xiangji used 16 tons of cement, 860 kilograms of steel bars, and 2.2 cubic meters of lumber. Comrade Wu Xianming used 25 tons of cement, 4.48 tons of steel bars, and 5.71 cubic meters of lumber. These materials that they requested were mostly bought at the price for public use, with surcharges added to the purchase of such cement and steel bars by private individuals exempted. They mobilized vehicles from units such as factories, communes, farms, official organs, troops, and petroleum teams to transport materials for themselves, to some of these vehicles they paid no transportation fees; to some, they paid only gasoline costs; and some were simply used gratis. For example, Comrades Wang Yueqing and Wu Xianming repeatedly requested vehicles from the Nanhai petroleum team without paying any transportation fees. They both asked only once for one 15-ton truck each to transport cement for them from Chahe cement plant; the round trip was 336 kilometers and the transportation fee for each was more than 450 yuan (not counting the cost for the trip back after unloading), but not a single penny of this was paid by them. Besides, they also used lumber from some farms, communes and production brigades gratis.

The Party Central Committee has repeatedly issued the order to strictly control the moving of population from the countryside into the cities. But Comrades Wang Yueqing, Zeng Xiangji and Wu Xianming ignored the relevant regulations and took advantage of their office to approve at random the use of foodgrains and the establishment of households. Since 1978, Comrades Wang Yueqing and others have issued approval slips to the relevant departments to handle as many as 66 households with 224 persons, of countryside population in their entry into the city to establish themselves there, under such approval, there were 69 households, with 231 persons, converted to the consumption of commerical crops, and 42 workers recruited beyond the planned figure.

Most of these foodgrains, households and workers recruited beyond the planned figure they approved were not in accord with established policies and regulations; some of them were approved as a measure of private favor, for the purpose of striking up desired relations, or for making private gains. Under the influence of Comrades Wang Yueqing and others, other leading cadres of the county party committee (except certain individuals) also followed suit by issuing approval slips at random. In April 1979, in particular, foodgrain departments at the superior level discovered that the problem of countryside population moving into the city was very serious, and had already pointed this out to the county party committee in time; but they continued to approve at random. In May, under the presiding of a deputy secretary of the county party committee, they approved, in the fashion of a commando raid, as many as 107 households, with 280 persons, to enter the city in one single session. This resulted in large contingents of countryside population entering the city. Thus in the first 8 months of 1979 alone, people entering the city exceeded the controlled target for the whole year by 15 times, and workers recruited also exceeded the planned figure by more than 1,000 persons. Apart from these, Comrades Wang Yueqing and Wu Xianming also used their office to take possession of public things and turn them into private possessions. Wang Yueqing took possession, from his public office, of two radios, two electric fans, one three-use machine; he also used a watch valued at more than 500 yuan and a bicycle of the Phenix Brand to exchange a watch valued at more than 900 yuan from a physician who had just returned to work after the policies were put into effect, thus taking advantage of the latter. Wu Xianming took possession of a three-use machine (now returned) and one bass speaker.

The mistakes made by Comrades Wang Yueqing and others were repeatedly investigated, and thus verified, by the commission for inspecting discipline of the Nanhai regional party committee in conjunction with other concerned departments. The standing committee of the regional party committee conducted serious discussion twice on this, and then made the decision to deal with them and also report it to the provincial party committee for approval. The decision pointed out that, as leading cadres of the county party committee and at a time when the Party Central Committee repeatedly stressed the restoration and exaltation of the party's fine traditions and working style and when the focus of work of the whole party was being shifted to socialist four modernizations construction, Comrades Wang Yueqing, Zeng Xianji and Wu Xianming chose not to lead the masses well in working on four modernizations construction with one heart and one mind, but to indulge in using their office to seek private gains, seriously ignore organization and discipline in violation of the party's policies and regulations, and thus create a very bad influence. Their mistakes are serious. As the principal leading cadre of the county party committee, Comrade Wang Yueqing must bear the main responsibility in this regard; Comrades Zeng Xiangji and Wu Xianming must also bear certain responsibilities. After criticism and assistance were rendered to them by the organization, they recognized their own mistakes and financially also made some refund and repayment. In view of their mistakes and their recognition of them in their attitude and in order to educate them and to educate the vast ranks of the party members and cadres, exemplify well the party's good working style, rigorously enforce party discipline, and elevate the party's fighting stamina, it was decided to deal with them severely. The regional party committee demanded that party organizations at various levels all combine with their study of "Some Regulations Concerning Inner-Party Political Life" and the revised draft of the new Party Constitution to develop discussions, and carry out a political and ideological education on party style and party discipline among the vast ranks of the party members. In the case of conduct in violation of party discipline on the part of party members and cadres, especially the party's leading cadres, who used their office to seek private gains, who fattened their own pockets at the expense of the public, and who built private houses and approved the use of foodgrains and establishment of households, etc., effort must be made to seriously inspect and severely deal with them accordingly.

The decision also pointed out, the other two deputy secretaries of the Chengmai County Party Committee also bore certain responsibilities in the handling of questions such as illegal expropriation of land and random approval of the use of foodgrains and establishment of households; they were required to make profound self-examination.

The decision finally required all party organizations and party members at various levels, especially leading cadres, to absorb lessons from the mistakes of Comrades Wang Yueqing and others, take them as a warning, and seriously study the "Regulations" and the revised draft of the new Party Constitution and thereby check against and inspect their own work, thinking and style; whatever is found not in accord with requirements must be actively corrected. In the case of those whose mistakes are found to be serious but who insist on continuing their ways, serious punishment must be meted out to them.

PARTY AND STATE

EXTRAVAGANT EATING, DRINKING BY CADRES CRITICIZED

Reasons for Prevalence

Hangzhou ZHEJIANG RIBAO in Chinese 9 Oct 80 p 4

[Article by Shi Zaichun [2457 6528 2507]: "Why Can't the Practice of Extravagant Eating and Drinking Be Checked?"]

[Text] Following the implementation of the "Guiding Principles Regarding Inner-Party Life" within the whole party, the practice of extravagant eating and drinking everywhere has been checked in some degree but not totally stopped. Some of the units have varied their tactics so as to continue the practice of extravagant eating and drinking, using all sorts of pretexts and taking advantage of every opportunity. Why can't this unhealthy tendency be quickly checked? It is understood that the reasons are as follows:

1. The sense of law and discipline on the part of some party member cadres is becoming blunted. The Party Central Committee has long since repeated its injunctions on the issue of extravagant eating and drinking. They just will not listen, but persist in their old ways as before. Some of the units have made self-criticisms on this issue, but before long they continue to commit the same old mistakes. Some of the units have made self-criticisms on this issue, but before long they continue to commit the same old mistakes. Some of the units decided to correct the evil trends of party members at party delegate conferences, but soon afterward commemorative albums were distributed and large-scale dinner parties were held even before the conferences ended. Some of the party leaders spoke earnestly about party discipline at party delegate conferences, and immediately after that they indulged in extravagant eating and drinking regardless of party discipline.

2. Some of the leading bodies and leading cadres themselves are not upright. Whenever they visit lower units, they like to get someone to offer them food and drink. Some of the "inspection parties," "visiting groups," or "groups for conveying greetings and appreciation" dispatched by the leading bodies also indulge in extravagant eating and drinking by taking part in various "on-the-spot meetings," "appraisal meetings," or "exchange meetings" at various places. They eat and drink wherever they go. Some members of the operational departments with real powers frequently take the quality of the food provided as a basis for judging the achievements of departments at lower levels in order to determine if some of their requests can be approved. "Whatever is favored by the upper level is to be followed by the

lower level." If the leading bodies concerned at the upper level can do it this way, there is no reason why the lower level cannot!

3. Certain shortcomings exist in the present economic system. The source of raw materials and the market of products of some business departments, especially enterprises operated by the communes or the production teams, have not been put under the national plan. Therefore they have to find a way out by themselves and solicit help from potential backers. "To earn one's own living" is to seek for help from others. One who beseeches favors from others must "cater to others' likes," either by giving dinners or by presenting gifts. Some people have complained: "One cannot get things done without a feast, and one cannot conduct a heart-to-heart talk without a smoke." Anyone who wants to establish a relationship or to solicit business has to use public funds to entertain others, even though he knows very well that it is not right to do so.

4. The law is not rigidly enforced. Some of the units until this day believe that "eating and drinking do not violate the law," and that they are not a matter of concern. Therefore, they do not handle this matter in all earnestness or with a positive attitude. They want to delay action whenever possible, with a tendency of "dealing leniently with it." Usually only after such cases have been exposed one after another by the masses, or they are repeatedly urged by the upper-level organizations, do they start to move reluctantly to prepare a report of the findings in a perfunctory way, to circulate a notice of criticism, or to ask the person in question to make a self-criticism. These symbolic methods of handling the matter mean nothing to those who practice extravagant eating and drinking, and it seems that there are not many lessons to be learned here.

The practice of extravagant eating and drinking is a traditional pernicious habit left over by the old society and is very destructive and corrosive. Leading cadres should first set an example to check the trend of extravagant eating and drinking.

In order to check the trend of extravagant eating and drinking, it is necessary to enforce party discipline. All regulations within the party or any documents of the Party Central Committee or the State Council should be strictly enforced once they are formally promulgated. An attitude of liberalism is absolutely not permitted. All men are equal before party discipline. Everyone, regardless of who he may be, has to be investigated once he violates the regulations. Investigations should be made wherever such violations occur. Disciplinary action should be taken in accordance with party discipline, administrative orders, or the law, especially against those who violate the law and discipline knowingly or repeatedly. Financially, we would act in the spirit that the one who initiates the "idea" should pay for it, and that he should be asked to make payment before the date due as a rigid economic sanction against him. Unless such actions are taken, it seems impossible to check the practice of extravagant eating and drinking.

There are certain connections between the practice of extravagant eating and drinking and the present backward economy, as well as certain shortcomings that exist in the economic system. We have to adopt principles which are both rigorous and prudent in order to do a good job of reforming the economic system. Departments at upper levels should strengthen their guidance over economic departments at lower levels and help them solve their real difficulties. At the same time, it is also necessary to educate them to improve production through normal channels, such as improving business administration, upgrading the quality of products, and strenghtening cooperation among themselves. It is not advisable to take improper measures or engage in illegal transactions.

The practice of extravagant eating and drinking has become a force of habit. In order to really keep it in check, it is necessary for comrades of the whole party to take concerted action. It is necessary to start in every place, every unit, and every department. This unhealthy tendency is doomed if all of us take concerted and closely coordinated action.

Corrective Measures Taken

Hangzhou ZHEJIANG RIBAO in Chinese 9 Oct 80 p 4

[Article by Guo Shuming [6753 7311 6900], Secretary of the Party Committee of Chengnan Commune, Xiaoshan County: "Looking at the Importance of Mass Supervision From the Checking of the Practice of Extravagant Eating and Drinking"]

[Text] For the purpose of implementing the "guiding principles" well in combating the evil trends of party members, it is necessary to subject party members themselves to supervision by the masses. The evil trends of party members cannot be corrected by adopting a closed-door attitude. In the practice of checking the tendency of extravagant eating and drinking, we have had a profound understanding of the truth of this.

Following the successive bumper harvests of farming, forestry, animal husbandry, sideline products, and fishery in recent years, an unhealthy tendency of taking away work income from commune members, practicing extravagant eating and drinking, and giving dinners and presenting gifts prevails among a portion of party member cadres of our commune. Even more serious is the fact that, in some places, one cannot get things done without inviting cadres to eat and drink This evil trend has impaired the fine tradition and style of the party, dampened the enthusiasm of the masses, and damaged the relationship between the party and the masses. In order to correct the style of party members, we are determined to check this evil trend. At the beginning, in consideration of the impact, we only educated the cadres in a general way. Although some cadres have made self-criticisms in the conference room, the evil trend still remains unchecked. Most cadres of our commune at the level of party branch member and above continue to indulge in extravagant eating and drinking. Once there was a banquet with more than 30 people in attendance. Some of the participants were dead drunk and threw up their dinner all over the ground, thereby creating a very bad impression among the masses. In view of this situation, at cadre meetings we have carried out serious criticism individually against those cadres who are habitually eating and drinking, and we have made it a rule that party member cadres are not allowed to practice extravagant eating and drinking under any pretext. Whoever violates this rule will be severely punished. We believe that the evil trend could thus be checked. However, things have not been that simple. Some of the cadres do not practice extravagant eating and drinking openly but privately, or not locally but at places other than their own. In the past 2 years, cadres of the Hongzing Brigade spent more than 3,000 yuan in the name of the "three supports" in indulging in extravagant eating and drinking.

It is not only positive education that has no effect, but the open criticism by name as well. Then, what measures on earth can check the practice of extravagant eating and drinking? We have discovered that the Yongfeng Brigade is extraordinary. They are upright. They do not indulge in extravagant eating and drinking. Brigade-operated enterprises do their business according to regulations. They do not take more than they are entitled to. Why? Because they have a set of systems to subject themselves to supervision by the masses. Informal discussions of commune members are regularly called by the party branch of the brigade to let the masses making comments on cadres, and general meetings of commune members are held regularly at which cadres have to report to the masses on the implementation of the system. By so doing, cadres conscientiously implement the system and the masses seriously supervise the cadres. This is why party members of this brigade are upright and the general mood of the masses is good. The practice of the Yongfeng Brigade has enabled us to understand that whatever one does has a bearing on the masses. To correct evil trends of cadres and to check the practice of extravagant eating and drinking, these must also be subject to supervision by the masses. For this reason, the party committee of the commune has conscientiously summed up the experience of the Yongfeng Brigade to extensively arouse the masses to supervise cadres in order to check the practice of extravagant eating and drinking. It has been decided that all cadres should conscientiously subject themselves to supervision by the masses. In turn, the masses are authorized to check up when they discover party member cadres indulging in extravagant eating and drinking or giving dinners or presenting gifts. They may put forward their reports in different forms for the party committee of the commune to handle. In this way, the extravagant eating and drinking habits of the cadres have been quickly checked. This year there has not been an instance of extravagant eating and drinking in the whole commune.

The practice of checking extravagant eating and drinking has enabled us to understand that a closed-door attitude is not the way to combat the evil trends of party members, and that correcting the evil trends of party members has a bearing on supervision by the masses. In accordance with the stipulations of the "guiding principles," we ask party member cadres to conscientiously put themselves under the supervision of the masses. The party committee of the commune is also asked to lead its members in setting an example. This year, there were several transfers to or from this commune, but on all of these occasions we did not indulge in extravagant eating and drinking. At the same time, we have severely punished those cadres who suppressed criticism by the masses and carried out retaliation. Huang Huanbiao [7806 3562 2871], a mechanic of the cement plant of the commune, put forward his criticism of a former party branch secretary and passed on the secretary's problems to the upper level leadership. This party branch secretary tried in every possible way to "give him tight shoes to wear" in order to carry out retaliation. Informed of this situation, the party committee of the commune thoroughly investigated the case and found many problems relating to this party branch secretary, such as utilizing public funds to practice extravagant eating and drinking for a long period of time, suppressing criticism, taking strong measures against the masses, and having an unhealthy lifestyle. This case has been properly dealt with. At the same time, Huang Hunabiao has been praised for his spirit of daringly criticizing and supervising cadres. Working in this way, a healthy tendency of daring to supervise and being willing to supervise has been created.

JIANGXI RADIO COMMENT ON IMPROVING PARTY WORKSTYLE

HK030814 Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 2 Jan 81

[Station commentary: "Truly Rectify the Party's Work Style"]

[Excerpts] Rectifying the party's work style is a major issue in strengthening and improving party leadership and enhancing the party's combat effectiveness. Comrade Yun recently pointed out with great acuteness that the question of the work style of the ruling party is related to the life or death of the party.

Due to the 10 years of great sabotage done by Lin Biao and the "gang of four" and the long period of interference by the ultra-leftist line, our failure to eliminate feudal privileged thinking, and ineffectiveness and mistakes in our own work, unhealthy trends are still rather serious in some areas and departments. Compared with the early post-liberation period, our party work style has not yet taken a fundamental turn for the better. There is now a lot of talk about this inside and outside the party and people have expressed profound concern and worry. This is fully understandable.

The recent work conference held by the Provincial Discipline Inspection Committee seriously studied the question of correcting party work style, and demanded that party organizations at all levels throughout the province resolutely implement the spirit of the Central Discipline Inspection Commission forum and correct as soon as possible the most prominent unhealthy trends in the party that arouse greatest discontent among the masses. Efforts should be made to raise the party's prestige to near the pre-great cultural revolution level this year, to equal it next year, and to exceed it in 3 years. We must adopt resolutely and steady measures to strive to achieve this aim and promote party work style.

There are very many difficulties and very great resistance in the arduous struggle to correct unhealthy trends in the party. This resistance comes from all levels and all sides. However, these people are certainly only a few in number, and are isolated. Every party member, especially leading cadres and cadres of the discipline inspection departments, must eliminate fear, act with boldness, and wage resolute struggle against all unhealthy trends.

'RENMIN RIBAO' ON IDEOLOGICAL TRANSFORMATION

HK021348 Beijing RENMIN RIBAO in Chinese 30 Dec 80 p 8

[Article by Fang Yan (2455 6056): "Transformation on the Basis of Seeking Truth from Facts"]

[Text] Since the 7 May cadre schools dominated by the ultra-leftist line of Lin Biao, Jiang Qing, Kang Sheng and company were disbanded, the ruthless method of bringing about "ideological transformation" in the "capitalist roaders" have become a thing of the past! Today, with a correct ideological line, the way to better transform people's subjective world has become clear once more.

During those years, many comrades who went to the 7 May cadre schools had indeed the desire to transform their world outlook. They did physically labor enthusiastically and tried to find time to read the works of Marx, Lenin and Chairman Mao. However, just when some people were still perplexed by "making revolution in the depths of one's soul" or were honestly feeling "an extremely great sense of guilt," they were locked up and subjected to the "all-round dictatorship." Some people said that detention was also a form of "transformation," but this transformation was cruel. After they were released, they looked at themselves in the mirror and saw that their faces looked famished and their hair has turned grey. Then, they learned about some worldly events which happened while they were in seclusion such as: Lin Biao had committed treason and killed himself in the process; a certain schoolmate in the cadre school had died.

What has been related was once considered "ideological transformation." Yet this is certainly not Marxist transformation.

Since the downfall of the "gang of four," particularly since the 3d plenary session of the 11th Party Central Committee, the party has put forth the slogan of "emancipation of the mind." In a sense, this is also an ideological transformation. It demands that people transform their subjective world as they transform the objective world. The discussion on the criterion of truth, the implementation of the policy of "emancipate the mind, set the machine in motion, seek truth from facts and unite and look ahead," the putting forward and implementation of the four basic principles and the proclamation of the "guiding principles for inner-party political life" all contain basic demands concerning the transformation of the subjective world. The serious implementation of this spirit is equivalent to ideological transformation on the basis of seeking truth from facts.

Because we persist in ideological transformation on the basis of seeking truth from facts, we have become wiser than when we were during the 7 May cadre schools. For example, now we know that we must distinguish between transforming our ideology into materialism and transforming our ideology into idealism. We have come to realize better the meaning of Chairman Mao's saying that "the transformation of the exploiters and the transformation of the working class are things of two different natures." What we must uphold is transformation on the basis of seeking truth from facts.

One must constantly transform his subjective world to be able to become a materialist and not an idealist and to be able to uphold Marxism and not to reverse back to liberalism. We are against the kind of "transformation" advocated by Lin Biao and the "gang of four" which persecuted cadres and intellectuals, but we are not against "ideological transformation" per se. Comrade Zhou Enlai's saying that "one is never too old to learn and transform oneself" can still serve as an important guide.

CSO: 4005

'RADIO BA YI' ON 'COERCIVE STYLE' OF PRC LEADERS

OW020412 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 30 Dec 80

[Text] After the downfall of the "gang of four," meetings and newspapers inside and outside the party, commenting on the disasters in China in the past two decades, laid the blame mainly on subjectivism, adventurism, a patriarchal system and autocratic rule. But, very few people criticized the coersive style that is rooted deep in our party. This is because, first of all, many of our comrades are used to seeing this style and therefore are not sensitive to it; and second, any effort to deliberately emphasize the need for overcoming this shortcoming would be open to a suspicion of attacking a certain person in the central authorities by innuendo.

The coersive style is actually one of the main causes of the disasters suffered by our party, our army and the people of the whole country. The establishment of the people's commune, the launching of the "great leap forward" campaign, the "blowing of communist wind," "smelting iron and steel in a big way" and antirightist activities, and the cultural revolution were forcibly imposed on the whole party and people of the whole country by a person or persons.

The coersive style remained unchanged and caused similar serious results after Chairman Mao died. For example, the Sino-Vietnamese war, which was opposed by the majority of people at two meetings of the CCP Central Committee's Military Commission, was called by Deng Xiaoping as a move to "kill the chicken to frighten the monkey" and to give Vietnam a lesson. As the results of our army's intrusion into and withdrawal from Vietnam, some 45,000 commanders and fighters were killed or wounded; state plans were disrupted, causing grave financial deficits.

The peculiar relationship between China and the United States has created a de facto two-Chinas situation. The serious losses through blind imports of equipment and machinery complexes from the capitalist countries are already well-known to all. The masses of people and cadres have suffered even more serious damages by the increase of farm products and byproducts, which has caused inflation and soaring prices. A double digit increase of the commodity price index in other countries is already a serious matter. But in our country, prices of some goods have risen by 20 to 30 percent. Cadres and people share a common feeling that now 1 yuan is only worth half a yuan.

Moreover, the trial of the former principal leaders of our army has also been forcibly conducted in accordance with the instructions of Deng Xiaoping and two other comrades. Many comrades of the CCP Central Committee's Military Commission have raised doubts and suspicions regarding the Lin Biao incident and pointed out that many of the frameups were concocted by Kang Sheng, Wang Dongxing and Zhang Chunqiao. Huang Yongsheng and others merely acted on orders. They committed serious mistakes but should have no criminal responsibility. However, Comrade Deng Xiaoping does not agree.

It should be noted that the coersive style of the comrades in the central authorities has influenced many local and military leaders. For example, when some provinces had difficulty delivering hogs to other provinces some time ago, many county CCP committee leaders forced the masses of people to eat "patriotic meat." Regardless of commune members' economic conditios, they were forced to buy a certain amount of meat in accordance with the number of people in each household. Some commune members with a large families but few laborers did not know whether to laugh or cry when they were forced to buy 50 to 60 jin of meat at once.

The coersive style reached an unreasonable extent in family planning. For example, when Comrade Zhao Ziyang was in charge of work in Sichuan, many localities in the province, in accordance with Comrade Zhao Ziyang's instruction, made it a rule to send a doctor to live with a commune member's family after his wife gave birth to a first child in order to sterilize her. The commune member was asked to pay 1.6 yuan per diem to the doctor until the sterilization was performed on the wife.

As the old saying goes, those in subordinate positions will follow the examples set by their superiors. The coersive style was and still is one of the main causes of the disasters suffered by our party, our army and the people of the whole country.

BRIEFS

FIFTH YUNNAN PEOPLE'S CONGRESS--The second session of the Nationality Committee of the Fifth Yunnan People's Congress was held in Kunming from 22 to 24 December to convey the spirit of the second session of the Nationality Committee of the Fifth National People's Congress and insure the legal rights of the minority nationalities in Yunnan. The participants have seriously listened to the message conveyed by Zhang Zizhai, chairman of the Nationality Committee of the Yunnan Provincial People's Congress. After studying the various relevant documents, the participants have vigorously discussed the legal rights of the nationalities in the province in accordance with the actual situation in the province. Zhang Zizhai presided over the session. Sun Yuting, vice chairman of the Standing Committee of the Yunnan People's Congress, also attended the session and spoke. SOCIOLOGICAL, EDUCATION AND CULTURE

POPULATION CONTROL MEASURES URGED FOR BEIJING

Beijing BEIJING RIBAO in Chinese 6 Oct 80 p 1

[Article by Zhou Hongduo [0719 7703 6995]: "The Population of Beijing Should Not Exceed 10 Million"]

[Text] In response to the call of the Party Central Committee for control of the population of our country, and to attain the strategic target set forth by the Party Central Secretariat that "at no time in the future should the population of Beijing exceed 10 million," the Beijing Municipal Population Society from 3 to 5 October held its first annual meeting and its second theoretical discussion on population. At the meeting, more than 150 delegates emancipated their thinking, freely expressed their views, and earnestly discussed such problems as the population of China, the population of Beijing, the quality of the population, and population and the economy.

The meeting strongly pointed out that according to the characteristics of the capital, the size of its population should not be too large and the density of its population should not be too great. As a political, scientific, and cultural center, its population requirement is not quantity but mainly quality. But the present situation in Beijing Municipality is very different from the foregoing requirement. In quantity, by the end of 1979 it had reached 8.71 million people, including 57 percent urban population and 43 percent rural population. In the age composition of the population, 25.2 percent was under 15, and 56.2 percent was between 16 and 50. This shows that the majority of people have reached childbearing age. According to the estimate of departments concerned, if no decisive measures are taken, by 1990 the population will exceed 10 million. How can this be? The meeting stated that first, for a long time in the past, the increase in the population was never interfered with and not controlled. According to statistics from 1950 to 1960, in those 11 years there was an increase of 3.18 million people; on average the annual increase was 289,000 people. During this period, the natural rate of increase of population was an average 26.7 percent. In 4 of these 11 years, the rate of increase exceeded 30 percent. The mechanical increase of population was about half the total increase. Secondly, the enforcement of planned parenthood came too late. In the early 1950's, people were encouraged to bear more children, so that by 1963 the natural rate of population increase had reached 35.3 percent. As enforcement of planned parenthood came too late, the natural increase of population reached 3.53 million people in 30 years. Thirdly, the turbulent political and economic situations resulted in large numbers of people coming in and moving out of this municipality. In the past 30 years, the cumulative total of people coming in was 5.37 million and that of people moving out was 4.33 million; the net increase thus was 1.04 million. During the 10-year period of turmoil, from 1971 to 1976 alone 500,000 people moved in. Fourthly, by arbitrary administrative means, areas surrounding the capital which at the time had no social and economic connections with it were incorporated into Beijing Municipality, even sometimes with difficulty. In 1958 alone, the expansion of municiapl boundaries on two occasions increased the population by 2.18 million people. Fifthly, after liberation, Beijing Municipality laid the emphasis of reconstruction on industry--particularly on heavy industry, which employed a large number of workers--and thus accelerated the mechanical rate of increase of the population of Beijing Municipality.

In the past 30 years, as we did not pay full attention to the special features and conditions of the capital, the population of Beijing Municipality developed too quickly and on a too large scale, and the development of our national economy could not cope with it. To change this situation, it is necessary to control the population of the capital within 10 million at all times. The meeting held that it is necessary to pay serious attention to planned parenthood, advocate widely the birth of only one child per married couple, straighten out one's thinking, intensify the work of propaganda, and do well the work of child care. At the same time, we must exercise strict control over the mechanical increase of the population of Beijing Municipality. Some organizations which have been established unsuitably in Beijing, or factories which obstruct environmental sanitation, should be moved out without exception. Effective economic measures should be taken against those people or factories that fail to move out as they should. We should also energetically develop satellite cities and towns and continuously disperse the population of Beijing. Satellite cities and towns should have their own distinguishing features, where the same lines of trade may concentrate to some extent. It may also be possible to build cities of science and cultural areas, or to build tourist towns of Beijing's real mountains and rivers and places of historic interest and scenic beauty. In a word, we must make full use of all advantages and build satellite cities and towns of our capital as quickly as possible. This is an important channel for dispersing the population of the capital. In conclusion, the meeting made a proposal to set up quickly an authoritative organ jointly run by the central party, government and army organizations, and Beijing Municipality for the control of incoming personnel, and to stipulate conditions for personnel to come into Beijing. As regards the necessity of transferring personnel to Beijing, we must persist in the principle of reciprocity, sending one person out in exchange for one person coming in; otherwise, nobody can be allowed to come to Beijing.

LABOR INSURANCE, 'OLD AGE CARE' SYSTEMS DISCUSSED

Beijing BEIJING RIBAO in Chinese 10 Oct 80 p 3

[Article by Dai Yuqing [2071 3768 1987]: "Labor Insurance and Planned Parenthood"]

[Text] In his speech at the Third Session of the Fifth National People's Congress, Comrade Hua Guofeng pointed out clearly: "In the interest of the people themselves, it is essential that the promotion of family planning should continue." To do the work of family planning well and to control the rate of population increase, we must pay serious attention to and do well the work of labor insurance, and truly achieve "old age care." However, due to certain shortcomings in our economic system, the labor insurance system has not yet been instituted in our vast rural areas, and the question of "old age care" has not yet fundamentally reached a solution. If the policy of "one couple, one child" is carried out in the countryside, after several decades a couple will take care of four old persons. It is very clear that this economic burden will be very heavy. If we do not adopt economic measures, the rural population, which constitutes 80 percent of our total population, will still increase on a large scale in the coming decades, bringing about tremendous pressure on the construction of the four modernizations.

At present, in our enterprise units of whole people's ownership and in most enterprise units of collective ownership, "old age care" is guaranteed by the retirement system. The state has enforced "compulsory insurance," and every year it has deducted, as the source of the pensions, insurance funds according to a fixed scale from the wealth created by staff members and workers. As most staff members and workers taking labor insurance are in the prime of life, they do not need their pensions for the time being. Therefore, a small portion of the insurance funds taken from them can be used to pay old people deprived of working ability as pensions, while the other major portion can be invested in construction enterprises so as to bring into play the beneficial results of investment. Labor insurance not only solves the problem of old age care but also has the effect of collective savings, thus being beneficial to both the people and the state. As the enterprise units of whole people's ownership and collective ownership enforce the system of labor insurance, it gives the work of family planning a reliable economic foundation. As seen from the statistics, there is a fairly great difference between the growth rate of the urban population and that of the rural population. In Shanghai Municipality, which has a higher cultural level, the natural growth rate of the population in 1978 dropped to 5.7 percent, which was far lower than the growth rate of the rural population.

There are favorable conditions in our rural areas for the introduction of labor insurance, because labor insurance is, in essence, a cause of collective welfare of "one for all, and all for one." In the population structure, the greater the number of middle-aged and young people with working ability, the greater will be the source of funds for labor insurance; while the fewer the number of old people who are deprived of their working ability, the smaller will be the expenditures out of labor insurance [funds]. At present, the composition of our population is getting younger. The average age of our citizens is 21, which is lower than the world average age level of 22.9 years. Our old people over 65 constitute only 4.6 percent of our total population. The number of able-bodied people far exceeds the number of people without working ability. As seen from the trend of population growth in the coming decades, the composition of our population will not be getting older very quickly. At present in the whole country, people under 30 constitute about 65 percent of the total population, amounting to some 630 million, including about 340 million people from 0 to 15 years of age who constitute 35 percent of the total population. After several decades, these people will be in the prime of life and become a labor reinforcement. Even by that time, the income from labor insurance funds will be certainly greater than the expenditures.

What deserves our study is the fact that there will be a contradiction between the system of labor insurance in our rural areas for total socialization and our existing rural economic system. What can we do? We suggest first the enforcement of compulsory insurance, and then the stipulation of a minimum insurance payment. With an annual income above this minimum, one may be exempted from the deduction of the insurance fee for the current year. When one's annual income again exceeds the minimum, one must again start to pay for insurance. As rural production is usually restricted by natural conditions, the harvest is not uniform in various places. A production team that is rich this year may suffer natural disasters and become poor next year, while a production team that was poor last year may become rich from a good harvest. From an analysis of the general average, all production units will pay more or less the same insurance fee. In this way, it will not only be possible to enforce the system of labor insurance in the whole society, but it will also be possible to show consideration for actual difficulties arising from the inequality between the poor and the rich, thus helping to protect the enthusiasm of the broad peasants.

WHO SPECIALIST STRESSES NEED FOR MATERNAL, CHILD CARE

Shanghai WEN HUI BAO in Chinese 4 Sep 80 p 1

[Article: "Consider Eugenics in Planned Parenthood"]

[Text] Reporter Gu Ronglu [7357 2837 4389] and correspondent Xu Zhengyi [1776 2973 0308] have learned from departments concerned that as various factors have impaired the quality of our population, the number of people with congenital stupidity (mentally retarded) and hereditary diseases has exceeded 10 million. For this reason, your reporter paid a visit to Zhang Peizhu [1728 0160 3796] for an interview on the question of promoting the study of eugenics. She is a maternity and child care specialist and consultant of the World Health Organization and the head of the International Peace Maternity and Child Care Center of the China Welfare Institute. She said the study of eugenics is a subject which should attract immediate attention in the work of promoting planned parenthood. This serious matter, which is related to the health of our coming generations, should cause concern to society as a whole.

Zhang Peizhu believes that we must not only control the quantity but also improve the quality of the population. This is an important topic of study for specialists concerned at home and abroad in recent years. It proves that eugenics is of extremely important significance. She said that although acquired training and "intelligence developing" education can make up some congenital deficiencies, natural predisposition is still the important link which decides human vitality, and this should not be overlooked. For the improvement of the quality of the population, it is necessary to exercise health care for the mother from the first day of her pregnancy. The prognosis of fetal health will prevent the birth of babies with congenital malformation or hereditary diseases.

While discussing the factors that affect the quality of population, Zhang Peizhu explained that congenital and hereditary diseases constitute the principal cause of defective babies. Parents with morbid genes not only can transmit hereditary diseases to their children but also can pass them on from generation to generation. The marriage of close relatives is also one of the important causes for the spreading of hereditary diseases. According to medical statistics, the incidence of recessive hereditary diseases, including dementia, from marriages of close relatives is 150 times higher than that among freely married couples. Furthermore, waste gas, wastewater, and industrial residue (the three wastes), noise pollution, pesticides, farm chemicals, and misuse of antibiotics and other medicines during early pregnancy will also impair the quality of the fetus.

Zhang Peizhu suggested ways of conducting prognoses of fetal health and giving birth to fewer and healthier children.

First of all, we must pay attention to the education of young people on sex and physiological health, and advocate premarital guidance and examination. From premarital guidance and examination, it may be found that both parties suffer illness that makes them not suitable for marriage, and they can be persuaded not to get married. Premarital guidance may also reveal a family history of hereditary diseases and of marriages of close relatives, and promptly may discover hereditary diseases and defects in order to receive treatment, seek guidance after marriage, and make preparations for planned parenthood.

Next, we must pay attention to health care for the period surrounding childbirth (for both mother and child) and the prognosis of fetal health in order to reduce the death rate of fetuses and newborn babies in the period surrounding childbirth (from the late stage of pregnancy to a certain period after childbirth). The main causes of the death of fetuses and babies are malformation, oxygen deficiency, and premature delivery, with malformation the most common cause of death of newborn babies. Most cases of fetal malformation occur in the early stage of pregnancy; therefore, the medical organs of maternity and child care are required to strengthen their work of health protection for mothers during the period of pregnancy. Pregnant women should immediately register with local health centers, which will keep a card file for them. In big and medium-size cities and in places with favorable conditions, hereditary consultation clinics should be established, and new diagnosis techniques should be used to carry out antenatal examination for congenital malformation and hereditary diseases. When necessary, the pregnancy of a malformed fetus should be terminated as early as possible. In the maternity hospital, the pregnant mother should be placed under constant observation for the protection of her unborn baby. We should make sure that every baby born is healthy, strong, and intelligent.

In addition, we should establish an efficient contingent for maternity and child care. Zhang Peizhu proposed that medical colleges should set up a speciality of maternity and child care for the training of a large number of health personnel for women and children, with secondary vocational qualifications and higher professional standards. She also stated that leaderships at all levels should show concern for the health of pregnant women, particularly after the first 3 months of their pregnancy, and make proper arrangement for their work so that they can avoid contact with any harmful substances.

SHANGHAI TEACHERS UNIVERSITY ADOPTS 5-YEAR SYSTEM

Shanghai JIEFANG RIBAO in Chinese 5 Sep 80 p 3

[Article: "The East China Teachers University Tries Out 5-Year System for Two Departments of Physics and Chemistry"]

[Text] With the approval of the Ministry of Education, the East China Teachers University, starting this year, is trying out a 5-year system for new students enrolled in its departments of physics and chemistry. During the first year, the students will concentrate their study in foreign languages and the Han language.

The university changed the school system of its two departments of physics and chemistry to 5 years in order to implement a concrete measure of the National Conference on the Work of Teacher Training. Most new students in their first year are under 20, are full of energy, and have a good memory. After a year's intensive study of foreign languages, they will be basically qualified for reading (to understand common essays) and writing (to write short articles close to the content of the textbooks). On this initial basis, when they later change to vocational study they will be able to read materials in foreign languages and original editions of teaching materials, even learn a second foreign language, and further consolidate and improve their knowledge of foreign languages. The improvement of their knowledge of the Han language will also contribute to their study of foreign languages and vocational subjects. To guarantee the smooth progress of the experiment in the physics and chemistry departments, the university has laid down special teaching plans for foreign languages and the Han language, transferred some teachers to these departments, selected teaching materials of foreign languages and the Han language, and also acquired more reference books, teaching reference materials, and equipment for teaching electricity and chemistry. Moreover, they have also taken into consideration the teaching of foreign languages after the first year, in coordination with the vocational study in these departments.

The East China Teachers University runs its regular courses under a 4-year system. In the past, when new students entered the university, they were taught foreign languages in a decentralized way at each grade year by year. The number of hours for teaching was limited, progress was slow, and the students could not concentrate their effort on the study. This long experience proved that most students could not qualify themselves in foreign languages, and that later on they even forgot what they learned because of lack of practice. As regards lessons in the Han language, these were taught in only a few courses in the departments of liberal arts; in some cases, the Han language was taken only as an elective course. Therefore, this affected the students' ability to improve their writing and reading. Proceeding from the practical needs of conducting teachers training well, raising the level of teaching and research, and building a contingent of Red and expert teachers, the East China Teachers University proposed to try out this reform of its school system.

SCHOOLS IN SHANGHAI, HANGZHOU TAUGHT BY LEARNED ELDERS

Noted Accounting School Reopens

Beijing GUANGMING RIBAO in Chinese 24 Sep 80 p 1

[Article: "Well-Known Li Xin Accounting School Resumes Classes in Shanghai"]

[Text] The Li Xin Accounting School, well-known among our accounting circles, recently resumed its classes in Shanghai. This school, which had once earned very high credtability, will from now on be able to train qualified accounting personnel for the cause of the four modernizations.

This accounting school was established in 1928 by Mr Pan Xulun [3382 1645 0243], who had devoted all his energies to the school. The school name of Li Xin [4539 0207] was taken from the text of the "Confucian Analects": "If the people have no faith in their rulers, there is no standing for the state." The school had trained successively some 100,000 talented persons in accounting. After liberation, the Li Xin School achieved even greater progress. In 1951, the school had 19,000 students in Shanghai alone. In 1952, with the readjustment of all colleges and university departments in the country, the Li Xin School was closed. After the smashing of the "gang of four," the party put forward the call to march toward the four modernizations. Mr Pan Xulun, at his advanced age of 88, understood that our country is in urgent need of accounting talent and made his proposal to resume operation of the Li Xin School. A group of his students, all over 60 in age, also said: "Even our old teacher is worried about accounting instruction in our country. We are willing to exert our utmost effort for this cause." They pledged to teach even without remuneration.

The Li Xin Accounting School has formed a committee of 11 members, including Pan Xulun, Ma Yixing [7456 0001 5887]. Gu Shuzhen [7357 2885 2823], Duan Lipei [3008 0500 0160], Gu Fuyou [7357 4395 0147], and others. This school of professional training will formally open in October. Its nature is of a vocational college, its school system is 3 years, and it will train mainly "assistant accountants" and, on behalf of departments concerned, train special personnel in planning, statistics and the control of commodity prices and business administration, in connection with the vocational knowledge in finance and accounting.

Spare-Time School Established

Beijing GUANGMING RIBAO in Chinese 24 Sep 80 p 1

[XINHUA news release: "Zhejiang Provincial Committee of KMT Revolutionary Committee Establishes Spare-Time School"]

[Text] The Zhejiang Provincial Committee of the KMT Revolutionary Committee has established a Hangzhou Long March Spare-Time School, which is starting classes in September.

This school, situated in the Hangzhou Rui Jin Middle School, conducts classes in the evening. At present, it has more than 1,400 students, including mostly working personnel and also some unemployed young people. It trains mainly talents in accounting and foreign languages urgently needed by factories and enterprises.

Many of the KMT Revolutionary Committee members taking part in running the school are old people over 70 years of age. They are still working hard to train personnel for the four modernizations. They have visited factories and enterprises to find out what they expect from the school, and they have tried by every means to get teachers. An 80-year-old scientist, Zhou Jinsan [0719 6651 0005], who studied in Japan in his early years, has volunteered to teach the Japanese language. Tang Zhenxiang [3282 4394 4382], head of the English-language teaching and research group, and Chen Yuanshan [7115 0337 0810], head of the Japanese-language teaching and research group, are both learned elders who studied in the United States and Japan in their early years. Assistant professor Li Gengyao [2621 5087 3852], of the Department of Economics of Hangzhou University, also comes to give lectures. As the lineup of teachers is strong, many students have signed up for the entrance examination of this school.

MIDDLE-AGED SCIENTIFIC PERSONNEL LEAD IN ACHIEVEMENTS

Beijing GUANGMING RIBAO in Chinese 16 Sep 80 p 1

[XINHUA dispatch: "Research Materials of Chinese Academy of Sciences Prove Middle-Aged Scientific and Technical Personnel Are the Backbone in Achieving Modernization of Science and Technology"]

[Text] A set of research materials of the Chinese Academy of Sciences shows that from 1978 to 1979, of the key scientific and technical personnel of some of the research units of the academy in the Beijing area who received awards for their important achievements in science and technology, 88 percent are middle-aged persons between 36 and 50. Therefore, it concludes that middled-aged scientific and technical personnel constitute the backbone in achieving the modernization of science and technology, and that special attention should be paid to improving their working and living conditions.

Recently, the achievements office of the planning bureau of the Chinese Academy of Sciences conducted an investigation of the ages of 179 key scientific and technical personnel of 28 winning units of the academy in the Beijing area who had received first and second grade awards for their important achievements between 1978 and 1979. The following data were obtained: 5 persons younger than 35, 2.8 percent; 43 persons from 36 to 40, 24 percent; 73 persons from 41 to 45, 40.9 percent; 42 persons from 46 to 50, 23.5 percent; 8 persons from 51 to 55, 4.5 percent; 5 persons from 56 to 60, 2.8 percent; and 3 persons older than 61, 1.7 percent.

These data show that among this group of key scientific and technical personnel who had received awards, there are 158 middle-aged persons from 36 to 50. The "peak" age bracket for scoring achievements is from 41 to 45, including 73 persons--constituting 40.9 percent.

This set of research materials states that most of these middle-aged key scientific and technical personnel of the academy were college graduates between 1958 and 1964. At present, their monthly pay generally ranges between 56 and 70 yuan. As a rule, they have old parents and young children to feed with their limited income. Moreover, most of them were assigned to jobs in which they are not specialized. To enable these scientific and technical personnel to play a greater role, it is necessary to pay special attention to the improvement of their working and living conditions.

PERSONS WITH FOREIGN LANGUAGE SKILLS SOUGHT OUT, EMPLOYED

Beijing GUANGMING RIBAO in Chinese 24 Sep 80 p 1

[Article: "Good Results Achieved in Assigning Work to Personnel With Foreign Language Capability Throughout the Country"]

[Text] Since the beginning of this year, personnel departments at all levels have conducted a general survey of personnel with foreign language capability throughout the country and, on this basis, have earnestly carried out the work of readjusting such personnel who were not employed in the line of their learning and also assigning jobs to such personnel who were unemployed. According to statistics of 14 provinces, municipalities, and autonomous regions, including Jiangsu, Shanghai, Liaoning, and Guangdong, readjustment has been made for 2,574 foreign language personnel not employed in the line of their learning, and jobs were given to 3,959 unemployed foreign language personnel. In Jiangsu Province, the number of foreign language personnel who, through the readjustment, have returned to the profession they were trained for has reached 96 percent of the number of personnel who should be readjusted.

Personnel departments at all levels have found many ways to assign work to personnel with foreign language capability who are free and at leisure in society. In most cases, they are either recruited on the staff or engaged by appointment; otherwise, they set up a company or a network of translation services, organize a collective translation cooperative or group, render translation services on a commission basis, and so forth. Zhejiang Province tried to meet the requirements of the departments of foreign trade, industry, supply and marketing, aquatic products and others, so Hangzhou Municipality posted public notices for the recruitment of foreign language personnel. More than 1,800 people applied for the examination, and 330 of them were recruited after oral and written tests in translation and political and physical examinations. Among them, there were staff members and workers of enterprises of whole people's ownership or collective ownership, and also young people awaiting employment who were free and at leisure in society. Zhang Xinming [1728 2450 2494] got the highest marks in the examination--89 and 93 respectively for written and oral tests in translation. In 1966 he had gone to Ningxia to settle in the countryside and studied English persistently in his spare time. After he returned to Hangzhou, he got a blacksmith's job in the No 3 Cotton Weaving Mill. Zhang Yali [1728 0068 7787], a dispatcher for the Hangzhou Municipal Telecommunications Company, had specialized in the English language. In the past, she was not employed because of her relations with overseas Chinese, and so she repeatedly asked permission to leave the country. Now that she has been recruited to work in the provincial bureau of foreign trade, she has voluntarily withdrawn her application to leave the country and has pledged to make her contribution to the four modernizations of the motherland.

SOVIETS LOSE MORE TROOPS IN AFGHANISTAN

OW051326 Beijing XINHUA in English 1253 GMT 5 Jan 81

[Text] Islamabad, January 5 (XINHUA)--A large number of Russians including one officer were killed by the Mujahideen during the heavy fighting in Tagab District, Parwan Province two weeks ago, according to a spokesman of the Alliance for the Liberation of Afghanistan in Peshawar today.

He said one Russian tank and 10 supply trucks were destroyed during the fighting. Some arms and ammunition as well as 6 communication sets were captured by the Mujahideen, he added.

According to the sources of HEZB-E ESLAMI of Afghanistan, several training centres were blown up by the Mujahideen in Jalalabad City on December 27.

On the same day, heavy fighting in Kaga District, Nangarhar Province, caused the destruction of five Russian tanks or armoured cars and the death of 27 militia men.

Reports from Laghman Province on January 3 said that the Mujahideen had attacked the Russian forces in the Sogkhakan area. In the three-hour clash, two Russian tanks were destroyed and 50 soldiers killed.

A report from Paktia Province said that in the recent heavy fighting in the district of Aji, three Russian tanks were destroyed and a number of Russian invaders and Afghan troops killed.

LEBANESE PRESIDENT APPEALS FOR PEACE

OW071346 Beijing XINHUA in English 1212 GMT 7 Jan 81

[Text] Beirut, January 6 (XINHUA)--Lebanese President Ilyas Sarkis appealed today to "those who are concerned about the safeguard of Lebanon to translate their words into action, to confirm their respect for the rights of the Lebanese and not to contribute consciously or unconsciously to the continuation of the tragedy in Lebanon."

At a meeting with foreign ambassadors, President Sarkis said that Lebanon is subjected to a severe test and she can only "reject all settlements which could prevent or delay the solution of the Lebanese crisis, regardless of any other regional or international problem and its connection with the Lebanese crisis."

On the Palestine problem, he said, "All plans of settlement based on resettlement (of the Palestinian people in Lec En) have been rejected because they not only jeopardize the vital interests of Lebanon but also fail to take into consideration the right of the Palestinian people to their own territory."

"We will continue to mobilize all energies to support the Palestinian cause," he said, "and urge the countries of the world to seek a just and overall settlement on the basis of the Palestinian people's right to self-determination and the establishment of a Palestine state in their own territory."

THAI OFFICIAL COMMENTS ON KAMPUCHEAN GUERRILLA STRENGTH

OW060738 Beijing XINHUA in English 0729 GMT 6 Jan 81

[Text] Bangkok, January 6 (XINHUA)--Squadron leader Prasong Soonsiri, secretary-general of the National Security Council (NSC), said yesterday that there is a growing tendency towards the formation of a Kampuchean united front to oppose Vietnamese forces.

He predicted that the war in Kampuchean will be a protracted one, but "not a fait accompli case as always claimed by Vietnam."

Lecturing a meeting at the Government House, Prasong said the Khmer Rouge guerrillas have used heavy weapons in battles with Vietnamese troops, set up mobile combat units and shifted from defensive to offensive in certain areas.

The Khmer Rouge guerrilla forces have almost doubled from 25,000 combatants to 45,000 during the two-year struggle against Vietnamese occupation troops.

He stated that a political solution can be achieved in Kampuchea only by implementing the U.N. resolution which calls for withdrawal of Vietnamese forces from Kampuchea and self-determination by the Khmer people.

"The world must not be misguided to other directions by Vietnamese propaganda," he warned.

Referring to Soviet activities in Vietnam, Prasong said the number of Russian advisers in Vietnam has risen and more naval vessels, fighter and transport planes are stationed on Vietnamese territory. The Soviet military infrastructure has markedly increased, including an intelligence-gathering network.

"The presence of Russian advisers in Laos and Kampuchea has aggravated the situation in the two countries, and Vietnam has made itself a complete proxy of the Soviet Union," he said.

INDONESIA TO DOUBLE DEFENSE BUDGET

OW051252 Beijing XINHUA in English 1239 GMT 5 Jan 81

[Text] Beijing, January 5 (XINHUA)--Indonesian President Suharto announced in Jakarta today that the defence budget will be doubled up to over 481,000 million rupiahs (about 800 million U.S. dollars) for 1981-82 while the previous defence budget was only 250,000 million rupiahs (about 408 million dollars), according to press reports received here.

Addressing a plenary session of parliament to deliver the draft budget, the president said the budget will be spent to carry out the military strategic plannings.

He said the whole draft budget for the fiscal year amounts to 13,900,000 million rupiahs (about 23,000 million dollars) marking an increase of 31.7 per cent over the previous one.

The president said the draft budget would consist of domestic revenues amounting to some 12,200,000 million rupiahs (about 20,300 million dollars) and foreign aid of 1,600,000 million rupiahs (about 2,700 million dollars). He noted domestic revenues increased by 35.5 per cent and development expenditures by 27.3 per cent. "With increasing domestic revenues, we shall be better able to administer our own state affairs," he said.

President Suharto announced that Indonesia's population, based on the latest census, totalled 147,383,075. From 1971 (the previous census year) up to 1980, the population of the country increased by some 2.34 per cent. "Considering a relatively still high production growth, it would stimulate us to continue and intensify further the family planning programme," he said.

UN CONFERENCE ON NAMIBIA OPENS IN GENEVA

OW071620 Beijing XINHUA in English 1612 GMT 7 Jan 81

[Text] Beijing, January 7 (XINHUA)--United Nations Secretary General Kurt Waldheim opened a week-long conference on the future of Namibia today in Geneva with the hope that the territory would become independent by the end of this year, according to reports reaching here.

Representatives from South Africa and the Southwest Africa People's Organisation (SWAPO), the two main delegates concerned, attended the conference.

Also present were delegates from the front-line African states, Angola, Mozambique, Zambia, Botswana and Tanzania. Others attending as observers were Nigeria, OAU and five Western countries (Britain, Canada, France, the United States and West Germany).

In his opening address, Waldheim said that the first aim of the meeting was to set a date for a ceasefire and he hoped there would be a firm agreement on this by the time the conference finished on January 14. He also called for implementation of a three-year-old U.N. plan for self-rule by the end of 1981 in the territory, known as Namibia. The plan calls for U.N.-supervised "free and fair elections."

He said the only alternative to independence for Namibia was a continuation of suspicion, violence and hatred between the parties.

JAPANESE PRIME MINISTER DISCUSSES ASEAN TOUR

OW080806 Beijing XINHUA in English 0731 GMT 8 Jan 81

[Text] Tokyo, January 8 (XINHUA)--Japanese Prime Minister Zenko Suzuki and Mrs. Suzuki left here this morning on a 13-day tour of the five ASEAN countries--the first overseas visit since his inauguration. He will have deep-going exchange of views with the leaders of these countries on bilateral economic cooperation and the complicated Kampuchea issue.

He will wind up his trip with an official speech in Bangkok, spelling out his government's new approach and basic policy in relation to ASEAN.

Departing from a Japanese prime minister's customary practice of first visiting the United States, Suzuki explained that he wished to "demonstrate in deed the importance (Japan) attaches to the Association of the Southeast Asian Nations."

Suzuki will visit the United States this summer and will participate in a south-north summit to be held in Mexico and the summit of seven Western nations in Canada. His current tour is generally regarded as "the inception of Suzuki diplomacy."

Suzuki will start the current tour with the Philippines and then proceed to Indonesia, Singapore, Malaysia and Thailand. The prime minister is accompanied by Foreign Minister Masayoshi Ito and Minister of Agriculture, Forestry and Fisheries Takao Kameoka.

Before his departure, Suzuki said that "ASEAN is Japan's permanent friend" and that beginning as ASEAN's "good partner," Japan will become a country "advancing together with ASEAN." The Japanese press also underlined the inseparable tie between Japan and ASEAN and noted that closer relations with ASEAN constitute a link in the guarantees for Japan's overall security.

To Japan, the ASEAN countries are a major supplier of raw materials such as tin and rubber. Next to the United States, they accommodate the second largest share of Japan's oversea investments. In 1979, Japan's exports to these nations amounted to 14.7 per cent of its total exports and the percentage for 1980 is even higher. Private Japanese investments in ASEAN countries totalled 2,652 million U.S. dollars by the end of 1979.

Besides, the Malacca Strait between Indonesia and Singapore is Japan's lifeline for with 80 per cent of the country's imported oil and 40 per cent of its manufactured goods passing through the strait.

Japanese papers pointed out that the relationship with ASEAN is a matter of life and death to Japan and that peace and stability in Southeast Asia is "indispensable to Japan's peace and prosperity."

While cordially welcoming the Japanese Prime Minister, the ASEAN countries have yet some reasons to be wary of and complain about Japanese economic cooperation. Deeply disturbed by Suzuki's current trip, Moscow has tried to take advantage of this discord and, through its mouthpiece the newspaper PRAVDA, to estrange the ASEAN nations from Japan.

ASEAN-JAPANESE TRADE INCREASES REPORTED

OW071706 Beijing XINHUA in English 1653 GMT 7 Jan 81

[Text] Beijing, January 7 (XINHUA)--The Association of Southeast Asian Nations (ASEAN) has emerged as a major trading partner of Japan as their two-way trade during the five-year period from 1975 to 1979 grew 110.92 per cent to a record 13,632 million U.S. dollars last year, according to an AFP report from Manila.

According to the latest Japanese customs clearance statistics issued by the Japanese Embassy in Manila, ASEAN countries--Indonesia, Malaysia, Singapore, Thailand and the Philippines--enjoyed an advantage over Japan since their regional exports rose faster than imports during the period. ASEAN exports, mostly raw materials rather than finished products, showed an increase of 115.71 per cent (or 9,911 million dollars) from 6,365 million dollars in 1975 to 16,276 million dollars in 1979.

ASEAN imports from Japan rose by 62.8 per cent, or 3,721 million dollars, during the same period.

Products exported from ASEAN consisted mainly of natural rubber, tin, tropical timber, vegetable oil, bauxite, copper ore and crude oil.

Direct Japanese private investments in the ASEAN region during the same period rose by 100.45 per cent, from 1,323 million dollars to 2,652 million dollars.

ASEAN PAPERS CRITICIZE SRV INCURSIONS

OW081346 Beijing XINHUA in English 1258 GMT 8 Jan 81

[Text] Hong Kong, January 8 (XINHUA)--Malaysian, Thai and Singapore newspapers condemn the fresh Vietnamese invasion of Thailand as a premeditated provocation and well-planned out.

The Malaysian SIN CHEW JIT POH said editorially yesterday that Vietnam has declared its refusal to attend the proposed international conference on Kampuchea, which the ASEAN countries are actively promoting through diplomatic channels. Now it demonstrated its "determination" to oppose this conference by resuming border incursions in an attempt to thwart ASEAN's diplomatic efforts.

The editorial pointed out that "Vietnam's resumption of gross military invasion has not only aggravated the tension at the Kampuchean-Thai border, but also convinced ASEAN countries that it is a most arduous task to persuade Vietnam to attend the proposed international conference."

The Malaysian NEW STRAITS TIMES said in an editorial on January 6, "Hanoi's immediate objective may be to revive last July's proposal that a DMZ straddling the Thai-Kampuchean border be established, the first step in securing acceptance of the Vietnamese-installed Heng Samrin regime."

The Thai TONGFUA DAILY NEWS said in an editorial yesterday that the aim of the new incursions, like those in June, was to intimidate the ASEAN countries into dropping the Kampuchean issue, because both Vietnam and its patron Moscow would not like to see any alteration of "fait accompli" in Kampuchea with a view to preventing any unfavourable effect on Vietnam's "Indochinese Federation" scheme and Russia's global strategy for hegemony.

The Singapore SIN CHEW JIT POH said on January 5 that the new attacks mounted by Vietnam on Thailand could only result in closer unity between ASEAN countries and world public opposition to and condemnation of Hanoi's aggressive nature.

GUANGDONG TO BUILD WHARF IN HONG KONG

HK060259 Hong Kong SOUTH CHINA MORNING POST BUSINESS NEWS in English
6 Jan 81 p 1

[Article by Julie Auyeung]

[Text] Guangdong Province is investing $400 million in Hong Kong to build a wharf mainly for its cargo vessels headed for the colony.

The investment is being made through Guangdong Enterprises Ltd, a newly-established company here which acts as agent for all economic entities and corporations in Guangdong.

To be located in Kowloon Bay, the project will be a joint cooperation between Guangdong Enterprises and the Hong Kong-based Chukong Shipping Co.

This is the second wharf project announced recently to be built in Hong Kong with Chinese capital.

The other one--also a $400 million project--is being planned by China Merchants Steam Navigation Co Ltd. It is to be built near Tuen Mun for vessels of 10,000 to 20,000 tons.

A company executive of Guangdong Enterprises said yesterday that the move is "to foster closer economic relations between the two places."

He disclosed that site investigation is being carried out and that the building of the wharf is expected to be completed by the end of next year.

"As trading between Hong Kong and Guangdong increases, we are anticipating more cargo to be transported to Hong Kong by dry-cargo vessels.

"In fact, Guangdong Province will give priority of investment in Hong Kong to that of improving the sea transportation facilites," the executive added.

Although the volume of rail transportation of Chinese cargo is also very significant, Guangdong Enterprises will not consider investing in a rail or air link.

This is mainly to make use of the existing cargo-handling facilities in Hong Kong especially in view of the Hong Kong Government's plan to allocate more such cargo-handling basins to Chinese vessels.

Moreover, the improvement of the rail system within China is still moving ahead slowly. The system is unable to cope with the fast development of the Hong Kong section.

He explained: "We cannot simply invest in the section of the railway on the Hong Kong side. The railway system within Guangdong is still poor and needs to be taken care of before we attempt another move."

The Kowloon Bay wharf project is the first investment made by Guangdong Enterprises Ltd which was officially inaugurated yesterday.

The company "has drawn closer the economic ties between Hong Kong and Guangdong," said the vice-governor of the province, Mr Zeng Dingshi, at the opening ceremony attended by over 1,200 guests.

Guangdong Enterprises has a registered capital of $5 million, purely from Guangdong interests.

"The company will lighten the workload now being borne by China Resources, Wah-yuan and other agents which have been representing Chinese products in the Hong Kong market for a long time," Mr Zeng emphasized.

And the function previously carried out by the "old agents" will be transferred gradually to the new company, representing a change in the trade pattern between Chinese corporations and their trading partners.

Guangdong Enterprises will strengthen its activities by increasing the number of staff. Its staff of 100 mostly come from Guangdong.

"We are ready to take over the business from China Resources and other Hong Kong agents step by step. But I wouldn't say this indicates competition among Chinese companies," the sub-manager, Mr Ho Hei-kun, said.

"We will begin taking back the business in which we have the experience and capacity. We are relatively strong at this moment in business transactions involving native produce and food," Mr Ho stressed.

For the last 6 months, the company has been carrying out business negotiations with local and foreign investors.

Agreements have been concluded concerning trading and other forms of investment in Guangdong, particularly in its free economic trade zones.

Mr Ho added: "Investors in future do not have to go to Guangzhou for trade negotiations as these will be conducted at our office in Hong Kong. This would save investors time."

POLAND IN CRITICAL ECONOMIC SITUATION

OW080818 Beijing XINHUA in English 0808 GMT 8 Jan 81

[Text] Warsaw, January 7 (XINHUA)--Economic situation in this country has deteriorated particularly in the past few months, with the industries showing no improvement and agriculture falling back to what it was several years ago. The country's national income has declined for the second straight year.

This was the gloomy picture painted by Vice-Premier and Chairman of the State Planning Committee Henryk Kisiel at a press conference here today.

He added that all this naturally had a negative effect on this year's plan.

The government, he said, would continue to curtail the growth rate of the national income, by cutting down investments, and 49 major projects have been suspended.

He noted that collective consumption would rise and spending for public health, culture, education and art would be increased this year. Per capita income is expected to rise by 17 per cent over last year, and purchasing power up by about 260 billion zlotys. By contrast, increase in commodity production and public services would be within 40-50 billion zlotys. Thus, the basic economic problem facing the country this year is how to narrow down this chilling gap.

POLISH OIL WELL BLOWS OUT

OW061232 Beijing XINHUA in English 1209 GMT 6 Jan 81

[Text] Warsaw, January 6 (XINHUA)--The nearly month-long blow-out of an oil well drilled last year in the Karlino region on the northwest coast of this country has fired the Poles with hope that they may have hit upon a substantial deposit of black gold and economic relief.

The blow-out started on December 9 and has not yet been stopped despite round-the-clock efforts by experts to cap a well.

Poland is rich in coal with a proven deposit of 160 billion tons. The annual output is some 200 million tons. The country exports 40 million tons each year in barter for the oil it needs. At present, the nearly 17 million tons of oil the country consumes annually are almost entirely imported, mainly from the Soviet Union and also from Libya and Middle East nations. Poland produces only 300,000 [words indistinct] year. The Poles [passage indistinct] largest oil field discovered up to now in this country. However, its deposit is a mere two million tons. Moreover, 1.5 million tons have already been exploited in the past six years.

The Karlino oil field in Koszalin Province is in the east of Kamien Pomorski, Szczecin Province. Experts have determined that the crude oil discovered in the area is of high quality and "free of sulphur." Its deposit is unknown up to now. However, even if the deposit is not large, it is still of great economic and strategic significance to Poland.

FRG FOREIGN MINISTER CRITICIZES SOVIET HEGEMONY

OW071330 Beijing XINHUA in English 1257 GMT 7 Jan 81

[Text] Bonn, 6 Jan (XINHUA)--West German Foreign Minister Hans-Dietrich Genscher today told a Free Democratic Party rally in Stuttgart that the Soviet hegemonist policy has no future.

Genscher said that the Soviet Union should be aware of the sincere desire of the West for cooperation and disarmament. He urged the Soviet Union to respect the Helsinki principles when pursuing its policies and to pay attention to worldwide reactions to its invasion of Afghanistan so as to reconsider its actions at the forthcoming Soviet Communist Party Congress in February.

The minister stressed the determination of the West to defend itself from attacks and the necessity to solidify the EEC and strengthen the alliance with the United States. Europe must make efforts to safeguard its security, he stated.

Genscher pointed out that the double-tier decision made by the NATO is an inseparable entity, which laid emphasis on both arms replenishment and the need for disarmament talks. Whoever neglects the part of the decision on arms replenishment undermines the basis for negotiations on the reduction of medium-range nuclear weapons. Such neglect could only lead to sustained Soviet military superiority, not arms limitation and disarmament, he warned. This question involves the security of the West and the core of the West disarmament policy, he added.

BRIEFS

ASEAN SUBMARINE CABLE MEMORANDUM--Bangkok, January 6 (XINHUA)--A memorandum of understanding was signed here yesterday among Thailand, Singapore and Malaysia on the ASEAN submarine cable installation project. The project calls for four stages of submarine cable linkage, the first stage, between the Philippines and Singapore, and the second, between Indonesia and Singapore, were completed in 1978 and 1980 respectively. The memorandum of understanding signed yesterday is for the third stage between Singapore-Malaysia and Thailand which will be completed this year. The fourth is between Thailand and the Philippines. Suchart Phuaksakorn, director general of the Post and Telegraph Department of Thailand, Datuk Mohamed Nadzim, director general of the Telecommunications Department of Malaysia, and Sim Kee Boon, permanent secretary of the Ministry of Communications of Singapore, signed on behalf of their respective governments. The project was decided following the meeting of the ASEAN Standing Committee on Transportation and Telecommunications in 1974. [Text] [OW060848 Beijing XINHUA in English 0815 GMT 6 Jan 81]

AFGHAN LEADER INTERVIEWED--Brasilia, January 5 (XINHUA)--The leader of the Front of Afghan Mujaheddins Mohammed Habib has called for worldwide arms supplies for the militant Afghan people who are determined "to fight to the end" against the Soviet aggressor for whom they "have no illusions." In an interview with the Brazilian magazine ISTO E in Paris, published in the January 7 number of the journal, the former Kabul University professor says "Moscow's objective is not merely Afghanistan itself." "Moscow is pursuing a strategic, offensive policy. The Soviet Union is only 400 kilometres from the petroleum-producing Gulf now that they are in Afghanistan," he points out. Reviewing the tough resistance put up by Afghan freedom fighters, he says that there has been organized fight in both cities and rural areas, which has thus far wiped out more than 10,000 government armymen and 5,000 Soviet troops. The Mujaheddins on their part have lost 12,000 men, he noted. [Text] [OW060722 Beijing XINHUA in English 0716 GMT 6 Jan 81]

POLISH FOREIGN DEBT--Warsaw, January 5 (XINHUA)--Poland's foreign debts now total 24 billion U.S. dollars and it is expected they will top the 30 billion mark by the end of the year, revealed the Polish newspaper NASZA TRYBUNA today. Referring to what should be done under such conditions, the paper called for: first, further restriction on imports from the capitalist countries; second, deferring repayment of debts due in 1981-83 until after 1985; third, efforts to maintain the country's export and an effective export system based on bonuses; fourth, making use of imported machinery and equipment which cost some 500 million U.S. dollars and lie idle. [Text] [OW060728 Beijing XINHUA in English 0724 GMT 6 Jan 81]

POLISH AGRICULTURE DECREASES--Warsaw, January 7 (XINHUA)--The sowing of winter crops and ploughing in Poland fell short of the plan last year. Briefing reporters at a meeting on agriculture held by the Political Bureau of the Central Committee of the Polish United Workers' Party today, Jerzy Wojtecki, member of the party's Secretariat, blamed adverse weather and inundation for the unfavourable farming situation. Other adverse factors he gave included shortage of energy and raw materials and short supply of fertilizer. About 30,000 tractors will be unfit for spring ploughing and sowing. He also mentioned the failure to fulfil the plan in the purchase of pigs, cows and sheep as well as milk which will have a bad effect on the supplies or butter and other dairy produce. He also said that last year's sugar beet output was half a million tonnes less than that in 1979, leading to the government proposal for rationing of sugar. To provide more help to agriculture, the government has decided that charges for services to individual farming households should not be increased; that the purchasing price of wool will be raised; and that production of agriculture-oriented industries and autonomy for rural areas, particularly for farming groups, should be expanded. [Text] [OW071340 Beijing XINHUA in English 1203 GMT 7 Jan 81]

FRENCH-AUSTRALIAN NUCLEAR PACT--Paris, January 7 (XINHUA)--France and Australia signed an agreement on "nuclear transfers" here today, said a communique of the French Foreign Ministry. The agreement, the result of prolonged negotiations, has set the conditions for the import of uranium by France and the purchase of French nuclear technology by Australia. The exchanges between the two countries in this field would come under the guarantee and control of the International Atomic Energy Agency for peaceful use. Australia possesses about 20 per cent of the world's uranium reserves. [Text] [OW080834 Beijing XINHUA in English 0811 GMT 8 Jan 81]

GUANGDONG-HONG KONG LINK--A vice governor of Guangdong yesterday pledged to expand spheres of cooperation between the province and Hong Kong. Speaking at the opening ceremony of Guangdong Enterprises Limited, Mr Zeng Dingshi said the recent years have been increasing economic cooperation between the two places. "From now on, we shall promote economic, commercial cooperation as well as cultural and technological contacts between Guangdong Province and Hong Kong pursuant to the guiding principle of mutual benefit and friendly exchanges." Guangdong Enterprises, the general agency for all economic organizations corporations of Guangdong in Hong Kong, officially opened for business yesterday. Financial secretary Sir Philip Haddon-Cave, political adviser Dr David Wilson, chairman of Hong Kong Bank Michael Sandberg, prominent businessman Li Ka-shing and shipping magnate Sir Y. K. Pao attended the event. Mr Zeng said the company has had strong support and warm assistance from the Hong Kong authorities and confidence from many friends from the industrial and commercial circles. Talking about the situation in Guangdong, Mr Zeng said the Guangdong provincial authorities have achieved encouraging results in executing the policy of adopting special economic policies. [Text] [HK060233 Hong Kong STANDARD in English 6 Jan 81 p 14]

LIBYAN EMBASSY CHANGES--Beijing 6 Jan (AFP)--The Libyan Embassy in Beijing was converted into a "popular committee," according to an embassy official in the Chinese capital. The official, Mr Atallah, did not say, however, when the change would take place, or whether it had in fact already been done. Foreign journalists here have in the meantime been called to attend a press conference scheduled later today. An anonymous correspondent said in his invitation by phone that the press conference had been organised by the "popular committee." [Text] [OW060445 Hong Kong AFP in English 0441 GMT 6 Jan 81] Beijing, Jan. 7 (AFP)--An official Chinese spokesman today said he had no comment to make on "the change of name" of the Libyan Embassy in Beijing to a people's bureau. The move was announced yesterday by Abudala al Harary who heads the Libyan People's Bureau as secretary of the People's Committee. "If the Chinese Government refuses to recognise us, the Libyan congress will decide what to do," he said. [Text] [OW070434 Hong Kong AFP in English 0425 GMT 7 Jan 81]

ASEAN OFFICIALS MEET--Manila, January 8 (XINHUA)--Senior ASEAN officials have agreed on the need for the ASEAN countries to go on seeking a lasting solution to the Kampuchea problem, according to a Philippine news agency report. At a three-day meeting held at Puerto Azul in Ternate, Cavite, which ended yesterday, the officials exchanged views on issues pertaining to peace, security and stability of the region and reiterated their desire to pursue talks with parties and countries concerned with the conflict in Kampuchea and to maintain consultations with their partners on this and related issues, including the problem of refugees and their relief. Many of the matters discussed and positions tentatively reached at the meeting would be referred to a higher-level ASEAN meeting for final decision, the report said. [Text] [OW080832 Beijing XINHUA in English 0823 GMT 8 Jan 81]

POLISH ECONOMIC REFORM--Warsaw, January 7 (XINHUA)--The Independent and Self-Governing "Solidarity" Trade Union of Poland today expressed support for the "genuine economic reforms" to be carried out by the government. This was made known in a resolution adopted at a recent meeting of the National Coordinating Commission of the "Solidarity" Trade Union after hearing a report by its observer attached to a government economic reform commission. The resolution asked the government to put forward as soon as possible its reform program before the trade union and the public. The program was to specify the major principles for setting up a new economic system and point out the ways and means for overcoming the current profound social-economic crisis. The resolution reminded the government "to take into consideration the interests and wishes of the working people" in its program. It stressed: "The new system must be truly based on genuine self-governing of the workers so that implementation of the economic decisions of the government could be supervised by society." [Text] [OW080802 Beijing XINHUA in English 0742 GMT 8 Jan 81]

LONDON INSURANCE OFFICE--London, January 6 (XINHUA)--The People's Insurance Company of China (PICC) has opened its first overseas liaison office here. Hosting a reception on the occasion here this evening, PICC deputy general manager Lin Zhenfeng said that the opening of the London office "is necessitated for the development of the relationship between the PICC and the London Insurance Market and associated interest in the United Kingdom." "The role of the London liaison office is to pave the way for better and smoother exchange of views and expertise and for the increase of business flow of our two markets," he added. Among those near 300 guests present at the reception were responsible officials of the British Trade Ministry, representatives of the London Insurance Market and the Overseas Chinese community in Britain. Counsellor of the Chinese Embassy in London Liang Geng and general manager of the London branch of Bank of China Jin Deqin also attended the reception. [Text] [OW070153 Beijing XINHUA in English 0143 GMT 7 Jan 81]

VIETNAMESE CASUALTIES--Beijing, January 8 (XINHUA)--Vietnamese troops in the northern part of Kampuchea's Koh Kong Province suffered more than 100 casualties on January 3 and 4, Radio Democratic Kampuchea announced today. A company of Vietnamese soldiers tried to cross the Me Tuk River by swimming from its east bank to the west. Twenty-seven of them were killed and 19 more wounded by Democratic Kampuchea troops and guerrillas while they were in the middle of the river. A Vietnamese platoon made a second attempt the next day and again sustained 24 casualties. On January 4, Democratic Kampuchean guerrillas ambushed a company of Vietnamese troops on its way from Chaytach to Mountain Kot Russei. Seventeen Vietnamese soldiers were killed and 21 more wounded. Vietnamese reinforcements coming to their rescue were intercepted and suffered six casualties. In Pursat Province, the guerrillas in Leach District on January 4 demolished two Vietnamese military vehicles and put out of action 23 enemy soldiers. [Text] [OW081356 Beijing XINHUA in English 1231 GMT 8 Jan 81]

U.S. MARINES IN INDIAN OCEAN--Beijing, 6 Jan (XINHUA)--News from Washington: The United States is planning to dispatch an additional battalion of marines (about 1,800 men) to the Indian Ocean, according to an announcement made by the U.S. Defense Department yesterday. This is the fifth such dispatch since last March. Since last March the United States has deployed a small marine force on the amphibious vessels in the Indian Ocean area as part of its armed forces there. The latest information indicates that the United States has 34 vessels in the Indian Ocean-Arabian Sea-Persian Gulf area while the Soviet Navy has 31 vessels in that area. [Text] [OW072343 Beijing XINHUA Domestic Service in Chinese 1513 GMT 6 Jan 81]

PAKISTAN, IRAN, AFGHAN SITUATION--Beijing, Jan 7 (AFP)--The Chinese Government has refrained from commenting on an announcement by the pro-Soviet Afghan regime that it was ready to start talks with Pakistan and Iran in a quest for a political solution to the Afghan crisis. "Our stand on the question of the Soviet aggression against Afghanistan is constant and clearcut," said an official spokesman questioned in Beijing. Beijing strongly condemned the Soviet intervention in Afghanistan over a year ago. China has repeatedly stated that the Soviet Union had thus posed a direct threat to Iran and Pakistan. Pakistan is one of China's main [words indistinct] in Asia. An Indian Government spokesman said in New Delhi on Monday that the Kabul government had informed India that it was prepared to start talks with Iran and Pakistan in the presence of a United Nations representative. TWENTY YEARS OF INJUSTICE CONDEMNED

Beijing RENMIN RIBAO in Chinese 7 Dec 80 p 3

[Letter to editor by Ji Minsheng [4764 3046 5116]: "Why has it Been So Difficult to Redress a Relatively Simple Case of Injustice?" with appended editorial comment]

[Text] Xiong Chuansui [3574 0278 3603] is a female teacher in the Second Middle School of Hengyang, Hunan. Though she originally came from a poor urban family, in 1958 the police substation maliciously changed her residency registration to "landlord" status. Because of this her parents were labeled landldord elements and put under supervision, her siblings and husband were also implicated, beaten and locked up. They all suffered over 20 years of injustice.

The Source of the Injustice

Xiong Chuansui originally lived in Chengguan township, Jiayu county, Hubei province. After graduating from middle school in 1957 she had to continue her studies at home because of poverty. She habitually attended the town's spare-time literary and arts activities and subsequently Chen Zhengbi [7115 2398 1732] a policeman in the local substation took a fancy to her. Chen went through Wang Bin [3769 2430] of the political committee to propose to Miss Xiong that if she would marry him he was willing to help her continue her education. She had just turned 17 at the time and so declined the proposal because of her youth. After this Chen felt only hatred for her and threatened, "People in my line of work are such that if you don't provoke us we won't provoke you, but if you provoke us we can be quite nasty." In 1958 when Xiong Chuansui changed her residence registration to teach at Jiayu the police substation illegally changed her family status from urban poor to "landlord."

The Limits of Suffering

After Xiong Chuansui's mother discovered that the family had been changed to "landlord" she at first thought a mistake had been made, so she had her daughter seek out the neighborhood chief Li Shijian [2621 0013 3508] to fill out an affidavit so the police substation could make the correction. The police substation not only did not make the correction but also accused Xiong Chuansui of trying to reverse the landlord decision against her family and also informed the school's League branch of this. Xiong Chuansui was then criticized and put under supervision by the Youth League.

In August of 1959 Miss Xiong's younger brother Xiong Chuanze [3574 0278 3419] passed the entrance examination for the Wuhan Steel Company technical school and repeatedly took the neighborhood chief's affidavit to the police substation to request a change in the family status. Chen Zhengbi became very angry, pounded on the desk while cursing him and forced this 16 year-old boy to write a self-criticism. Xiong Chuanze reasoned with him but the chief of the police substation placed his pistol on the desk threatened him saying, "If he won't write then tie him up." Xiong Chuanze was forced then and there to write a "self-criticism." Chen Zhengbi still was not satisfied and changed the "self-criticism" into a "statement of repentance." He also forced Xiong Chuanze and his mother to print up 300 copies and post them in the lanes and streets of Chengguan. When the police substation finally permitted Xiong Chuanze to change his residence registration they changed his family status to "industrialist-businessman and landlord." In 1962 Xiong Chuansui's parents were labeled by the township's local police station as unreformed "four bad elements" and they not only were beaten but were also placed under surveillance. After the Cultural Revolution began they were beaten whenever they ventured from their house. Her father lost his front teeth and her mother suffered a broken arm which became crippled.

In February of 1968 Xiong Chuansui was teaching in Ningxia and asked the Qingtongxia county revolutionary committee to send her request for a change of family status to the Jiayu county revolutionary committee. Before long Xiong Chuansui received a letter from the Chengguan local police station in Jiayu county. The letter said that her status had been changed to "rightist case reversing" and she had thus stirred up another storm. They called her a "leader of rightist case reversals" and "daughter of a landlord who firmly takes a reactionary stance" and after this she suffered endless insults.

The Branch Chief Makes Obstacles to Reversing the Injustice

In 1972 Miss Xiong was transferred from Ningxia to the Second Middle School in Hengyang, Hunan. She repeatedly appealed to the organization for a redress of the injustice done to her. The Second Middle School party branch of the Hengyang Municipal Bureau of Education twice sent someone to Jiayu county to make an investigation and twice was refused without reason. The many letters that the Bureau of Propaganda of the Hengyang municipal committee wrote asking for particulars in the case of Xiong Chuansui all went unanswered.

Since there was nowhere left to turn, early in 1979 Xiong Chuansui appealed to the Central Committee commission for investigating discipline and told of her 20 years of suffering. The commission forwarded her appeal to the Jiayu county committee for handling. In February of the same year the Supreme People's Procuratorate took the appeal she had made to the Procurator Huang Huoqing [7806 3499 7230] and transmitted it to the Hubei Public Security Bureau for handling. At the urging of the upper levels the Chengguan local police station of Jiayu county again made an investigation. Then in early March they spoke with Miss Xiong's father Xiong Junshi [3574 0689 1395] who clearly stated that the Xiong family were not landlords and that the matter should be corrected.

Subsequently, on July 25th the Jiayu county Public Security Bureau and its "Jiayu Public Security Re-Examination (79) No 4 'Case Re-Examination Report'" on Xiong Chuansui finally said, "According to testimony by old cadres of the land reform her father Xiong Junshi in a re-examination of the land reform movement actually was designated as a landlord. Moreover, the original 1955 residency registers record that the Xiong family was landlord class. Her father also was put under three years of surveillance in 1957 because he raised market prices. The record of this along with his confession all verify his landlord status. There actually was no change of status made on the residency registers in 1958. Because of this, investigations from many quarters have proven without question that Xiong Chuansui is without question from a landlord family and not from another class. An investigation has determined that she should be retained as a member of the landlord class and her baseless appeal should be rejected."

Why should an injustice that was just about to be resolved suddenly be "rejected"? As we understand things, the original cause of this problem Chen Zhengbi had become a branch chief in the county Public Security Bureau. He was the one who overturned the conclusion of the township police substation investigation and fired off the "Report" quoted above.

Repeated Appeals are Made

After Xiong Chuansui recieved the "Report" of the county Public Security Bureau she was thoroughly dejected, but she had faith in party policy and once more summoned up her courage to obtain the support of the school party branch and make another appeal to the Central Committee commission for investigating discipline and the Supreme People's Procuratorate.

After the leading comrade of the commission for investigating discipline received Xiong Chuansui's appeal, on 15 November 1979 he personnaly issued instructions requesting the Hubei provincial committee leading comrade to designate a special person to investigate the case. After making the investigation ordered by the provincial committee the leaders of the Jiayu county disciplinary committee felt that from the standpoint of the Xiong family's economic conditions three years prior to Liberation they certainly were not landlords, so they recommended that the Jiayu county Public Security Bureau quickly reverse the decision, but it refused to rescind the "Jiayu Public Security Re-Examination (79) No 4 'Case Re-Examination Report'."

In July of this year the Central Committee commission for investigating discipline once again asked the responsible comrades of the Hubei provincial committee in charge of political and legal work to instruct the Jiayu county committee for investigating discipline and the Jiayu Public Security Bureau to quickly handle the case of Xiong Chuansui's family status.

On September 20th the Jiayu county commission for investigating discipline wrote an official letter to the Hengyang municipal Second Middle School party organization saying, "In regard to the appeal from the teacher Xiong Chuansui we have completed our investigation: During the land reform re-examination Chengguan did not demarcate class lines. The family of her father Xiong Junshi was determined to be of landlord class in 1952 through the decision of the Chengguan township residency registers and the neighborhood cadres when they established the city and township registers. Comrade Chen Zhengbi, now the Public Security Chief of the county Public Security Bureau, was transferred to the Chengguan police substation in 1958 so it is not a question of his having changed the record because his proposal of marriage was rejected. According to the 1950 decision by the Political Affairs Council regarding the divisions of rural class status they are not landlord class. The county Public Security Bureau has already investigated this decision and made the correction. Please inform the person concerned."

Although this official letter did not give a fair decision to Xiong Chuansui it did demonstrate two points: (1) During the land reform re-examination Jiayu county did not draw up class lines. (2) Based on the economic conditions Xiong Junshi's family and according to the 1950 decision of the Political Affairs Council on the demarcation of rural class lines they should not have been classified as landlords. This proves that the so-called "Case Re-examination Report" written by the county Public Security Bureau on July 25th was a complete fabrication made up of fake materials to fool the superiors and oppress the inferiors and was an extreme error.

How Can We Countenance Crime by Police Officials?

Because Xiong Chuansui did not directly receive a formal case reversal from the county Public Security Bureau she was still rather uneasy and repeatedly made appeals to the central discipline commission. The commission again made phone calls to the leading comrades of the Hubei provincial discipline commission and urged them to investigate the handling of this matter. This being the case the Jiayu county Public Security Bureau had no choice but to write up a decision titled "Decision Regarding the Nullification of the 'Jiayu Re-Examination (79) No 4, Case Re-Examination Report'" to send to Xiong Chuansui. This was done on November 4th. The complete text is as follows:

"Regarding the many appeals by Xiong Chuansui, our bureau sent a special agent and the discipline commission repeatedly sent people to investigate this case. According to the 1950 Political Affairs Council decision on the demarcation of rural class lines, and based on the Xiong family's economic conditions and sources of income for the three years prior to Liberation, on July 12th we corrected the land reform policy decision which recorded their family as landlords. We have nullified the July 25, 1979 Jiayu County Re-Examination Report (79) No 4 which upheld the land reform classification of their family as landlords."

It must be said that the above statement by the Jiayu county Public Security Bureau is an improvement over the July 25th "Notification" which "upheld the landlord class status determined in the land reform" because this nullifies the errors of that report. However, what makes one so mad is that they still still continued to deceive people with lies. The county discipline commission did not officially report the re-examination conditions until September 20th, saying that the county discipline commission had investigated the matter and made corrections, but how could the county Public Security Bureau have made a decision according to this policy on April 12th? The official letter by the Jiayu county Public Security Bureau clearly states that, "Chengguan did not demarcate class lines during the land reform re-examination," but the county Public Security Bureau says that "the land reform recorded them as landlords." Now where did this come from? Even if they had demarcated class lines how could they have been classified as landlords? The classification of Xiong Chuansui's parents as landlords is in error and ought to be reversed.

The Public Security Department is in charge of enforcing the law so its units and workers ought to be models of lawful behavior. Nonetheless, Chen Zhengbi, who was a policeman and now is a branch chief in the Public Security Bureau, and the Jiayu county Public Security Bureau are not at all such models. Chen Zhengbi plotted to take revenge and knowingly altered a residency register to change the status of Xiong Chuansui's family from urban poor to landlord status, which brought over 20 years of suffering to the members of this family. This is criminal behavior! In her letters of appeal Xiong Chuansui many times asked for an investigation of Chen Zhengbi's responsibility in this matter. This is entirely correct. The comrades of the Central Committee commission on investigating discipline worked to help Xiong Chuansui and advised her to look to the future, saying that this was a problem from the past and that over 20 years had passed. At that time Chen Zhengbi was still young and errored, which must be changed. The case has been reversed and so the matter can be laid to rest. Even if this the situation, the culprit in the matter is still unenlightened and upholds his error. While working at the Jiayu county Public Security Bureau, Chen Zhengbi neglected party policy and ignored the instructions and urgings of the comrades of the Central Committee commission on investigating discipline and the provincial discipline commission in order to save face. He was finally forced to admit his guilt as perpetrator of the crimes of deceiving his superiors and oppressing his inferiors and manufacturing false evidence to prolong the resolution of this relatively simple case for over two years before a decision was reached. Where are those who make policies and take care of our laws? I hope that the Hubei provincial Public Security Office will severely prosecute this matter and then publish the result in the newspapers.

Editorial Comment: Regarding the Severe Prosecution of Criminal Law Enforcement Personnel

Ever since the Third Party Plenum a number of wrongful cases have been corrected with obvious success. However, it must be pointed out that much work remains in this area especially in mistaken cases between cadres and the masses, which so far are underrepresented in proportion to their number. The case of the teacher Xiong Chuansui is an example of this type of case.

The case of Xiong Chuansui was not complex. Her original family status was urban poor and the local substation then criminally changed it to landlord status. If Chen Zhengbi, originally a substation policeman and now branch chief in the Public Security Bureau, had immediately admitted his error, or if the leadership comrades of his units at the Chengguan local substation and the Jiayu county Public Security Bureau had upheld principles, been objective and carried out a thoroughgoing investigation of this matter, then it could have been cleared up in a very short time. Even after two years the matter was not corrected. The problem is that the original culprit has power and his immediate superiors willy-nilly are distorting and concealing his guilt.

This is no special instance. Many injustices involving cadres and the masses have long gone uncorrected simply because the guilty party is still in power and has the support of his superiors. Are they ignorant of the Law? Not at all. Some of them know the law and some uphold it. Some know the law and break it and some break the law even while enforcing it. They ought to see the light and quickly mend their ways. If they remain unenlightened then they can only be punished by our socialist laws.

Our readers are reasonable and believe that the perpetrator and other guilty persons in Xiong Chuansui's case of injustice will be punished with utmost severity.

JIANG QING, 29 DEC 'GONGREN RIBAO' ARTICLE DISCUSSED

HK301246 Hong Kong HSIN WAN PAO in Chinese 30 Dec 80 p 1

[Unattributed "News Talk" column: "Some Persons After the 'Gang of four'"]

[Excerpts] Jiang Qing unscrupulously caused trouble in the court yesterday. People could see that she still maintained her features of the "Cultural Revolution," and heard the words of how the government authorities negated the "Cultural Revolution" and appraised Chairman Mao Zedong. These were included in procurator Jiang Wen's summation statement.

In his summation statement, Jiang Wen sharply refuted Jiang Qing, noting that she attempted to scare people off by saying that her trial was like "Xiang Zhuang performing his sword dance which was aimed to strike Liu Bang." Anyhow, the current appraisal of the modern "Liu Bang" was that all through his life, his achievements occupied a first place while his errors occupied a second place. The "Cultural Revolution" was an error. His error was firstly his leadership (no mention of his launching it) and secondly his negligence (for putting Lin Biao and Jiang Qing in important positions). This was, in fact, "a responsibility which needed no reticence." Now there is no reticence. His responsibility should in the future be more openly made known; and more should be disclosed.

The "Cultural Revolution" ended with the smashing of the "gang of four." Nevertheless, there are still repercussions and their pernicious influence. "In the first 2 years after the smashing of the 'gang of four,' there were still those who completely ignored the strength of the people and the decisive role of the masses in the struggle to smash the 'gang of four.' They continued to slander the 5 April movement as a 'counterrevolutionary political incident in Tianammen,' fabricate the personality cult and seize and kill outstanding youths who uphold Marxist truths. As a result, China, which has gone through 10 years of great calamity, has continued to waver at the crossroads of progress and retrogression."

The above passage was taken from an article published in yesterday's Beijing GONGREN RIBAO. Some persons were vividly portrayed in the article. Some of them were obviously those who were regarded as members of the "whatever faction" and have now been ousted from the Political Bureau.

Some of these persons for some time caused China to waver and hesitate in its steps. Now, people have painfully realized that petroleum production, which was for some time lavishly praised, will not only be wavering, but will decrease--probably for as long as 7 years. This poses an even more serious problem than the sinking of the "Bohai No 2" oil rig. Although the nature is different because it does not involve any human life, yet the country's prestige has been undermined and the national economy has been impaired. We probably cannot avoid carrying out an investigation and affixing the responsibility.

CHINA ZHI GONG DANG HOLDS PLENARY SESSION 11-18 DEC

OW200530 Beijing XINHUA Domestic Service in Chinese 1412 GMT 19 Dec 80

[Text] Beijing, 19 Dec (XINHUA)--The second session (enlarged) of the seventh Central Committee of the China Zhi Gong Dang was held from 11 to 18 December in Beijing. The session examined and discussed the work report submitted by Huang Dingchen, chairman of the Zhi Gong Dang, on behalf of the Standing Committee of the party's Central Committee. After discussion, it also drew up an outline of Central Committee work for 1981. Through this session, Dong Yinchu [5516 1377 0443], Yang Chengzhi [2799 2052 1807] and Xiao Huan [5135 3562] were added to the Zhi Gong Dang Central Committee as additional members, and Ye Hongbao [0674 7703 1405], Han Chenglong [7281 2110 7127] and Zhang Kunlie [1728 2492 3525] were added as additional alternate members.

The session pointed out that over the past year the Zhi Gong Dang has done a lot of work and made certain achievements in helping implement the Overseas Chinese affairs policy, in encouraging its members to work hard on various fronts and in establishing ties and uniting with their relatives and friends residing in Hong Kong, Macao and foreign countries so as to have them show concern about the socialist modernization program being carried out at home and contribute to the early return of Taiwan to the motherland and to the great cause of the reunification of our country. New organizations of the Zhi Gong Dang have been set up in Shanghai and in key areas inhabited by families of Overseas Chinese, and more than 150 new members have been absorbed into this party from various localities.

The session called on the Zhi Gong Dang members to do a still better job in the new year and work with one heart and one mind under the CCP's leadership to build China into a highly democratic and civilized modern and powerful socialist country. They were urged to contribute to the early return of Taiwan to the motherland, to the great cause of the reunification of the country and to the work of opposing hegemony and preserving peace in the world.

BRIEFS

DEMOCRATIC ASSOCIATION MEETING--A 10-day meeting held by the China association for promoting democracy to exchange its experience in serving the four modernizations opened in Beijing on 20 December. Nearly 100 members who work in the educational, cultural, publication, medical, scientific and technical fields are attending the meeting. Zhou Jianren, chairman of the association's Central Committee; Lei Jieqiong and Ge Zhicheng, vice chairman and secretary general of the association, attended the opening ceremony. Addressing the opening ceremony, Xu Boxin, vice chairman of the association's Central Committee, urged the members of the association to work harder hereafter and make new contributions to the motherland's modernizations and unification. Jiang Nanxiang, minister of education, also attended the opening ceremony. He thanked those who have contributed to China's education and four modernizations. The association marks its 35th founding anniversary on 30 December. [Beijing Domestic Service in Mandarin 1000 GMT 20 Dec 80 OW]

NEW MARRIAGE LAW--Beijing, 19 Dec (XINHUA)--A "Propaganda Handbook on Marriage Law," compiled by the National Women's Federation, will soon be published in China. This handbook contains the "marriage law of the People's Republic of China," the "measures governing marriage registration" approved by the State Council, an article by Chairman Kang Keqing of the National Women's Federation entitled "Earnestly Study and Positively Propagate and Implement the New Marriage Law," and 10 lectures on the new marriage law transmitted by the XINHUA News Agency. [Beijing XINHUA Domestic Service in Chinese 1215 GMT 19 Dec 80 OW]

JOURNALIST ZHU BOSHEN'S DEATH--Beijing, 11 Dec (XINHUA)--Zhu Boshen, a veteran Chinese journalist, died in Beijing on 9 November 1980 at the age of 77. Zhu joined the CCP in 1930. After liberation, he was engaged in people's diplomacy and scientific and technological information work. He suffered persecution by the Lin Biao-Jiang Qing counterrevolutionary clique during the Cultural Revolution. [Beijing XINHUA Domestic Service in Chinese 1308 GMT 11 Dec 80 OW]

JUDGMENTS ISSUING--Beijing, 5 Jan--The earliest date for the special court of the Chinese Supreme People's Court to announce its judgments on the 10 defendants in the case of the Lin Biao and Jiang Qing counterrevolutionary cliques may be on 8 January (Thursday). The date for announcing the court judgments may also be postponed until 10 January or an even much later date. [Text] [HK051110 Hong Kong HSIN WAN PAO in Chinese 5 Jan 81 p 1]

BRIEFS

LIAONING PLA UNITS--In the past year, some 5,900 leading comrades at or above the regiment level of the Shenyang PLA units have gone to some 17,300 units, including local party and government departments, plants, mines, enterprises, communes and brigades, to solicit people's opinions, accept criticism and solve some 1,000 practical problems. [Shenyang Liaoning Provincial Service in Mandarin 2200 GMT 26 Dec 80]

PLA NAVY TECHNICAL ACHIEVEMENTS--Beijing, 30 Dec (XINHUA)--The PLA navy recently issued an order to commend and give cash awards to scientists, medical doctors and teachers who have made achievements in scientific research work. Among those who received top prizes were Zhang Yiping and Feng Dingguo, teachers of the navy's No. 1 surface ship school, who successfully designed and manufactured China's first radar signal recording instrument [Lei Da Xin Hao Ji Lu Yi 7191 6671 0207 5714 6068 6922 0308]. The instrument can be used for watching and other purposes. [OW031805 Beijing XINHUA Domestic Service in Chinese 1207 GMT 30 Dec 80]

ZHEJIANG PEOPLE'S AIR DEFENSE--The Zhejiang Provincial People's Air Defense Office recently held a discussion meeting in Jinhua on warning communications for the people's air defense work. The participants exchanged their experience in the people's defense against war and discussed the tasks for 1981. They unanimously held that while implementing the readjustment of the national economy we must not slacken our preparations against war, and that we must further prepare well against aggressive war in order to protect socialist modernization. [Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 31 Dec 80]

ZHEJIANG ARMY-PEOPLE RELATIONS--The Zhejiang Provincial People's Government recently issued a circular on unfolding activities of supporting the army and giving preferential treatment to military dependents. The circular calls on governments at various levels to effectively publicize the great deeds of the Chinese People's Liberation Army, military dependents and retired servicemen in the revolutionary war years and in the course of socialist construction, commend advanced units and people in supporting the army and giving preferential treatment to military dependents, conscientiously help various PLA units to solve their problems, and launch a mass campaign to support the army and give preferential treatments to military dependents during the new year and spring festival period. [Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 1 Jan 81]

SOME VIEWS ON RECENT CHINESE POPULATION TRENDS EXAMINED

Bucharest VIITORUL SOCIAL in Romanian No 3, Jul-Sep 80 pp550-557

[Article by Vasile Ghetau: "Recent Trends and Views Regarding the Population of the People's Republic of China"]

[Text] The more than 5 years that have passed since the World Conference on Population (Bucharest, August 1974) have fully confirmed the validity of three ideas that were in the center of the discussions at the conference and that were expressed in unequivocal statements (and unanimously accepted) in the World Plan for Action in the Field of Population, the principal document approved by the conference: the rapid growth of world population, and especially the population of the developing nations, is reason for alerting and increasing the concern of governments for resolving the implications stemming from this growth; demographic policy is an attribute of national sovereignty, stemming from the multitude and variety of situations existing on our planet; the real solution to the population problem cannot be conceived outside the general framework of economic and social development and the achievement of a new international economic order. We feel that the political, economic and social changes that we have seen since August 1974 not only verify the justice of these three theses, but considerably increase their timeliness.

Since the 1974 estimate that there would be a population of four billion persons on earth, an additional one-half billion has been added. The aggravation of the international economic situation (the energy crisis and the unbelievable increase in the price of oil, financial disorder, and the severe economic recession in the Western world being the most significant elements), the stagnation or degradation of the fragile economic situation of most of the developing nations[1] and the accentuation of the economic gap, even if it does not have its origins (or solutions) in the demographic factor, cannot but be amplified under the conditions of this galloping demography.

The national and sovereign nature of demographic policies was even more strongly affirmed after the world conference on population. It is, actually, a natural trend that can be placed within the more general context of the struggle for consolidating national independence. Events have confirmed and are confirming that on all the continents, and especially in the developing nations that have only recently set out on the path to national independence, the formation of nations and independent national states, as well as their consolidation, represent an objective necessity and a factor for accelerating economic and social progress. The variety of objectives and material means of demographic policy, elements that in a way confirm the independent nature of this policy, represent only the expression of certain demographic, economic, social, geographic and other realities that are extremely varied from one region to another, from one country to another.

The third thesis emphasized at the Bucharest conference, solving the population problem within the general framework of the problem of development, is today accepted more than any other time, both in the developed countries and the developing nations. Significant changes have occurred in international demographic literature, with the balance of the studies centered on relationships of interconditioning between socio-economic factors and demographic phenomena and processes showing a truly impressive increase. It is felt that "in 1978, there was practically no government, in the developed countries or in the developing nations, that did not feel that control of the diverse parameters of the evolution of population would not constitute an element of vital importance for the success of development plans."[2] The field of demography has expanded considerably and its concerns are more and more oriented towards the place where it should have been all along: the center of the processes of economic and social development of a society.

An eloquent illustration of the three ideas especially stressed in the documents of the world conference on population and verified by later developments is offered to us by the experience of the most populous country in the world - the People's Republic of China.

Until very recently, information on the population of China was extremely limited. The "newest" data published by the most competent organ, the National Bureau of Statistics, was from 1960[3] and referred to the population by provinces, autonomous regions and municipalities in 1957. This data, as well as that published in 1957 for the period 1949-1956, were based on information from the first national census conducted in China after the proclamation of the people's republic, the 1953-1954 census, as well as information on the natural movement of population. The 1953-1954 census constituted, therefore, a basic element for any study of the population of China. The cause for this situation must be seen in the same factors that slowed the economic and social progress of the country in the second half of the 1960's and the first half of the 1970's.[4]

The lack of detailed information also coming from official cources brought about the appearance of an extremely large number of elaborate estimates made by national (governmental and non-governmental) and international specialized organs or by diverse specialists.[5] These estimates were based on the older official information that we have mentioned and use a large variety of methods, techniques and instruments for demographic analysis, extrapolations and projections. (From this point of view, they represent a convincing demonstration of the abilities and refinements attained by work in demography.)

World Population and The Population of the PRC: Estimates for 1975 (in millions)

Source of the Estimate	World Population	PRC Population	World Population Without the PRC
United Nations	3,968	839	3,129
U.S. Census Bureau	4,100	943	3,157
International Developed Agency (United States)	4,044	935	3,109
World Bank (1976)	4,033	897	3,136
Population Council (USA)	3,964	830	3,134

Source: Dudley Kirk, "World Population and Birth Rates: Agreements and Disagreements," POPULATION AND DEVELOPMENT REVIEW, New York, Vol 5, No 3, 1979 p 330.

For a summary analysis of the population estimates on the PRC, we chose the newest of the estimates considered to be the most representative. We also added the appropriate estimates for the world population, keeping in mind that these figures directly depend upon the estimates of the population of China.

Therefore, according to the estimates considered, the population of the PRC in 1975 was between 823 and 987 million persons. The difference (the spread of the variations) is 164 million persons or nearly 19 percent in relation to the average figure (886 million), a significantly high percentage also reflecting the considerably different views and estimates on the rate of growth of the population of China (in other words, on the evolution of the two components - birth and death rates).

The uncertainty on the size of the PRC population finds its direct correspondent in the variation of the estimates on world population: the relative spread of the estimates on the population of world is only two percent if we exclude the population of China, compared to approximately six percent if we include it.

We can, thus, conclude that the lack of official information on the evolution of population has led to the proliferation of estimates. Without making any reference to the precision of these estimates (we will do that later), we will mention that the difference between the lowest and highest figures is appreciable.[6] Paradoxically, however, the higher degree of uncertainty is accompanied by the quasi-certainty that major changes have already taken place in the evolution of the fertility of the PRC population.[7]

At the 1974 World Conference on Population, the PRC delegation rejected the idea of a world plan of action that would impose a uniformity, having in mind that the realities and demographic conditions are different from one country to another. Each government must be left to elaborate by itself its own demographic policy.[8] Referring to the situation in China, the Chinese delegation mentioned that the population does not constitute a problem in China under the conditions of socialism. Unemployment had been eliminated and, using merely 10 percent of its surface area, China is capable of feeding its entire population. In regions having high population densities, delaying marriage and birth control are encouraged, but on a voluntary basis. In a general manner, there is concern for the planned growth of the population.[9]

The recent years have marked significant changes in the political and economic affairs of the PRC, engaged in a new "long march" that has as an objective, as established by the 11th Congress and the December 1978 Plenum of the Communist Party's Central Committee, the transformation of China by the end of the century into a powerful socialist state by achieving the four modernizations: in agriculture, industry, national defense, and science and technology. Under this development strategy, the demographic variable is called upon to play a major role, as shown in the party and state documents.

In the report regarding the government's activities presented by Premier Hua Guo Feng at the first session of the Fourth National People's Congress in February 1978, in addition to the tasks facing the Chinese people in the fields of economics, science and culture, special references are made to the demographic policy and its objectives: "Family planning constitutes a very important problem. The planned control of population growth contributes to the planned development of the national economy and the health of the mother and child. It likewise has positive effects with regards to production, work and education. We must continue to give it serious attention and seek to reduce the average annual rate of population growth in China to less than one percent during the next 3 years" (translated by V.G.).[10] Article 53 of the PRC Constitution, adopted at this same congress, mentions that "the state favors and encourages family planning."[11]

The second session of the Fifth National People's Congress in June 1979 was marked by the report presented by Premier Hua Guo Feng which makes more detailed references to the objectives of the PRC's demographic policy. After it points out that during the 1970's significant progress was made in controlling population growth, it notes that the rate of growth must continue to be reduced in order to accelerate the four modernizations and to improve the health and welfare of all the people. A consistent activity must be carried out on an ideological, educational and technical level, as well as in the field of health and child care, so that the population can practice family planning voluntarily, safely and effectively. After a series of economic measures are enumerated that are to be taken in order to reduce the size of the family, it fixes as an objective the attainment of a population growth rate of one percent in 1979 and its continued reduction to .5 percent in 1985.[12]

It is worth mentioning the fact that in the two documents numerical information is not given regarding the population of the country and the parameters of the natural changes in the population. Such information, as well as a documented economic motive for the need to reduce the population growth rate, are found in an article published in ZIARUL POPORULUI (RENMIN JIHPAO) [THE PEOPLE'S NEWSPAPER], signed by Vice Premier Chen Mu Hua, the director of the Management Group for Birth Planning[13] of the Council of State.[14]

The firm control of population growth represents one of the ten important tasks in the effort to develop the national economy. Economic development must take into consideration the law of planned proportional development, a law which is applied not only to the production of material goods, but also to the evolution of the size of the population. Planned population growth is not a subjective and arbitrary decision, but a necessity required by the socialist manner of production.

Theoretically, the superiority of the planned socialist economy makes possible the regulation of human reproduction and ensures a balance between population growth and the production of material goods. But, for a long time this problem has not been well understood and was not studied, and population growth was not taken into consideration in economic planning, arriving at a situation in which population evolved in an uncontrolled manner. There are historical, economic and political reasons for this situation. And, there are demographic reasons. The population of China was 540 million in 1949 and it reached 960 million at the end of 1978. From the liberation of the country (1949), approximately 600 million people were born, with the percentage of those born after 1949 representing 63 percent of the total population. The growth of the population during the period 1949 to 1979 was 78 percent, which indicates an average annual rate of two percent. The gross birth rate was 40 percent in the 1960's and reached 18.34 percent in 1978 as a result of the measures taken after 1970. As a result, the rate of natural growth decreased from 23.4 percent in 1971 to 12.05 percent in 1978, a decrease estimated as rarely encountered keeping in mind the age structure of the population (the 0 to 20 age group represents 50 percent of the entire population).[15]

A rate of natural growth of 12 percent means an annual growth of 11.5 million people. Taking into consideration the fact that during the 1960's fertility had an especially high value, the number of women in the child-bearing age group will also be higher in the next decade and 22 million persons annually (11 million couples) will reach the age of marriage (23 years old for women and 25 for men). Even if all the couples adopt the norms of the official birth planning program (which is based on three principles: 1. delayed marriage: 28 years old for men and 25 years old for women in urban areas and 25 and 23 years old, respectively, in rural areas; 2. spacing births: the first child after the marriage and the second child after the first is at least three years old; 3. smaller families: two children), China's population will continue to growth for at least a half century until it reaches zero population growth.

During this period, the size of the population will increase by 30 to 40 percent. The new measures that are to be taken by the Chinese state (in some provinces they were already put into practice) call for attaining zero population growth in a much shorter period of time: by the end of the century. The strategy adopted calls for two stages: I. attaining a rate of growth of 10 percent by the end of 1979 and a rate of 5 percent in 1985; II. attaining zero growth in the year 2000.

In order to achieve these ambitious objectives, a law on birth planning is to go into effect at the beginning of this year, a law which, through a series of measures, primarily economic ones, is designed to encourage families to have one child.[16]

In the article signed by Vice Premier Chen Mu Hua, several details are also given regarding the manner in which a stationary population can be reached in the year 2000. Of the 17.4 million births in 1978, 5.2 million (or 30 percent) were born as the third child or more. If the percentage of these births could be reduced to half, the gross birth rate could be decreased from 18.4 percent in 1978 to 15.59 percent at the end of 1979. In the hypothesis that the birth of the third child or more will be eliminated completely by 1985, the gross birth rate would be approximately 13 percent and the rate of natural increase would reach approximately 7 percent. This level is higher than the one advanced in the party and state documents (5 percent), which means that in addition to the firm prevention of having three or more children it is necessary to stimulate couples to having only one child.[17]

What are the motivations for this demographic policy directed towards reducing the population growth rate and attaining a zero growth rate in an extremely short time?

We must not forget that we are talking about a population of nearly one billion people,[18] or nearly one-quarter of the world population. To make reference to the great natural wealth of China without taking into account this immense population and the perspectives for its growth under the conditions of a laissez-faire demographic policy would be, as Chen Mu Hua states, a great error. In other words, the motivation for China's demographic policy stems from the demographic and economic realities of China themselves and must be interpreted in this context.

Under the specific conditions of China, the efforts to develop the economy, to improve the standard of living and to create new jobs have become more difficult because of the rapid growth of the population. This effects the socialist development of the country. The problem of whether or not to control population growth cannot be reduced to a problem of having more or less children; it is a strategic problem which influences the development of the country's production forces, the achievement of the four modernizations and the transition from the building of socialism to communism. From the liberation of the country, the national economy developed impetuously. But, since the economic base from which it began was small and the population grew too rapidly, the growth of per capita production and per capita income is not great. During the same period, the economic rate of growth of the developed capitalist countries, overall, was not higher than in China. Instead, their economic base was stronger and the population grew at a slower rate. This explains why the growth of production and income per capita was more rapid in these countries.

It is felt that too high a rate of population growth effects the efforts to achieve the four modernizations because of three causal relationships: I. The slowing of rapid investments from capital; II. The reducing of the efficiency of efforts for the rapid growth of the scientific and cultural level of the entire country; III. The slowing of the rapid growth of the standard of living of the people.

Since the principal source of accumulating capital is the rapid development of industry and agricultural, and therefore national income, under the conditions of a given rate of growth of industry, agriculture and national income, the size and rate of growth of the population directly and considerably influences the volume and rate of capital accumulation. The cost of raising the 600 million children born after liberation to the age of 16 represents 30 percent of the total national income accumulated during this period. If fewer had been born, the opportunities of the state to accumulate capital would have been greater, without creating a crisis in the workforce.

The creation of an army of workers, peasants and intellectuals capable of mastering and handling modern science and technology requires a massive expansion of learning and education. And, the portion of the national income that can be allocated yearly for this purpose is limited. The number of those who must be educated as well as those whose level of culture and science must be improved is expressed not in tens of millions, but in hundreds of millions. Currently, six percent of school age children are not in school, 12 percent of the elementary school graduates cannot pursue middle school, over 50 percent of the middle school graduates cannot pursue high school and only 5 percent of the high school graduates go to institutes of higher education. One of the principal factors responsible for this situation is demography.

With regards to the causal relationship between the demographic factor and the standard of living, it is felt that the potential for improving the standard of living is determined by the relationship netween the rate of growth of funds slated for consumption and the population growth rate. During the period 1953-1978, the consumption funds increased by 180 percent. Since, however, the population grew during this same period by 67 percent, the consumption funds per capita increased by only one-third. On the other hand, 58 percent of the annual growth of the consumption funds was slated to cover the needs created by the population growth and only 42 percent was allocated to improving the standard of living.

Implementing the new directions of the Chinese demographic policy is influenced by the success of the following measures:

1. Strengthening the leading role of the party and including birth planning work in the work plans of the party organs at all levels;

2. Strengthening propaganda and educational work,

3. Adopting appropriate legislation and taking certain economic measures calling for the stimulation of behavior towards smaller families and penalizing families with a large number of children;

4. Training medical personnel, improving the quality of medical care in this field, and the production and spread of contraceptive devices;

5. Creating certain powerful and active birth planning units.

Placing the reasoning of the current demographic policy of the PRC at an ideological level, Chen Mu Hua mentions that, in the past, in criticizing the Malthusian theory on population, well-founded criticism at that, there was stress only on the role of man as a producer, arriving at that point since it was felt that the larger the population the better off it was, the more producers there were the better, more rapid and more effective the building of socialism would be. In this manner, however, there was an underestimation of the fact that man is also a consumer. Under the conditions of a relatively lower level of production, this second aspect has an especially significant impact. From what one man produces, an important portion goes to his and his family's consumption, with the remaining surplus for society being small. This is characteristic of Chinese society today. Marxism shows that the producers of material goods are those who have a sertain level of experience and qualification, being capable of using machinery and equipment to produce these goods. When a child reaches working age, he cannot fulfill the role of a modern producer without having modern knowledge and the technical training and qualifications required by modern technology. On the other hand, without having the modern machinery and technology he cannot, similarly, successfully fulfill his role of a producer of material goods and will continue to be a dependent person, that is, a consumer. The efforts that are being undertaken to control population growth precisely call for facilitating the accumulation of capital, improving the education of the people so they can use modern technology and increasing the level of professional and scientific qualifications that will permit the full useof the Chinese people's production potential.

Without a doubt, several remarks and conclusions are required.

The PRC's demographic policy is a study that has its origins in the demographic, economic and social realities of the country. Moreover, all the arguments advanced by Chinese specialists and politicians in order to explain and justify this policy outline its strictly national character. It would be wrong, in our opinion, to attempt to generalize and formulate postulates even for the simple reason that the great variety of the demographic, economic, social, geographic and other conditions, as well as the particular nature of the national strategies for development, preclude any attempts of this type. The failures of certain campaigns to limit births without including them within the specific conditions of a country and without introducing an endogenous aspect to the demographic factor in development programs offer a significant example in this regard.

The fourth demographic investigation into governmental policies (1978)[19] also shows the complexity and variety of objectives and means. According to this research, of 158 governments 36 opted for a rate of population growth higher than the one attained. We stress that these 36 governments belonged both to certain developed countries (13) and to certain developing nations (23). With regards to the birth rate (fertility), a dominant component in modifying the population growth rate, 22 governments (10 from developed countries) felt that their level was too low, and 17 of these took measures to stimulate the growth of the birth rate. In other words, the governments of these countries feel that a more sustained population growth rate is a positive factor for economic growth or for preserving "national identity."

The broad spread of contemporary demographic policy and the trends and changes encountered over the last 5 years confirm in a shining way the speech made by President Nicolae Ceausescu at the World Conference on Population: "Certainly, demographic policy and, in general, the problems of the development of the population must be analyzed in relation to historical, national and economic-social conditions in each country. Only by beginning with specific realities can conclusions be made that will lead to the just solution of the population problem. The demographic map of the contemporary world presents great diversity. On our planet, there are regions with high population densities, just as there are areas where the number of inhabitants, in relation to the area and existing resources, is still very low. Beginning with the fact that the population problem represents a determining factor for the progress of each people, each state has the sovereign right to promote the demographic policy and the measures which it considers most appropriate in accordance with its own national interests, without any outside interference."[20]

With regards to the new information on the population of the PRC, they will fill a large hole in the estimates of the United Nations, as well as other organizations and organs, on the population of our planet and its regional distribution. In a general way, it can be stated that this information will directly contribute to a better knowledge of recent trends and, furthermore, future trends.

Although the studies and articles we used make no reference to the source of the information and its reliability, limiting for the moment our knowledge of the status of the statistical information system on demographics in the PRC, a summary comparative analysis of the indicators at the national level with other information at the regional or provincial level[21] indicates a better coherence of the data and a considerable degree of detail.

Finally, leaving to the reader the evaluation of the reliability of the estimates in relation to the recently published official figures, we will merely mention the fact that the information on the level of the birth rate (18 percent) and the general death rate (under 7 percent) are far from the existing estimates.[22]

FOOTNOTES

1. See the World Bank, "Rapport sur le developpement dans le monde 1979," Washington, D.C., 1979, pp 12-20.

2. United Nations, Economic and Social Council, "Rapport concis de l-observation continue des politiques demographiques," Commission on Population, Vingtieme Session, 29 January-9 February 1979, E/CN. 9/338, 22 Dec 1978, New York, p 8.

3. Some information on the population of the provinces was published in the press or given on local radio stations in 1967-1968, as well as in two atlases published in 1972 and 1974 (cf. Y. C. Yu, "The Demographic Situation in China," "Population Studies" (London), Vol 32, No 3, 1978, pp 427-437).

5. For more detailed information on the main estimates see Y. C. Yu, op. cit., pp 437-438.

6. It must nonetheless be mentioned that some estimates of more recent data indicate a considerable agreement in the points of views and signs of a consensus with regards to the rate of growth. Here are these estimates (cf. Penny Kane, "China's Population - Consensus Grows," PEOPLE (London), Vol 6, No 2, 1979, pp 36-37):

Population of China - in millions

Author of the Estimate	1976	1977	1978
John S. Aird			
- minimum	938		
- maximum	968		
Judith Banister			
- optimistic		960	
- preferred		974	
Pi-chao Chen		957	
R. T. Ravenholt		910	921
Y. C. Yu			935-946
United Nations			950

The fact should not be ommitted, however, that the above estimates take into consideration some more recent information from Chinese sources.

11. Idem, p 179.

12. Hua Guo Feng, "Report on the Work of the Government," BEIJING REVIEW, No 27, 6 Jul 1979, p 20 (quoted in: "International Family Planning Perspectives" (London), Vol 5, No 8, 1979, p 94).

13. Our translation for Birth Planning Management Group.

14. We are speaking of the article: "To Achieve the Four Modernizations It Is Necessary To Control Population Growth in a Planned Manner" (RENMIN JIHPAO, 11 Aug 1979). We used an abbreviated version of the article: Chen Mu Hua, "Birth Planning in China," "International Family Planning Perspectives" (London), Vol 5, No 3, Sep 1979, pp 92-100 (Published, likewise, in "Family Planning Perspectives" (New York), Vol 11, No 6, Nov/Dec 1979, pp 348-354).

15. In our country, the proportion was 35 percent on 1 Jul 1978 (cf. the Central Directorate of Statistics, "The Statistical Yearbook of the Socialist Republic of Romania, 1979," Bucharest, 1979, p 55).

16. In cities, couples who have only one child and who pledge not to have any more (presenting proof that they are practiving birth control) can request a "sole child certificate" which gives them the right to a fixed allocation each month until the child is 14 years old. These couples have the right to a home with a living space equal to that allotted to couples with two children or they have priority for getting a place to live. The sole child will have priority for admission to schools and getting a job. Upon retirement, couples with one child will receive larger pensions.

In rural areas, couples with one child will receive supplementary income each month until the child reaches 14 years old, and the amount of cereal grain received will be the same as that given couples with two children. All couples, regardless of the number of children, will receive the same sized personal lot and the same area for building a home, in both cases the areas will be based on a family with two children.

At the same time, the law calls for taxes on couples who have more than two children (with the exception of cases where there are multiple births).

17. According to Pi-chao Chen's estimates (Wayne University, Detroit), the elimination of all third child births and the practice of behavior directed towards the "sole child" by 40 percent of the couples in urban areas and 25 percent in rural areas, over the course of several decades, will result in a decrease in the population of the PRC (cf. Pi-chao Chen, an introductory note and comment to Chen Mu Hua's "Birth Planning in China," "International Family Planning Perspectives" (London), Vol 5, No 3, Sep 1979, p 93.).

18. If in 1979 the figure advanced by official sources (cf. "Urban Collective Economy: Develop or Eliminate It?", BEIJING REVIEW, No 35, 31 Aug 1979, p 10) was 970 million and we accept an annual rate of growth of one percent in this year, the population of China would be around 980 million.

19. United Nations, Economic and Social Council, op. cit., in footnote 1.

20. SCINTEIA, 20 Aug 1974.

21. See: "Family Planning in Jutung, China," POPULATION AND DEVELOPMENT REVIEW (New York), Vol 4, No 2, 1978, pp 367-371; Roland Pressat, "Anti-Birth Measures in China," POPULATION (Paris), Vol 34, Nos 4-5, 1979, pp 908-909.

22. Information that came to us after writing this article (Roland Pressat, "The Reappearance of Chinese Statistics" POPULATION (Paris), No 1, 1980, pp 226-232, and "La croissance demographique: inquietude majeure en Chine," POPULATION (Paris), No 2, 1980, pp 441-443; Michel Cartier, "The Rebirth of Demographic Studies on the Population of China," POPULATION (Paris), No 2, 1980, pp 444-449), permits us to have a more complete picture of the population problem in the PRC. The importance given to the demographic factor in the modernization of the country could not omit the fields of research and education. The rehabilitation of professor Ma Yinchu and his appointment to the post of honorary president of the University of Peking (in September 1979, 20 years after the condemnation of his "neo-Malthusian" theses) have symbolic value in this regard. At the same time, certain research centers and groups have been created at the national and provincial level and higher demographic training has been stressed. Finally, Hua Gou Feng's speech at the third session of the Fifth Assembly of the National Assembly of the People's Representatives (Sep 1980) mentions that the objective of PRC demographic policy is to attain a maximum population of 1.2 billion in the year 2000, and stress must be placed on actions to convince the people and on ideological and political work, and not coercive means (LE MONDE, 9 Sep 80,p6)

BISHOP INTERVIEWED ON CHRISTIANITY IN COUNTRY

OW241516 Beijing XINHUA in English 1500 GMT 24 Dec 80

[Text] Beijing, December 24 (XINHUA)--Ding Guangxun, president of the Christian Council of China, said that he is satisfied with the revival of Christian activities in this country.

In an interview with XINHUA on Christmas Eve, Bishop Ding also warned against any attempts from abroad to split the Christendom in China by fabricating the existence of an "under-ground church" and an "official church."

Bishop Ding is a deputy to the National People's Congress and a Standing Committee member of the National Committee of the Chinese People's Political Consultative Conference.

With the implementation of the government policy on freedom of religious belief in recent years, he said, Christians who were persecuted during the "Cultural Revolution" have been rehabilitated politically and the lack of churches and bibles is being overcome.

Around Christmas this year a number of churches are being restored on top of the 56 which have resumed their operations since September of last year, he said.

As a functionary of the World Student Christian Federation, Ding Guangxun worked in Shanghai, Geneva and Canada in his early years. He is now concurrently chairman of the three-self (self-administering, self-supporting and self-propagating) patriotic committee of the protestant churches of China.

"The Chinese People's Government has consistently followed a policy for freedom of religious belief," Ding Guangxun said. "Only the gang of four wanted to strangle religion."

Refuting allegations abroad that there are two kinds of Christian churches in China, one "official" and the other "underground," he said: "This is sheer fabrication." The government gives the churches no economic help except exempting them from housing and land taxes, he said.

The Christian churches in China are operating on the basis of self-administering, self-supporting and self-propagating, the bishop said. "They are churches with their own national characteristics and most of the Chinese Christians are patriots," he added.

The bishop pointed out, "Chinese Christians welcome friendly exchanges with Christians and Christian organisations in other countries. But he took strong exception to activities from abroad which are aimed at splitting the Christian churches in China.

Living in a quiet house in Nanjing, capital of Jiangsu Province, the bishop has a happy family with his wife, a professor at Nanjing University, and two sons, one studying in the United States and the other in a Chinese university.

Ding Guangxun has been president of the Nanjing Union Theological Seminary since 1953. He said that the seminary, which was closed down during the "Cultural Revolution," will reopen early next year with a first enrolment of some 40 students to be trained for priesthood.

FOURTH NATIONAL BUDDHIST CONFERENCE OPENS IN BEIJING

OW161602 Beijing XINHUA in English 1510 GMT 16 Dec 80

[Text] Beijing, December 16 (XINHUA)--The fourth national conference of the Buddhist Association of China opened in Beijing today, with 250 delegates from all Buddhist sects in China attending. Representatives of the China Islamic Association and the Christian and Daoist groups extended congratulations at the opening session.

Zhao Puchu, acting president of the Buddhist association, said in his opening speech that, with the implementation of China's policy on religious freedom, the situation for Chinese Buddhists has improved considerably.

He said: "Many monks and nuns who were hounded from monasteries and temples during the 'Cultural Revolution' are now returning. The number of new monks and nuns is increasing and new respect is being paid to Buddhist religious practices."

He told the delegates that soon after the last conference of the association, in 1962, religious life was disrupted by "leftist" tendencies. The Buddhist association disappeared during the "Cultural Revolution" and began to revive only after the downfall of the gang of four.

Zhao Puchu said that in the past few years, the association has helped the government to implement its religious policy, restoring Buddhist academic research, training candidates for the priesthood and developing links with Buddhists overseas.

"With the support of the state," he said, "we have renovated some noted temples and monasteries, revived the Chinese Buddhist Theological Institute and set up the institute's first branch school. We have also done much work to preserve Buddhist culture and relics."

Initial success has been achieved in studying the scriptures engraved on stone tablets in Fangshan, the first volume of "Buddhism in China" has been published, and a museum of Buddhist literature and relics has been set up, he reported.

As for the future, Zhao Puchu said, the association will increase contacts and unity between Buddhists of all sects, nationalities and regions of China and continue the fine traditions of Buddhism so as to contribute to the country's major objectives during the 1980's.

Bainqen Erdini Qoigyi Gyaincain, vice-chairman of the National People's Congress Standing Committee and honorary president of the Buddhist association, called on all believers, under the leadership of the people's government, to help build a powerful and prosperous China, to disseminate Buddhism and to work for the happiness of mankind and world peace.

He hoped they will "emancipate their minds, voice popular sentiments and raise constructive suggestions on the work of the association, the religious policy of the government and its implementation."

The delegates recited Buddhist scriptures in the Tibetan and Han languages at the opening of the conference. Later, the venerable Ju Zan, vice-president of the association, read out congratulatory messages from Japanese Buddhist and other friendship groups.

The venerable Zheng Guo, deputy secretary-general of the association, explained some revisions of the association's constitution.

The opening session was also attended by Zhang Zhiyi, deputy head of the united front work department of the Chinese Communist Party's Central Committee, and Xiao Xianfa, director of the religious affairs bureau under the State Council.

BUDDHIST ASSOCIATION ELECTS OFFICIALS

OW231250 Beijing XINHUA in English 1240 GMT 23 Dec 80

[Text] Beijing, December 23 (XINHUA)--Zhao Puchu was elected president of the Buddhist Association of China here today at the closing session of the fourth national conference of the association.

Pagbalha Geleg Namgyai, vice-chairman of the national committee of the Chinese people's political consultative conference, and seven others were elected vice-presidents.

Bainqen Erdini Qoigyi Gyaincain, vice-chairman of the National People's Congress Standing Committee, was elected honorary president.

In his closing speech, vice-president Ju Zan of the association said that the conference had achieved fruitful results. During the eight-day meeting, he said, the delegates discussed questions that Buddhists had on mind, and put forward some constructive suggestions on the work of the association. He pointed out that this conference would contribute to carrying forward the fine traditions of Buddhism, helping the government implement the policy of religious freedom, and promoting national unity.

The conference adopted a resolution calling on all Buddhists of the country to unite closely under the people's government, cherish both the country and Buddhism, and strive for China's modernization.

BUDDHIST THEOLOGICAL INSTITUTE REOPENS

OW221720 Beijing XINHUA in English 1534 GMT 22 Dec 80

[Text] Beijing, December 22 (XINHUA)--The Chinese Buddhist Theological Institute, which was closed down 14 years ago, reopened at a ceremony here this afternoon.

Forty monk students dressed in saffron Buddhist robes attended the ceremony along with 250 delegates to the fourth national conference of the Chinese Buddhist Association being held in Beijing.

Ranging in age from 18 to 30, the students are required to take courses in the history and doctrine of Buddhism, language and literature and foreign languages.

The teaching staff includes senior monks with high accomplishment in Buddhist studies and teachers from other colleges. The institute's library is well stocked with books on Buddhism, history, science, philosophy and art and literature.

Housed in the 1,300-year-old Fa Yuan Monastery here, this institution of higher learning in Buddhism was founded in 1956. During the ten years from 1956 to the time when it was closed down at the beginning of the "Cultural Revolution" in 1966, the institute trained 380 monks, most of whom are now members of local Buddhist associations or executives in well-known temples. Some of the trainees are engaged in Buddhist research.

One of them, a 47-year-old monk named Jing Hui, has been collecting materials for an anthology of biographies of some 200 Chinese Buddhists known since 1940. One-fourth of the work has been completed.

The venerable Jing Hui is also responsible for editing a series of books under the general title of "Buddhism in China" and a Buddhist journal. Covering the history, sects, theology and culture of Chinese Buddhism, the series is expected to run to a total of 1.4 million words.

Another graduate, Chang Hao, has been studying Buddhist scriptures engraved on stone slabs found in Fangshan County west of Beijing. Carved during the period from the Sui Dynasty (581-618) to the Ming Dynasty (1368-1644), the engravings are valuable for studying the art of calligraphy and stone carving and Buddhism in ancient China.

Monk Chang Hao has also translated from the Tibetan into the Han language Buddhist works including "Exposition of the Madhyamika Sastra" and "Exposition of the Sastra of 400 Stanzas." He is now working on a dictionary of Buddhist terms.

One of the first graduates from the institute, the venerable Tong Yi has taken part in the investigation of cultural relics kept in caves in Xinjiang, Gansu, Sichuan and Shanxi. While inspecting some of the famous grottoes, he took more than 2,000 pictures of murals, paintings and carvings, copied several hundred paintings and drew 50 maps showing the layouts of the caves. All this is useful for the study of Buddhist culture and cave art in China.

BACKGROUND OF BUDDHISM IN CHINA HIGHLIGHTED

OW161558 Beijing XINHUA in English 1535 GMT 16 Dec 80

[Text] Beijing, December 16 (XINHUA)--The fourth national conference of the Buddhist Association of China, which opened here today, marks a new stage of development of Buddhism in China.

Founded in 1953, the association held its second national conference in 1957 and its third conference in 1962.

Like all other religions in China, Buddhism suffered tremendous damage during the "Cultural Revolution." Normal religious activities have been revived since the fall of the "gang of four."

Buddhism was introduced into China in the first century. It has since exerted a great impact on the development of ideology and culture in this country.

After the fourth century, an increasing number of Chinese monks went to India to study Buddhist scriptures and many Indian Buddhist priests came to China to disseminate the religion, which was spread from China to Korea and Japan.

As a result of the mingling of Buddhism and Chinese thought and culture, native Buddhist sects such as Tiantai, Chan Zong and pure land appeared in China during the Sui and Tang Dynasties (581-907).

The mutual influence between Buddhism and the nature worship prevailing in Tibet gave rise to Lamaism in the eighth century, and the most influential and powerful sect of Tibetan Lamaism, the Yellow Sect, was founded by Zong Kaba in the 14th century.

After the founding of new China, the feudal system of exploitation and oppression within the Buddhist hierarchy was abolished with the support of the people's government.

In China, freedom of religious belief is guaranteed and the legitimate right of believers to perform religious services protected. Well-known monasteries and temples have been repaired and renovated by the people's government.

Buddhists enjoy political equality in running affairs of state. A number of Buddhists have been elected deputies to people's congresses or members of committees of the Chinese people's political consultative conference at various levels.

Since liberation, Chinese Buddhists have established relations with Buddhist groups and individuals in more than 20 countries. Delegations sent by the association have visited many countries and attended a number of international religious conferences, contributing to international friendship among religious circles.

PROMINENT BUDDHIST LEADER REHABILITATED

OW181702 Beijing XINHUA in English 1646 GMT 18 Dec 80

[Text] Beijing, December 18 (XINHUA)--China today officially exonerated the venerable Xerab Gyaco, former president of the Buddhist Association of China, who died in 1968 at the age of 85 from persecution during the disastrous decade of the "Cultural Revolution."

The decision was announced by Xiao Xianfa, director of the Bureau of Religious Affairs under the State Council, at a plenary session of the fourth national conference of the Buddhist Association of China here this afternoon.

Xerab Gyaco enjoyed high prestige both at home and abroad for his great attainments in the studies of Buddhism. After new China was founded, he served successively as a member of the Northwest Committee for Military and Political Affairs, vice-chairman of the Northwest Committee for Nationalities Affairs, vice-chairman of the Qinghai Provincial People's Government, a deputy to the first and second national people's congresses and a member of the Standing Committee of the Third National Committee of the Chinese People's Political Consultative Conference.

In 1964 when China's policy on religion was affected by the "left" tendencies, Xerab Gyaco criticized the way the government handled religious affairs and was, therefore, repudiated and dismissed from his posts. During the early stage of the "Cultural Revolution," he again was subjected to cruel persecution under the ultra-left line of Lin Biao and the "gang of four" and died in 1968.

Xiao Xianfa said: "Xerab Gyaco was a good religious leader of the Buddhist Association of China. He was an example of patriotism and devotion to his faith for all religious people in China. He was a patriot who cooperated and maintained friendship with our party and a friend of our party who gave forthright admonition."

He declared that the repudiation of Xerab Gyaco was wrong, that all false charges imposed on him should be overturned and that he should be rehabilitated.

Xiao Xianfa also praised other noted patriots in Buddhist circles. He said that they and those from other religions were part of the revolutionary and patriotic united front in China. Chinese Buddhists, under the leadership of the Communist Party, had made great progress in the course of socialist revolution and construction, he added.

Xiao Xianfa reiterated China's policy of religious freedom, saying that regular religious activities including reciting scriptures and holding religious services were protected by the government. Only activities violating the law on the pretext of religion would be stopped, he explained.

Xiao Xianfa then criticized certain instances of violating the government's religious policy. He mentioned the closing down of the Daming Temple in Yangzhou, in east China's Jiangsu Province, after Japan's lacquer statue of the celebrated Tang Dynasty Buddhist Monk Jian Zhen was shown there last April. "This was violation of the policy on religious freedom," Xiao Xianfa said. "The problem has now been settled after investigation."

Xiao Xianfa expressed hope that religious believers in China would rally round the people's government and contribute to the causes of making China a modern socialist state with a high degree of democracy and civilization, promoting the return of Taiwan to the motherland and the reunification of the country, opposing hegemonism and safeguarding world peace.

CHINESE UNIVERSITIES TO AGAIN OFFER SOCIOLOGY COURSES

OW170254 Beijing XINHUA in English 0244 GMT 17 Dec 80

[Text] Beijing, December 17 (XINHUA)--Beijing University, Nankai University in Tianjin and other universities at major centers in China will offer courses in sociology in February, leading sociologist Professor Fei Xiaotong said today.

The study of sociology was suspended in China for nearly 30 years.

The professor said it is of pressing importance to train as many sociologists as possible in a short time. He expected the universities to turn out at least 200 graduates in the next five years, and these would serve as the core in reviving sociology in China.

Sociology was branded as "bourgeois" and "useless and reactionary" and courses were suspended at all Chinese universities in 1952. In 1957, Professor Fei was persecuted for articles in which he expressed disagreement with the ban.

The subject was a "forbidden area" until its rehabilitation in early 1979.

The professor said socialism needs sociology as much as the capitalist system does. He said it is important for dealing with social problems that exist in China today, such as unemployment, wages, housing, over-population, juvenile delinquency, education, and the relationship between the people and the administration.

These problems have a bearing on the people, he said, and relate to the stability and balance of society. He said systematic and comprehensive sociological research will help the government find reasonable answers to these problems and help improve and develop the socialist system.

The professor said the recent founding of the Institute of Sociology under the Chinese Academy of Social Sciences was a significant development. As director of the institute, he believed it will play an important role although, for the moment, it is short of experience, staff and facilities.

The institute will start its work in selected residential districts of Beijing, which he described as the "epitome of Chinese society" where the thinking, mood and demands of people from all walks of life can be found.

Later, the institute will choose some factories and rural communities as long-term study bases.

The professor said Chinese sociologists would give priority to questions affecting young people, especially schooling, crime, employment and marriage.

Professor Fei Xiaotong, now 70 years old, has studied sociology since 1930 and once studied in England. He says he is confident of the revival of the science in China. In the past two years he has made study tours of the United States, Japan and Canada.

SERIES OF LAW LECTURES BEGIN IN BEIJING

OW170801Beijing XINHUA in English 0753 GMT 17 Dec 80

[Text] Beijing, December 17 (XINHUA)--A talk on law in China since 1949, the first in a series of 40 lectures sponsored by the Beijing Law Society, was given here today by society president Professor Chen Shouyi, dean of the Department of Law at Beijing University.

The series, intended to help upgrade judicial work in the Chinese capital, is being attended by 280 professionals, including law school postgraduates, university teachers, judges and attorneys.

The presidents of the Chinese People's Supreme Court and the Beijing People's High Court were invited to attend the first lecture.

Future lectures in the series, which is expected to last over a year, will cover theory of law and legal systems, ideological history of law, criminal, civil, constitutional and international law and the science of crime detection.

Xie Bangyu, deputy secretary-general of the law society, said today: "It is important to make ordinary people more aware of the law and we should also make greater efforts to upgrade the present practice of law."

He said most judicial workers have been out of practice for many years and are finding it difficult to take up the job again. About 80 percent of the judges in Beijing are new, he said, and they lack sufficient knowledge of the new laws introduced at the beginning of this year and basic law theory.

Professor Chen Shouyi, who gave today's lecture, is chief defence lawyer in the Lin Biao-Jiang Qing trial now nearing its end in Beijing, and a member of the Legislative Commission of the Standing Committee of the National People's Congress.

The lectures will be made into a series of books for national publication, the society said today.

ACADEMIC DEGREES COMMITTEE MEETING HELD

OW181552 Beijing XINHUA in English 1521 GMT 18 Dec 80

[Text] Beijing, December 18 (XINHUA)--Degrees will be granted to qualified people in 10 major academic fields starting in 1981.

The three-day meeting of China's National Academic Degrees Committee which closed here this afternoon decided to issue degrees in science, engineering, agriculture, medicine, literature, history, philosophy, economics, law and education.

The degrees will be B.A., M.A. and Ph.D. Honorary doctor's degrees will be conferred upon outstanding Chinese and foreign scholars and public figures.

Foreign under-graduate and post-graduate students in China can also apply. The appraisal group will determine academic qualifications.

Applicants for a master's or doctor's degree must pass an examination, including an oral, and submit a thesis. The committee of examiners is to be chaired by professors. Special groups to judge in various academic fields will be established.

Three scholars on the academic degrees committee, Yan Jici, Zhang Wei and Fei Xiaotong, addressed the meeting on the importance of objective application of academic standards. The committee, which works under the State Council, is composed of 41 leading scientists and scholars in various fields.

Jiang Nanxiang, the committee's vice chairman and minister of education in his speech to the meeting said that there had been long discussion on granting academic degrees. The present regulations were based on a draft drawn up in the early 1960's and incorporated suggestions from some 50 research institutes and universities.

Vice Premier Fang Yi, chairman of the committee said at the meeting that the granting of academic degrees would "speed up the selection of qualified people," "improve education and academic levels," and "promote exchanges between Chinese and foreign scholars."

'XINHUA' CARRIES EDUCATION NEWS IN BRIEF

OW291210 Beijing XINHUA in English 1200 GMT 29 Dec 80

[Text] Beijing, December 29 (XINHUA)--Xiamen (Amoy) University in Fijian Province has reopened its correspondence courses for overseas students after more than ten years' interruption. Between 1956 and 1966, the university offered correspondence courses for overseas Chinese in beginning and advanced Chinese language and traditional medicine. With a current enrollment of 498, the new program reaches overseas Chinese students, Hong Kong and Macao compatriots and foreigners. The university hopes to open a correspondence course in acupuncture soon.

A research society concerned with education for the blind, deaf and deaf-mute has been set up in Beijing. Its members are interested teachers and researchers who wish to sum up their experience and find better ways of helping handicapped students in their studies.

The Institute of Journalism under the Chinese Academy of Social Sciences recently held its first meeting to be attended by representatives of journalism teaching units, research units and the press. The group discussed theoretical problems in journalism.

The Shanghai Municipal Bureau of Education arranged advanced training courses in pedagogics, psychology and school administration for some 1,800 principals and party secretaries of primary and middle schools during 1980.

BEIJING TESTING 1970-1976 COLLEGE GRADUATES

OW280738 Beijing XINHUA in English 0711 GMT 28 Dec 80

[Text] Beijing, December 28 (XINHUA)--Over 13,000 people who graduated from college during 1970-76 and are now working in Beijing science and technology institutions or factories took part in a city-wide higher mathematics examination today in the hopes of getting promoted to the post of assistant engineer.

Similar testing in physics, chemistry and foreign languages will take place on January 11, 1981.

The examinations organized by the Beijing Municipal Scientific and Technological Committee in accordance with State Council regulations on engineering and technical posts are being given at 360 sites.

The purpose of the examinations is to give these college graduates a chance for promotion as well as to encourage them to raise their knowledge to the levels of pre-1966 college graduates, according to Han Lin of the scientific and technological committee.

The Beijing testing reflects a nationwide effort to upgrade the qualifications of people who went through college during the Cultural Revolution, when China's institutions of higher learning were in sorry shape.

China has a total of more than 900,000 college graduates who graduated in 1970-76. Measures are being taken across China to raise their academic level and ability.

In Beijing, Han Lin said, the examinees come from more than 200 units. They entered colleges or universities by way of recommendation instead of through examinations and only studied for two or three years at school, their knowledge is insufficient and unsystematic, and their levels vary greatly since the examination system was abolished at the time.

Han Lin predicted that about 4,000 of the 13,000 young college graduates taking the citywide tests could pass.

"The testing can provide a set of concrete standards through which we can push people toward achievement," she said. "The idea is to try to pinpoint their weaknesses and correct deficiencies rather than to kick them out. These young people could be worthy successors to the cause of science and technology in China, if they work hard and efforts are made to upgrade them."

Those who fail in this round will be given another chance in the exams next year and the year after.

Following these tests, functional skill tests will be given by the units in which they work.

It is estimated that most of the examinees will attain the standard of assistant engineer during these three rounds of testing. Those who fail every time will be transferred to other jobs, according to the science and technology committee.

In August this year, the municipal scientific and technological committee and the Beijing Broadcasting Bureau launched a television course in basic sciences aimed specially at helping those whose education suffered in the Cultural Revolution.

Students followed the course full-time, according to Han Lin, and the units in which they work invited teachers from the major universities in Beijing to serve as tutors.

In tests given during the four-month course, 68.9 percent of the students failed the higher mathematics portion, 73 percent flunked physics, for the first time and 55 percent flunked for the second time and 56 percent failed the chemistry portion, Han Lin said.

BEIJING OPENS FIRST NIGHT COLLEGE OF LAW

OW131306 Beijing XINHUA in English 1248 GMT 13 Dec 80

[Text] Beijing, December 13 (XINHUA)--Beijing Municipal Night College of Law, the first run by a municipality in China, was formally opened at a ceremony in a west Beijing meeting hall today.

Starting next Monday, the college will run 16 law courses, three political theory courses, three cultural courses and one elective course in foreign languages. It has 156 students.

Those who pass the graduation examination will be given diplomas and regarded as regular college graduates.

Wang Feizan, president of the college, who is also a vice-chairman of the Standing Committee of Beijing Municipal People's Congress, said at the ceremony: "The college will train legal workers who have a good knowledge of the law, are objective, fair, upright and are ready to devote their lives to the law."

The college is jointly run by the Beijing Judicial Bureau, the Beijing branch of the Jiusan Association, one of China's eight democratic parties, and the law department of Beijing University.

The students, 114 men and 42 women aged between 18 and 45, were chosen from over 1,000 applicants among legal workers in Beijing.

Jian Jingsheng, 25, a clerk at Beijing's intermediate people's court, who earned top marks in the entrance examination, said at today's ceremony: "It is important for me to get more knowledge. It is regrettable when one does not have sufficient knowledge to cope with his work."

Xiao Yongqing, vice-president of the college and deputy dean of the Department of Law at Beijing University, said: "Of the 1,800 legal workers in Beijing, only 12 percent have received college-level legal training. The rest are ex-servicemen with middle-school education. They lack sufficient knowledge to administer the law properly."

FOREIGN LANGUAGE TEACHING REFORMS DISCUSSED

OW250828 Beijing XINHUA in English 0817 GMT 25 Dec 80

[Text] Beijing, December 25 (XINHUA)--How to develop a comprehensive nationwide plan for foreign language study in China, broaden language students' curriculum and improve language teachers' training and skills were the main concerns at a recent meeting of language education specialists held in Qingdao, east China.

Today's GUANGMING DAILY carries a report on the meeting, which was attended by representatives from 34 foreign language teaching units.

The paper says the specialists agreed it is necessary to develop a plan outlining the country's requirements regarding numbers and standards of foreign language school graduates.

Many specialists pointed out that language students in the past have concentrated on language alone, and suggested the curriculum should be expanded to provide a general education which includes science and the arts. They also suggested more elective courses and more free study time for language students.

Participants said the urgent demand for language teachers in China now requires a variety of teacher training programs for different school levels. Teachers could go through two, three or four-year courses, and some schools could offer four or five-year courses for highly qualified interpreters, researchers and language specialists.

Continuing education for language teachers, offering advanced degrees through examination and sending some young teachers abroad for further study were other recommendations.

Participants at the meeting also proposed that foreign language teaching should begin in the first year of middle school. Some suggested that foreign language institutes across the country become language centers offering good libraries, teaching materials and even electronic teaching aids.

The GUANGMING DAILY also reports that the Chinese Ministry of Education has invited 75 foreign teachers to retrain young English language teachers in 24 institutes and universities around China. They will conduct six-month courses, dealing with such things as teaching methods, linguistics, literature and technical English. It is hoped that some 5,000 teachers will benefit from these courses.

ARTISTS ASSOCIATION SPOKESMAN COMMENTS ON ART IN 1980

OW300712 Beijing XINHUA in English 0701 GMT 30 Dec 80

[Text] Beijing, December 30 (XINHUA)--A spokesman of the Chinese Artists Association said today 1980 was a year of "vigorous thinking within the arts and of quick expansion of artists unions."

In a year-end press interview, 53-year-old Kan Fenggang, a secretary of the association, said he supported the 1980 trend of "opening up of long-shelved topics of disagreement."

Forums on "The Language of Painting Arts," "Re-evaluation of Realism" and "The Art of the Human Body" and nine conferences for painters and sculptors, art teachers, editors and researchers were held during the year.

Speakers had pointed to the intervention of commercial interests in art and demanded "a deeper understanding and more honest interpretation of life." They called for greater efforts to develop oil painting and other fields of fine arts that are relatively weak in China. Social responses to the influences of Western arts were also discussed.

Beijing saw an unprecedented number of art exhibitions in 1980, among them more than 20 national and multi-provincial shows, Kan Fenggang said.

His association had organised 13 trips during the year for painters to visit famous scenic spots and minority regions. A big new studio had been completed in the Beijing Botanical Garden for young painters who cannot afford private studios.

Five publishing houses are now specializing in fine arts, Kan said. Beijing's People's Publishing House of Fine Arts printed nearly 150 million books and drawings in 1980. A textbook of sketching techniques ran into 110,000 copies in its first printing.

Among the year's most valuable new albums were collections of classics from the Palace Museum in Beijing, the best works of great modern painters Xu Beihong, Qi Baishi, Li Kuchan, Li Keran, and the selected works of foreign masters.

Drawing lessons were revived in middle and primary schools, and school groups are taken regularly to art galleries and museums.

Three shows of new year pictures, scrolls and calendars are now running in Beijing's downtown shipping centre of Wangfujing. XINHUA bookstores have received complaints from buyers who say too many of the calendars and new year pictures are of film stars. Customers have asked for more traditional paintings in future supply.

Kan Fenggang said that in 1981 the Chinese Artists Association will give priority to helping young painters and promoting academic exchanges. "We have great expectations for new creative experiences," he said. The association has a membership of 1,845, of whom 715 joined in 1980. Most are below middle age.

PLAY ON CULTURAL REVOLUTION PRAISED

OW311250 Beijing XINHUA in English 1235 GMT 31 Dec 80

[Text] Beijing, December 31 (XINHUA)--Eighty-year-old veteran of China's film industry Xia Yan has high praise for a new Chinese film "Night Rain" which shows people's diverse reactions to an episode during the "Cultural Revolution."

The vice-chairman of the China Federation of Literary and Art Circles and chairman of the Chinese Film Artists' Association said: "Of all the films on similar themes, this is effective."

The praise comes from one who has spoken out on many occasions since the downfall of the gang of four about the need to eliminate the hangover of the gang's influence in cinema art, although he agreed that there had been a general improvement in the past few years.

Xia Yan was speaking at a meeting called by the Cinema Research Institute and the China Film Library to assess the artistic achievements of "Night Rain."

A new production of the Shanghai film studio, "Night Rain" is set on a Yangtze River voyage from Sichuan to Wuhan during the Cultural Revolution. A poet named Qiu Shi who is condemned as a counter-revolutionary is being taken to a destination most likely on orders from the gang of four. One of the two escorts is middle-aged man who remains seemingsly neutral till the end of the story when he is shown helping the poet escape to safety. The other is a Red Guard, a school girl much poisoned by the gang. At first she finds the cabin in which they are staying too hot since all the other passengers are hostile to her. This prompts her to think things through and she comes to understand the poet better. Finally, she also helps him escape.

The 30 and more participants in the discussion agreed that the film was a far deeper presentation of the struggle against the gang of four.

One of the speakers was the poet He Jingzhi. He said: "The film makes one weep. But it gives one strength and aesthetic enjoyment. We need more films of this kind."

Today's PEOPLE'S DAILY carries two reviews. One critic sums up the artistic characteristics of "Night Rain" this way: conviction emerges from popular indignation; there is a sense of the good and beautiful amid a perilous situation; characterization is achieved with quiet elegance; and the implications of the theme are suggested through condensation of material.

CULTURAL RELICS PUBLISHING HOUSE BROADENS SCOPE

OW301224 Beijing XINHUA in English 1208 GMT 30 Dec 80

[Text] Beijing, December 30 (XINHUA)--The Chinese Cultural Relics Publishing House has published 95 titles this year covering a wider range of subjects than in previous years. Titles are one-third more than two years ago. Included are more works on ancient science and post-liberation discoveries.

"Gansu Painted Pottery" and "Qinghai Painted Pottery" are of great value for studying human activity in China's new stone age in the northwest.

"An Album of Ancient Relics and Documents Connected With Astronomy" deals with 52 items ranging from the neolithic age to the Qing Dynasty (1644-1911). Included is China's earliest extant work on the subject "Astrology Based on Five Planets" which contains a record of the movements of the Jupiter, Saturn and Mars from 246 to 177 B.C.

Also issued were books dealing with cradles of bronze culture, the first two volumes of the five-volume "Bronzes of Shang and Zhou Dynasties Unearthed in Shaanxi Province," and the first of the three-volume "Bronzes of Shang and Zhou Dynasties Unearthed in Henan Province."

Collections of archeological reports include "Excavation Report of a Han Tomb in Mancheng" (two volumes) and "Sui and Tang Tombs on Outskirts of Changan (Today's Xi'an)."

"The Yingxian Timber Pagoda," a book of great scientific value, deals with this eleventh century Shanxi Province octagonal ten-storeyed Buddhist pagoda which is 67.31 metres high. The State Council proclaimed it as one of the country's important cultural relics in 1961. The book contains 35 scale drawings and 142 photographs of the outside and interior. It was compiled by Chen Mingda, famous historian of ancient Chinese architecture.

Chinese painting and calligraphy are represented by "An Album of Famous Paintings of Song Dynasty," "Collected Paintings of Liaoning Provincial Museum (Sequel)," "Imperial Hand-carriage" by Yan Liben of the Tang Dynasty and "Spring Excursion of Lady Guoguo and Her Party," a handcopy by the art patron and painter, Emperor Hui Zong of the Northern Song Dynasty, and "Two Horses" by Ren Renfa of the Yuan Dynasty. Scheduled for issue in chronological order are "Twenty Specimens of Chinese Calligraphy, Rubbings From Stone Tablets in Longmen Grottoes" (chosen from among over 1,000 fine examples of the northern Wei over fourteen hundred years ago) and "Chinese Calligraphy: Liu Gongquan" (two volumes). Liu Gongquan was a famous Tang Dynasty calligrapher.

The first of the five-volume "Grottoes in China: Mogao Grotto in Dunhuang" will soon come off the press in Beijing. A Japanese edition has already been published in Tokyo. "Art Treasures of Dunhuang" was published this year in cooperation with the Hong Kong branch of the Joint Publishing Company.

In scientific research the publishing house has edited and published "Thirty Years of Archeological Work," a collection of 30 papers, with an appendix of major events in this field. Other books include "A collection of archeological papers on Xia, Shang and Zhou dynasties," "Collected Papers on Ancient Chinese Weapons" as well as "Study of an Ancient Cadaver in Mawangtui Tomb No 1 of the Han Dynasty in Changsha," and books dealing with studies of textile fabrics, animal and plant specimens in this tomb and manuscript copies of lost ancient books written on Chinese silk (the first volume), found in tombs at Mawangtui. Another important book is "Studies of Oral and Written Language of the Nuzhens."

The publishing house has also printed two series of booklets, one on ancient monuments and relics and the other on revolutionary ones. Already published are: "Great Wall," "White Horse Monastery (one of China's earliest Buddhist monasteries)," "Xuan Zhong Monastery (the cradle of the Pure Land Sect of Buddhism in China)" and "Lugouqiao Bridge."

It is editor of "Cultural Relics," a monthly, "Revolutionary Relics," a bi-monthly, "Chinese Cultural Relics" (a pictorial) and prints journals of the Palace Museum, the Beijing Library and the Museum of Chinese History.

YUNNAN MINORITIES HOLD EXHIBITION IN BEIJING

OW190814 Beijing XINHUA in English 0758 GMT 19 Dec 80

[Text] Beijing, December 19 (XINHUA)--An exhibition of garments and adornments of the minority nationality peoples living in southwest China's Yunnan Province is attracting tens of thousands of visitors every day in the Chinese capital.

The exhibition, which opened at the Beijing Natural History Museum last week, displays hundreds of pictures and samples of shoes, dresses, earrings, necklaces and daggers of exquisite design and elegant workmanship. The intent is to help explain the history, daily life, arts and crafts, culture and customs of the minority peoples.

Gao Zongyu, chief organizer of the exhibition, said, it is part of the effort to enhance mutual understanding among the people of various nationalities in China and to promote national unity. "It also provides a good opportunity for anthropological and enthnological research," he said.

Yunnan Province has the largest concentration of different minority nationalities in China. Of the 56 nationalities which have been identified, 22 live there, accounting for one-third of the province's total population. Before nationside liberation in 1949, these people still lived in a primitive state and only some had reached even the level of feudalism. But while great changes have taken place in their economy and culture over the past 30 years, many of their customs and habits have persisted.

Many of the minorities' lifestyles and traditions are reflected in the objects on display. The Bai people's blue sleeveless jacket worn over a white shirt harmonizes with the natural scenery of the place where they live--by the snowcapped mountains and blue waters of Erhai Lake. The moon-and-star patterned clothes worn by the women of Nasi Nationality symbolize their industriousness; legend has it that all Nasi men went out to war while the women did the farm labor, rising before dawn and returning home after dusk.

One of the most attractive items on display is the cockcomb hat worn by the women of Yi Nationality. According to a legend of this nationality, a monster wanted to take possession of a beautiful girl who was in love with a young man. It killed the young man, but when it chased the girl, a cock crowed and scared the monster away. The girl carried the cock to the dead youth, and the cock's crow brought him back to life. Later on, the girl made a hat in the shape of the cockcomb and the couple lived happily thereafter. The hat was decorated with as many as a thousand silver beads, blinking like the stars in the night sky, said to symbolize the night when the monster was scared to death.

Pictures on display show the tattooing patterns on men of Wa Nationality, the needled designs on the faces of Dulong women, and the head hoops, giant earrings, bracelets and necklaces characteristic of these minority people.

Also on display are pottery, primitive tools, poison arrows, hieroglyphs and musical instruments these minority people used before liberation.

CULTURAL NEWS ON PUBLICATIONS, OPERA

OW241211 Beijing XINHUA in English 1201 GMT 24 Dec 80

[Text] Beijing, December 24 (XINHUA)--A collection of more than 200 poems on China's 1911 revolution has just been published by the Changjiang Art and Literature Publishing House in Wuhan, Hubei Province.

"Poems on the 1911 Revolution" contains poems by over 50 revolutionaries from the democratic revolution led by Sun Yat-sen, many of whom were later involved in the revolution that brought about the establishment of the People's Republic in 1949.

The poets include Sun Yat-sen, Huang Xin (a military leader in the Sun Yat-sen movement), Qiu Jin (a woman revolutionary active at the close of the Qing Dynasty), Liao Zhongkai (Sun Yat-sen's assistant), He Xiangning (wife of Liao Zhongkai and formerly vice-chairman of the Standing Committee of China's National People's Congress and chairman of the Revolutionary Committee of the Kuomintang), Marshal Zhu De (formerly chairman of the Standing Committee of the NPC), and Dong Biwu (formerly vice-chairman of the NPC Standing Committee).

The book includes short biographies of each poet and the poems are annotated.

The Joint Book Company in Beijing has recently published "Notes on Wen Yiduo," which recounts the life of this poet, scholar and revolutionary who died in July, 1946.

The book includes historical data, poems and articles and stories from Wen Yiduo's life, mostly written by his colleagues, students, comrades-in-arms and relatives.

The Joint Book Company also plans to publish Wen Yiduo's "Annotations on 'Asking the Heavens'" and to reprint the "Complete Works of Wen Yiduo."

The China Research Society of Traditional Operas on Modern Themes has been set up in Nanjing.

The Society was formed by eight opera troupes from Beijing, Shanghai and Zhejiang, Hunan, Shandong, Henan and Shanxi provinces.

JOURNALISTS ASSOCIATION SPONSORS FILM RECEPTION

OW271851 Beijing XINHUA in English 1830 GMT 27 Dec 80

[Text] Beijing, December 27 (XINHUA)--A new colour film "Legend of Tianyun Mountain," with the 1957 anti-rightist movement and rehabilitation efforts two decades later as its theme, was shown this evening at a film reception for foreign correspondents working in Beijing.

The All-China Journalists Association, which sponsored the reception, also invited the film cast--actress, scenarist and director--to meet the journalists.

Four characters are involved in the film: the young communist Luo Qun wrongly labelled a "rightist" but who devoted his whole heart to surveying for the country's resources, his friend Wu Yao who passed the verdict on Luo Qun and tried to obstruct the effort to rehabilitate him, Lou Qun's sweetheart Song Wei who broke with him under political pressure and later married Wu Yao, and Luo Qun's wife Feng Qinglan, the real heroine of the film, who married Luo Qun and assisted him to complete his work of research in hardships.

Lu Yanzhou, who wrote the original novel and adapted it into the film, came from Hefei of Anhui Province yesterday. He said this evening that his intention was to help people draw lessons from their experiences in life and help restore the values debased during the ten years of chaos.

When the film was shown in Hefei, he told the reporters, the young people attending the seven previews received it well. A young printer told Lu Yanzhou after seeing the film that "a person must have a purpose in life, like Luo Qun in the film."

The screenwriter said he was satisfied with the work of the two actresses.

Xie Jin, the director, said that the focus of the film was on bringing out what is best in people. The film was not intended to arouse a controversy over the anti-rightist campaign of 1957, a subject which, he added, could well be left to a newspaper editorial to deal with.

"Let there be more and more people like Feng Qinglan in our country. This is what I want to say through the film," he said.

Films of such themes in which people criticized their own mistakes were a sign of strength and maturity, the director stated.

When asked how she liked the part she acted in the film, actress Shih Jianlan said she "loved this character for its inner beauty, moral strength. She is like a candle which burns itself off to give light to others." Once a Shaoxing opera singer, the 30 year old actress felt her stage experience was useful. "The traditional opera is expressive in bringing out inner feeling, especially through the use of eyes," she said.

BEIJING STATISTICS BUREAU CRITICIZES COSTLY WEDDINGS

OW030527 Beijing XINHUA in English 1200 GMT 2 Jan 81

[Text] Beijing, 2 Jan (XINHUA)--Beijing Municipal Statistics Bureau said today that young couples who married in the capital in 1980 spent an average of 1,554 yuan each on the wedding ceremony and on setting up house--equivalent to more than a year's wages for the bride and groom. Often, they had to borrow to pay the bills.

In a survey of 180 newly-wed couples, the bureau found that only 28 of them spent less than 1,000 yuan. Another 113 couples spent between 1,000 and 2,000 yuan and the remaining 39 spent more than 2,000 yuan.

About 21 percent of the money was spent on the wedding feast, sweets and cigarettes. About 33 percent was spent on bedding and clothes, and nearly 44 percent went on furniture and electrical appliances. One or two percent was used for other purposes.

The bureau pointed out that most of the young people earn less than 50 yuan a month, exclusive of bonuses. Often they spent beyond their means and had to borrow or rely on their parents for the money. On average, only 49.6 percent of the money they spent was their own.

The bureau said this sort of extravagance should not be encouraged. It said the practice of giving lavish feasts and sending expensive gifts had imposed a heavy obligation on the friends and relatives of bridal couples.

'GONGREN RIBAO' REPORTS ON PROHIBITION OF FIRECRACKERS

OW131244 Beijing XINHUA in English 1228 GMT 13 Dec 80

[Text] Beijing, 13 Dec (XINHUA)--Chinese authorities, in a notice issued recently, call on passengers not to bring with them explosives or inflammable articles while travelling by train, bus, ship or plane, reports the WORKERS' DAILY today.

The joint notice of the State Economic Commission and a number of ministries related to transport, commerce and public security prohibits the production and selling of fire crackers filled with potassium chlorate, red phosphorus and realgar, fire crackers which instantly explode when knocked or struck.

The units producing or selling such fire crackers will be held responsible if accidents occur due to explosion. Those who brought them on the trains, buses, ships or planes will certainly be dealt with.

Over the past few years, the notice points out, numerous explosions and fires have broken out on trains, ships, buses and planes, causing serious casualties and heavy losses of public property.

BRIEFS

PHYSICAL CULTURE MEETING--Beijing, 22 Dec (XINHUA)--A national physical culture science report meeting was held 15-22 December 1980 in Beijing. It was attended by about 300 professional and sparetime physical culture science researchers from some 120 units in various provinces, municipalities and regions. The meeting received 621 papers, 280 of which were read at the meeting. Yang Jingren, vice premier of the State Council, attended and addressed the meeting. [OW290014 Beijing XINHUA Domestic Service in Chinese 1555 GMT 22 Dec 80 OW]

1980 FILM PRODUCTION--Beijing, December 27 (XINHUA)--China has produced 80 feature films and opera films this year, a 20 percent increase over last year, announced Chen Bo, director of the Film Bureau of the Ministry of Culture, to the Beijing-based foreign correspondents attending a film reception this evening. Between January and October, the regular cinema houses attracted a total of 4,500 million viewers, a slight increase over the same period of last year. The figure does not include those served by the mobile teams. This year's new progress, according to director Chen Bo, was made on the basis of what had been achieved in 1979, the year which saw a turning point for China's film industry after having overcome the catastrophes brought about by those ten chaotic years of the "Cultural Revolution." New advances have been made in the quality of the films and there is also a wider variety of themes and forms. Among other developments he mentioned, fifteen co-productions with foreign countries have been finished or are in progress this year. [Text] [Beijing XINHUA in English 1628 GMT 27 Dec 80 OW]

MINISTRY OF CULTURE EVENT--Beijing, December 26 (XINHUA)--A 1980 competition of new plays, operas, music and dance begins today with a play entitled "A Day in K City" by the Chinese Children's Art Theatre, which illustrates the theme of equality before the law. Sponsored by the Ministry of Culture, the event will feature 13 performing troupes. They will give about 50 performances over a three-month period. The emphasis will be on contemporary themes. According to Wu Xue, head of the No. 2 Bureau under the Ministry of Culture, the competition is intended to promote exchanges among troupes in order to raise their artistic level. New outstanding playwrights, directors, actors, musicians and stage designers are expected to emerge in the process, he said. [Excerpt] [Beijing XINHUA in English 1213 GMT 26 Dec 80 OW]

NATURAL MUSEUM ASSOCIATION CONGRESS--According to GUANGMING RIBAO, the first congress of the Chinese Natural Museum Association was held in Beijing recently. The congress elected Pei Wenzhong, noted paleoanthropoligist and curator of the Beijing Natural Museum, as chairman of the association council. [Beijing Domestic Service in Mandarin 0900 GMT 18 Dec 80 OW]

NATIONAL YOUTH ART EXHIBITION--Beijing, 21 Dec (XINHUA)--Nearly 580 young painters and sculptors entered their works at the All-China Youth Art Exhibition that opened here this morning. Visitors are invited to cast a ballot for the best work. An awarding committee will announce the results. This is the second of its kind ever held in China since the country's first national youth art exhibition in 1957. [Beijing XINHUA in English 1200 GMT 21 Dec 80 OW]

MARXIST THEORISTS--Beijing, December 30 (XINHUA)--"Marxism and Socialism" will be the central research theme of Marxist theories in China next year, the GUANGMING DAILY said today. This has been decided by the Chinese Society for the Study of Marx-Engels-Lenin-Stalin Works at a meeting in Guangzhou, south China. The project will cover the following topics of immediate significance to China: determining the purpose of socialist construction; contradictions in socialist society and their solutions; developing the socialist economy and culture; practising socialist democracy; preventing the communist party, as the leader, from becoming the ruler. The meeting also discussed preparation for the commemoration of the centenary of the death of Karl Marx, which falls in 1983. The participants reviewed major world events of the past century, especially since the second world war, that influenced the development of Marxism, and the various tendencies that surfaced within the Marxist ranks. Attention was called to the study of European theories on communism and formulas of socialism. [Text] [OW300306 Beijing XINHUA in English 0255 GMT 30 Dec 80]

RELIGIOUS BUILDINGS--Beijing, Dec 22 (AFP)--The Chinese Government has decided to allow all religious buildings, with the exception of those being used as factories or schools, to revert to their original religious functions again, an official spokesman said here today. The spokesman for the government's religious affairs bureau said that restoration work necessary to repair the many places of worship which were damaged or destroyed during the Cultural Revolution would be carried out "gradually." The government decision was taken "recently" under the policy of religious tolerance currently being applied by the Chinese authorities the spokesman added. [Text] [OW231124 Paris AFP in English 1107 GMT 23 Dec 80]

CULTURAL NEWS BRIEFS--Beijing, December 21 (XINHUA)--Twenty local operas on contemporary themes, presented by 16 leading theaters in Fujian Province, have been entered in a provincial contest for the best script, performance, direction, music and decor. Guangdong held its 1980 provincial music festival this month with 830 songs and instrumental pieces, one-third of which were new compositions. A number of items are based on traditional music, with more modern melodies. Playwrights, directors, actors and actresses from Beijing's leading drama theaters discussed the role of the stage director, truthfulness of creative works, training new playwrights and encouraging new plays at a meeting called by the Art Bureau of the Ministry of Culture. They also exchanged views on the lack of artistic quality of some plays, and the tendency to present plays that "sell well" but do not have serious content. [Text] [Beijing XINHUA in English 0145 GMT 21 Dec 80 OW]

QI BAISHI'S PAINTINGS--Beijing, December 3 (XINHUA)--A selection of 108 paintings of China's best-known modern Chinese-ink painter, the late Qi Baishi, has been published in Beijing as a paper-back album. During the "Cultural Revolution," Qi Baishi's paintings were branded as feudalistic and petty-bourgeois and were banned. However, since the fall of the gang of four, there has been increasing demand for a popular collection of his works. [Beijing XINHUA in English 0825 GMT 3 Dec 80 OW]

MINORITY LANGUAGE PUBLISHING HOUSES--Beijing, December 8 (XINHUA)--China is to set up publishing houses in Inner Mongolia, Xinjiang and Tibet to publish books in the local languages. The call for the new publishing houses was made at a national meeting of minority language publishers in Beijing. The conference, attended by delegates from 12 of China's provinces and autonomous regions, was sponsored by the State Nationalities Affairs Commission and the State Publication Administrative Bureau. The delegates discussed the training of more editorial and printing staff and mapped out a three-year plan for publishing new works in the Mongolian, Uygur, Tibetan, Kazak, Korean, Tai and Yi languages, including historical writings, folk and classical literature and textbooks, medical books and dictionaries. They also called on the government to provide more subsidies for minority language publishing and to improve the network for distributing books. China has 55 minority nationalities--about six percent of the population--and 19 of them have written languages. At present, the country has 17 publishing houses which have minority language departments staffed by about 1,000 editors and translators. [Text] [OW091019 Beijing XINHUA in English 1228 GMT 8 Dec 80]

PEOPLE'S EDUCATIONAL PUBLISHING HOUSE--Beijing, December 4 (XINHUA)--The People's Educational Publishing House, China's chief publisher of school textbooks, recently celebrated its 30th anniversary. In the past three years, the publishing house has compiled and published a complete set of texts for the ten-year school system, both primary and secondary levels. Draft copies were sent to technicians and teachers across the country for comment before publication, and the publisher also sent representatives to various areas to gather suggestions. Over five hundred scientific and engineering texts and education books for teacher's colleges were also published. Forty-five well-known scientists and professors acted as advisers in compiling the primary and secondary school texts, and 370 experienced teachers from colleges and universities served on editorial boards which supervised the writing of texts covering 14 basic subjects in science and engineering. [Text] [Beijing XINHUA in English 1202 GMT 4 Dec 80 OW]

HEBEI ARCHEOLOGICAL FIND--Shijiazhuang, 5 Dec (XINHUA)--Nine and a half counting rods made of animal bones and dating back 1800 years have been found in a tomb uncovered on a construction site on the outskirts of Shijiazhuang, capital of Hebei Province. The counting rods are 7.8 to 8.9 centimeters long and 0.4 centimeters square at the ends. A "Wuzhu" coin minted in the first century A.D. and a pottery model of a well-head were unearthed at the same time. Archeologists estimate that the counting rods date from the early Eastern Han Dynasty (A.D. 25-220). The discovery of the Eastern Han Dynasty rods verified the account in records of the Sui Dynasty (581-618) that counting rods gradually became shorter and changed from being round to square. It also provides material for the study of the development of Chinese calculating tools. [Beijing XINHUA in English 0214 GMT 5 Dec 80 OW]

SPORTS COMPETITION--Beijing, December 28 (XINHUA)--1980 is a year of bumper harvest for Chinese sportsmen and women in their international competitions. This is the second year since the restoration of China's legitimate right at the International Olympic Committee. China sent its first team to the Winter Olympics. Apart from a boycott of the Moscow Summer Olympics owing to Soviet aggression against Afghanistan, Chinese sportsmen and women participated in a series of contests of world calibre. [Excerpt] [OW281906 Beijing XINHUA in English 1830 GMT 28 Dec 80]

CHRISTMAS CELEBRATIONS--Beijing, December 25 (XINHUA)--Mid-night mass was celebrated on Christmas Eve yesterday at the Church of St. Joseph and the Church of Immaculate Conception. Amid Merry Christmas music, Chinese and foreign Catholics attended a mid-night mass conducted by Bishop Yang Gaojian at the Church of Immaculate Conception and another by Bishop Fu Tieshan at the Church of St. Joseph. The Church of St. Joseph, located not far from business centre Wangfujing, was built in 1666. It was closed down and turned into a warehouse during the "Cultural Revolution." It was restored and repaired last month. Bishop Zong Huaide, chairman of the China Patriotic Catholic Association, and Bishop Tu Shihua held mass again today at the two churches. Christmas service was also held in Protestant churches here yesterday evening. At the same time, diplomatic envoys were invited to a Christmas party in the Nationalities Palace of Culture. [Text] [OW250208 Beijing XINHUA in English 0200 GMT 25 Dec 80] Beijing, December 25 (XINHUA)--Chinese Catholics and Protestants celebrated Christmas in a variety of activities today. A tea party was held here this afternoon jointly by the Chinese Patriotic Catholic Association, the National Administrative Commission and the Chinese Catholic Church and the Chinese Catholic Bishops College. In his speech, Zong Huaide, chairman of the Chinese Patriotic Catholic Association, said: "I am pleased to see fellow Christians celebrating Christmas so happily." More than 4,000 Shanghai Catholics attended the pontifical mass in the Church of Saint Ignatius of Zi Ka Wei, which is the biggest Cathedral in China. Eighty-eight-year-old Bishop Zhang Jiashu, head of the Chinese Catholic Bishops College, officiated at the mass. Protestants and Catholics in Guangzhou attended the Christmas service and mass in the Xi'an Church and the Stone Room Cathedral respectively. [Text] [OW251634 Beijing XINHUA in English 1553 GMT 25 Dec 80]

HAINAN PAPER BANNED--Beijing, 2 Jan (AFP)--A provincial Chinese daily newspaper has again been banned to foreign readers after being freely available to them for a year. The newspaper is the HAINAN DAILY, published in the southern island of Hainan off the Tonkin Gulf opposite Vietnam. Beijing postal services gave no explanation for the move when they refused to renew subscriptions to the HAINAN DAILY for 1981. The newspaper which usually reached the Chinese capital a week late, was one of the richest in news items revealing the state of undevelopment of the Chinese countryside, observers said. The HAINAN DAILY abounded in accounts of superstitious customs and difficulties the regime had in doing away with them so that such practices would not drag the country's modernisation under. The newspaper also reported various clan fights, events such as sabotage against oil well installations, and lengthy rundowns on the development of smuggling goods illegally brought into the country by sea from Hong Kong. [Text] [OW020810 Hong Kong AFP in English 0803 GMT 2 Jan 81]

BOOKS ON TAIWAN--Beijing, December 23 (XINHUA)--Sixteen new books about Taiwan were published this year in Beijing, Shanghai and Fujian. One of the new books, "Motherland's Taiwan," gives information about Taiwan's political, economic, cultural, educational and social life. "Taiwan Economics" describes its agriculture, industry, transportation, foreign trade, banking and finance. Among the literary titles are "Selection of Taiwan Poems," which presents the works of 80 authors, "Selection of Taiwan Folk Songs" and "Taiwan Folk Legends." Novels by Li-hua Yu and Hualing Nieh, two Chinese-born American writers are also on the list. Hualing Nieh's "Taiwan Anecdote" and her novel "Shangqing and Taohong," and Li-hua Yu's novel "Palms Again and Again," describe the life of people from the mainland who now live in Taiwan. [Text] [OW231244 Beijing XINHUA in English 1232 GMT 23 Dec 80]

XINJIANG KAZAK-CHINESE DICTIONARY--China's first Kazak-Chinese dictionary has been published by the Xinjiang People's Publishing House. The dictionary, which will be put on sale soon, is expected to promote mutual understanding and cultural exchange between the Kazak and Han people. It will also enhance the development of China's multinational culture. [OW271315 Urumqi Xinjiang Regional Service in Mandarin 1620 GMT 21 Dec 80]

XINJIANG RURAL SAVINGS--Urumqi, 27 Dec (XINHUA)--Bank savings by rural collectives and individuals in Xinjiang Uygur Autonomous Region have increased substantially this year. Between January and November this year, deposits by people's communes and their subdivisions went up 24.5 percent over the same 1979 period, those of individual commune members by 86.6 percent, those of state farms and stockbreeding farms by 20.3 percent and those of workers on these farms by 22.6 percent. Ismail Amat (of Uygur Nationality), chairman of the people's government of the region, recently noted that the big increase in bank savings indicates that people of all nationalities in Xinjiang, an area of national minority groups, have earned more income and that the region's living standards have improved. The per capita income of peasants and herdsmen this year will be up by seven percent over last year, he said, thanks to increased production, raised purchasing prices for farm and sideline products and government tax remissions or exemptions. [Text] [Beijing XINHUA in English 0752 GMT 27 Dec 80 OW]

PLA THEATER ART EXHIBITION--Beijing, 7 Dec (XINHUA)--The first PLA all-army theater art exhibition formally opened on 8 December in the Chinese People's Revolutionary Military Museum. The exhibition is sponsored by the Culture Department of the PLA General Political Department. [Beijing XINHUA Domestic Service in Chinese 0127 GMT 7 Dec 80 OW]

TOURISM PERSONNEL TRAINING--Wuhan, 12 Dec (XINHUA)--The China Travel and Tourism Bureau recently held a national discussion meeting on tourism workers' education in Wuhan Municipality. At the meeting, the responsible persons of tourism departments and tourism schools in 25 provinces, municipalities and autonomous regions discussed matters concerning funds, faculty and teaching materials of tourism education. There are tourism schools for training hotel managers, clerks and workers in Shanghai, Jiangsu, Sichuan and Hubei. The Hangzhou University and the Dalian Foreign Language College offer tourism economy and Japanese-language tourist guides courses respectively. Secondary tourism schools have been set up in Tianjin, Beijing and Zhejiang. [Beijing XINHUA Domestic Service in Chinese 0214 GMT 12 Dec 80 OW]

BEIJING PLANNED PARENTHOOD MEETING--Beijing Municipality held a meeting on 25 December to promote planned parenthood. Party committees at all levels are urged to continue to encourage family planning and deferred marriage and childbirth. This year Beijing's population growth rate has returned to approximately 9 percent from less than 2 percent in 1976 and this growth trend will continue for the next 8 years. Beijing's population already exceeds 8.7 million. As there are 770,000 young people of marriageable age in Beijing today, it will be difficult to keep population down to under 10 million at any time as instructed by the secretariat of the CCP Central Committee if measures are not immediately taken to control the population. During the meeting, Bei Jiefu, vice mayor of Beijing, urged that the CCP Central Committee's open letter be energetically propagated from now to the spring festival. [Beijing Domestic Service in Mandarin 1200 GMT 25 Dec 80]

ANHUI NEWSPAPER--"FU XIAO BAO," a newspaper with glorious traditions, will resume publication on new year's day. The paper, first published on 30 September 1938, used to be a paper circulated within the political department of the fourth division of the new fourth army. It later became the organ of the party committee of the Soviet region in Henan and Anhui and the paper of the Changjiang-Huaihe Regional Party Committee and the Suxian Prefectural Party Committee. The paper was forced to suspend publication in July 1972 when the gang of four was on the rampage. The new "FU XIAO BAO" will be published every Wednesday, informing mainly peasants and grassroot cadres in the rural areas about the party's policies and scientific and cultural knowledge and reflecting their demands. [OW031315 Hefei Anhui Provincial Service in Mandarin 1100 GMT 30 Dec 80]

SHANGHAI FRONT WORK--On 29 December the United Front Work Department of the Shanghai Municipal CCP Committee held a meeting for leading members of various democratic parties, the Association of Industry and Commerce, the Nationalities Affairs Committee and religious organizations to greet the new year and discuss how to uphold the party's readjustment policies and strengthen political and ideological work. The leading members of various parties maintained that political and ideological work must be further strengthened in the new year and that the party's readjustment policies must be fully and firmly implemented. Zhang Chengzong, director of the United Front Work Department of the Shanghai Municipal Party Committee, chaired and addressed the meeting. [OW031315 Shanghai City Service in Mandarin 2300 GMT 29 Dec 80]

CHINA DEMOCRACY ASSOCIATION MEETING--Beijing 29 Dec (XINHUA)--The Central Committee of the China Association for promoting democracy held a meeting to exchange experience on serving the four modernizations from 20 to 29 December in Beijing. More than 120 responsible persons of the association from 22 provinces, municipalities and autonomous regions attended the meeting. Minister of Education Jiang Nanxiang spoke at the meeting. He talked about the readjustment and reform of education at present and praised association members for their work in the educational field. Zhou Jianren, chairman of the Central Committee of the China Association for Promoting Democracy, attended the opening ceremony. Ye Shengtao, vice chairman of the association's Central Committee, encouraged association members to educate the young into qualified socialist citizens. [Beijing XINHUA Domestic Service in Chinese 1650 GMT 29 Dec 80]

SCIENTIFIC SOCIALISM SYMPOSIUM--The first national symposium to discuss the teaching of scientific socialism at party schools was recently held in Guangzhou. The meeting exchanged experience in teaching scientific socialism and discussed the nature of socialism, the superiority of socialism, socialist democracy and law, and subject matters and the system of scientific socialism to be studied. The meeting also exchanged opinions on compiling textbooks on scientific socialism and about forming a preparatory committee for the National Society of Scientific Socialism. The meeting was cosponsored by the CCP Central Committee Party School, the Guangdong Provincial CCP Committee Party School and the Guangzhou Municipal CCP Committee Party School. Attending the meeting were 223 people from 117 provincial, municipal and autonomous regional party schools and departments concerned. [Text] [Beijing Domestic Service in Mandarin 0900 GMT 30 Dec 80]

SHANGHAI STUDENT CRIME RATE--JIEFANG RIBAO reporters have learned from the Shanghai Municipal Public Security and Education Departments that the crime rate among students in Shanghai has declined since the beginning of this year, from 31.8 percent in May to 15.5 percent in November. It is the lowest figure since the start of the cultural revolution, but is still much higher than that before its start. [Shanghai City Service in Mandarin 2300 GMT 30 Dec 80]

LITERARY MAGAZINE--Beijing, 31 Dec (XINHUA)--"Literary Works and Contentions," a unique journal exclusively reproducing current controversial literary works and contentions and arguments spurred by these works, will come into being on 1 January 1981. Edited by the Chinese Society of Modern Literature, it is published by the Tianjin Beihua [one hundred flowers] publishing house. [OW041716 Beijing XINHUA Domestic Service in Chinese 0321 GMT 31 Dec 80]

HONG KONG PUBLISHING AGENCY--Hong Kong, 31 Dec (XINHUA)--The Joint Publishing Company, the Commercial Press and the Zhonghua Book Company will have a joint Hong Kong general administration office beginning 1 January 1981 to facilitate cooperation with foreign publishing houses. All of these three companies' branches in Hong Kong and overseas will be under this office's unified management. [OW041716 Beijing XINHUA Domestic Service in Chinese 1223 GMT 31 Dec 80]

SHAANXI PUBLICATION--Xian, 1 Jan (XINHUA)--"XIAN WANBAO" resumed publication on new year's day. The paper, warmly welcomed by the masses of Xian Municipality, was forced to suspend publication during the "Great Cultural Revolution" and later to change its name to "XIAN RIBAO." To meet the needs of the broad masses of readers, the paper resumed as an evening paper. After resumption of publication, "XIAN WANBAO" will be geared to the needs of grassroots units and the masses, with increased news on economic and cultural topics of great concern to the masses, and it will start such columns as "Xian Today," "The New Face of the Ancient City," "The Xian Market," "Friends of Youth," and "Mailbox on Life." [Beijing XINHUA Domestic Service in Chinese 0128 GMT 1 Jan 81]

1980 BEST-SELLING BOOKS--Beijing, 2 Jan (XINHUA)--A special study of China's economic problems by the noted economist Xue Muqiao was among China's best-selling books last year. It sold 2.1 million copies, indicating a rising interest in politico-economic subjects, booksellers in the capital said. "Be a Qualified Communist" and "Days with Commander Peng Dehuai" were also best-sellers. Peng Dehuai, minister of national defence in the 1950's, was persecuted to death during the Cultural Revolution. Others at the top of the popularity list were two general knowledge encyclopedias (a total of 6.63 million copies); the ancient classics "Pilgrimage to the West" and "The Biography of Yue Fei" (a total of 3.35 million); a selection of short stories by Mao Dun, a noted contemporary writer; the novel "C.I.D. Superintendent," by the young writer Wang Yaping, one of the few detective stories to appear last year; "Selected Novels from Taiwan"; and Chinese translations of Romain Rolland's "Jean Christophe," Charlotte Wbronte's "Jane Eyre," Jane Austen's "Pride and Prejudice," and some foreign science fiction. Booklets on how to maintain T.V. sets, cassette recorders, refrigerators and on gardening are also selling extremely well. [Text] [OW030425 Beijing XINHUA in English 1211 GMT 2 Jan 81]

NEW OPERA SOCIETY--Nanjing, 10 Dec (XINHUA) -- The Chinese Society for Studying Modern Operas was established in Nanjing Municipality yesterday. On 1 December, the Ministry of Culture called a meeting of eight local opera troupes from Shanghai, Hunan, Shandong, Shaanxi, Henan and Shanxi to discuss creation of more and better local opera plays on contemporary themes. A speech was delivered at the discussion meeting by Vice Minister Zhou Weizhi of culture. [Beijing XINHUA Domestic Service in Chinese 1202 GMT 10 Dec 80 OW]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CORRECT PARTY POLICIES HAVE TRANSFORMED RURAL ECONOMY

Beijing XIN SHIQI [NEW ERA] in Chinese No 1, Jan 81 pp 2-5

[Article by Li Honglin [2621 3163 2651]: "What Type of Cat Do We Need?"]

[Text] An old question is again asked: "After all, what type of cat is a good cat?" This question arises in the same old place--the countryside.

The Third Plenary Session of the 11th CCP Central Committee eliminated that leftist line which had led China into catastrophe, established a political line for the new period, and thus brought our country onto the road of scientific socialism. The most extensive beneficiary of the plenary session's line is the countryside. Wherever this new policy has been carried out seriously, production often has increased not by a few percent or by a little more than 10 percent but by scores of percentage points. Wherever the leftist line had played havoc, as soon as the trend was reversed, the outcome was markedly successful. In those so-called "three reliance" production teams--that is, "relying on loans for their production, relying on state-resold grain for their food, and relying on relief for their livelihood"--in just one year the situation had changed completely, and they were able to sell their surplus grain to the state. I have a family of relatives in the countryside in northern Anhui; every year in the past they have always sent me letters with bad news, and never once with good news. In 1979, it was a miracle that for the first time their letter conveyed the happy news of a bumper harvest during the serious drought. They had more than enough grain to eat and also money on hand. How could this happen? Because the Anhui Provincial Party Committee had resolutely carried out the political line of the Third Plenary Session of the 11th CCP Central Committee.

It seems rather difficult for agricultural production to bring about miracles. During the period of the "Great Leap Forward," "satellites" were launched every day; however, most of them were phony. [At that time, numerous claims about high output were made and these were called "satellites."] Now, real miracles have come about. They are like black cats and white cats having caught rats right before our eyes: nobody can deny them. However, people talk differently about the same fact. Some say that it is a good cat which has caught rats, while others say that it is a bad cat because it does not have the right color. Still others make the prediction that this cat is an ill omen and will lead us to disaster.

The dispute over cats started in the beginning of the 1960's. At that time our country was in serious difficulty. There were two views on the adoption of measures for overcoming the difficulties. One held that no matter whether a cat is white or black, whichever one catches rats is a good cat. The other held that only a cat of the right color is a good cat, and that a cat of the wrong color is not a good cat even though it catches rats. The outcome of the dispute was that the first view was defeated.

Till the "Great Cultural Revolution," there was further development on this issue. Some people said: "We would rather have socialist grass than capitalist seedlings." As long as anything was said to be "socialist," even including grass, it must be good--and still moreso the case with cats. It was not important for a cat to catch rats. As long as the cat had the right color, it had to be a good cat! Indeed, this political line truly fostered a number of spotted cats with dazzling colors. These cats did not catch rats but made a lot of noise, and very loudly. Of course, they ate greedily. However, these cats did not like to eat grass, whether it was socialist or capitalist, they refused to eat either kind. They ate only meat, whether it was capitalist or socialist; they liked very much to eat both kinds.

At present, in our policy we have freed ourselves from the leftist line and have begun to see practical results. However, in theory the difference between right and wrong is still not very clear. After all, what type of cat is a good cat? If the difference is not made clear, our correct policy cannot be carried out smoothly.

The dispute in the early period of the 1960's was about overcoming difficulties at that time. This was a matter of expediency. At present, the question is not to seek expedient measures to overcome difficulties, but to sum up our past experience carefully and look for a scientific way to build socialistm. That "a cat must catch rats" is only a figure of speech. The "cat" refers to production relations, and "catching rats" refers to the development of productive forces. In fact, this dispute is a basic theoretical disagreement of one's attitude toward Marxism.

Productive forces and production relations are two inseparable parts of the same production process which are not assembled after they have been made outside the process. In the process, productive forces play the decisive role. Production relations are social relations which take shape in the process of production. A certain type of production relation is required for a certain type of productive force. Production relations which meet the level of productive forces constitute a powerful motivating force pushing the development of production. This is a Marxist theory. This theory also tells us that neither production relations that surpass the level of productive forces meet the requirements of production; both hinder the development of productive forces. To sum up, we have the following law: "Production relations must meet the level of productive forces."

This is to say that people cannot choose production relations as they please and, of course, still less can they invent or discard any type of production relations as they please. Production relations are social relations independent of the people's will.

The fact that a certain type of production relation exists is simply because there is an objective necessity for the production itself. In other words, its existence is for the sake of production, not for putting up an appearance or for using a name that is nice to hear.

Therefore, there is only one standard for judging the merits of any given type of production relation and that is whether it promotes or hinders the development of productive forces, and not whether it has a high-sounding name or a nice appearance.

With this conclusion, when we look back at these cats, things become clear. We needs cats to catch rats. After all, what type of cat is a good cat? Of course, it is one that can catch rats. A good cat can catch rats, and nobody should care whether it is black or white, big or small.

However, for many years this view was said to be "revisionist." It was even called "the theory of the unique importance of productive forces." As its antithesis, the so-called "Marxist" view which occupied the dominant position for many years may be called "the theory of the unique importance of production relations." Such a view came from the theory that production relations play the decisive role under certain conditions. The term "certain conditions" seems to imply special circumstances; however, in practical application it became a universal truth, because any action taken against objective laws could declare itself to have been taken because of "special circumstances." Of course, productive forces should determine production relations: this is the basic principle of historical materialism. There can never be any exception. With the addition of "certain conditions," it became an exception and could actually overturn the basic principle of historical materialism. In those years this was exactly what happened. "The theory of the unique importance of production relations" became orthodox "Marxism." The basic principle of historical materialism, founded by Marx and Engels, inadvertently became "revisionism." As a result, the term production relations became a matter of primary importance, and nobody cared whether or not production relations could meet the level of productive forces.

In socialist Cuba, agriculture should take the road of cooperative transformation. There is no doubt about this. However, to promote the development of productive forces, cooperative transformation is inseparable from the actual conditions in our country.

In old China, agriculture consisted of backward, small-scale production widely dispersed like the vast sea. A socialist economy means large-scale production. There is a process of development from small-scale production to large-scale production. Our country completed the cooperative transformation of agriculture very quickly and achieved great success. However, with respect to production technology and management, within a short period most of our rural areas could not prepare the groundwork to undertake socialist large-scale production. Naturally, problems were left for necessary solution. When these problems remained unsolved, the cooperatives were undoubtedly unsound.

Just as expected, in 1957 there was agitation among the peasants to withdraw from their cooperatives. At that time, there was no great effort made to consolidate the cooperatives economically by developing production so that a peasant could get more material benefits than by working on his own. On the contrary, stress was laid on politics, and a "mass debate on the struggle between the two roads" was lauded. After the "mass debate," there was indeed no more agitation. However, the cooperatives were not really consolidated by means of this struggle. Immediately afterward, in 1958, a further big step was taken toward "first, big; second, "publicly owned." This brought about the people's communes. The special feature of the people's communes was the so-called "government and commune merged into one," as if the government was the master of the collective economy. Thus started the gust of "communist wind."

These actions may be summarized as follows: they were an attempt to take the road of socialist by waging unceasing struggles politically and constantly changing production relations economically.

To strike down any opposition or suspicion against such actions, in 1959 an "anti-rightist opportunism" struggle again was waged. The target of this struggle was mainly the cadres.

Through the "mass debate" in 1957 and the "antirightist" struggle in 1959, all opposition to such actions was crushed inside and outside the party, and among the cadres and the people. Nevertheless, these political struggles had done nothing to give impetus to the productive forces, but instead had undermined them. Three years of difficulties were the real result of such actions.

In the early 1960's we carried out a whole set of measures to readjust production relations in the rural areas, including stopping the "communist wind"; we affirmed people's communes as a collective economy; and we put into effect such policies as "ownership at three levels, with the production team as the base." These policies may be expressed in a few words--that is, to help production relations in rural areas meet the level of productive forces. If we compare socialist transformation in rural areas with walking, then in the past it walked too quickly, with the result that production relations overtook the level of productive forces, and production relations had to turn back to meet the level of productive forces. At that time there was a saying that they should retreat fully," that is, back to the state of meeting the level of productive forces. This is true Marxism. These policies played a useful role in the rehabilitation of agricultural production. However, neither at that time nor afterward did they seriously sum up their experiences and learn their lessons; instead, they refused to admit their mistakes. Moreover, they "concealed their faults and glossed over wrongs," and shifted the main [excuse for the] cause of economic difficulties to natural disasters. Thus there was no correct theory to guide us in action, and things were done not very efficiently.

Beginning in 1962, class struggle was again launched on a large scale, and the struggle was carried on with increasing vengeance. Personal realtions became more strained than ever, and the attraction of the collective economy faded away. Therefore, it was necessary to step up the struggle in order to consolidate the collective economy. This was a vicious circle. Later, somebody invented a theory which sang its own praises but actually reflected only this vicious circle. The theory said that "if the capitalist road is not blocked, it will not be possible to march toward socialism." In its simplified version, it meant that "strong criticism will promote greater efforts." According to this theory, all means of improving the livelihood of the peasants were blocked and rejected by criticism; these included private plots, family sideline occupations, "to each according to his work," and country fair trade. Consequently, something unusual occurred. Those peasants who had made their living by farming generation after generation lost interest in agricultural production. Therefore, it became all the more necessary to "promote" [their interest] by means of "strong criticism." Under the great pressure of "strong criticism," indeed many peasants sweated profusely and made "greater efforts" for many years. Their "great efforts" plus state investments did produce results in the transformation of natural conditions and in turning out technical equipment for agricultural production. (Of course, they also made much ado about nothing. The project of "diverting the water from west to east in Xiyang County, Shanxi Province, is only one of the examples.) What a pity. Despite the great improvement in irrigation, mechanization, and other conditions, agricultural production never could get by. What was the reason? Fundamentally, the reason was that there was no economic motivating force.

What is the explanation for this fact? The explanation is that if production relations could not meet productive forces, then no matter how high-sounding the name and no matter how great the power used in carrying out mass criticism, in blocking "the road to capitalism," and in "promoting greater efforts," all these [efforts] would be useless.

How could production made an immediate change in the same village after the Third Plenary Session of the 11th Party Central Committee? It was because the readjustment of production relations brought about the economic motivating force. As the saying goes: "You can't push a train forward." If a train has no motivating power of its own and must be "pushed" by outside forces, even though the train may be pushed forward a few feet by means of "the tactics of using a huge crowd of people," this after all is not a permanent solution. Production is an economic activity, and the collective economy is an economic entity that can be motivated only by applying the economic level so that it will go into operation by relying on its economic motivating force. This is a very simple truth. Unfortunately, for many years this truth was taken as "revisionism" and was bitterly criticized, so that it lost its ground. Only after the Third Plenary Session of the 11th Party Central Committee has this issue been settled.

Respect for the right of production teams to make their own decisions helps the collective economy become worthy of its name, and not a state-run economy or any other kind of economy. The introduction of the job responsibility system for production in various forms, including the fixing of farm output quotas for each household, is a way of operation and management that meets the level of the productive forces. It properly integrates personal interests with collective interests, and can arouse to the maximum the workers' enthusiasm for production. All this helps production relations to meet the level of productive forces, and therefore, brings about an economic force which greatly promotes the development of agricultural production.

Do these measures hold fast to the path of socialism? Yes, the Third Plenary Session of the 11th Party Central Committee held fast to the path of scientific socialism. Socialism is not some kind of perpetual, unchangeable pattern which the people have designed, but is a new social system which the workers, united, have created according to the realities of their country. The system itself is in the process of development. It is flexible, adaptable, and has strong vitality. In our country, the level of social productive forces is fairly low. On the condition that the public ownership economy holds sway over the whole country, there should be ways to have a multiple economy. In addition to various production responsibility systems with different degrees of public ownership, should be the presence and development of an individual economy which benefits production and people's living should be permitted and encouraged in cities and rural areas. According to the hackneyed ultraleftist view, this undoubtedly means the "restoration of capitalism." They do not understand that the different job responsibility systems are merely various methods of operation and management inside the collective economy. Even the fixing of farm output quotas for each household is one of the ways, provided that the extent of public ownership is very low. However, it does meet the concrete conditions of the productive forces in those areas, so that it can push forward the development of production. Even individual farming is also not the same as capitalism, because individual farming does not exploit others of their labor. Under the socialist economic system, and with the enforcement of correct policies, this individual economy will not go in the direction of capitalism but will help the socialist economy and be a supplement to it. At present, this individual economy is not yet a socialist economy of public ownership; however, it does promote the development of production, and therefore it contributes to the consolidation of the socialist system. With the development of productive forces, when there is the objective necessity and there are the necessary conditions, the individual economy will naturally go through a transition to a collective economy, and there will be a transition of economic management from a low degree of public ownership to a high degree of public ownership. Then, this will not mean a "transition to poverty," but will constitute a progress along the path of scientific socialism.

As for the kind of "socialism" which sounds good in speech but hinders the development of productive forces, we Chinese people have no such need of it. Though it is called "socialism," in fact it is false, and at best it is nothing. It has only a name but no substance, like a spotted cat which has beautiful fur but cannot catch mice. It is not only good for nothing but also a burden to keep. The Chinese people have endured untold sufferings from such kinds of cats and are determined to get rid of them. What we need is a cat that catches mice. Black or white, as long as it catches mice it is a good cat. This is the truth which our people have finally realized from our experiences of many years.

LAST HALF OF CHEN DUXIU'S LIFE CRITIQUED

XIAMEN DAXUE XUEBAO [JOURNAL OF XIAMEN UNIVERSITY] in Chinese No 2, 1981 pp 86-94

[Article by Li Shuying [2621 3219 1260]: "Critique of Chen Duxiu [7115 3747 4423] Following the Collapse of the Great Revolution [1924-1927]"]

[Excerpts] Recently historians have given considerable emphasis to study and commentary about Chen Duxiu. Numerous substantiated articles have been continuously published, and original materials have also steadily come to light. This is a manifestation of the increasing thoroughness of research into party history. A look at already published articles shows research and commentary to be concentrated largely on Chen Duxiu's early activities; research on this activities following collapse of the Great Revolution has still been fairly scant. Furthermore there has been no research linking the early period to the late period, and so there is no way to prepare a scientific and fair commentary on Chen Duxiu's whole life.

The history of Chen Duxiu during the late period extends from the collapse of the Great Revolution in 1927 until 27 May 1942, when he fell ill and passed away. These 15 years may be roughly divided into periods. The first period was from the collapse of the Great Revolution until his expulsion from the party (July 1927 to the end of 1929). The second period was the time of his arrest and jailing by the Kuomintang (early 1930 to 1938). The third stage was when he lived in seclusion at Jiangjin (1939-1942) [Sichuan Province]. Different appraisals exist about these three periods, requiring further discussion.

I. Wrong Line or Counterrevolution?

Collapse of the first revolutionary civil war resulted from betrayal at the time by a reactionary clique that had arisen in the allied Kuomintang, and the excessive strength of the combined forces of imperialism and the Kuomintang reactionary clique. At the same time the Communist Party was still in its youth and lacked experience, and Chen Duxiu, in his role as party secretary, carried out an erroneous line at a critical time.

After the collapse of the Great Revolution in July 1972, Chen Duxiu secretly returned to Shanghai. Though he had been dismissed from his Central Committee leadership position, he was still a member of the party. In a 1927 letter to the Central Committee, he noted that, "Though the Kuomintang cannot long rule and consolidate, for the present it is not about to collapse. Therefore, the time for us to use the power of the masses to mop them up and seize power has not yet arrived. Adoption of policies for action that are too early for events is more mistaken, and I recommend use of a slogan of 'four no's' (namely, no payment of rents, no tendering of grain, no payment of taxes, and no repayment of debts) to take the place of the slogan of 'land to the tiller,' as a simpler and more concise way of arousing the peasant masses." During the uprising in Guangzhou, he wrote another letter to the Central Committee in which he held that "whether the Guangzhou insurrection succeeds or fails, we must do this. There is no doubt whatever about it." This showed an attitude of support. Though Chen Duxiu no longer held a leadership post, he still stood with the party.

As the resolution developed more deeply, the split between Chen Duxiu and the party and Communist International became sharper and sharper. The Communist International directly invited Chen Duxiu, Cai Hesen [5591 0735 2773], Luo Zhanglong [5012 4545 7893], Zhang Guotao [1728 0948 3447], and Deng Zhongxia [6772 0022 1115] to attend the Sixth Party Congress in Moscow during June 1928. Chen Duxiu urged the other four to attend while refusing himself to go. This demonstrated that Chen Duxiu had a passive attitude about organizational relationships.

In October and November 1929, the CCP Central Committee's Politburo made a series of resolutions (namely resolutions about opposition to opportunism within the party and about the Trotskyite opposition faction, and about cancellation of Chen Duxiu's party registration). It made a rather comprehensive criticism of Chen Duxiu's organizational and political mistakes. Major problems may be summed up in the following four ways.

1. Failure to adopt a correct attitude about the question of responsibility for collapse of the Great Revolution.

Granted that Chen Duxiu recognized in words that the collapse of the 1927 revolution resulted from opportunism, yet on the question of responsibility, he held that, "We should very frankly and very objectively recognize that in the past and at the present time, opportunism came from the international, and the international should bear responsibility." A meeting held that the Politburo should bear major responsibility. Chen Duxiu was general secretary at the time and should have borne major responsibility, yet Chen Duxiu only acknowledged that, "The youthful Chinese party did not yet have the ability to discover theories or decide policies. As for blindly carrying out opportunistic policies without the slightest understanding or ability, this is a responsibility that Chinese party leadership organizations should bear." He regarded himself as an implementer yet he used, "youthful," "blind," and "without the slightest understanding or ability" to explain away the mistakes that he himself had made. Without doubt, this was very wrong.

2. Following collapse of the Great Revolution, a split existed in the Central Committee of the party on the questions of the situation, the character, and the tactics. Chen Duxiu held the nature of the Chiang Kai-shek regime to be a "purely bourgeois regime, and the Kuomintang purely a political party of the bourgeoisie." For this reason, though he acknowledged that a "revolutionary high tide could naturally come again," he, in fact, denied the semi-colonial and semi-feudal social

character, and the need to carry out anti-imperialist and anti-feudal missions, abolishing all illegal struggle and seeking to carry out legal activities. Such a mistaken conception of the situation, the character, and the policies of the revolution was clearly divergent from the thesis that had been repeatedly put forward ever since the Seventh Central Committee Meeting.

3. Acceptance of the Trotskyite point of view politically, and carrying out factional activities organizationally.

Chen Duxiu's views of the reasons and responsibility for collapse of the Great Revolution, of the circumstances, and of the nature of revolutionary tasks and tactics following collapse of the revolution were very close to those of Trotsky, though he did not understand that at the time. During the summer of 1929, students who had studied in the USSR and had accepted Trotsky's point of view were continuously returning to China, bringing Trotskyite books with them. Chen Duxiu's ideology underwent a great change. He said, "after a year of deep thought and careful consieration," "I firmly believe that if either I or some other comrade had been able at the time to have had a deep perception such as Comrade Trotsky had about international opportunist policies, and had argued so resolutely as he,... such a disgraceful collapse of the Chinese revolution would not have resulted, making the party as politically bankrupt as it is." Subsequently, Chen Duxiu further rebuked Comrade Stalin and the Communist International, opposed the theory of building socialism in one country, criticized the foreign policy line and policies of the USSR, and opposed the policy of cooperation between the Kuomintang and the Communist Party during the period of the first revolutionary civil war. He also attacked the Chinese revolution's correct advocacy of the need to go through a national democratic revolutionary stage of opposition to imperialism and feudalism. On 15 October 1929, the Politburo of the CCP Central Committee issued, "Resolutions on Opposition to Opportunism Within the Party and to the Trotskyite Opposition Faction," which noted that "Comrade Chen Duxiu must immediately submit to the decisions of the Central Committee and accept the Central Committee's warning to work under the line of the party and stop all anti-party propaganda activities." Mericing attention here is that the Central Committee had already issued a warning to Chen Duxiu at this time, that it still termed Chen Duxiu a comrade, and pointed out that Chen Duxiu, "is not only purposely stirring up discussion of the party, but is also carrying out their small organization activities." Nevertheless, though Chen Duxiu sympathized with Trotskyite ideas at this time, he did not formally participate in or openly organize Trotskyite organizations.

4. There was a divergence on the Chinese Eastern Railroad question, which sharpened contradictions and resulted in the Central Committee categorically making the decision to abolish Chen Duxiu's party registration.

Following the "12 April" counterrevolutionary coup d'etat in 1927, the Kuomintang purified its ranks and became anti-communist internally, and became pro-imperialist and anti-USSR externally. At the end of 1928, Zhang Xueliang's [1728 1331 5328] "change of flags" strengthened Chaing Kai-shek's forces. At the time, the USSR government had not yet put into effect the first manifesto on China, which it had published on 25 July 1919 (namely abolition of all unequal treaties and all special privileges provided for between Czarist Russia and China, including future "unconditional return to China with no compensation whatsoever" of the Chinese Eastern Railroad, etc.). The Chinese Eastern Railroad was nominally under joint control of China and Russia, but they monopolized rights to the railroad, in fact, Chiang Kai-shek had taken the opportunity to use armed force to take over the Chinese Eastern Railroad, impelling Zhang Xueliang into the first line against the Soviet Union and making Zhang more subordinate to himself. Under these circumstances, Chen Duxiu did not agree with the Central Committee's raising of the slogans of "Support the Soviet Union," and "Protect the Soviet Union," but sent a letter to the Central Committee recommending adoption of the slogan, "Oppose Kuomintang Harm to the Country." In terms of how properly to handle the relationship between internationalism and patriotism, Chen Duxiu's views were not entirely lacking redeeming merit. However, at that time, leadership of the Central Committee was in the hands of "leftist" opportunists. In "On the Views of Comrade Saweng [2320 5040] [phonetic] About the Question of the Chinese Eastern Railroad," Wang Ming said repeatedly that he wanted to carry out a "determined struggle" with Chen. Consequently, the divergence between Chen Duxiu and the "leftist" opportunist on the issue of the Chinese Eastern Railroad was the most direct reason for his expulsion from the party.

Judging from the above four situations, I believe Chen Duxiu had no correct perception of the error of his own opportunistic line. Politically and ideologically, serious divergences with the CCP Central Committee existed, and he put forward numerous erroneous views. Organizationally, there were small group factional activities. As the Seventh Plenary Session of the Sixth Party Central Committee noted, opposition to Chen Duxiuism was entirely necessary at the time. However, it was deficient in the way it was done, "too much emphasizing individual responsibility, supposing that simply by striking out against people who had committed errors, the problems could be solved." Moreover, in the resolution there was another formulation, namely that the group of capitulationists of the period of the first Great Revolution period, as represented by Chen Duxiu, had now become pessimistic and had lost hope about the future of the revolution, gradually changing into liquidationists. He had adopted the reactionary Trotskyite standpoint,...and had united with reactionary Trotskyite elements to establish a small anti-party organization, as a result of which there was no choice but to expel him from the party, after which he degenerated into counterrevolution. How should the contradiction between these two be viewed? I believe that the Yan'an rectification emphasized summarization of the lessons of the erroneous "leftist" lines followed on three occasions, the erroneous "leftist" line of Wang Ming, in particular. On the question of Chen Duxiu, inasmuch as history has already rendered a decision, and since the matter bears on the Communist International and the USSR, there have been no renewed deliberations.

II. Chen Duxiu Participates in Organization of Trotskyite Faction, But Does Not Defect to the Enemy Nor Become a Traitor to China

Chen Duxiu himself admitted to having participated in a Trotskyite organization, and he also denied the same. Some documents and articles are also a little confused about the time when Chen Duxiu sympathized with Trotskyite views and his own organization of a Trotskyite faction. Actually, Chen Duxiu had adhered to Trotskyite views from an early date, and his participation in the organization of a Trotskyite faction occurred after his expulsion from the party. Between 1 and 3 May 1931, the Chinese Trotskyite faction held a unified conference for which Chen Duxiu became the Trotskyite faction organizational secretary. Naturally, this was one of the serious political mistakes of Chen Duxiu's life. After 1930, Trotskyism had changed fundamentally. It was no longer a political faction of the proletariat but rather, "7 or 8 years earlier, Trotskyism had been one such political faction of the proletariat, albeit an anti-Leninist party and consequently an extremely wrong political faction; nevertheless, it was still considered to be a political faction." The separate organization that Chen Duxiu established following his expulsion should be regarded in the social life of China as having been a political faction that was neither Kuomintang nor Communist Party.

In a political resolution issued in the name of the Standing Committee of the Trotskyite faction in May 1932, Chen Duxiu noted that "Our tasks must be the organization of and participation in volunteer armies of the workers, peasants, and urban poor, and to resolutely raise high the banner of opposition to Japan and opposition to the Kuomintang..."It must be admitted that Chen Duxiu unswervingly advocated opposition to Chiang and resistance to Japan. In October of the same year, Chen Duxiu was arrested and jailed by the Kuomintang for the crime of "endangering the republic."

The "leftist" opportunists represented by Wang Ming termed Chen Duxiu's arrest as "an opportunity for the liquidationists to go more firmly hand in hand" with the Kuomintang, "the ruling class using the tactic of detaining Chen Duxiu as a means of discussing together with Chen an attack on the Chinese revolution." Many fair minded people at the time begged to differ with this point of view. Had Chen Duxiu been arrested and jailed because of his opposition to Chiang and resistance to Japan and "endangering the republic," or was it "to go more closely hand in hand with the Kuomintang?" This was a principle that had to be clarified. We can conduct an analysis from the following several standpoints.

1. Words and actions prior to imprisonment. Following the September 18th Incident [seizure of Shenyang in 1931 by Japanese invaders], in an article published by Chen Duxiu in the third quarter issue of HUOHUA [Spark] titled, "The Broad Road of the Movement for Resistance to Japan and National Salvation Now," Chen supported a boycott by the people of the entire country of Japanese goods, and called for a declaration of war against Japan and opposition to Chiang Kai-shek's policy of no resistance. He also pointed out that "In order to declare war on Japan, in order to realize a national revolutionary war, and in order to win victory in a war against imperialism, only resurgence of the third revolution in China and use of a revolutionary mass regime to replace the counterrevolutionary regime would succeed. (This revolutionary mass regime to be implemented through a nationwide meeting for opposition to Japan and national salvation, or through a national congress, or through a Soviet)."

2. Attitude following arrest by the Kuomintang. Chen Duxiu had been arrested in the public concession in Shanghai, and following his arrest, he "damned his mistreatment in the Shanghai detention house, and persisted in talking unreasonably saying efforts should be stepped up to take back the concession" [from European powers]. The "Xian Incident" [the kidnapping of Chiang Kai-shek] of 12 December

1936 made "Chen Duxiu simply as happy as a child celebrating New Year's." He Yingqin hoped to win him over, and asked for his autograph. Chen Duxiu wrote, "Armies may make a person captive, but no one can imprison a person's will." Released from jail, Hu Shi and otherw wanted him to join a national defense congress, but met with flat refusal.

3. Demeanor during trial. In court, the judge asked Chen Duxiu, "Why did you want to overthrow the national government?" Chen replied, "This is a fact, which cannot be denied. The reasons are three: (1) The present Kuomintang government is ruled by bayonets and the people have no rights of speech; even members of the Kuomintang have no right of speech. This is not according to the principles of democratic rule. (2) The Chinese people are already extremely poor, but warlords and bureaucrats know only how to concentrate money and put it in imperialist banks. The people are so distressed, they do not have food to eat. Such was the situation when Korea was subjugated. (3) The people of the entire country are for resistance to Japan, but the government retreats step by step. The 19th Route Army offered resistance in Shanghai, but the government would give them no aid. The so-called long war of resistance is nothing more than the four words, long war of resistance; there has never been any resistance. In view of the three points mentioned, the people have a duty to oppose this government, which contravenes the three principles of the people and has no civil rights in fact." Chen Duxiu inspired awe by upholding justice in court, and demonstrated a strongly serious and principled stand in resisting Japan and opposing Chiang.

Finally, the Kuomintang sentenced Chen Duxiu to 13 years in prison and forfeiture of civil rights for 15 years. After the outbreak of the war of resistance against Japan, as a result of appeals by the party, Chen Duxiu was released from prison in August 1937 after having spent a total of 5 years there. No data shows that he bowed his head or bent his knees under threats or enticements, or that he became more intimately linked "hand in hand" with the Kuomintang, to become a traitor to the revolution. The party understood this situation.

Following his release from prison, Chen Duxiu indicated a desire to undertake work under the leadership of our party, and he made contact through Lo Han [5012 3352] with the party's Central Committee. Numerous comrades also expressed an attitude of welcome. Comrade Zhou Enlai pointed out that "As Trotskyites, Chen Duxiu and Lo Han had advocated opposition to Japan." On 19 March 1938, Ye Jianying [0673 0494 5391], Bo Gu [0590 0657], and Dong Biwu [5516 1801 2976] gave Chen Duxiu three conditions for returning to work under the leadership of the party. "(1) Public renunciation and resolute opposition to all Trotskyite theories and activities; public declaration of a break in relationships with Trotskyite organizations; and admission that past participation in the Trotsky faction had been a mistake; (2) Public announcement of support for a national united front policy of resistance to Japan; (3) Demonstration in action of the sincerity of this support. When Dong Biwu went to meet Chen Duxiu, he again expressed hope that he would earnestly practice the conditions that the Central Committee had put forward, and publicly announce as soon as possible his own political attitude. Chen Duxiu very much had the bad habits of old scholars and doctors, and was rather reluctant to publicly admit his own errors. We should honestly point out that before Chen Duxiu went to prison, he was a member of the Trotskyite faction. This is a fact.

But after coming out of prison, he had, in fact, divorced himself from the Trotsky faction's organization. In 1939, Chen Duxiu wrote a letter to Trotsky in which he criticized the policies of the Trotskyites saying, "Such a closed-doorist, ultra-left small bloc (in which dissenting elements are a rare exception) naturally has no hope of developing; even if it were able to develop, it would be an obstacle in the way of the Chinese revolutionary movement." Between 1938 and 1940, "Trotsky wrote letters asking Chen Duxiu to go to the United States, but he refused."

After coming out of prison, Chen Duxiu did not continue in Trotskyite activities, and the party extended its hand to him. But, in the end, he did not return to the party. I believe there were three reasons why.

First, at that time the USSR was just beginning the struggle against the "alliance between the rightists and the Trotskyites." In 1938, XINHUA RIBAO [New China Daily News] published an article linking the struggle in the USSR to China, and Chen Duxiu could not avoid becoming an object for struggle. In fact, as early as December 1937 at a Politburo meeting, Wang Ming had vilified the proper contact between the party and Chen Duxiu. He shouted, "We can cooperate with anything in resistance to Japan,...but we cannot cooperate with the followers of Trotsky. In China, we can cooperate with Chiang Kai-shek and the anti-communist agents under his control, but we cannot cooperate with Chen Duxiu."

Second was the premeditated frame up done by Wang Ming and Kang Sheng [1660 3932]. They flew the banner of resolute support for the Communist International, but used it as a club to beat people. The 28 January and 8 February 1938 issue of JIEFANG [Liberation] carried an article by Kan Sheng titled, "Root Out Spies of the Japanese Invaders and the Public Enemies of the Nation, the Trotsky Gangsters," which termed Chen Duxiu a " Chinese traitor."

Kang Sheng's article was full of holes and irrational. For example, following the "18 September" incident, Chen Duxiu was already behind bars, so how was he able to represent the Trotskyite organization in talks with spy organizations of the Japanese invaders? In another instance, it was said that if Chen Duxiu's Trotskyite organization would "not obstruct Japanese agression against China," Japan promised him payment of 300 yuan monthly, while in the same article it said that the "Japanese invaders would subsidize the Trotskyite gangster, Zhang Mutao [1728 1970 7118], with 50,000 yuan monthly, and wanted him to organize a so-called "New Party" to counter the Communist Party and to destroy the national united front against Japan." Considering that Chen Duxiu's status was doubtlessly higher than that of Zhang Mutao, why was Chen Duxiu so cheap in the eyes of the Japanese invaders? This was hard for people to believe. Wang Ming's and Kang Sheng's frame up of Chen Duxiu was the result of a base political plot to connect Chen Duxiu, the international anti-right faction and the Trotskyite alliance struggle so that Chen Duxiu, though he hoped to return to the party, would almost certainly be unable to do so. The facts have been shown that Chen Duxiu had not degenerated into a traitor against China, and this fabricated and ridiculous piece of history must be settled.

III. Dejected, Living in Seclusion and Cut Off From the Party, But By No Means Counterrevolutionary

After suffering the aforementioned setbacks and attacks, Chen Duxiu's mentality underwent very great change. Henceforth, he adopted an attitude of opposition to Chiang and resistance to Japan, but without "playing up to the Communists," and he gradually became dejected and withdrawn. He no longer took part in factional political activities, but rather mostly engaged in the annotation of writings, published some articles on current political topics, and lived a life of poverty. On 27 May 1942, he succumbed to illness at the age of 63.

The several tens of political essays he published during this period contained political views, which may be summarized in the following manner.

1. Continued advocacy of resistance to Japan, opposition to German and Italian fascists, and approval of the establishment of a national united front to resist Japan, and an international united front against fascism.

In an article titled, "The Question of Political Parties During the War of Resistance," which was published in April 1938, he noted, "Today when the nation faces a crisis in survival or destruction, all political parties and factions, no matter whether in power or in opposition, must, if they believe the welfare of the people to be higher than the welfare of political factions, unhesitatingly avoid controversy about fundamental policies involving victory or defeat in the war of resistance and devote their full energies to a war of national liberation." He approved establishment of a united front of cooperation between the Kuomintang and the Communists, saying, "A halt to the many years of civil war by the Kuomintang and the Communist Party in the face of the crisis to the nation, and military cooperation in the war of resistance is a matter about which there can be no question." In another article, he opposed united ideological beliefs as a condition for cooperation between the parties in the war of resistance, advocating that there can be only one slogan to make parties cooperate and unite and that is "resistance to Japan to save the nation from extinction."

He firmly opposed the war of agression launched by Hitlerite Germany. He said, "'annihilation of Hitler's Nazi followers' must be the overall goal of the common attack by all peoples. Only when all other struggles have a positive role and no negative role in this overall objective can they have progressive significance."

At the time the view of the Trotskyites held that both parties to the war were imperialist and reactionaries, and they wanted adoption of a program of collapse of the present government in order to obtain arrival of world revolution. Chen Duxiu opposed this view, feeling that it would only benefit the Nazis.

2. Opposition to dictatorial fascism, but a muddled distinction in principle between the USSR and German and Italian fascists.

Before the USSR declared war on Germany, he regarded the treaty signed between the USSR and Germany as being the same thing as the Munich policy of the British and French. Once the Soviet Union went to war, his attitude changed, and he wrote, "For the same reason, we do not stand for the USSR's adoption of defeatism, although no facts make us believe that for the fate of human freedom the follower's of Stalin's party are any better than the followers of Hitler's party."

He did not sufficiently credit the power of the Soviet Union. He said, "When the war is over there can be only two opposing leading blocs that are entirely independent and not under the control of others, the United States versus Germany or Great Britain versus the United States. The people of all other countries can only become subordinate to the blocs led by these two leading groups in the name of alliance or full cooperation. Not only will the present productivity of the USSR make it unequal to the task of being a leading bloc, but it has long since departed from socialism."

3. Overlooked the right of leadership in the united front to resist Japan

He emphasized that the welfare of the nation is greater than the welfare of any political party or faction, but he did not understand that only when the united front against Japan was under the leadership of the Chinese Communist Party could full victory in war be won against Japan. He kept talking about unity, but not about struggle. He said, "This alliance has been quite effective after several months in the war of resistance. But at the same time the undercurrent of friction between the two parties gradually floats toward the surface. This is something everyone knows, and something that cannot be denied." He felt the reasons for the friction to be: "On the one hand the Kuomintang has been unable to cast aside its attitude of calling for surrender [of the Communists], and on the other hand the Communist Party has been unable to candidly stick to its own political advocacy in the war of resistance in making political accommodations and promises on every matter; consequently this has aroused a priori suspicion on the part of the Kuomintang in both political attitude and in propaganda matters that Communist actions do not accord with their words, and all frictions gradually increase daily." Therefore, he advocated that the Communist Party and all other parties positively support the war of resistance to Japan. "Today when the nation is at last gasp, parties in opposition should give support in word as well as in deed to the government's war of resistance to win victory. There should be no planning to conserve one's forces or taking advantage of misfortune to do damage one to another." Had things been done as he proposed, that would inevitably have meant taking the same old disastrous road to defeat as in the Great Revolution.

4. Depreciation of the role of people's war, and maintenance of a pessimistic attitude toward prospects for victory by the people

He believed that "true guerrillas," had a special function in pinning down and harrassing the enemy during war; nevertheless if in the war of resistance "guerrillas and guerrilla warfare tactics were overestimated, the enemy would be helped unconsciously to occupy more easily the large cities and main transportation and communication arteries of the entire country, and even though the guerrillas might extend into every rural village and small city in the country, or even evade the enemy's forces and establish in out of the way places some pitiful border area governments, the country must still be counted as having been lost! Without large cities, there is no country."

He slighted the importance of the people's armed forces under our leadership, not supposing the Eighth Route Army and the New Fourth Army to be major forces, instead pinning his hopes for victory in resistance to Japan on the Kuomintang's conventional forces. In Chen Duxiu's view, the outlook after the war was if not a revival of semi-colonialism then a slide into colonialism. This was because he lacked a true understanding of the Soviet Union and was unable, as well, to correctly estimate the anti-Japanese strength of the leadership of the Chinese Communists; consequently, he held a pessimistic attitude toward post-war China.

During his late years, Chen Duxiu's ideology was extremely contradictory. He had characterized himself as a "lifelong opposition faction," who had spent his whole life exploring without being able to find a proper political home to which he could repair.

The aforestated circumstances show that in his late years Chen Duxiu was an advocate of resistance to Japan, yet as a result of political setbacks, extremely contradictory spiritual vacillation, dissatisfaction in his dejection, living in isolation yet not linking loneliness, he expressed numerous wrong opinions and divorced himself from the revolutionary trend. This was the inevitable result of loss of correct theoretical guidance and being cut off from the revolutionary organizations. However, he never degenerated into counterrevolution, and to unfairly exaggerate his dejection, dissatisfactions, and erroneous statements, etc. as making him a "traitor to China," or a "counterrevolutionary" is an attitude that does not seek truth in facts.

In an overall sense, Chen Duxiu's life was one of great accomplishments and great errors. During the May 4th [Chinese political and cultural movement of 1919], and the period of founding of the party, he made major contributions. During the first revolutionary civil war's latter stage, he committed the error of following a rightist opportunism line. Later, he went from an erroneous line to sympathy for Trotskyism, engaging in and organizing anti-party factionalist activities. This was the great mistake of his life. During the last half of his life, he staunchly opposed Chaing and resisted Japan. His attitude of resistance to Japan was active, but his fundamental attitude toward the USSR and toward Stalin was wrong. He perservered in opposition to Chiang, but he also spoke and acted against the Communists. He followed a tortuous path his whole life long, and it may be said that though Chen Duxiu was a good Marxist, and was not a "traitor," or a "counterrevolutionary," he was a party leader who made grievous errors, but also a democratic radical with patriotism.

GUANGDONG PARTY LEADER SPEAKS ON IMPORTANCE OF PARTY HISTORY

Guangzhou YANGCHENG WANBAO in Chinese 17 Jun 81 p 2

[Article by Wang De [3769 1795]: "Do a Good Job on Party History Research To Promote Glorious Tradition of the Party"]

[Text] On this solemn commemorative occasion of the 60th anniversary of the founding of the CCP, on behalf of the Guangdong Provincial Party Committee, I want to extend my warm congratulations to the academic seminar on the history of the party and the inaugural meeting of the Guangdong Society of History of the Chinese Communist Party attended by our Guangdong provincial comrades dedicated to work on the history of the party. I also want to salute comrades devoted to research on the history of the party and thank them for being able to come here to attend these meetings even though they must travel long distances.

Sixty years have passed since the founding of the CCP in July 1921. During these 60 years, under the leadership of the CCP, the Chinese people have worked hard, advanced wave upon wave and heroically struggled to defeat the Japanese aggressors, drive U.S. imperialism out of the country, bury the Chiang dynasty, overthrow the 3 big mountains which weighed down on the backs of the Chinese people, found the great People's Republic of China, and win a great victory in the new democratic revolution. The CCP has also led the people in the new democratic revolution. The CCP has also led the people in healing wounds caused by the war, in restoring the national economy, in carrying on the great socialist revolution and construction, and in building China into a socialist power with initial success in achieving economic prosperity.

The history of the CCP should highlight its efforts to lead the Chinese revolution in advancing from one victory to another under the guidance of Marxism-Leninism-Mao Zedong Thought. The Chinese revolution followed a tortuous road and has been crowned with hard-won victory. Following the Opium War of 1840, the Western capitalists used gunboats to open the door to China, thus gradually reducing it to a semifeudal and semicolonial society. Many Chinese with advanced ideas embarked on a search for the truth of national salvation at a cost of blood and lives. Some tried to save China through the development of science and industry. But practice proved this idea unfeasible and unable to save China. "The salvos of the October Revolution marked the beginning of the transmission of Marxism-Leninism to China," bringing a silver lining to our country, and inspiring the Chinese people to see the day of victory. Marxism spread quickly to China in the wake of the October

Revolution. In 1979, the patriotic "4 May" Movement broke out, clearing the way for the training of cadres in Marxist ideology essential to the birth of the CCP. In 1921, the CCP was born to bring a new look to the Chinese revolution. Through protracted revolutionary struggle, our party produced Mao Zedong Thought by integrating Marxism-Leninism with the concrete practice of the Chinese revolution, and applied it to solve a series of problems in the Chinese revolution and to guide the Chinese revolution and construction on a march from one victory to another. Mao Zedong Thought is the result of the collective wisdom of the entire party membership, guiding our cause to victory. Practice shows that without the CCP, there would have been no new China; Marxism-Leninism-Mao Zedong Thought is a banner of victory and can be constantly enriched and developed through the revolutionary struggle.

Today, our great motherland has reached a great turning point in history. Under the leadership of the CCP, the people throughout the country are embarking on a march toward the grand goal of the socialist modernization. Our future is boundlessly bright. In connection with this solemn commemoration of the 60th anniversary of the founding of the CCP, we must concentrate on conveying to the public the information on its great contributions to the cause of liberating the Chinese people and the socialist cause, the superiority of the socialist system, as well as the truth that "without the CCP, there would have been no new China" and that "only socialism can save China." We must also carry forwared the CCP's excellent tradition and style of integrating theory with practice, maintaining close ties with the masses and criticism and self-criticism. We must closely rally around the Party Central Committee, and unify our political thinking behind the Party Central Committee. We must uphold party leadership, the socialist road, the dictatorship of the proletariat and Marxism-Leninism-Mao Zedong Thought. We must share the same concern with the party, play a positive role in achieving the far-reaching objective of the socialist four modernizations program and strive to fulfill the great ideals of communism.

In connection with the celebration of the 60th anniversary of the founding of the CCP, our Guangdong provincial comrades devoted to research work on the history of the party are meeting here to open this academic seminar on the history of the party and formally inaugurate the Guangdong Society of History of the Chinese Communist Party. This is indeed a very significant event. Such meetings have been suspended for many years. Since the 30 Plenary Session of the 11th Party Central Committee, the Party Central Committee has attached great importance to research work on the history of the party and its compilation, thus greatly boosting the morale of our comrades working on the history of the party. I want to take this opportunity to present some views on the research work on the history of the party for the benefits of interested comrades.

1) Our comrades working on the history of the party must pay enough attention to the problem concerning the research work on the history of the party as it is a very serious and difficult task.

Since its founding, the CCP membership has grown from several tens to 38 million. The CCP has spent the past 60 years traveling over a difficult and torturous road, surviving 1 test after another and building a shining and brilliant record, something rarely seen in the history of the international communist movement. We must conscientiously study the history of such a great party, sum up its experiences and lessons, and educate the entire party membership and the people throughout the country including party members and people in Guangdong in the history of the party and the revolutionary tradition. We must consider this task absolutely necessary. This is a glorious but difficult mission. If we can present to the public a highly scientific document on the party true to the historical facts, we can help the people further gain an insight into its greatness, glorious tradition and correctness, exhibit firm faith in its leadership, further restore its prestige among the masses of people, and inspire its members and people throughout the country to redouble their efforts to build their great motherland under its leadership.

Sixty years have passed since the founding of our party. We must fully understand that the research on the history of the party is an important and urgent task. For many years, we still cannot provide the public with a relatively accurate document on the history of the party. This is indeed a very serious problem. Before the "Great Cultural Revolution," manpower was mobilized by Guangdong Province to study and gather the information needed in the compilation of the history of the party's organization and activities in this province. The compilation was suspended after drawing criticism from people who mistakenly considered this work an attempt to give publicity to Guangdong and certain personalities and events there. When the "gang of four" was in the heyday of their power, and many old comrades were under attack and tortured, the compilation of the history of the party was made more difficult than ever. Since the smashing of the "gang of four," and since the 3D Plenary Session of the 11th Party Central Committee, the Party Central Committee has listed the research work on the history of the party as an important item on its agenda. The time is now ripe for us to intensify our research on the history of the party. We must consider the research on the history of the party and its compilation to be a long-term plan and a problem to be faced by generations to come. We require that the history of the party be compiled based on historical facts. We must pay attention to its accuracy, scientific and ideological qualities.

2) Those in charge of the compilation of the history of the party must be faithful to the historical facts and seek truth from facts.

The history of the CCP should highlight the Chinese people's great victories in the new democratic revolution, the socialist revolution and construction under its leadership. A compilation of such a multifaceted, glorious and splendid history requires us to apply Marxism-Leninism-Mao Zedong Thought as a guide, uphold dialectical and historical materialism, pay tribute to historical facts and seek truth from facts. Like any other scientific documents on history, the history of the CCP must deal with time, places, figures and events accurately. They can neither be distorted nor misplaced. Time and places cannot be misstated. Historical figures and their activities should be evaluated objectively, comprehensively, properly and scientifically. There were many soul-stirring legendary heroes who came to the fore during the long period of the Chinese revolution. When we write their autobiographies, we must evaluate them accurately, and command their contributions to the evolution. In dealing with the historical events, we must pay attention to their historical backgrounds. We cannot curry favor with any influential historical figures. Nor can we distort the roles played in history. For example, in order to achieve the purpose of deceiving the people, Lin Biao and the "gang of four" distorted the historical fact by describing the 1928 rendezvous of the forces led by Comrade Zhu De and Mao Zedong in Jinggangshan as a rendezvous of forces led by Lin Biao and Comrade Mao Zedong. Such distortion and adulteration of history cannot be tolerated. In the future, we must follow an accurate and scientific approach in the portrayal of the true features of historical events so that the schemes of careerists and conspirators to tamper with history will stand no chance of success.

However, we must be faithful to the historical facts and seek truth from facts. To this end, we must intensify our investigations and study and gather information from many different sources including those from historical data, newspapers, journals and the archives of the enemy and puppet regime. As soon as all detailed information is available, we must process it in such a way that everything false will be discarded, everything true will be retained, trash will be thrown away and things essential will be selected. Our primary task is to clarify historical facts and derive from them laws governing the development of history. Only in this way can the history of the party which is to be compiled, survive the tests of history and scrutiny of all authorities and become a truly scientific document. To achieve this end, however, calls for hard work, and a series of investigations and studies. We cannot rely on collections of a single person and totally trust what he says because, through the recollection of the long past, he must say something wrong and may say something right. We must gather information from various sources, listen widely to their suggestions, and repeatedly verify their authenticity. Only in this way can we be faithful to the historical facts, and present to the public a scientific document on history. In this connection, a little sloppiness will cause trouble.

3) An urgent task is to rescue vital information on the history of the party. Many old comrades inside and outside the party personally watched the events take place in the 60-year-old history of our party, and still remember them clearly. These historical facts which could not be printed in book form or by newspapers and journals during the official wartime are buried deeply in their hearts. If we delay our action to gather and process this vital information, they may carry it to their graves once they join the list of ghosts headed by Marx. For this reason, we must take prompt measures to dig up this vital information and process it. We must fulfill this glorious mission assigned by the party to collect this precious asset which is indispensable to the history of the party. We have already suffered a loss of too much time caused by the perverted conduct of the counterrevolutionary cliques of Lin Biao and the "gang of four," who alleged that the history of the party must "serve the struggle between two lines." In addition in order to deliberately distory this history of the party, they even went so far as to accuse those old comrades who made faithful contributions to the history of the party of being "counterrevolutionaries" and "capitalist readers." At that time, there was no such thing as the freedom of academic research. Comrades devoted to research on the party's history fell victim to slanderous attacks and lived in danger of being persecuted. Many old comrated were tortured to death. Others have died of illness one after another. The number of old comrades who are still alive become fewer and fewer as time goes on. Among these few old comrades who are fortunately still alive today there are former participants in the First and Second Revolutionary Civil Wars with their age ranging from the seventies to the eighties. Their days in this world are really numbered. In view of this, our present urgent task is to gather this vital information from these comrades on a crash basis. I want to

take this opportunity to call on units in charge of the research on the party's history and comrades interested in this work to focus attention on this problem without delay and regard this as an important task to be accomplished by the party.

The branches of our party in Guangdong occupies a very important position in the development and growth of the CCP. During the great revolution, Guangdong was a stronghold of the party in carrying out its activities. From there was started that earth-shaking strike in Guangdong and Hong Kong, and the first peasant training classes given by the Guangdong-Guangxi Party Committee. The sixth peasant training class began to enroll students from all over the country with Comrade Mao Zedong as its chief lecturer. The Northern Expedition also started from Guangdong. Many leading comrades of our party such as Mao Zedong, Zhou Enlai, Liu Shaoqi, Zhu De, and other proletarian revolutionaries of the older generation were once active in Guangdong. During the Second Revolutionary Civil War, the War of Resistance against Japan, and its liberation war, the branch of the party in Guangdong was very active and can provide a lot of information in this connection. For this reason, the research on the party's history and its compilation in Guangdong will be a difficult and preponderous task. I hope that comrades working on the party's history in Guangdong Province will emphasize particularly its activities in Guangdong in their research on its history.

Finally, I wish that comrades will score greater successes in reseraching the party's history and will make greater contributions to the four modernizations program.

(Editors note: This article is a recorded speech by Comrade Wang De, secretary of the Guangdong Provincial Party Committee, at the inaugural meeting of the Guangdong Society of History of the Chinese Communist Party and the academic seminar on the history of the party held in Guangzhou.)

'SOCIALIST MORALITY' VITAL TO INDIVIDUAL, SOCIAL INTERESTS

Kunming YUNNAN RIBAO in Chinese 19 Jun 81 p 3

[Article by Zhang Shangren [1728 1424 0088]: "Adhere to the Moral Principle of Collectivism"]

[Text] The specific requirements set forth in the "five stresses" and "four beauties" with the aim of practicing civilized courtesy in an all-round way should be met by all means and should command equal attention from the public. However, it is significant to note that "laying stress on morality" is the central theme and the main objective of the "five stresses" and "four beauties" activities, as well as a starting point in the right direction.

The talk about morality contains the following two aspects: the aspect of fostering correct moral ideals and concepts and the aspect of putting such morality in action. Correct moral ideals and concepts can be fostered through the strengthening of moral education and training which induces people to uphold party leadership and the socialist system and to become patriots and citizens of rectitude and honesty, while moral acts can be performed through work, study, daily activities, and social contacts. In this way, the people can be induced to lay stress on courtesy, sanitation, order, beautiful styles of language and good behavior. Anyone who emphasizes morality in thinking and action can be called a civilized man.

The basic objective of moral education is to make people understand the basic moral principles and to help them handle properly the relationship between the individual and social interests. The basic principle of proletarian morality is collectivism. This principle is determined by the socio-economic conditions. After capitalism was replaced by socialism and the system of private ownership was replaced by the system of public ownership, the principle of "from each according to his ability and to each according to his work" was adopted. In accordance with this principle, workers can now obtain their means of livelihood from among the social products. In this way, a form of relationship between individuals and society based on an almost common economic interest has been established to tie individuals to collectives and to make collective interests and the destiny of individuals indivisible. In this case, individuals must be concerned with collectives while collectives are obliged to protect individuals. Consequently, devotion to the people's interests will be praised and individualism dedicated to private interest will be hated by the people in society.

The socialist system is designed to unify the interests of individuals and society behind their common cause. But this does not mean that the contradiction between the two categories of interests has been resolved. In social reality, one must realize that our present productive forces at their present low level still cannot create material wealth to satisfy fully the needs of individual interests while on the other hand, some people under the influence of the tradition of selfishness still prefer to base any dealings between individuals and society on their private interests. They still want to be granted special privileges, to fatten their private gain at the expense of public interest, and to seek profits at other people's expense or that of social interests. This contradiction between the interests of individuals and society needs to be resolved through the application of the moral principle of collectivism.

The moral principle of collectivism requires us to yield individual interests to social or public interests and to subordinate individual interests to social interests when the two categories conflict. Does this moral principle deny the individuals their interests? No. This principle calls for resolving the conflict between the interests of individuals and society on the basis of collectivism, in order to unify the two categories of interests behind their common goal. It is inimical to the socialist morality if we split individual interests from that of society, if we set the former against the latter and if we denounce the former in favor of the latter. We must uphold the moral principle of collectivism, and rationally adjust the relationship between the interests of individuals and society. On the one hand, we must develop production and on that basis do everything possible to raise the standards of material and cultural life for the people so that they will come to truly understand that only by protecting and developing the social interests can the individual interests be satisfied. On the other hand, we must display the spirit of hard struggle and heroism in the service of social and people's interests and must make people understand that the individual interests cannot be put on a par with or ahead of the social interests. Of course, there are many categories of socialist morality including social morality shared by all mankind, morality characteristic of socialism, and morality for people of all trades and professions working at different posts. In a country like ours, everyone must observe the basic principle of morality, integrate individual interests with social interests and short-term interests with long-term interests, and put social interests above all else. Only in this way can we constantly consolidate and develop the socialist system as a reliable guarantee for realizing the four modernizations program in our country.

PARTY AND STATE

MAO'S CONTRIBUTIONS TO SOCIALIST REVOLUTION, CONSTRUCTION HAILED

Wuhan HUBEI RIBAO in Chinese 30 Jun 81 p 1

[Editorial: "Advance Triumphantly in the Direction Indicated by the Party--Marking the 60th Anniversary of the CCP Founding"]

[Text] Six decades ago--in July 1921--spring thunder reverberated throughout the land and marked the rise of the Communist Party in China. From then on, there has been a beacon, a helmsman, a nucleus, and a direction from which the Chinese revolution and revolutionary ship could start a triuphant voyage to bring hope to the suffering Chinese people.

Today, the 6th Plenary Session of the 11th Party Central Committee, an event of great significance in the history of our party, is being convened triumphantly amid the solemn celebration of the 60th anniversary of the founding of the CCP. We warmly acclaim the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" unanimously adopted by this session, and wholeheartedly support the reelection of the principal leading members of the Central Committee and the election of additional members to the committee. The successful conclusion of this session will have a very significant role to play in strengthening the collective leadership of the Central Committee with Marxism as its base, as well as its unity, in further illuminating the course of continuing advance in work for our socialist cause and our party, and in ensuring the full implementation of the line, principles and policies adopted since the Third Plenum.

The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" is a historical resolution and a Marxist document. Applying dialectical and historical materialism as a guide, this "resolution" accurately sums up events of great historical significance of the past 32 years since the founding of the PRC, especially the "Great Cultural Revolution"; analyzes in a scientific way the party's correct and erroneous guiding thoughts concerning these events as well as the subjective and social factors leading to such mistakes; realistically evaluate the historical role of the great leader and great teacher Comrade Mao Zedong in the Chinese revolution; and fully expounds the great significance of Mao Zedong Thought as the Party's guiding thought. This will certainly have a great and far-reaching impact on the effort to unify the thinking of the entire party, the entire army and the people throughout the country and their struggle to fulfill their new historical mission with one mind and one heart.

"The rise of the Communist Party in China is a tremendous event that shocks the heaven and shakes the earth." In celebrating the 60th anniversary of the CCP founding and in studying the resolution on historical questions, we review the past with a feeling of pride and look to the future full of confidence.

After being defeated in the Opium War of 1840, China with a long history of feudal society was reduced to a semicolonial and semifeudal society. Through a long, dark period, the Chinese people carried out a series of heroic and unflinching struggles against imperialism and feudalism. Although the peasant movement of the Taiping Heavenly Kingdom, the Boxers movement, and the 1911 revolution led by Sun Yat-sen, a great forerunner of the democratic revolution, dealt a series of blows to the enemy, they all failed to solve any basic problems concerning the Chinese revolution. Why? The most fundamental reason is that they were not led by such advanced political parties as the CCP armed with Marxism-Leninism. The picture of the Chinese revolution remained gloomy until the Communist Party came into being to brighten its prospect. Subsequently, the party led and rallied the people throughout the country to win a great victory, the result of 28 years of hard struggle, for the new democratic revolution which led to the founding of the PRC, to complete the process of transition from the democratic revolution to the socialist revolution, to score a series of great successes in socialist revolution and construction through a difficult, complicated and tortuous struggle, and build our country into a socialist new China taking an initial step toward prosperity. During the past 6 decades, practice has verified the CCP as the only party capable of proposing and implementing the correct revolutionary program and policies, and faithfully representing the people's interests. History testifies to the truth that "without the Communist Party, there would have been no new China or victory for socialism in China." History dictates that the Communist Party has had no alternative but to assume the leadership for the new democratic revolution, socialist revolution and socialist construction in China.

The theoretical basis guiding our party's thinking is Marxism-Leninism and Mao Zedong Thought. Mao Zedong Thought resulting from the application of Marxism in China is the crystallization of the collective wisdom of the CCP, a product of integrating the universal truth of Marxism-Leninism with the concrete practice of the Chinese revolution, and a scientific conclusion drawn from the Chinese people's experiences in the revolutionary struggles. Comrade Mao Zedong made the most outstanding contributions to the great cause of integrating the universal truth of Marxism-Leninism with the concrete practice of the Chinese revolution. The history of our party which spans 6 decades shows that Comrade Mao Zedong deserves to be called a great Marxist, and a proletarian revolutionary with achievements second to none. Mao Zedong Thought is a scientific guiding ideology conforming to China's conditions, the most invaluable assets to our party. The banner of Mao Zedong Thought will be upheld forever by our party as a banner of victory.

Our revolution has not been smooth sailing. During the protracted struggle, our party committed mistakes and suffered frustrations. This was something that could not be avoided during the difficult and complicated crusade for the revolution and construction. Such mistakes and frustrations were fleeting phenomena in history while our party's victories and revolutionary advances are inevitable results of history. Never before has our party covered up its mistakes. Nor has it lost its courage openly to expose and correct its mistakes including those committed by its leaders. The CCP armed with Marxism-Leninism and Mao Zedong Thought has proved completely capable of correcting its mistakes. As a matter of fact, our party has relied on its own strength to correct every mistake it committed and has drawn lessons from mistakes so that it can grow more mature and stronger than ever. The 3d Plenary Session of the 11th Party Central Committee represented a thorough and successful effort by our party to correct all mistakes committed during the 10-year civil war, and to shift itself onto the track of Marxism-Leninism-Mao Zedong Thought, ideologically, politically and organizationally. The current Sixth Plenum has fulfilled a historical mission to rectify the party's guiding thought, an achievement which will be written into history. This shows that our party is a serious-minded party with a sense of responsibility to the people and a party of great vitality. We communists will take the same Marxist attitude toward victories and frustrations and achievements and mistakes. We will be neither carried away by our achievements nor disheartened by our mistakes. We will never be intoxicated by victory. Nor will we lose confidence after suffering frustrations. We are reviewing what happened yesterday for the purpose of winning new victories today and tomorrow. We always look forward with confidence, focus our attention on the future, and move forward with courage while grasping the present moment to carry forward achievements, correct mistakes and heal wounds.

With the passage of 6 decades has come a great new turning point in history. With the emphasis of its work shifting to socialist modernization, our party is guiding the people throughout the country on a march toward the goal of building our country into a modern socialist power enjoying a high level of democracy and civilization. Our objective is to realize the socialist modernization, to blaze a trail to modernization in a Chinese style, to build a high level of democracy and civilization and simultaneously to improve the socialist economic and political systems. This is a new and great undertaking. This undertaking is so significant and difficult, its scope is so large, and its accompanying reforms are so far-reaching that it is comparable to any revolutionary struggles undertaken by our party in the past. It is clear that only the CCP can assume the responsibility for fulfilling this great cause. The socialist modernization can never be realized in China without the Communist Party's leadership. This is why we are required to uphold and strengthen party leadership and build the party so that it can lead this great cause to success in a better way.

In building the party, priority must be given to the ideological building of the party. We must follow the party's fine tradition by using its historical experiences to educate its members and cadres as part of its ideological building program. A successful program to educate the cadres in the party's historical experiences was completed [illegible]1 and 1945 when the central leading organs and senior cadres participated in historical discussions under the rectification movement under the leadership of Comrade Mao Zedong. This study of historical experiences was instrumental in achieving the ideological and political unification of the party unparallelled in history, and in ensuring success in turning the Seventh Party Congress into a congress of unity and victory and the thorough implementation of the party's correct line represented by Comrade Mao Zedong, and in getting the party's ideological and organizational fronts well prepared to win the War of Resistance Against Japan and the liberation war. At this crucial moment in history, a conscientious study of the resolution on historical questions adopted by the 6th Plenary Session of the 11th Party Central Committee and the application of the party's historical experiences to educate party members and cadres are of great practical significance and far-reaching historical significance to the party in its efforts to help all its members raise their level of Marxism-Leninism and Mao Zedong Thought, understand correctly and resolutely implement the party's Marxist line, principles and policies adopted since the 3d Plenum. It is also a significant step in making the entire party and the people throughout the country achieve unanimity in thinking, understanding and actions, in inspiring their revolutionary spirit and morale, and in bringing the great cause of the socialist modernization to a successful conclusion. Leading comrades of party organizations at all levels in Hebei Province must first organize themselves to study this document well and must consider this their most important task at present. They must also work out plans to organize and lead party members, cadres and the masses to study the resolution and communique of the Sixth Plenum and conscientiously grasp this task well as a key link in pushing all other work forward.

The party of today has grown out of the party of yesterday. Only by studying the party's past experiences can we understand more accurately and more profoundly the line, principles and polciies adopted since the 3d Plenary Session of the 11th Party Central Committee. During the past 2 years, an excellent situation on the political and economic fronts rarely seen since the founding of the PRC has developed in our country, and our belief in the superiority of the socialist system has been further confirmed. The line, principles, and policies adopted since the Third Plenum are correct as certified in practice. The complete correctness of the line, principles and policies adopted since the Third Plenum has been fully confirmed by the Sixth Plenum from the theoretical point of view and on the basis of the party's past experiences, as shown in its resolution on historical questions. We must conscientiously study this resolution, and analyze historical experiences scientifically. Only in this way can we understand clearly what is right and what is wrong in history, uphold what is right and correct what is wrong, develop those good things under the new situation, avoid acting blindly, strengthen our political consciousness, unify the thinking of party members, cadres and the masses behind the guidelines of the Sixth Plenum, single-mindedly look forward, engage in the four modernizations with one mind and one heart and make all our work move forward triumphantly in a direction indicated by our party.

Party organizations and party members in Hebei Province have made significant contributions to the great cause of our party and are proud of their revolutionary tradition. Hebei was one of important base areas where our party carried out its revolutionary activities during the early stage of its development. Comrades Mao Zedong, Zhou Enlai, Liu Shaoqi, Dong Biwu and other proletarian revolutionaries of the older generation were once active in Hebei. After the party was founded in 1921, under its leadership, the workers movement gained momentum in Hebei Province. During the first revolutionary civil war, Hebei was one of the provinces swept by the national peasant movement. During the second revolutionary civil war, the Hebei party organizations led the masses of workers and peasants to rise heroically to join forces to take the road of armed struggle and open up important revolutionary base areas after the pattern of the Jinggangshan revolutionary base area founded by Comrade Mao Zedong. During the War of Resistance Against Japan, the party led the Hebei people in their persistence in the guerrilla warfare behind the enemy line, thus adding new strength to the armed forces against Japan and expanding the liberated area. During the liberation war, our regional forces in central China smashed each encirclement attempted by the Kuomintang reactionaries, and finally made a triumphant breakthrough. Our people's army units continued to deal blows to the enemy troops while fighting in north and south China, thus paving the way for the liberation of Hebei Province. Since liberation, the party has led the people throughout the province in embarking on the socialist revolution and construction and has achieved brilliant successes in this field. During the protracted revolutionary war, party members in Hebei Province distinguished themselves by cherishing the lofty revolutionary ideals, by demonstrating a high revolutionary morale, by fearing neither sacrifices nor hardships, by heeding the party's orders in all their actions and by serving the people's interests. Today, during our great march toward socialist modernization, we must preserve and carry forward this glorious tradition and strive to make contributions to the rehabilitation of the Chinese nation and the grand cause of socialist revolution and socialist construction.

Comrades, the smashing of the Lin Biao and Jiang Qing counterrevolutionary cliques which means the removal of a gigantic obstacle on the road of our advancement, and the convocation of the Sixth Plenum at which its historical experiences have been summed up have cleared the way for our party to move forward more vigorously than ever. In response to the call of the Sixth Plenum, we must hold high the banner of Marxism-Leninism and Mao Zedong Thought, rally more closely around the Party Central Committee, continue to display the spirit of the foolish old man who removed mountains, and show determination and courage to overcome difficulties and march toward the goal of socialist modernization.

MILITARY AND PUBLIC SECURITY

SOVIET COMMENTS ON CHINA'S NAVAL CAPABILITIES

Moscow ZARUBEZHNOYE VOYENNOYE OBOZRENIYE in Russian No 4, Apr 81 (signed to press 6 Apr 81) pp 63-68

[Article by Captain 1st Rank V. Kozhin and Captain 1st Rank I. Vasin, candidate of military science: "The Chinese Navy"]

[Text] In pursuing its policy of the militarization of China and establishment of its hegemony throughout the world, the Beijing leadership considers its armed forces, of which the Navy is an independent branch, as the basic means for achieving these aggressive aims. The Navy was established at the end of 1950 and by now, foreign military specialists believe, is among the largest in Asia.

According to the Western and Chinese press, the Chinese Navy has the following main missions: combat enemy naval forces, support ground forces operating in coastal sectors, defend the coast against landings in coordination with the other branches of the armed forces, protect sea lines of communications and in addition, conduct reconnaissance, carry out amphibious landings and participate in realizing plans for expansion on the sea. The Chinese seizure of the Paracel Islands (January 1974) marked the beginning of the practical utilization of the Navy to realize Beijing's territorial claims, including in the South China Sea where large oil reserves were discovered.

The chief of the Navy is also a deputy defense minister. He is responsible for the status and development of the Navy, organization and conduct of operational and combat training of ships, units, formations and staffs, recruiting and ideological influencing of personnel, supply of arms, and for construction and defense of military coastal facilities. The commissar heading the Navy's political directorate is equally responsible for the activity of the Navy and its combat readiness and personnel morale and psychological state.

The Chinese Navy has three fleets (the Northern, Eastern and Southern), naval aviation and coast artillery.

Organizationally, the fleets consist of submarines and surface ships (cutters), naval bases and naval regions. Each fleet has its own zone of operations, within the bounds of which it carries out daily activity, organizes its protection and organizes the defense of the offshore islands and coastal facilities. Thus, the Northern Fleet (Qingdao is the main naval base) is assigned the waters of the Yellow Sea and the Bohai Gulf; the Eastern Fleet (Shanghai) has the East China Sea and the strait zones connecting it with the Sea of Japan and the South China Sea and the Pacific Ocean; the Southern Fleet (Zhanjiang) is assigned the South China Sea, Gulf of Tonkin and the outlets to the adjacent seas.

Judging by the data of the reference MILITARY BALANCE, the Chinese Navy has under 250 combat ships of the main classes, about 800 combat cutters and over 100 auxiliary ships for various purposes that are distributed between the three fleets. A considerable number of them are of American, Japanese, British, Canadian and Australian construction from the period of the forties to the sixties. In design, they are obsolete, have substantially exhausted their service life and are in need of modernization, and a certain number are to be withdrawn from use in the next decade.

The fleet's nucleus and main strike force, according to the estimate of foreign military specialists, consists of the submarines (86 ships). The most modern of them are considered the two nuclear torpedo "Han" type. The rest are diesels, the majority of which were built according to foreign designs of the fifties to sixties. They are obsolete and do not fully meet the requirements imposed on this class of warships.

The "Ming" type (two) diesel submarines and the nuclear ones are of native Chinese design and construction. According to the foreign press, the "Ming" type ships were placed into operation in the years 1974 to 1975. Their surface displacement is 1,500 t and submerged is 1,900 t; length is about 76 m; armament is six 533-mm torpedo tubes. The crew numbers 75. The nuclear ships were built, judging by the reference JANE'S, in the years 1974 to 1977.

The Chinese command is paying much attention to the development and construction of submarines of their own design that would be close to modern models. The appearance in China of the first nuclear ships of national construction is evaluated by foreign military specialists as a serious step on the path to raising the combat capabilities of its fleet.

The Chinese surface navy consists of URO [guided-missile] destroyers, guided-missile frigates, frigates, escorts, ASW ships, landing ships and minesweepers.

The guided-missile destroyer class (12 ships) includes the "Lūda" type (8, fig. 1 [not reproduced]) of doemstic development and the "Angshang" type (4) of foreign construction in the forties, modernized and reequipped by the Chinese at the beginning of the seventies. The "Lūda" destroyers were put into operation in the seventies. Their total displacement is 3,750 t; length is 131 m; width is 13.7 m; draft is 4.6 m; top speed is 30 knots; armament: two three-container PU [launchers] for PKR [antiship missiles], two 130-mm, four 57-mm and four 25-mm twin guns, and two depth-charge throwers. The crew numbers 200.

Guided-missile frigates (11): five "Jianghu" type ships and two "Jiangdong", built in the second half of the seventies from Chinese designs, as well as four frigates assembled in the fifties from assemblies and sections supplied from abroad and reequipped into guided-missile ships in 1971.

The "Jianghu" and "Jiangdong" guided-missile frigates have a total displacement of 2,200 t; length 103 m; width 12 m; draft 4 m; speed up to 28 knots; armament: guided missile system (on the "Jianghu") or SAM's (on the "Jiangdong"), 100-mm twin gun, four 37-mm twin guns, four depth-charge throwers.

Frigates: five "Jiangnan" ships constructed in the years 1967 to 1969. Their total displacement is 1,600 t; length 90.8 m; width 10 m; draft 3.9 m; top speed 28 knots; armament: three 100-mm guns, four 37-mm twin guns, two 12.7-mm coaxial machineguns, six depth-charge throwers (including two rocket launchers), and two bomb release slips. The crew numbers 175.

As the foreign press reports, in the escort and ASW ship class, there are 12 escorts of foreign construction from the forties to the fifties, including Japanese (the types "Nanchang," "Hueian," "Changbai," "Wuchang" and "Shenyang"), Canadian ("Guanzhou"), British ("Kaifin") and Australian ("Zhnogxing"), as well as 45 ASW ships (24 of Chinese construction of the "Hainan" type and 21 of foreign production). The "Hainan" type ships have a standard displacement of 360 t, length of 60 m, and speed of 24 knots. They have gun and ASW armament.

The most numerous class of ships in the Chinese Navy, according to the reference MILITARY BALANCE, are the missile, torpedo and patrol ships (about 800 ships) intended to counter surface ships and landings of an enemy, as well as for patrolling coastal waters. The greater part of these ships are of foreign production (delivered in the sixties), and the rest were built in China based on foreign designs ("Svtaou" type) or domestic design. Built in national shipyards are PT boats with hydrofoils of the "Huchuan" type (displacement 37 t, length about 22 m, speed 50 knots) and the patrol ships "Shanghai-1" and "Shanghai-2" (displacement, respectively, 100 and 120 t, length 36.6 and 38.8 m, speed up to 30 knots).

All the landing ships are mainly of foreign construction. Included among them are the former American tank landing ships of the types LST (15) and LSM (15), as well as landing ships (11) built in the forties. Installed on some are gun systems of various calibers and models, and on others, launchers for NUR [unguided missiles] and minelaying facilities. Several "Yulin" type tank landing ships with a displacement of 1,500 t, as well as the "Yunnan" type landing ships (300) with a displacement of 300 t have now been constructed from Chinese designs.

Besides these landing ships, the Chinese command has the capability of also using a considerable number of junks and ships for coastal and river duty.

The fleet's minesweeping forces include 37 basic minesweepers (20 "Fushun" type of domestic design and 17 of national construction based on foreign models) and up to 100 auxiliary minesweepers reequipped from fishing trawlers and other ships. The ships are armed with guns, depth-charge throwers and various types of sweeps.

The navy's auxiliary forces include over 100 ships of various classes. Among them are floating bases for submarines and PT boats, dry-cargo transports, tankers, rescue ships and tows for various functions. The main part of the auxiliary ships are of foreign construction.

Naval aviation was established in 1952 based on foreign aircraft. Gradually improving, it has now been transformed into a major naval arm capable of carrying out missions in the interests of the fleet.

According to the reference MILITARY BALANCE, the Chinese naval airforce has over 800 combat and auxiliary aircraft and helicopters grouped into three bomber (mine-torpedo) and six fighter air divisions, separate units and subunits. The main organized combat unit is the squadron.

The bomb (mine-torpedo) divisions have torpedo and mine carrying aircraft (over 100). The fighter divisions have the F-4, F-6, F-7 and F-9 fighters (about 550). Reconnaissance aviation has no more than 20 obsolete aircraft. Auxiliary aviation subunits include trainers and transports as well as liaison aircraft and helicopters.

A large part of the naval aviation fleet was manufactured abroad in the fifties and sixties, and the rest are modified models of national production of recent years. All aircraft and helicopters are shore based. According to the estimate of Western military specialists, naval aviation, even though it has a considerable fleet of aircraft and an impressive combat composition, has limited capabilities for supporting naval forces and combatting enemy submarine and surface forces, especially at distant approaches.

Coastal artillery has existed in the Navy since its organization. The long extent of the coasts, and the presence of a considerable number of convenient harbors, naval bases, ports and other facilities on the coast predetermined the need for this arm. The basis of the coastal artillery, according to the reference JANE'S, are artillery battalions and regiments as well as separate batteries. They have guns of various calibers (from 76.2 to 180 mm) and a small number of shore-to-ship missiles. The coastal artillery guns were made by the Chinese largely from foreign models,

Judging by the foreign press, the Chinese Navy also has antiaircraft artillery subunits and units intended to establish air defense systems for harbors, ships and staff bases, major ports and other facilities. They have antiaircraft guns (from 37-mm to 85-mm) of domestic and foreign manufacture.

The coastal and antiaircraft artillery subunits and units are distributed between the naval regions. As a rule, they are positioned close to major and important facilities on shore, supplying their defense, and they also cover strait zones and offshore islands located within the effective range of fire. In executing their missions, naval coastal artillery coordinates closely with the ground force field and antiaircraft artillery positioned in coastal areas.

According to the reference MILITARY BALANCE, the Chinese Navy has 360,000 men, including 30,000 in naval aviation and 28,000 in coastal and antiaircraft artillery.

Naval personnel recruitment is based on the "Decree on Questions of Military Service" of 1978, by which the system of combining military obligation with recruitment of volunteers was introduced. Under this system, all male citizens between the ages of 18 to 49 have a military obligation. The length of active duty in the Navy is 5 years, and for voluntary enlistment it is 15 to 20 years. A considerable number of the junior commanders and specialists are serving voluntarily beyond the required period. Mid-level commanders are primarily graduates of military schools and academies and higher civilian institutions who have gone through military training in special schools.

Senior and top-level commanders are replaced with people who have extensive practical naval service and have completed the Naval Academy or short-term academic courses.

The Chinese Navy has a rather elaborate system of military training institutions that basically supply the needs for command cadres. Among the most well-known institutions, according to the reference JANE'S, are: the Naval Academy, established in 1950 (Dalyan), the Military Academy (Nangking), the School of Coastal Artillery, Radio Specialists and Rear Support (Shanghai), the Naval Air Academy (Shanghai and Qingdao), and the Submarine Schools (Lushao, Yulin and Qingdao).

Military Training. Judging by the American journal PROCEEDINGS, in recent years the Chinese command has stepped up activity to improve the combat training of naval units and formations. Joint exercises with the different naval arms have been held, and naval exercises have been held in the South China Sea. During them, special attention was paid to the questions of organization and control of operations by ship formations, coordination of the naval arms and the Navy as a whole with other branches of the armed forces, and to practicing the missions of combatting enemy submarines and surface ships, supply of materials and equipment to ships at sea (fig. 2 [not reproduced]) and others.

Prospects for Development. As the reference JANE'S reports, further development of the Chinese Navy presupposes increasing its strike power through placing new types of warships and aircraft into service (primarily, nuclear submarines, destroyers with guided missiles, guided-missile frigates and missile ships) and equipping them with modern armament. Much importance is also attached to modernizing ships, obsolete models of weapons and combat equipment both through domestic capabilities and with the assistance of Western countries. Having decided to expand cooperation with the imperialist states, the Chinese are counting on obtaining from them models of modern systems of naval armaments, communications and navigation equipment, and advanced technology to modernize their Navy. However, for the time being, Beijing's efforts in this direction have not met success, and as foreign military specialists note, China will have to rely on its own resources and capabilities now. Therefore, in their opinion, in the near future, one should hardly expect any significant buildup in ships in the Chinese fleet or substantial increase in combat capabilities of the naval forces as a whole.

SURVEY OF PROFUSION OF LONG NOVELS PUBLISHED IN 1980

Beijing GUANGMING RIBAO in Chinese 9 Jun 81 p 4

[Article by Zhang Jiong [1728 3516]: "A Brief Survey of Long Novels of 1980"]

[Text] As modern historical poems, long novels, with numerous characters, complicated plots, and nearly all-inclusive artistic descriptions, have earned an important status in literature. They are like the peonies in a flower garden or like buildings that particularly attract people's attention. In the increasingly thriving literary garden of our new era, along with the blossoming, exuberant, short and medium-length novels, the harvest of creation of long novels has become richer year after year. In the first 3 years after the smashing of the "gang of four," nearly 170 long novels were published, and the year 1980 alone saw the publication of as many as 90. This latter year exceeded any other year since the founding of our state in the number [of novels published]. It is very pleasing that, in the case of these long novels that came off the press in 1980, not only did their subject matter and style exhibit variety, but there emerged a large contingent of talented new writers along with them. Although they were trying out their talent for the first time in this realm of creation, they missed no opportunity in providing a historical epic of broad vision to the readers with their singular sensitivities and keen observations as well as their generous depth of thought and artistic characteristics.

The Chinese people are well known to the world for their long history. In the hoary territory of our motherland, countless militant and magnificent dramas of history have been staged, and many, many heroic and moving historical personalities and tales have been produced. All of these could very well have been turned into rich subject matter for literary creation, including the creation of long novels. But since the founding of our state, creations along these lines have not been well developed because of various reasons. The historical play "Hai Rui Dismissed From Office" was subjected to a criticism that it did not deserve and the 10-year catastrophe followed immediately thereafter; historical subject matter became even more of a "taboo area." During the past few years, this "taboo area" was done away with, but the pouring forth of historical long novels one after another occurred as a salient phenomenon only in 1980.

Depicting the contradictions and struggles of personalities in various classes and various strata with broad scenarios of life, doing their best to sum up the social historical outlook of an entire era, and placing emphasis on praising the people's heroic undertakings in resisting aggression and resisting oppression and exploitations: these are the common characteristics of the year's historical long novels. Among these works, "The Starry Grass," "The Wind Rustles," and "The Breach on the Gold Cup" especially attract attention.

"The Starry Grass" is the energetic product of young female writer Ling Li [0407 0500] which reflects the Nian rebels' resistance against the Qing House in the later period of the Heavenly Kingdom of Peace. It was written through 10 long years and 7 revisions. Although only Volume I has been published, it has already given people a strong feeling of tremendous momentum and impassioned vehemence because of her clearly depicted, myriad characters, abundantly legendary, moving plots, and sinewy yet gracious, bold yet refined pen. The author of "The Wind Rustles," Jiang Hesen [5592 0735 2773], has long engaged in literary research work. This work is Part I of his "Record of the Eruption to Heaven," in which he depicts the uprisings of Wang Xianzhi [3769 0103 5347] and Huang Cao [7806 1560]. Its structure is magnificent, its content is solid, the plots of its stories are full of complications, and its characters are marked with freshness and vivacity. The author's writing is also more experienced, graceful, neat, and fraught with national flavor. Xu Xingye's [1776 5281 2814] "Breach on the Gold Cup" takes as its subject matter the wars between the Song Dynasty and the states of Liao and Jin and generally depicts the great evolution of this historical storm. All three of these novels pay rather much attention to the authenticity of history. They merge broad knowledge with imagination, on the one hand, and they closely grasp details and situations full of historical characteristics in their artistic creations on the other, so as to depict and bear out the given images of their characters. Thus they really seem to present anew to us those scenarios of life already of the past. They do indeed provide the value of enabling us to know history. Besides, whether it is a case of a dusty fight on the battlefield with clashing iron horses and gold spears, or of sweet love between young lads and lasses with the playing of the silver lyre and the jade flute--whether it has to do with a strategic city or great metropolis, or a remote village or store in the wilderness--all, from members of the nobility to plain folks, are vividly described by a versatile pen.

Among the long novels of historical subject matter, there are also "Bloodshed in 1898," which carves out the image of Tan Shitong [6223 0843 0681] (by Ren Guangchun [0117 0342 2797]); "The Storm of 1900," which reenacts the incident of 1900 (by Bao Chang [7637 2490]); Volume I of "Cao Xueqing [2580 7185 3830]," which depicts the childhood of Cao Xueqing (by Duanmu Hongliang [4551 2606 5584 5328]); "The Moon of Qin Times," which reflects the internal struggles of the Qin House and its collapse under the impact of peasant uprisings (by Liu Yazhou [0491 0068 3166]); "The Divine Lamp," which praises the heroines in the Boxer Movement (by Feng Yicai [7458 7535 2088]); etc. These, too, reenact the social scrolls made up by numerous characters in various historical periods. Among them, some are outstanding because of their possession of veritable, rich historical data, some are winsome because of more romantic imagination, but all cannot help be described other than as works with definite ideological and artistic attraction.

The life and struggles of our people after they entered the 20th century, especially the stormy excitement of the period of the democratic revolution, are still preserved in the memories of the old generation. Subject matter in this regard makes up a considerable proportion of the long novels of 1980. The series of long novels of this year almost constitutes a chronology, from the fermentations of the 1911 Revolution until the triumphant establishment of the People's Republic of China. Through the depiction of the development and evolution of the characters' fortunes, relationships, and dispositions from various aspects, they quite vividly reenact the diverse genres of Chinese society in the first half of this century and the roughness and tortuousness of its revolutionary path, thus castigating the long darkness of the old world on the one hand and praising the undaunted pursuit of brightness by the revolutionary people and their vanguards on the other hand. This also is undoubtedly a harvest in a very important aspect of literary prosperity in the new era.

First of all, we should mention the work "Right Underneath the Red Flag" left by Lao She [5071 5287]. This autobiography, in the form of a long novel, was never completed because of the persecution the author suffered during the 10-year catastrophe. But this manuscript of 80,000 characters left to us has already drawn an authentic scroll of our society from the end of the last century up to early this century and has touched on the basic contradictions of that period. The latter two volumes, "Freedom" and "Dawn," of Ye Junjian's [5509 0689 0256] trilogy "The Earth" also came off the press in 1980. Through the depiction of personalities of various urban and rural classes and strata in the midstream region of the Changjiang from the 1911 Revolution to the time around the "4 May" movement, the novel reflects China's internal and external contradictions at the time and the Chinese people's turn from the old democratic revolution to the new democratic revolution. Although the work's portrayal of the personalities' character still lacks depth and liveliness, it is very good at calm narration and succinct sketches. Lu Di's [7120 0966] "Waterfall" also generally reflects the era after the 1911 Revolution. With the tortuous process through which the main character Wei Buping [7279 2975 1627] grew into the revolutionary warrior of the proletariat as its theme, it unfolds the stormy scene from [the time of] the "Down With Yuan Shikai [5913 0013 0418] Movement" to the second civil revolutionary war. Although its structure appears rather lax, its situational descriptions and factual narratives are often presentable and richly endowed with a southern flavor. Only Volume I of the whole book, "The Long Night," has been published, and it stops at the fermentations of the great revolution of the early 1920's.

The mighty great revolution ending in failure, with Communists burying the corpses of their companions, wiping the blood from their bodies, and marching anew toward their unswerving struggles--these are the most heartrendering and also most moving chapters in the history of the modern Chinese revolution. Yang Qianru's [2799 4960 1172] "Umbrella" (Volumes I and II) and Peng Hui's [1756 1979] "The Endless Changjiang Keeps Rolling" both reflect the waves of this period of life. The former places emphasis on writing about the path followed by intellectual youths, whereas the latter stresses the growth of revolutionary workers. Both take the ebb and flow of great revolutionary waves in Wuhan as their background and vividly depict various contradictions and struggles in Chinese society around the time Chiang Kai-shek and Wang Jingwei reneged on the revolution. Both authors are equipped with personal experience in the life of that period; their depiction of characters gives an abundant impression of authenticity. Their writing is plain and refined, and the indigenous character of their languages is quite distinctive.

Among the long novels reflecting social life and our party's underground struggles during the period of the second revolutionary war is Yan Guopei's [6768 0948 1014] "The Whirlpool." This is Volume I of the author's Changjiang trilogy. With contradictions between the Nationalist and Communist parties and the Changjiang navigation capitalists in the eastern Sichuan region as its warp and woof, the novel broadly depicts local warlords, ringleaders of secret societies, agents of military intelligence, Japanese spies, church ministers, native landlords, and colorful characters of the like, and warmly applauds stories about the hard and dangerous struggle of Li Ming [2621 2494] and other Communists and about the anti-Japanese and national salvation movements on the part of the vast ranks of the masses of people. Its writing is smooth and pertinent, and its characters are rather genuinely portrayed. Its plots are also quite bewitchingly and movingly told.

Among the long novels, the war of resistance against Japan and the war of liberation are used by many writers as their subject matter. The works of 1980 make up quite a proportion in this regard, and they have also broken new ground in terms of subject matter and style. Although the writings of Zhou Yiliang's [0719 7535 5328] "Ji Hongchang" [0679 7703 2490] and Chen Lide's [7115 0500 1795] "The Grievance About the Great Wall" are different and their styles are not the same, they both use General Ji Hongchang's stories as their raw material and endeavor to sculpture his heroic image. Yang Mo's [2799 3106] "Dawn in the East" writes a song of praise for the intellectuals who, after the Lugouqiao incident, marched toward unity with the workers and peasants and kept up their difficult struggles against Japan in cities and in the countryside. Li Zhun's [2621 0402] "The Huanghe Flows Eastward" (Volume I) takes as its background the Kuomintang troops' breaching the Huayuankou Dam and creating a thousand li of inundated countryside in 1938. Through stories of the peasants in the Huanghe flooded region leaving their homes and struggling for their lives, it sculptures the images of Xu Qiuzhai [1776 4428 7872], Li Mai [2621 7796], Wang Pao [3769 6410], Lu Wu [5663 0063], Liang Qing [2733 2532], and others in a series of toiling rural people of distinctive character, praises the qualities of industry, wisdom, resilient self-control, and mutual assistance on the part of the Chinese people, and vividly reflects various social contradictions in Kuomintang-controlled areas. The novel's language is neat, beautiful, and full of national flavor; its portrayal of personalities is penetrating and indicative of the author's cultivation of skills. In addition, there are "Ten Years of Storms" (by Li Mengyan [2621 1322 1484]), "Heavy Snowflakes Flying" (by Xu Yu [1776 2700]), "The Story of Two Dragons" (by Yang Ming [2799 2494]), "The Silver Beach Full of Fire" (by Shi Ying [4258 5391]), "New Biographies of the Heroic Sons and Daughters," Followup Collection (by Kong Que [1313 0628]), "The Deep Winter" (by Gu Ligao [0657 4539 7559]), "Qimeng Mountain Is Fine" (by Wei Shuhai [7614 2885 3189]), etc.--all of which depict anti-Japanese and anti-Chiang Kai-shek struggles in various areas. Some of these works are quite characteristic in terms of the angle from which their subject matter is adapted and in terms of their artistic depiction. For instance, Mu Qing's [2606 7230]

"The Tomb Tablets in Youlinli" tells the story of a group of vagrant children who, upon the liberation of a certain city in the Northeast, elevated their consciousness with the help of the revolutionary fighters and participated in the struggle against special agents. Its plot is bewitching, and its language is plain yet full of deeply genuine and provocative sentiments. Also, Wu Yinyi's [0702 0936 2496] "Chronology of the Pear Garden," through the rough experiences, comedies, and tragedies of Sichuan opera performers after the triumph of the war of resistance, reflects the darkness of the old society and the people's resistance and struggle from that approach. But its tone is rather lighthearted and humerous, hence creating a special style. Among works with military subject matter, "Autumn and Spring of Hebei and Shandong" (by Guo Minglun [6753 2494 0243] and Zhang Zhongtian [1728 6850 1131]) takes as its background the anti-Japanese struggle in the Hebei-Shandong border area. It endeavors to portray commanding generals of both the enemy's side and our side, and reflects their discrepancies during strategic and tactical decisionmaking activities. "The Great Battle of Huaihai" (by Han Feng [1383 7364]) reenacts the historic battle, with its narrative attention also concentrated on how headquarters commanders made decisions in their tents to determine victory or defeat far away, thus depicting a series of genuine historical personalities in succinct and brief language and with a roundly coherent structure.

In comparison, those works reflecting revolution and construction during the socialist period still appear to be rather weak among the long novel creations of 1980. But we should also not overlook the newly achieved results. First of all, publication of Volumes III and IV of Zhou Erfu's [0719 5079 1788] "Morning in Shanghai" finally made this long novel depicting the difficult process of the socialist transformation of industry and commerce complete. It provides us with the complicated picture of the 1950's in which the proletariat and the bourgeoisie both united with and struggled against each other. And through Hu Kao's [5170 5072] "Duel Melody" people also see a vivid portrayal of certain political movements during the early days after the founding of our state. Cheng Shuzhen's [4453 2885 5271] "College Days" and Kang Caiping's [0073 1752 1456] "The Small Iris" describe life in the institutions of higher learning in the 1950's and 1960's, respectively. They have molded the images of a generation of a certain type of youths and certain high intellectuals. In addition, Feng Lingxi's [7458 5376 2784] "The Mysterious Songbuer" narrates the story of a scientific survey team which in the early 1960's went deeply into the Songbuer Desert to carry out survey work; it describes quite vividly the miraculous scenes in the desert area. "Daughters of the Sea," written jointly by Wu Deyong [0702 1795 3057] and Che Jixin [6508 0679 1800], uses delicate strokes to sing praises of stories about the people of the islands who dedicate themselves to the building of socialism. It has molded the vivid images of a contingent of young women from fishing families and presents the strong flavor of island life.

Among the long novels reflecting the socialist period, those making up the greatest proportion and also arousing strong response and reaction among the vast ranks of readers are mostly those works that depict from different angles the society which was made up of various personalities whose destinies fluctuated during the 10-year turmoil. A good number of these [novels] are rather outstanding in their exploration of new subject matter and in their portrayal of personalities, as well as in the development of their plots. Zhou Keqin's [0719 0344 5367] "Xu Mao [6079 5399] and His Daughters" is lyric in its writing style, fresh and plain in its language, and authentically communicative in its portrayal of personalities. Through the depiction of Xu Mao and his daughters and sons-in-law, the novel vividly reflects the evolution of social relations in our countryside and the mischiefs of leftist thinking in the 1970's. Among the long novels published in 1980 which reflect life in the countryside, it is indeed a profound work with due merit and fortitude that describes the days of the 10-year period. Mo Yingfeng's [5459 2019 6265] "A Poem About the General" is another outstanding work. With concentrated political excitement, it portrays the sturdy image of old General Peng Qi [1756 0366] in his fight with Lin Biao, the "gang of four," and their ilk. It also clearly depicts youths with different characters, such as Zhao Daming [6390 1129 2494], Peng Xiangxiang [1756 3276 3276], and Chen Xiaopao [7115 1420 3517]. The author is very good at structuring tortuous stories. His language is healthy, smooth, and also delicate, and his descriptions of situations and things are full of vitality of life and colors of the day. "Record on Breaking the Walls" coauthored by Chen Dengke [7115 4098 4430] and Xiao Ma [5135 7456], through a description of the 9-month experience of An Dong [1344 2639], secretary of a municipal party committee, in getting out of prison and entering it again, reflects the drastic struggle between the two lines in our social and political life in 1975 and provides contours of the spiritual outlook of various personalities in the cities and the countryside. Although the novel's structure is rather loose and lacks depth, its scenarios are broad and its turn of the pen is usually swift. Thus it clearly preserves the imprints of the particular time and gives people the feeling that, despite the prevailing heavy darkness, brightness is nonetheless ahead and no one can really vanquish the people. Li Ruqing's new product "The Winter Bud" takes the 10-year turmoil as its background and praises the victory of unflinching persistence in scientific research and the fighting spirit of the main character Fang Fang [2455 5364] in her dedication to the four modernizations. Hao Ran's [3185 3544] "Love for the Mountains and Rivers" and Liu Yazhou's [0491 0068 5297] "Taking a Bride and Getting a Husband" both narrate stories of love between men and women in the countryside and reflect the contradictions and disputes of general implications when the four pests held sway, but each [novel] has its own characteristics. Apart from these, "Blood-Tinged Love," coauthored by Li Xianjuan [2621 1288 1227] and Yang Ying [2799 7336]; "Come Back, Souls!" coauthored by Wang Xinji [3769 2450 4764], Tao Zheng [7118 2973], and Tian Zengxiang [3944 1073 5046]; Mu Qing's [2606 7230] "The Autumn in Which No Harvest Was Allowed"; Shi Min's [1102 2404] "The Sea, the Thoughtful Sea"; and "Love and Hate," coauthored by Cui Wei [1508 1550] and Niu Yuda [6873 1342 1129] also provide vivid portrayals of the stormy changes on various fronts in the 10-year turmoil from different approaches.

Here I should also especially mention young writer Ye Xin's [5509 6580] creations. In 1980 he successively published the long novels "Our Generation of Young People," "The Wind Is Cold and Strong," and "Wasting Time," which reflect intellectual youths on their paths of life when sent to the mountains and the countryside. Ye Xin himself was an intellectual youth sent from Shanghai to settle in the mountainous region of Guizhou at the end of the 1960's. He was familiar with the life of his companions, his writing is graceful, and he is good at the delicate portrayal of psychological states and the bewitching deployment of stories. From his long novels, people can see a gallery of personalities of a whole younger generation who fared through different fortunes of life. Although the theme of his works still lacks depth, they do show a healthy, inspiring strength encouraging people to strive forward.

Another pleasing phenomenon about the long novels of 1980 is that there are new achievements in the reflection of the life and struggles of brotherly minority nationalities. In describing the "Yakesa" during the anti-Russian war in the reign of Kangxi, Xie Kun [6200 7649] and Wang Feisha [3769 7378 3079] expose realistically Tsarist Russia's cruel plunder of brotherly nationalities such as Daguan'er in our Heilongjiang drainage area, and also the history of the defeat of the aggressors under the counterblows of Qing troops and the people of various nationalities. Wang Shengnong's [3769 4141 6593] "Ferocious Fighters," in turn, describes the war of the people of the Daguan'er and Hezhe nationalities in their renewed resistance and attack against Tsarist expansion in the reign of Xianfeng. It saliently depicts the moving image of the patriotic hero Batu'er [1572 0956 1422]. Reflecting subject matter such as this is another work, "Soul of the Black River" (by Lo Guoshi [5012 0948 1102] and Liu Dihua [0491 6611 5478]. The conceptual framework of all these works is rather broad, and their plots are quite bewitching and tense: scenarios on the grassland, national habits, bravery and vehemence on the battlefield, the dignity and solemnity of the palace...all invariably vividly reappear from their pen--beguiling people and exciting people. In depicting modern subject matters, Zhang Xiangwu's [1728 0686 0582] "Storm in the Great Desert" reflects the story of the people of Mongol and Han nationalities in launching their sharp and drastic struggle against reactionary landlords, cattle owners, and armed bandits under the support of our troops during the early postliberation period. Xiangbien Jiaco's [7100 6708 0857 2238] "Gesang Meiduo" in turn sings the hearty praise of slaves of Tibetan nationality who supported the Liberation Army in its march into Lhasa, and who thereby became revolutionary fighters. The author's use of the Han language is proficient, smooth, and also fresh and rich; this is quite a feat.

Even more noteworthy about the long novels of 1980 is the fact that more works reflecting the life of overseas Chinese have come to be published. "Two Kinds of Americans" by lady writer Wang Ying [3769 3853], who has already passed away, follows with a neat, smooth pen the struggle of a Chinese couple attempting to return to the motherland. It portrays the different expressions of the officials of the immigration office and ordinary Americans. Hong Yonghong's [3163 3057 1347] "Prisoners on the Sea" and Hong Sisi's [3163 4828 4828] "Strange Encounters in a Foreign Land" in turn expose the story of how Chinese laborers were sold to America in the early days and suffered blood-and-tears hardships, and how they ultimately rose in struggle. In addition, American lady writer Nie Hualing's [5119 5478 3781] "The Mulberry Is Green and the Peach Is Red" and Yu Lihua's [2456 2746 5478] "Seeing Palms Again, Seeing Palms Again" were also published for the first time in the mainland of the motherland. Both books were representative works which made [their authors] known in their early years. While their specific subject matter is different, they both express the trying situations of Chinese wandering in America and their strong nostalgia for their motherland and their relatives. The writing styles are to a definite extent influenced by the modern [writers] of the West, yet they each exhibit creative features of their own.

In this short article, it is of course impossible for us to list one by one all of the long novels published in 1980. But from the incomplete survey above, it is already not difficult for us to see the results achieved by the long novels of that year. When we read these works, there seem to appear right before our eyes the long river of history surging with waves, the land of the motherland exhibiting all its charms, and countless personalities of the past and present who most certainly are sufficient in number to make up a long, long gallery winding and extending beyond what one's eyes can absorb all at once. Although the ideological and artistic level of these works is by no means even, we should nonetheless affirm that their ideological content in all of them is healthy or relatively healthy and beneficial to our effort to educate the people with the spirit of patriotism, socialism, and revolutionary heroism. At the same time, insofar as their genuine reflection of reality is concerned, the overwhelming majority of all these works do afford a hard-to-come-by perceptivity and meaning. And quite a few among them can well enter the list of fine long novels since the founding of our state--whether in terms of their ideological depth or of their artistic success.

UNIVERSITY PRESIDENT DISCUSSES PROBLEMS IN HIGHER EDUCATION

Beijing GUANGMING RIBAO in Chinese 25 Jun 81 p 3

[Report: "President Fan Xuji [4636 4872 4614] of the Jiaotong University of Shanghai Discusses Several Problems Concerning the Readjustment and Reform in Higher Education"]

[Text] Comrade Fan Xuji has engaged in higher education for 40 years. Not long ago he went on a tour to investigate some institutions of higher learning in the United Kingdom, France and West Germany, and also surveyed education in the United States. He told reporters: We have our own national circumstances. Ours is a socialist country. In running education we cannot copy the experience of others. We must follow China's own way but the experience of other countries can be used. He combined the realities of our country, drew on the beneficial experience of other countries, and made some suggestions for the reform of our higher education. Some of his propositions are being tested at the Jiaotong University of Shanghai.

Reform Teaching Methods, Foster Students' Intellectual Capacity

He said that for many years our teaching method has been "spoonfeeding." Teachers put on one-man shows in the classroom, emphasize "solving problems right in the classroom" and overlook self-teaching by the students. This spoonfeeding way of teaching is unfavorable in fostering the students' intellectual capacity. Particularly with the relatively high standards for enrollment at the Jiaotong University of Shanghai in recent years, if teachers still conduct their classes in the old way, teach too many details or straight from the book and repeat the contents of teaching materials, students will of course have no interest. How teachers and students can enliven teaching and learning and commonly place themselves in enthusiastic thinking and pursuit of knowledge is a problem that needs to be resolved in earnest. Some teachers at the Jiaotong University of Shanghai have done experiments in this aspect. Some adopt the method of "self-teaching, proficiency in giving explanations, and more practice." By allowing students to prepare their study through self-teaching before class, teachers can simplify classroom teaching, elucidate basic concepts and key materials and use only half of the original time. Emphasis is given to the selection of typical examples for analysis so that students can draw inferences about other cases from one example. This allows ample time to ask questions and inspires leading students to conduct discussions. At the Jiaotong University discussion sessions are organized beginning with the physics course. There are four sessions in physics each week, one of which is a discussion session that is carried out gradually in the early college years. One teacher in ship structural mechanics is experimenting in giving students the right to use their initiative in seeking knowledge. In class, students are given two basic points. One is the purpose of the lesson, the problem to be solved and how to apply it. The other is the ideological line along which the problem is to be solved. With these the students will have the overall situation in mind, display initiative under the teacher's explanations and guidance and become seekers of knowledge. What was originally a relatively difficult lesson students now learn with ease. Regardless of their individual characteristics, among some institutions of higher learning in the United Kingdom, France and West Germany, the one common feature is still giving play to the student's enthusiasm and developing their ability to work independently. In the United States at the University of California at Berkeley, calculus has 132 class hours of which 66 are for lectures and 66 are for discussion. In physics a quarter of the time is spent on discussion sessions and combined with laboratory at the same time. This way students do not passively receive knowledge but they think actively and are able to obtain good results. Our calculus course has 160 class hours totally taught by the teacher and is still considered to be insufficient. This must be changed. Teachers also cannot passively respond to questions, answering when there are any and not answering when there are none, but they should set problems for students to solve. Cambridge University in the United Kingdom has over 30 peripheral colleges. Students are recommended by teachers of these colleges for enrollment. These teachers continue to guide students in their study after they are enrolled. Their method is to understand learning conditions, present problems for students to solve and promote the intensive study of problems by the students themselves.

Fan also believes that practical ability cannot be ignored in fostering intellectual capacity. Attention must be given to two aspects. In doing experiments emphasis must be given to developing self-initiative. With the exception of some required experiments, in their laboratory sessions students of other countries are allowed to select their problems, and with the consent of the teachers they can draw up laboratory plans, choose their own apparatus and operate on their own. Our laboratory classes must be improved. We cannot merely let students follow readymade arrangements to prove theories. The laboratory classes at the Jiaotong University of Shanghai are now being improved. For example, the electrical engineering department offers experiments of a design nature and the physics department is starting the construction of intermediate laboratories, providing students with a place of activities for independent experiments. Practical experience in the factories, graduation projects and other links should be restored and improved and not be abolished. Actually, although the school timetable does not include a factory training plan, at some universities in other countries, students must go to the factories during the summer vacation. West Germany puts even greater emphasis on the practical link. The relationship between the factory and school is very close. Some large facilities and even workshops in the schools are endowed by factory owners. This cooperative relationship between factories and schools has played a positive role in making the industry of West Germany prosperous. Our own experience also proves that it is a great contribution to the construction of the four modernizations if research units draw up contracts and carry out cooperative scientific research. There are also benefits to mutual cooperation in learning from each other's strong points to offset one's weaknesses and develop scientific techniques. The Jiaotong University of Shanghai is strengthening this aspect of work. Last year the number of cooperative scientific research projects was 47.9 percent and the outlay was 23.7 percent of the total.

Foster and Select Talents While We Confront the Majority

He believes that the scope of knowledge in undergraduate education should be a little broader. Undergraduate education is essentially still laying a strong foundation in science, acquiring appropriate and specialized knowledge, and developing one's special skills according to concrete conditions even after graduation.

Institutions of higher learning must face all the students but must also pay great attention to the "development of talents," teach students according to their aptitude, adopt practical measures, give play to the learning potentials of students of excellence so that they may progress even faster. We must no longer use the method of "simplifying in one stroke," suppressing the development of their intellectual capacity. This is being tested in several departments of the Jiaotong University of Shanghai. They have adopted the method discussed and jointly recommended by course instructors, classroom teachers and advisers who determined a number of excellent students. One way to develop them was to offer elective courses. Last term, 33 courses were offered and this term there are 55. Another way is to operate interest groups. There are now 33 different such groups, some of which study foreign languages, some repair apparatus and make models, and some study particular books. Under the guidance of the teachers, one person makes a report and everyone participates in the discussion. In time, talents will be discovered. Until by the 3d year, a group of even more outstanding students will be selected. The department will arrange for those with relatively higher academic standards to work as instructors and will establish a teaching plan for each outstanding student, open the laboratory to them, allow them to borrow books and gain access to the reference rooms just as graduate students do, purchase books or provide laboratory expenses for them under the direction of instructors, and even allow them to change specialities or take elective courses in other departments or schools in accordance with their strong points. The determination of "the best of its kind" must be examined and approved by the school. All experimental points of the departments pay special attention to carrying out ideological and political education, teaching them not to be arrogant and impulsive so that they may live among the masses.

The School Must Function Primarily in Teaching and Combine It With Scientific Research

Key schools and colleges must engage in scientific research in order to develop science and technology. Scientific research must combine with teaching, which will favor raising the scientific and technical level of teaching. For many years the separation of teaching and scientific research has been incorrect. Jiaotong University of Shanghai, by advocating that teachers should have two concurrent jobs, mainly teaching to foster talents for the motherland but also engaging in scientific research to produce results, can then fit the present situation in the development of science and technology. Otherwise it would be difficult to bring new knowledge and techniques into teaching and it might be too late to incorporate them. Those who engage in scientific research must also engage in teaching.

Teachers must take on graduate students when engaging in scientific research. This usually brings greater results than when they do it alone. Taking on graduate students does not mean doing the problems and then asking the students to repeat them the same way. That is still the method of instilling. The teacher mainly should demonstrate the methods of research. It is not possible for the teacher to be wiser than the gradiate students in every way and it is not surprising if the teacher is not as good as his own graduate students in certain respects. The pupil can surpass the teacher. To foster a mentality, teachers and graduate students should jointly explore new knowledge, techniques and problems, and strive to create new discoveries and inventions.

Develop Inter-Disciplinary Studies and Open New Spheres of Learning

Comrade Fan Xuji thinks that students, with the consent of their teachers, should be allowed to cross disciplines in accordance with their special skills or the direction their specialities develop. Not only can they cross disciplines within their departments but also with other departments.

According to the practice of the Jiaotong University of Shanghai there are three ways to develop special fields of study. One way is to set up inter-disciplinary fields such as the bio-medical engineering field set up by our Jiaotong University in cooperation with the No 1 Medical College of Shanghai. The two schools jointly recruit students and offer courses. Both schools have their own bias. The Jiaotong University learns medicine on the basis of engineering while the No 1 Medical School learns engineering on the basis of medicine. The two schools jointly foster talents in medical apparatus and instruments as well as talents in the application of new engineering techniques in medical treatment such as the use of computers to diagnose illnesses. The mechanics department of Jiaotong University and the electronic computer field successfully created a manipulator which is already able to perform two kinds of motion. After a worker of a certain factory in Shanghai had his armed severed in an accident at work, such a manipulator was attached to him and now he can work as a warehouseman. Another way is to run schools with a diversity of forms, operating study courses or short-term training courses for the scientific and technical staff of factories or research institutes. New special fields of study can gradually begin through these courses. The Jiaotong University has already operated 8 different types and 12 terms of special and training courses including business management and vibration. Those who come to learn have a considerable amount of basic knowledge in science and technology. Some come to update what they know. New knowledge and techniques are taught. New teaching materials can be compiled after a course is taught once or twice, and new fields of study can begin shortly. The third way is to "use science to foster engineering." Special fields in engineering recruit graduate science students and those in science can also recruit graduate engineering students. For example, the physics field can recruit graduate students in computer or data science. New courses and specialities are created through such a linkup. He thinks that if subjects do not keep in touch, the significance and function of the comprehensive engineering college will be lost. Once interdisciplinary studies develop, people with the same goal gather together and exchange research findings with each other. A large number of elective courses is made available and many research problems are raised. Naturally this gives rise to cooperation inside and outside the school. Such a scene is very heartening.

Stress the Outfitting of Computers and Popularize Their Use

The development of electronic computers has promoted the growth of all branches of learning, even causing changes in the direction of research in some of them. It can be said that the outfitting and use of computers symbolize the modernization of education. Computers enable us to use the dispersion method to solve very complicated computations. Combining mathematical and physical models to do analog experiments on the computer takes the place of constructing certain large-scale laboratory facilities. This is truly a great savings. Computers can also provide the necessary means for processing data in experiments as well as upgrading designs. Clearly, the use of computers in the sphere of teaching transforms teaching and scientific research in the schools. Institutions of higher education must emphasize fully the development and use of such modern means of teaching and scientific research. This is a very important problem. Regardless of their special fields of study, most Chinese graduate students in the United Kingdom, France and West Germany work with computers. Universities in these countries were widely equipped with computers 10 years ago. Many computer centers at key institutions are linked to regional or national networks. In some schools there is a terminal for every 30 to 50 university students. After class they either go to the library or the computer room. The Jiaotong University of Shanghai is striving to move in this direction, with the gradual expansion of libraries, trial use of computers to search for data, trying out open-shelf reading among students, fully utilizing existing small computers before setting up computer centers, and vigorously popularizing and developing the application of computers in teaching and scientific research.

Correctly Treat the Relationship Between the Introduction of Technology and Self-Reliance

Comrade Fan Xuji pointed out emphatically that in order to do well in our country's educational undertaking we must base ourselves on self-reliance. We must learn what is advanced in the West but we must not copy it blindly. We have learned a bitter lesson in this. We should now pay attention to not losing the beneficial things we have learned in the past--the spirit of integrating theory with practice--on account of the emphasis of "all-round education." Engineering students must still go to the factories to obtain practical experience and must still attend engineering design courses. He thinks that redundant hiring of large numbers of foreign specialists to teach should be improved. Hired specialists must be small in number and outstanding. There are specialists for quite a few disciplines in our country and many foreign journals can be utilized. Organizing specialists inside our country to teach can save some funds for the state. He also thinks that the standard of undergraduates at our key universities does not appear to be lower than that in other countries. From now on it is not imperative to select and send students abroad to study beginning with the freshman year in college. These problems should be studied and improved in the readjustment and reform of higher education.

There is also the real problem of combining with our socialist system when learning foreign things. Western countries use the method of "hiring at a high price" to recruit qualified personnel. Heads of schools rely on prestige to solicit contributions from society. This is not what we should learn. In one respect, we must have a personnel system that is rational and suitable to the conditions in our country. In another respect, we must rely on ideological and political work to increase the socialist consciousness of the broad masses of teachers and scientific and technical staff, advocate working with a will to make the country strong, study assiduously, help each other, organize cooperation, and serve the construction of the four modernizations. Running schools must rely on the spirit of working solidly and using the result to produce talents and achievements which will gain people's trust and social prestige, and not pursue esteem with a mere name and without any real work. He said: In any case, we must base ourselves on self-reliance, learn from the strong points of others to make up for our weak points, give full play to the superiority of socialism, unite and cooperate, help supply each other's needs, and jointly advance for the early realization of the four modernizations of the motherland.

COOPERATIVE GROUPS ORGANIZED FOR TEACHING BASIC COURSES

Beijing GUANGMING RIBAO in Chinese 25 Jun 81 p 3

[Report: "Nine Institutes of Higher Learning Directly Under the First Ministry of Machine Building Form Cooperative Groups for the Teaching of Basic Courses"]

[Text] Since last January, 9 institutes of higher learning directly under the First Ministry of Machine Building, including the Hunan University and Hefei Industrial College, have offered 15 basic and basic technical courses and have formed cooperative groups to coordinate them.

Led by the institutes with relatively more favorable conditions the cooperative groups organized informal discussion activities. Participants included the comrades in charge and chief instructors of teaching and research sections as well as scientific research personnel. The essence of these activities was to formulate a teaching program in accordance with the unified program that would suit the real needs of institutions under the First Ministry of Machine Building to exchange experiences in teaching each course and to study the problems in strengthening practical links. Some groups even invited teachers with more teaching experience and attainments in learning to explain certain chapters and sections of each course. Other groups organized the compilation of new teaching materials, guides and exercise books. At the time the cooperative groups for basic courses in electrical engineering held informal discussions at the Hunan University, the participating chief instructors and laboratory staff of the nine institutes of higher learning personally performed all the required experiments. Ultimately they compiled and published for the students A Guide To Courses On Basic Experiments in Electrical Engineering.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PARTY AND STATE

CONFIDENCE IN LEADERSHIP OF PARTY EMPHASIZED

Harbin HEILONGJIANG RIBAO in Chinese 15 Jun 81 p 4

[Article: "Practice Brings Us Greater Confidence"]

[Excerpt] Today there are still many comrades who have exhibited little confidence in party leadership and the future of the four modernizations. This is a problem that deserves our attention. These comrades have failed to conduct an accurate and adequate evaluation of what the entire party and the people throughout the country have done and achieved under the leadership of the party Central Committee. They always feel that "what has been done is negligible" and "the step forward is not big enough." For this reason, they always look to the future with a feeling of uncertainty. At work, they always feel dispirited, demonstrating a lack of the vigor expected of revolutionaries.

Why do some comrades lack a correct understanding of the current situation regarding the four modernizations? An important factor is the underestimation of the serious damage to the party and state in the political, economic and ideological fields caused by Lin Biao and the "gang of four," the inadequate understanding of the long prevailing leftist mistakes and the impact of the new left-deviationist adventure that took place 2 years after the downfall of the "gang of four," and the inadequate assessment of the difficulties we now face in settling these problems and in carrying out the four modernization program. We often use such terms as "incurable" and "problems accumulate like mountains" to describe the political, economic and social problems we face. It is unrealistic to expect that so many problems that have accumulated over the years be resolved in a matter of a few days. Comrade Zhen Yun once said: As communists, who has ever thought of doing less and not more and who has ever thought of lagging behind? But whether we can achieve what we want and whether we can double our pace cannot be determined by our subjective wishful thinking alone. More important is the fact that we must take into account the actual conditions and measure our pace of progress on the basis of available energy and resources. This deserves to be called a Marxist approach to seeking truth from facts. An assessment of what we have done since the Third Plenum on the basis of this approach will reveal that we are not lagging behind in work, we are moving very fast; and what we have achieved is not small but great. This understanding is also an approach conforming to reality.

There is another important factor that has led to an inaccurate assessment of the current situation by some comrades: They are unwilling to analyze, fully and specifically, some problems that exist in our work and workstyle, and therefore, they cannot distinguish the mainstream from its tributaries; thus they can see only tangible problems that exist but overlook the active efforts that are being made to solve them with good results. Looking back on the party's workstyle, we will realize that unhealthy workstyles do exist within our party, thus tarnishing its image, lowering its prestige, and weakening its fighting strength, This is something that deserves our great attention, and a trend that should be conscientiously reversed. But a realistic review of these problems will reveal that the unhealthy tendency is not so widespread as to affect all or the majority of party members; special privileges are not so universal that they have been granted to all or the majority of cadres; the majority of party members and cadres are men of moral integrity devoted to serving the people. No one should regard specific local phenomena as universal phenomena or the situation in specific regions as the overall situation. Nor should anyone view problems that exist among some party members and cadres as something that affects the party as a whole. Particularly noteworthy is the fact that in the past 2 years, consistent efforts have been made to overcome this unhealthy tendency; our party's workstyle today is a great departure from what it was during the 10 years of catastrophe, and even differs more or less from what it was more than 2 years ago; this workstyle has become a trend continuing to move in the right direction. Therefore, the bad workstyle that has affected some people within the party should not be allowed to spread to others so to prevent all of us from losing confidence in the leadership of the party as a whole or courage to move forward. We should evaluate the problem concerning the party's workstyle in much the same way as we evaluate problems in work.

We must build up confidence before trying to score successes in our careers. Those with misgivings, a wavering attitude, and overwhelmed by pessimism are persons who often want to beat a retreat in the face of difficulties. Persons with this mentality can achieve nothing whatever they do. They are not qualified for participation in the extremely difficult and great cause of socialist modernization, an undertaking unparalleled in history. At every crucial moment in the history of our revolution, the party always considers it a duty to pass on to the masses the truth about our bright future, our present difficulties, our achievements and existing problems. The party also wants to refute statements full of pessimism and disappointment by means of reasoning and by citing facts to help the people build up their confidence. During the Jinggangshan period, Comrade Mao Zedong made known his thesis that "A Single Spark Can Start A Prairie Fire" in order to repudiate the gloomy view that "the red flag flying days are numbered." During the early stage of the War of Resistance Against Japan, in the face of the swaggering and cocky Japanese agressors, some people who did not dare to resist them spread the view that "the War of Resistance Against Japan is doomed." In response to this idea, Comrade Mao Zedong wrote a series of well-known articles analyzing scientifically the strengths of the enemy and ourselves, pointing up the belief of certain triumph in the War of Resistance Against Japan. In his address to the Seventh Party Congress, entitled "The Foolish Old Man Who moved Mountains," Comrade Mao Zedong solemnly admonished the entire party and the people throughout the land in the certain triumph of the revolution." A review of this historical experience reminds us of the necessity to constantly analyze the situation in order to achieve a correct understanding of it. This process of analysis and gaining knowledge has been instrumental in unifying the revolutionary ranks and inspiring us to march forward confidently toward victory. Earlier, I reviewed some work we have done since the Third Plenum. Although this review is far from specific and comprehensive, it is sufficient to enlighten us to the fact that today another great epoch in the history of our party since the Zunyi meeting has been ushered in for the party Central Committee, that our cause is advancing triumphantly and our future is infinitely bright. All our comrades must strengthen their confidence, coordinate with one another, and play an active role in pushing our great socialist modernization program forward.

STUDY OF DOCUMENTS EVALUATING MAO'S ROLE IN REVOLUTION URGED

Shanghai JIEFANG RIBAO in Chinese 4 Jul 81 p 1

[Commentary: "Study Documents Well, Unite As One To Look Forward"]

[Text] The Sixth Plenary Session of the 11th Party Central Committee is an event of great historical significance that has taken place at a time when the people throughout the country are jubilantly celebrating the 60th anniversary of the founding of the CCP. This is another very important conference in the history of our party that has taken place since the Third Plenary Session of the 11th Party Central Committee, a conference calling for summing up experiences and uniting to look forward, a new milestone in the endeavor of the party and state to bring order out of chaos, carry on our cause and forge ahead. During the Sixth Plenum, a "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" was adopted, principal leading members were elected and reelected to the Party Central Committee. Such actions entirely conform to the common aspirations of the entire party, the entire army and the people throughout the country, reminding us that our party has fulfilled a historical mission to rectify its guiding ideology. The facts show that our party has become more mature and stronger; our cause is gaining momentum and strength.

The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the Sixth Plenum is an important historical document pervaded with the brilliance of Marxism-Leninism and Mao Zedong Thought. This resolution contains a brief but concise review of the 28-year history preceding the founding of the PRC, a realistic summation of basic experiences and lessons our party has drawn from its endeavor over the past 32 years since the founding of the PRC to lead the people of all nationalities throughout the country to embark on the socialist revolution and socialist construction, and a scientific evaluation of the historical role of Comrade Mao Zedong and Mao Zedong Thought. The document further clarifies the correct path to socialist modernization conforming to Chinese conditions. This resolution results from labor that cost us dearly. It is a realistic, convincing and inspirational document, a reflection of the collective wisdom of the party, full of imposing ideals as well as objective realities. The document is an important basis for our party and state to distinguish right from wrong and unify our thinking, and an important weapon for us to unite as one to look forward, and to carry on our cause and forge ahead. Comrade Hu Yaobang's "Speech at the Meeting in Celebration of the 60th Anniversary of the Founding of the CCP" is a detailed account of the militant course taken by our party over the past 60 years as well as its basic experiences during this period, illuminating the direction in which our party is building itself into a strong elite force for the socialist modernization program.

It is indeed a programmatic document on strengthening party building for this new historical period. The publication of the "resolution" and "speech" will certainly have a great role to play in educating, inspiring and mobilizing the people throughout the country. At present, a task facing our party oraganizations at all levels is to organize, and provide effective and conscientious leadership for, a movement to study the three documents--the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," the communique on the plenary session, and Comrade Hu Yaobang's "Speech at the Meeting in Celebration of the 60th Anniversary of the founding of the CCP."

At every crucial turning point, the party as a whole has initiated a study movement to sum up its historical experiences, to unify its thinking and to raise its level of Marxism. This has become a tradition of our party. An example is the rectification and study campaign that took place in Yanan from 1942 to 1945. The current study movement centering on the study of the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" is another large-scale drive to study theory, principles, policies and historical experiences or a widespread Marxist education campaign in the history of the party. All leading cadres and members of our party must correctly sum up historical experiences through this study as a basis for unifying our will, coordinating our steps, uniting us as one to look forward, and to serve the four modernizations program wholeheartedly. To guide the organization of this study through to success should be regarded by the entire party as a central task to be fulfilled in the second half of this year. Our present task is to read these documents thoroughly and grasp their essence, to understand their contents. Our party's leading cadres at all levels must first do a good job in this field by learning more and better than others. This is the key and crucial point of this study movement. All leading cadres are required to read these documents conscientioulsy and thoroughtly until they can grasp their essential contents and spirit and essence. They must concentrate on grasping the guiding ideology of the "resolution." For example, they must uphold the historical role of Comrade Mao Zedong and Mao Zedong Thought as the significant guiding ideology of our party, realistically evaluate the matters of right and wrong and merits and demerits of the past 32 years following the founding of the PRC, and use this as a basis for unifying the thinking of the entire party and for uniting the nation to look forward.

This study is a form of profound ideological education. In the course of study, we must concentrate on major issues and on issues of substance, and dovote ourselves to studying them repeatedly. We must refrain from quibbling over peripheral issues or certain individual phrases. Nor should we engage in any mass disputes over specific historical issues of right and wrong in specific units and localities.

Different opinions may be expressed through this study. This is something normal in every sense. We must encourage comradely discussions on an equal footing as a step toward unity. Every party member must solemnly defend and implement the "resolution" and observe discipline. No one is permitted to spread and statements inconsistent with the spirit of the "resolution" among the masses.

In the course of studying the doduments conscientiously, the party's leaders at all levels must make successful efforts to organize party members and the masses at the grassroots units to study them. Although methods for learning such documents may vary from one grassroots unit to another, the key method should generally take the form of lectures. In other words, through this extensive movement to study the documents, those cadres who have done a better job in this field are in a good position to convey the key points and basic spirit of the documents to the party members and masses. Lectures can be delivered under specific titles and on various occasions. Each lecture must be right to the point, emphasize the effect of its delivery and avoid nonsense and rush or cram sessions. A lecture is not a transmission of what is printed in the documents. Each lecture should be fully prepared beforehand and should be delivered in a way that takes into account what party members and the masses in specific units have in mind. The lecture is a forum for presenting facts, for reasoning things out, and for conveying something interesting in a lively manner with a well-defined objective in mind so that the listeners can easily grasp its meaning and key points. In recent days, newspapers and journals have published reference material in connection with the study of the documents along with other related articles presenting some thought-provoking questions. All these can be used as complementary material or as aides in carrying out our study or presenting our lectures. Leading cadres at all levels must take the lead in presenting the lectures, and show concern for and attach importance to the training of cadres in propaganda programs. It is hoped that through this study and lecture presentation campaign, the system of training publicity men and reporters can be gradually restored and perfected so that an important force can be fostered for the grassroots units to strengthen their political and ideological work on behalf of the party.

In 1945, the Seventh Plenary Session of the Sixth Party Central Committee adopted a "Resolution on Some Historical Questions" which played a great role in summing up experiences and lessons and in unifying the thinking of the party as a whole, in guiding the sweeping advance of the revolution through a great period of history, and in winning subsequent brilliant victories in the War of Resistance Against Japan and the liberation war. Today, at this new turning point in history, the "Resolution on Certain Questions in the History of our Party Since the Founding of the PRC" adopted by the Sixth Plenary Session of the 11th Party Central Committee can certainly be expected to play the same great historical role. We deeply believe that as a result of our party's conscientious efforts to study and sum up the historical experiences, vast numbers of cadres, party members and the masses of people will rally more closely around the party Central Committee, further display their revolutionary spirit, raise their morale for the revolution, increase their confidence in the revolution, work with one mind and one heart to overcome all difficulties, strive for success in production and other work, and guide this great revolutionary cause of socialist modernization through to success.

POLITICAL EDUCATION OF PARTY MEMBERS INTENSIFIED

Nanjing XINHUA RIBAO in Chinese 24 Jun 81 p 1

[Report: "Province Strengthens Party Member's Education Since Third Plenary Session of 11th Party Central Committee--Consciousness of Vast Ranks of Party Members in Carrying Out the Party's Principles and Policies Continually Heightened"]

[Text] Ever since the Third Plenary Session of the 11th Party Central Committee, our province has been closely following the party's line, principles and policies in carrying out the education of party members.

From the end of 1978, for 3 years in a row the provincial party committee has made arrangements to operate winter training programs for party members and basic-level cadres in the countryside. The Suzhou and Yancheng prefectural party committees and the Changzhou and Xuzhou municipal party committees have all convened all-prefecture (municipality) forums on party member educational work or experience-exchange conferences each year to discuss, sum up, and organize party member educational work in the prefecture (municipality). Now a few party organizations have listed this work on their agenda in order to insure that it is carried out regularly without fail; principal responsible comrades have actively taken the lead in undertaking it well. In April last year, after the principal responsible comrade of the provincial party committee gave a lecture on the party to party members of organs at the provincial level, many responsible comrades of the prefectural, municipal, county and basic level party organizations took the lead at each level in investigating and insuring the work of educating party members and gave lectures on the party to party members. In order to assure the organization of this educational work, propoganda departments of the provincial party committee and most prefectural, municipal and county party committees set up educational institutions for party members; those few party committees that did not set up such institutions designated definite individuals to take the responsibility. From August 1978 on, the provincial party committee also resumed publication of the journal PARTY LIFE; newspaper and broadcasting departments also strengthened propaganda and reportage on party member educational work. During the past 3 years, the province has made use of the end of the year to train a total of more than 5 million persons among countryside party members and basic-level cadres. Short-term training classes run by municipalities such as Nanjing, Changzhou, Lianyungang and Yangzhou last year trained from 70 percent to more than 90 percent, respectively, of the total of party members of these municipalities.

Closely following the party's line, principles and policies, the party organizations at various levels in our province have seriously carried out education of party members in the present situation and our tasks as well as in our ideological line: education in the party's democratic centralism, organization and discipline; in the party's unity; in the party's traditions, workstyle and spiritual civilization; in adherence to the four basic principles; in the readjustment and transformation of the national economy; and in economic policies in the countryside.

Clarify the shift in the focus of work of the whole party, insist on taking the four modernizations as our central task

Party organizations at various levels carried out timely, profound and broad ideological education among the vast ranks of party members and cadres, elevated their perception of the shift in the central tasks and the political line, and strengthened their consciousness, firmness and creativity in carrying out the party's political line. Some comrades said: "Now we will take the four modernizations as our central task and we will no longer work on extensive criticism and large-scale struggles; the barriers in our minds can now be let down, and we can thrust our arms open wide to work on the four modernizations." Many party members thus pulled themselves together, concentrated their energies, dug into their work, and launched themselves into the construction of the four modernizations; there thus emerged not a few New March shock workers, labor models, and fine party members. Party organizations and the vast ranks of the party members at various levels also consciously maintained and developed a situation of political stability and unity; rectified unjust, false and erroneous cases of litigation; struggled against various bad tendencies hampering internal party stability, unity and social order; and thus energetically promoted the development of various undertakings.

Rectify our ideological line, having established the idea that practice is the only criterion for testing the truth

The Third Plenary Session of the 11th Party Central Committee broke through the ideological constraints of the two "whatevers" and restored the party's dialectical-materialistic ideological line of proceeding from actualities in everything, connecting theory with actualities, and seeking the truth from facts. On this, some of the party members found it impossible to turn the corner; through discussions and makeup lessons on the question of the criterion for testing the truth, the thinking of most comrades underwent a change. They proceeded to correct mistakes in the guiding ideology with respect to the political line formulated by the party Central Committee since the Third Plenary Session of the 11th Party Central Committee and with respect to the experience and lessons since the founding of our state, particularly those of the "great cultural revolution"; they gradually deepened their perception of a series of major readjustments and changes in theoretical and policy questions. Some comrades said after participating in the winter training programs: "Undergoing this study is like putting a handful of alum in a tank of muddy water; this helped clarify much of our murky perception of many questions." Applying this ideological line in the construction of the four modernizations, the vast ranks of the party members continued to study new situations, solve new problems, and further promoted the implementation of the princi le advanced by the Third Plenary Session of the 11th Party Central Committee on "emancipating our thinking, opening up the apparatus, seeking the truth from facts, and uniting together to look forward." Through this education in the ideological line, not only were they able to eliminate "leftist" remnant poison but they also precluded interference from the right and thereby maintained and adhered to the four basic principles.

Clear up the "leftist" guiding ideology in our economic work, heighten consciousness in carrying out the party's various principles and policies

Since the Third Plenary Session of the 11th Party Central Committee, in the main the attitude among the vast ranks of the party members in the province toward understanding and carrying out the series of principles and policies formulated by the party Central Committee has been good, but there are still no small number of persons who, because of the "leftist" ideological influence to which they were subjected, still have this or that kind of perceptual problems. Some take the liberalization of policies and revitalization of the economy as resorting to capitalism; some capitalism; some are worried about the readjustment of the national economy; some have developed a misunderstanding of the Central Committee documents concerning the strengthening and perfecting of a production responsibility system in the countryside, etc. Through the study of such documents and ideological and political education, the vast ranks of the party members have acquired an understanding of the long-standing guiding ideology in our economic work and also a new perception of the above problems. Party organizations and the vast ranks of party members at various levels all take an active, positive attitude toward the current readjustment; many units are courageously shouldering difficulties on behalf of the state by reducing their scale of capital construction and thus contributing to the readjusment; they have come to recognize that strengthening and perfecting a production responsibility system is a great breakthrough in contryside management. Not a few countryside party members and cadres said after studying the documents that they felt as if they had just swallowed something capable of setting their minds at ease; they praised the documents of the party Central Committee as "golden keys" to curing poverty and achieving wealth, so that they must carry them out well.

Straighten out the party's workstyle, having restored and given scope to the party's fine traditions

After the promulgation of the "guiding principles," party organizations at various levels in the province carried out education in comparative systems among the vast ranks of party members. Through the study of this document, the vast ranks of party members adopted its spirit and acquired further understanding of the proposition advanced by Comrade Chen Yun that "the question of party workstyle for a party in power has a bearing on the life and death of the party"; they proceeded to carry out the "guiding principles," and consciousness regarding straightening out the party's workstyle was thus greatly heightened. The vast ranks of party members have consciously undertaken to "measure themselves with the established yardstick," "look at themselves in the mirror," and carry out criticism and self-criticism; they are adhering to the party's ideological line and political line, and are actively carrying out the party's line, principles and policies; they are insisting on collective leadership and refraining from resorting to the practice of "what I say counts"; they are strengthening party organization and discipline, maintaining party centralism and uniformity, and doing a good job of forging Party unity; they are serving the people wholeheartedly; they are refraining from feasting and collecting gifts, seeking positions for their children, seeking privileges, entering through the back door, etc. In all this, conspicuous results have been achieved. Many comrades have reflected that, since the study and implementation of "guiding principles," the party's workstyle has improved, social customs have changed, the party members' role as models has been given full play, and the party's prestige has been elevated. Some comrades also say: Through studying and carrying out the "guiding principles," old party members have restored the party's fine traditions and the workstyle of the Old Eighth Route Army has returned; new party members have also learned the party's fine traditions, and understand party' discipline and party laws. In carrying out the "guiding principles," everywhere there has been a grasp of certain questions which are more influential and about which the masses are more critical to energetically crack down on devious styles and assert healthy attitudes.

PARTY AND STATE

NEW LEADING CADRES ELECTED IN GUANGDONG

Guangdong NANFANG RIBAO in Chinese 29 Jun 81 p 1

[Article: "Majority of the Province's Cities and Counties Selected New Leading Cadres To Strengthen the Leadership Role of the Party and To Develop Good Work Style for the Party"]

[Text] As of the middle of the month, 104 cities and counties (including the six districts in Guangzhou) have successively convened conferences of party representatives and democratically elected leading cadres for each of the city and county commissions. The cities and counties which have convened such conferences comprised 90 percent of the province's total number of cities and counties.

According to investigations, new cadres of city and county commissions produced by democratic election, in general, have common characteristics. They can firmly carry out a thorough implementation and execution of the party's line, principles and policies set forth during the Third Plenum of the Central Committee. They will carry out separation of party and government, overcome the phenomenon of party apathy, and concentrate their energies on getting a good grasp of the party's intellectual and organizational construction.

They will perfect the democratic centralism and put into effect the role of collective leadership. They are leaders in the execution of the "guiding principles" and will consciously rectify unhealthy tendencies. They will emphasize investigative research, keep close contacts with the masses and improve the relationship between the party and the masses.

The party representative conferences already convened progressed relatively smoothly. It is due to the provincial and prefectural committees' conscientious strengthenging of leadership. through experiment and experience, they conducted party training classes on a widespread basis, educating party members to adhere to party regulations and party guiding principles, to thoroughly carry out democratic centralism to fully bring out the inner party spirit of democracy and to respect the elected. Differential election is followed. Furthermore, the election and regulation of leading cadres are based on the "three in one" principle to accomplish the overall planning of the four sets of cadres: the party commission, the Standing Committee of the People's Congress, the government, and the Political Consultative Conference.

RURAL CADRES UNDERGO TRAINING IN OPERATING COMMODITY ECONOMY

Beijing RENMIN RIBAO IN Chinese 15 Jul 81 p 1

[Article by Cai Guanghui [2580 0342 2547], Li Yeying [2621 2814 5392] and Wu Xueran [0702 1331 3544]: "Help Grassroots Cadres Keep Abreast of the New Situation"]

[Text] Active measures have been taken by the party committee of Linli County, Hunan Province, to strengthen the education of rural grassroots cadres and help them keep abreast of the new situation.

Although the situation in the countryside of Linli County has been improving steadily as a result of the implementation of the series of party Central Committee's rural economic policies, a number of cadres including grassroots cadres remain far from achieving a clear and accurate understanding of the situation resulting from the development of a diversified economy, the implementation of the plan to allow a specific segment of the peasant population to become rich ahead of others, and particularly the system of responsibility for production. These difficulties in understanding stem from the following: 1) under the prolonged "leftist" influence, they are still inclined to view problems with their "left-leaning eyes," always believing that the series of policies formulated by the Central Committee to correct the "leftist" mistakes in a deviation to the right; 2) as a result of adopting a biased view of the situation, they seem unable to conduct an accurate analysis of the problems that arise during their march forward, and hence are unable to distinguish the mainstream from its tributaries; 3) the establishment of a system of agricultural production responsibility designed to improve efficiency in implementation of the principle "to each according to his work" conflicts with the "vested interests" of those cadres who cherish special privileges and other unhealthy lifestyles.

The Linli County party committee believes that the education of cadres must concentrate on educating grassroots cadres in policies and workstyles. The major measures taken by the county party committee in this connection call for organizing cadres to study the Central Committee documents and relevant basic theories. Earlier, the party committee of Xinhe commune made the mistake of viewing the commodity economy as an economic model unique to capitalism, equating "money" with capitalism and denouncing those units scoring successes in "diversifying the economy and all-round development" as capitalist models. Since then, the county party committee has helped comrades of this commune conscientiously study the two documents of the Central Committee on agricultural development and relevant economic theories with the understanding that socialism also calls for efforts to develop commodity production. Lately, bold steps have been taken by this commune to change its policy of grasping grain production alone, to reasonably adjust its internal agricultural structure and to vigorously develop diverse economic undertakings in order to enliven the commune economy.

During the past 2 years, the party school short-term training program sponsored by the county party committee has graduated more than 5,300 county, commune and brigade level cadres. Most of the cadres not associated with production and principal brigade-level cadres have improved their knowledge of politics and policies after completing a systematic study program.

The Linli County party committee has persisted in the principle of educating cadres at the grassroots level by means of persuasion and reasoning. To this end, it has established and improved the party study class system, the system regulating the meetings of party democratic life, and the system of individual heart-to-heart talks designed to teach party members and cadres to act as models. The Zhuma brigade of Guanting commune has a cadre who was previously known for his sloppy performance and unwillingness to become a professional in his field. He devoted only 50 to 60 days a year to manual labor, but earned more than 4,000 work points in subsidies. Last year he repeatedly resisted commune members' demands to implement the system of responsibility for joint operations and labor compensation. He was asked to meet the secretary of the party committee of Guanting commune a dozen times in order to straighten out his problems when the latter was on an inspection tour of the brigade. Through heart-to-heart talks, the secretary criticized his mistakes in order to raise his political consciousness. Shortly after last fall, he voluntarily moved to the backward No 10 production team determined to get something done. While there, he tried in practice to improve the system of production responsibility while taking an active part in manual labor and assiduously acquiring knowledge of agricultural sciences and technology and passing on it to others, thus paving the way for the production team to increase the output of wheat and rapeseeds this year. The concentrated education of cadres has brought about the following two changes in the countryside of Linli County: 1) Those at the top and those at the bottom have achieved a unity of thought and action; 2) cadres have learned to consult and work together with the masses and have truly become their leaders.

CADRES ADVISED TO ADHERE TO PRINCIPLES IN SEEKING VOTES

Nanjing XINHUA RIBAO in Chinese 24 Jun 81 p 3

[Article by Lu Zhengfang [7120 2973 2455] in "Issues and Comment" section: "'Principles' and 'Votes'"]

[Text] "Principles" and "votes" don't seem to have anything to do with each other, but in actual life it has happened that those cadres who adhere to principles get fewer votes, while those who do otherwise may possibly get more votes. This is not usually the case, but such a phenomenon has created an abnormal psychology in a few cadres. In order to get more votes, some comrades are afraid of adhering to principles and struggling against devious styles and sinister trends. From their point of view, adhering to principles is bound to offend people and harm "relations with the masses," and hence cost some votes. Therefore, they are afraid of "getting short changed" and they turn to emphasizing "practical benefits"; as a result, they become oblivious of erroneous tendencies, devious styles and sinister trends, and they only wish to be "nice fellows." This attitude is obviously wrong.

Of course, we are now reforming the cadre system and carrying out democratic elections; whoever has the highest prestige and whoever maintains the best of relations with the masses is likely to get the most votes and enjoys the greatest possibility of getting elected. But how do we manage such relations with the masses? Where does such prestige come from? It depends on whether or not we serve the people wholeheartedly and work in their interests. At present, the erroneous tendencies of violating the four basic principles, certain practices that go against the "guiding principles," plus some devious styles and sinister trends, still exist and they seriously harm the people's interests. The masses have expressed great dissatisfaction with this. As long as our cadres proceed from the people's interests, dare to adhere to principles, and are good at struggling against devious styles and sinister trends, they are bound to be popular. Even if they should offend a small number of people who resort to devious styles, they will earn the trust and support of the vast ranks of cadres and masses; they should not lose many votes. On the contrary, if they proceed from private interests and choose to be "nice fellows" in order to protect their position and hence do dare not to adhere to principles, then, while a small number of people might benefit, in general they will have harmed the people's interests; most of the masses will not trust them. As a matter of fact, because the level of consciousness on the part of the masses is not very high in some localities, the votes "nice fellows" get might prove temporarily more numerous than those of the comrades who adhere to principle, but with the passage of time and the awakening of the masses, such a situation will ultimately change. As party cadres, we must proceed from our party character and we must not consider our individual gains or losses; it is better to get fewer votes temporarily so that we can adhere to principles and work wholeheartedly for the interests of the people.

CONFERENCE CONVENED BY PARTY HISTORY RESEARCH COMMITTEE OF GUANGDONG

Guangzhou NANFANG RIBAO in Chinese 30 Jun 81 p 2

[Article: "The Party History Research Committee of the Guangdong Commission Convenes a Conference of All Its Members To Discuss the 'Chronicles of the Revolutionary Struggles of the Guangdong Communist Party (During the Period of New Democratic Revolution)' and Problems in Carrying Out Party History Research and Data Collecting"]

[Text] On the eve of the commemoration of the 60th anniversary of the establishment of the Chinese Communist Party, the Guangdong Provincial Party Committee's Party History Research Committee convened a meeting of all members on the 24th and 25th of June. The key discussions centered on the "Chronicles of the Revolutionary Struggles of the Guangdong Communist Party (During the Period of New Democratic Revolution)" and on problems related to comprehensive party history research and data collecting. Many of the participating members were old cadres who had been through the first and second national revolutionary struggle. Although they were senior in age, they still actively participated during the meeting and enthusiastically took the floor one after the other, showing how much they valued and cared about the successful execution of the province's party history research, data collecting and organizing projects.

Wu Nansheng, Secretary of the Provincial Party Committee and Deputy Director of the Party History Research Committee presided over the conference and made a speech. He said, "This conference convening on the eve of the 60th anniversary of the birth of the party is especially meaningful. It is a concrete activity through which the Party History Research Committee commemorates the party's 60th anniversary. We hope that, through this conference, we can take a further step in our province's party history research work and party history data collecting work and complete the revision of the 'Chronicles'." In his speech, Wu especially emphasized the point that all must deeply recognize the importance, urgency and level of political consciousness in the party history data collecting work and in the party history research work, and urged all levels of party organizations and all old comrades to attach great importance to the successful completion of the information collection and history research work. He requested that all levels of party organizations emphasize the importance of the positive nature of the old comrades and to create conditions to help them to do a successful job.

Participating comrades, based on the spirit set forth in related central and provincial circulars and integrated with reality, carried on an enthusiastic discussion of the "Chronicles" and contributed many important historical facts and leads as well as many valuable revision ideas for the "Chronicle". They unanimously pointed out that: The people of Guangdong have a long and glorious revolutionary tradition. Guangdong is one of the relatively earliest areas to have a party established. It is the origin of the Great Revolution. Mao Zedong, Zhou Enlai, Liu Shaoqi, Zhu De and other senior generation proletariat revolutionaries had all personally led revolutionary struggles in Guangdong. The history of the Guangdong organization is an important chapter of the entire party history. The work of successfully completing the Guangdong party history research and data collecting is an undeniable duty and responsibility of all levels of the Guangdong party organization and of all the comrades, especially of the older comrades. Old comrades within and outside the party must give voice to their role as historical witnesses and realistically, seeking truth from facts, contribute as much historical struggle information as possible. During the conference, all levels of party history workers were urged to penetrate the masses, to carry on investigation and research to make clear and precise the party's revolutionary history, to complete the compilation of the "Chronicles", and, with this as a basis, to further work on the compilation of a brief history of the Guangdong Communist Party.

FOSTERING PARTY'S WORKSTYLE OF CRITICISM, SELF-CRITICISM URGED

Shenyang LIAONING RIBAO 17 June 81 pp 2, 4

[Article by Chen Puru [7115 3877 1172]: "Restore and Foster the Party's Excellent Workstyle of Criticism and Self-criticism"]

[Text] Criticism and self-criticism is one of the excellent traditions and work styles of our party. This workstyle was formed during a long period of revolutionary struggle, and early on struck deep roots among the broad party members and cadres. Since the 3rd Plenum of the 11th Party Central Committee, and especially since the Central Work Conference last December, comrades of the entire party have conscientiously carried out the "Guidelines Concerning Political Life Within the Party," and from the angle of the leadership took aim at the ideological influence of the "left" in our work, undertook criticism and self-criticism, distinguished true and false, raised awareness, strengthened unity, and caused life within the party to develop a pleasant lively atmosphere. Practice has proven that criticism and self-criticism is an effective means to solve ideological contradictions within the party, thoroughly eliminate the residual poison of Lin Biao and the "gang of four," gradually overcome the mistaken ideological influence of the "left," effect a good party work style, and perfect political life within the party. We must fully recognize the importance of restoring and fostering the excellent work style of criticism and self-criticism, accurately calculate the ideological situation of party members in matters of criticism and self-criticism, and correctly use the weapon of criticism and self-criticism.

1

Criticism and self-criticism is a weapon for consolidating and preserving party unity and a motive force for furthering the self-education of party members. That our party must foster criticism and self-criticism is determined by the nature and basic purposes of the party's proletarian vanguard. Our party is a political party in whole-hearted service to the masses. Aside from the greatest benefit for the greatest number of the masses, it has no private interest. This special characteristic determines that our party not only does not conceal any of its own shortcomings or mistakes, but, on the contrary, needs the masses and ourselves to expose these shortcomings and mistakes and, moreover, to conscientiously correct them. Comrade Mao Zedong said; "Because we serve the people, if we have shortcomings, we are not afraid that others criticize and point them out." By undergoing criticism and self-criticism we can, in timely fashion, eliminate the political dust and microbes from our thinking, increase the strength of our resistance to them, and effectively stave off erosion caused by various non-proletarian ideologies. By undergoing criticism and self-criticism, in summarizing the positive and negative sides of our experience, we can learn more of the standpoint, viewpoints and methods of Marxism-Leninism, and can raise the level of Marxism-Leninism and Mao Zedong Thought. By undergoing criticism and self-criticism, we can fully foster democracy within the party, hear different opinions, clearly distinguish true and false, timely correct mistaken tendencies, and achieve revolutionary unity. Criticism and self-criticism is a powerful weapon for strengthening the organization and fighting capacity of the party. The serious promotion of criticism and self-criticism is a clear sign distinguishing our party from any other political party.

Historical experience tells us that whether or not there is conscientious and correct criticism and self-criticism within the party, and especially among the leading organs and leading cadres at entry level, has a very close relationship to the party's ability to maintain a normal political life. In the Yenan period and at the 7th Party Congress the Central Committee leadership and Comrade Mao Zedong, were strict in disciplining themselves, and took the lead in carrying out self-criticism in regard to certain shortages and mistakes in their work. The majority of the cadres in the party were modest and cautious, shunned pride and impatience and matured very quickly. This was inseparable from our being able to maintain and develop the excellent party work style of criticism and self-criticism. Those comrades within our party who went through this period of life are still full of emotion when recalling the experience and feel it is to be prized. The Yemen spirit has already become a precious spiritual resource of our party. Ever since the period of nation building, many of our party comrades have maintained the hard work and austerity of the war era. They remain modest and cautious, having strong feelings for the people, listen attentively to the voice of the masses, are courageous in the workstyle of self-criticism, and enjoy great prestige within the party and among the masses. At present, our party is leading the people of the entire nation in carrying out the great undertaking of socialist modernization, and the party's work style will influence the party's fate. Carrying on and developing the excellent tradition of criticism and self-criticism has tremendous significance in regard to strengthening the unity of the entire party and better leading the masses to carry out socialist modernization.

2

During the ten years of civil strife, Lin Biao and the "gang of four," acting on their counterrevolutionary goals, madly sabotaged and broke apart the party, conspired to usurp party and state power, and trampled to pieces the excellent party work style of criticism and self-criticism. They perversely labeled their critics as criminals or sought opportunities for revenge. They unfairly and excessively criticized the shortcomings and mistakes of others, even going so far as to grasp at shadows when evidence was lacking, make something out of nothing and open a "label factory." They were arbitrary and over-weening within the party. They were overlords who created "one voice meeting halls" where alternate viewpoints could not be aired and "faction meeting halls" on a large scale, and brought forth a feudal fascist dictatorship. They carried out cruel struggle and merciless attacks against those who expressed differing opinions. They did not allow comrades who committed mistakes to correct them in their work. Once you were recognized as having committed an error, then there were endless critiques of your shortcomings to write and long periods where you had to stand aside, apart from all activities. You were struggled with until utterly defeated and discredited. The effects of this were extremely serious. It caused everyone within the party to fall mute--a stagnant pool. It brought forth a disasterous flood of every kind of unhealthy ideological workstyle and did great damage to the body of the party. At the same time it made extremely difficult for us to restore and foster the excellent traditions of criticism and self-criticism. Things often tend toward the reverse of themselves. After a calamitious fiery struggle within the party, there always appears the phenomenon of doing away with criticism and self-criticism.

After smashing the "gang of four," and especially since the 3rd Plenum of the 11th Party Central Committee, the Party Central Committee has adopted a series of important measures intended to restore normal life to the party. The entire party has resolutely and thoroughly implemented the adopted policies of the Party Central Committee and has already begun to restore the excellent work style of criticism and self-criticism within the party. The party organizations at every level in our province have done likewise. But, we should recognize that within some party organizations there still exist some problems in need of urgent solution. The main ones are not developing criticism and self-criticism, not discussing ideology, learning how to get ahead through connections, practicing peaceful coexistence, hearing and ignoring things of the "left" and right and other mistaken ideologies or morely perfunctorily saying a few words about them, not solving problems, and the so-called "It is best not to speak of thing's relations to principles"--these are first. Second is criticism not achieving its goal, people running off once criticism is aired and refusing to accept correct criticism, but rather considering themselves to be right and consistently corect. Third is when there is no criticism forthcoming, letting things lie, and once there is criticism, going to extremes but for those considered to be your own people, turning big matters into small ones and making small matters disappear. Fourth is developing havits of crafty businessmen, refusing to speak openly, but saying anything behind one's back, or no speaking in meetings, but saying anything after meetings, or speaking pleasantly to one's face and then stabbing one in the back, and so forth. These problems severely weaken the fighting capacity and reduce the prestige of the party. These corrupt work styles are an expression of impure party character. If they are not thoroughly solved and the party work style set right, then it will be very difficult to realize the important task of socialist modernization.

Presently, there are quite a few comrades who do not dare to struggle. They have struggled until they fear it. This is very dangerous. In the ten years of unrest, the severe destruction done by the Lin Biao, the "gang of four" anti-party cliques, in addition to the construction of absolutes, the exaggerations, and the excesses in the practice of struggle within our party, led some persons to the other extreme--they do not dare to struggle. How can this be accepted? Without struggling against thinking and behavior which violates the line, principles and policies of the 3rd Plenum of the 11th Party Central Committee, without struggling against mistaken speech and actions which oppose the Four Basic Principles, and without struggling against bad men, bad events, bad ideology, and bad work styles, the life of the party will cease. We must teach party members to take up the weapon of criticism and self-criticism.

The key points in restoring and fostering the excellent traditions of the party are to move forward in eliminating the residual poison and influence of the ultra-left line of Lin Biao and the "gang of four" and to teach party members the correct handling of criticism and self-criticism. For now, we must pay special attention to the following points:

1, We must have a firm standpoint. We communist party members must, in matters of principle, stand firm, be open and frank, hold up a clear and definite banner, be fearless in the knowledge that our cause is just and dare to struggle. To be equivocal in matters of principle, to fail to uphold what is correct and to fail to resist what is mistaken are expressions of impure party character. As for going whichever way the wind blows, taking help from both the left and right, and trading in principles, these are the work styles of bourgeois politicians and must be resolutely opposed. Criticism must certainly take note of politics and, at present, we must pay attention to whether or not we resolutely and thoroughly carry out the line, principles, and policies of the 3rd Plenum of the 11th Party Central Committee, and we must unwaveringly uphold the politics of the Four Basic Principles. In grasping this, we cannot go so far as to carry on unprincipled arguments and vulgarize criticism, but rather we should cause criticized comrades to become prudent gentlemen.

2, We must have the spirit of seeking the truth from facts. The "Guidelines Concerning Political Life Within the Party" demands that "in regard to themselves and to others, communist party members must at all times and in all places respect facts and, according to the original aspect of things, realistically report conditions to the party." It further demands that "the leading organs and leading cadres of the party at every level must all act as models of seeking the truth from facts." We communist party members must seek the truth from facts when we carry out criticism. We must recognize the good points of comrades, remember to cherish the revolutionary enthusiasm of comrades, and protect the socialist initiative of comrades. It is not permissible to overlook these things. Criticism must be based on facts. What is said must be supported by evidence. We cannot rely on subjective impressions or spread rumors, and it is even less permissible to fabricate material and falsely incriminate comrades.

At present, we must uphold the development of criticism and self-criticism based on facts. And we must specially emphasize that our comrades, especially high-level cadres, must possess the broad-mindedness of the proletariat, must possess "a heart as big as all outdoors," and must work hard at being pleased to hear of their mistakes. Of those cadres within our party, most have come from small producer backgrounds and small producers have always been relatively narrow-minded. Because of this, paying attention to correcting this sort of thinking is a long-term task on the ideological battlefront of our party. We must advocate getting rid of historical hangups and must not become entangled in old debts of history, nor be mindful of personal gains and losses. As for comrades who spoke too heatedly or did some incorrect things during political movements at various times, they need only thoroughly review their mistakes and that is all. We did not continue to restrain them. There should be no grudges held between comrades which are constantly remembered.

Only this will be beneficial to stability and unity. Both the positive and the negative sides of the several decade-long historical experience of our party tells us that people must adopt a serious and cautious attitude in handling problems. That is to say, they must not be ambiguous or perfunctory or injure other comrades. This is one of the signs of the flourishing development of our party.

3, We must have correct principles. We must correctly grasp and use the formula, "unity--criticism--unity," and, starting with a desire for unity, pass through criticism and self-criticism to reach a new unity built on a new foundation. After the 3rd Plenum of the 11th Party Central Committee, in accordance with unified forward looking principles, there was clear improvement in the area of restoring the work style of criticism and self-criticism. At the same time, the meaning expressed in this formula was made richer and further developed. New experience has been gained, especially in the area of changing past use of methods of the "left" in criticism. For example, we must not abuse the method of calling for struggle within the party; not lightly speak of line struggle; not indiscriminately blame others; not try to see that everyone passes unscathed through ordeals; not compel everyone to write reviews of past errors; allow people to return to their leadership postions after errors are corrected; use enlightened persuasion as the primary means of solving ideological problems, etc. We should advocate the continued summation of experience in practice and create more and better methods of doing things. In the area of improving comradely relations, we must firmly carry out unified, forward-looking principles, taking the overall situation to be most important and both discerning the general interests and keeping watch on the main currents.

4, We must have a sincere attitude. We must uphold the principles, "Say all you know and say it without reserve," "The speaker should not be punished, but the listener should take heed," and "If you made mistakes, then correct them, if you make none, then work harder," which Comrade Mao Zedong initiated. We must proceed with whole-hearted, sincere criticism and self-criticism and should be strict with ourselves and tolerant of others. For the most part, we should take self-criticism to be primary. We must be severe in analyzing ourselves and, in regard to ourselves, divide one into two [a dialectical materialist method of analysis grounded in Mao's throty of contradiction]. Criticism of others is to be for their own good. It should be like a mild breeze and a light rain, a reasoned persuasion of the person, honest and frank, straightforward and upright. We must encourage and protect comrades who make strict demands on themselves and consciously carry out self-criticism. We absolutely cannot permit any persons to use someone's self-criticism to attack him. Only in this way can we open up the thinking of party members at the party's organizational life meetings and allow them to be honest and forthright and to conscientiously develop criticism and self-criticism. We must encourage and support criticism which runs from the bottom upward.

Some comrades never seem to get used to criticism printed in newspapers. The anti-party cliques of Lin Biao and the "gang of four" named names in newspapers at every turn in order to knock down and utterly discredit those involved. But our public criticism and self-criticism is in order to correct the party work style, to strengthen the relationship between the party and the masses and to increase the prestige of the party among the people. If those who are criticized will merely treat the criticism correctly, then their reputations will not only not be harmed, they will be even better. Of course, public criticism must pay special attention to seeking the truth from facts. First, accurately determine the circumstances and afterwards talk things over with the person being criticized and his organization. In this way very good results will be realized. Do not launch sudden surprise attacks. Do not disregard the facts. Act for the good of the person involved. These are extremely important principles.

The ideology and revolutionary spirit of communism are precious spiritual resources of our party. In order to carry on and develop these resources, we should consciously take up the weapon of criticism and self-criticism. We must support repudiation of and opposition to the remaining influences of feudalism in the areas of ideology and politics both inside and outside of the party; repudiation of and opposition to the worship of capitalism and the tendency to advocate bourgeois liberalization; repudiation of and opposition to the corrupt notions of harming others to benefit oneslf, of thinking of only of profit, and of all "money grubbing;" and repudiations of and opposition to anarchism and extreme individualism. And we must strengthen the concept of organizational discipline. We must foster righteousness and oppose wickedness. Every communist party member must clearly draw the lines between right and wrong, true and false, good and bad, and beauty and ugliness. In regard to evil persons and evil matters that violate communist morality, that disregard revolutionary standpoints and principles, and that disrupt comradely relations among the revolutionary troops, we must meet them head on in resolute struggle.

While commemorating the 60th anniversary of the founding of the Chinese Communist Party, let all of us party members work hard together singlemindedly to restore and foster the good party work style of criticism and self-criticism, and, moreover, carry on this hard work in order to make the relations between our great, glorious, and correct party and the masses even more intimate, and to do away with any places inside or outside of the party where evil influences and bad customs can exist. Under the correct leadership of the Party Central Committee, we can certainly achieve the great victory of socialist modernization.

PARTY AND STATE

CALL FOR STUDY OF 'RESOLUTION,' HU'S SPEECH

Hangzhou ZHEJIANG RIBAO in Chinese 2 Jul 81 p 4

[Circular issued by Zhejiang Provincial Party Committee: "A Circular Concerning Study of the Sixth Plenum "Resolution" and of Comrade Hu Yaobang's "Speech"]

[Text] The Sixth Plenum of the Eleventh Party Congress has already come to a victorious conclusion. The Plenum has already adopted the "Resolution Concerning Certain Questions in the History of the Party since the Founding of the State" and the "Speech at the Meeting Celebrating the Sixtieth Anniversary of the Founding of the Communist Party" by Comrade Hu Yaobang. At this time, the major tasks of all levels of the provincial party organization are to organize all party members and the broad cadres to sincerely study the "Resolution" and the "Speech" in order to improve their understanding, strengthen their unity, lift their spirits and improve their work. The following communique is directed toward these goals:

1. It must be thoroughly understood that the "Resolution" and the "Speech" are important party documents and we must improve the level of consciousness in our studies of them. All party organizations must exert the utmost effort to make these studies unify ideology throughout the party. There must be strengthened leadership, a fixed study plan, and concrete preparations, and moreover there must be continual summation of the positive results of study and a deep involvement with study.

2. The study must have clearly defined requirements. After undergoing study one should thoroughly understand and affirm the great contributions and historical significance of Comrade Mao Zedong and clearly understand that Marxism-Leninism-Mao Zedong Thought is our guiding ideology, thoroughly approve of the great accomplishments, brave spirits and stirring faith during the past 32 years of national construction, and, under the correct leadership of the Party Central Committee, strengthen our conscious implementation of the line, direction and policies stemming from the Third Party Plenum while fixing our minds on overcoming difficulties in the struggle for new victories in building the four modernizations and in building the party. We must enlarge party member and cadre ideological unity to

include the "Resolution" and the "Speech," focus our minds on progress, on the four modernizations and on studying the new conditions in order solve new problems. We must consciously rectify the party style, be strict in party discipline and restore and give vent to the party's grand traditions.

3. All party committees and all organizations and groups must take from twenty to thirty days to hold daily half-day study sessions. The "Resolution and the Speech" should be read section by section and sincerely discussed in order to seek perfect understanding of their spirit and meaning. There should not be any lax, broad-ranging discussion but rather an emphasis on summing up experience and group progress. After group study of a section it should be combined with actual work conditions and then there should be continued study. After studying the "Resolution" and the "Speech" the original plan should be followed with continued study of economic theory.

All party schools and all party training organs must give priority to study of the "Resolution" and the "Speech" and carry out study and teaching of them.

All organs and all units can form classes to study the "Resolution" and the "Speech" in order to nurture core study personnel.'

The focus of this study effort is to firmly grasp study by leading cadres on all levels, especially those from county level on up. Leadin cadres of all levels should proceed from their own foundation in study to go among the cadres and masses to spread propaganda, unite with reality, speak of their own gleanings, and help everyone to better understand the spirit and substance of these documents.

4. There must be broad and deep propagandizing of the "Resolution" and the "Speech" among basic level party members and the masses. We must use propaganda to make them understand the main points and basic spirit of the "Resolution" and the "Speech" and must educate them to be patriotic, love the socialist system, love party education and grasp the basic principles of the four modernizations. As for students past middle school and other young people, we must act in accord with their particular characteristics to carry out a lively propaganda campaign regarding the "Resolution" and the "Speech" in order to make the broad youth aware of and correctly understand the glorious process of struggle since the founding of our party 60 years ago. They must understand that without the Communist Party there could be no New China, that only the socialist system could save China, and must also understand the close unity between propagandizing the "Resolution" and the "Speech" and the ongoing campaigns the "wu jiang" [0063 6199] "The Five Lectures," the "si mei" [0934 5019] "The Four Goods" and "Learn from Lei Feng, Establish a New Work Style."

5. The broadcast, television, publishing and fine arts departments must use a variety of methods to actively coordinate study of the "Resolution" with the propaganda campaigns and carry out lively education and propagandizing of all the masses. Such propaganda ought to be scientific, to the point and vital.

6. Both study and propaganda should pay close attention to getting results and avoiding mere formalism. There must be unity of ideology and unity of the real conditions in the local districts and the local departments in order to respond to and to solve major problems in ideological understanding and in work. In propaganda work we cannot be satisfied with uninspired efforts and a mere recitation of the texts. The propagandizing of the "Resolution" and the "Speech" must be spirited and with great effort to correctly answer questions and solve problems. There must be no uncritical acceptance of anything. The study and discussion must promote open thought, truth and must follow the "three don'ts."

7. The conditions found in study and propaganda as well as the major questions occuring in the discussions must be promptly reported to the upper level committees.

EDITORIAL OUTLINES CORRECT STUDY OF 'RESOLUTION'

Guangzhou NANFANG RIBAO in Chinese 4 July 81 p 1

[Editorial: "Study of "Resolution" Urged in Guangdong"]

[Text] Just when the party and the entire nation were celebrating the 60th anniversary of the founding of the Chinese Communist Party the party was victoriously conducting the Sixth Plenum of the Eleventh Congress. This meeting is of great significance in the post-Third Plenum history of the party and is a new milestone for the party and state in bringing order out of chaos. This meeting deliberated on and approved the "Resolution Concerning Certain Historical Questions in the Party since the Founding of the Nation" and correctly summed up party experiences of the past 32 years. The meeting changed and supplemented the major leadership of the Party Central Committee and strengthened the Marxist foundations of the collective leadership and the unity of the central committee. The victorious Sixth Plenum and the publication of the "Resolution" are events of great importance in the political life of the party and the state and have received a hearty welcome from the broad party membership, cadres and masses. We must sincerely study the "Resolution," unite study of this public report by the Sixth Plenum with Comrade Hu Yaobang's major speech at the Beijing meeting celebrating the 60th anniversary of the founding of the Chinese Communist party, unify our ideological understanding and accept party leadership in following the post-Third Plenum line to wholeheartedly carry out the four modernizations.

The "Resolution Concerning Certain Historical Questions in the Party Since the Founding of the Nation" which was unanimously passed by the Sixth Plenum is an important document. It applies the Marxist theories of dialectical materialism and historical materialism in an examination of the 32 years since the founding of the nation by correctly summing up the major historical events, especially the "Great Cultural Revolution," by scientifically analyzing what was right and what was wrong in the party leading ideology regarding these matters, by analyzing the subjective factors and social roots in production mistakes, by realistically evaluating the historical status of the great leader and teacher Comrade Mao Zedong in the Chinese revolution and by thoroughly discussing the great significance of using Mao Zedong Thought as the guiding ideology of our party. The "Resolution" reaffirmed the Third Plenum's correct line of gradually establishing the building of socialist modernization in a fashion which suits our national conditions and make progress in pointing out the road ahead in socialist endeavors and party work. Therefore, the "Resolution" has had a great and far-reaching influence in unifying the ideological understanding of the party, the military and all nationalities, improving the party's level of Marxism-Leninism-Mao Zedong Thought, deepening the understanding of the post-Third Plenum line, direction and policy and strengthening the unity of the party and all the nationalities in China. This "Resolution" has the same historical significance as the "Resolution Concerning Certain Historical Questions" which was adopted by the Seventh Plenum of the Sixth Party Congress in 1945, and it will have the same historical function. Thirty-six years ago, in the period of the democratic revolution, the party made a correct summation of our historical experiences, attained the ideological unity of the party's politics and won a great revolutionary victory. Now, the party has made a correct summation of our historical experiences since the founding of the nation, has also contributed to the unity and cohesiveness of the party and has won a new victory in building socialist affairs. We definitely must correctly study, propagandize and implement the "Resolution," make it a unified ideology, a vital spirit and a strong faith and increase the motive power underlying construction of the four modernizations. In studying and propagandizing the "Resolution," the main thing is to clearly sum up the guiding ideology and grasp the study of the important points. These are to undergo study of the "Resolution" in order to thoroughly understand the historical status of Comrade Mao Zedong and Mao Zedong Thought, correctly evaluate the 32 years of history since founding the nation and from this foundation then unify the party's ideology and unite in forging ahead.

The "Resolution" informs us that Comrade Mao Zedong is officially recognized as the great leader of our party and of all nationalities in China and that Mao Zedong Thought is officially recognized as our guiding ideology. This came about during the party's 28 years of democratic struggle, is an unavoidable consequence of historical developments, is a historical fact and has historical existence. Comrade Mao Zedong is a great Marxist, a great proletarian revolutionary, strategist and theoretician. His contributions to the Chinese revolution and to national construction were primary and his errors were secondary. Mao Zedong Thought is the application and development of Marxism-Leninism in China, is the product of the unification of the general principles of Marxism-Leninism with the concrete practices of the Chinese revolution, is the crystallization of the collective wisdom of the Chinese Communist party and is the scientific guiding ideology which actual practice has proven to suit Chinese conditions. Mao Zedong Thought is a precious spiritual treasure of the party and is a long-term guide for our actions. We must firmly grasp the banner of Mao Zedong Thought, not only in the past and present but also in the future, Mao Zedong Thought has a wealth of variety. The "Resolution" made special reference to six aspects of independent great theoretical creativity in and development of Marxism-Leninism and to three basic points which permeate the stance, viewpointand methodology of these six aspects. This is of major significance in our study and application of Mao Zedong Thought. Our study of Mao Zedong Thought must have a realistic and scientific attitude and we must separate Mao Zedong Thought from the errors Comrade Mao Zedong made in his later years. We must struggle against adopting a dogmatic attitude toward the sayings of Comrade Mao Zedong, oppose the mistaken viewpoint of the "two whatevers," and we must oppose the mistaken tendency of suspecting and denying the scientific value of Mao Zedong Thought and denying the contributions of Mao Zedong Thought to the revolution and national construction.

The "Resolution" not only made an overall evaluation of the 32 years of history since the founding of the country, but also made a separate appraisal of each historical period. The "Resolution" tells us that during these 32 years when the party was under the guidance of Marxism-Leninism-Mao Zedong Thought it made great history in leading the country and all nationalities in carrying out the socialist revolution and socialist construction. The party achieved ten major successes. Even though the party made errors, even such serious errors as the "Great Cultural Revolution," nonetheless the successes are primary and the errors are secondary. We must undergo study of the "Resolution" to correctly understand the 32 years of history since the founding of the nation and have a realistic and appropriate view of the successes and errors and what was right or wrong. We must overcome the mistaken viewpoint which belittles our achievements and magnifies our errors, even to the point of painting a bleak picture of the past 32 years, being suspicious of and denying the superiority of the socialist system and neglecting the four basic principles.

Ever since the Third Plenum, in terms of the questions of liberating thought and restoring order within the party and among the cadres, how to evaluate Comrade Mao Zedong and Mao Zedong Thought and how to evaluate the 32 years of history since the founding of the nation, everyone has been greatly concerned, ideology has been relatively lively and a variety of viewpoints has emerged. Everyone hoped that the Party Central Committee would produce a correct evaluation of these questions and unify party ideology. Today, the party has chosen the method of the mass line, collected the correct views of the entire party and produced a resolution concerning certain historical questions since the founding of the nation which provides scientifically correct answers to those questions about which everyone has been concerned. All party members must consciously unite their thought with the "Resolution" and take the resolution as the standard for making observations and analyses. In this way, the entire party can reach a high level of consistency in politics and ideology and can join together even better in the struggle to build a strong, modernized socialist nation.

The "Resolution" points out that since the Third Plenum the party has already gradually formed a correct line which suits our national conditions for building socialist modernization. There are ten major points. The series of conclusions, which are in accord with Marxism-Leninism-Mao Zedong Thought, were reached by expending a great effort and are guiding principles which from now on must be followed in all our work. We must undergo study of the "Resolution" and from the foundation of this experience in deeply understanding the two aspects of right and wrong since the founding of the nation, have a better grasp of these ten points and improve our consciousness in implementing the post-Third Plenum direction, line and policy. We must unite with the realities in Guangdong, use the impetus in the "Resolution" to take steps in stimulating our minds, liberating our ideology, properly carrying out the Party Central Committee's special policies and lively actions for Guangdong of having more foreign connections, relaxing policies and building special areas, to make progress in improving the economic conditions, to improve our agricultural products and all aspects of our work, to effectively build a socialist spiritual civilization and increase the pace of the four modernizations in our province.

Study of the "Resolution" is the central task of the entire party for the next six months. All party levels and propaganda departments must give high level consideration to and sincerely organize leadership for these studies. There should be periods of group study. There should be formation of study groups or other methods of group study, and separate groups for cadre study should be organized. The leadership should guide the studies. The focus should be on grasping study by leading cadres above county level. During the studies the document should be read carefully in order to perceive its main meaning and spiritual qualities and to clearly comprehend the party central's guiding ideology concerning the "Resolution." As for the basic level party members and the masses the primary method should be that of a lecture which will enable them to understand the major points and the basic spirit of the "Resolution." The lecture should be given in a series rather than at a single sitting and it should be no mere reading aloud of the text. The lecture should be lively and should be interesting to the audience. Study of the "Resolution" should be linked with ideological realities. It should emphasize ideological research and work, deep understanding of cadre and mass reactions to the study of this ideology and correctly solve ideological questions. Study of the "Resolution" must be united with eliminating mistaken "left" ideology. Study should incorporate the "three do's and three don'ts" and improve conditions.

Let us respond to the call of the Sixth Plenum, lift high the banner of Marxism-Leninism-Mao Zedong Thought, move closer to the position of the Party Central Committee, continue to foster the spirit of the foolish old man who moves mountains, be determined, overcome difficulties, and struggle vigorously to build China into a modernized, highly democratic, highly civilized powerful socialist nation!

FREE SPEECH EXISTS WITHIN FRAMEWORKS OF RESPONSIBILITIES

Guangzhou YANGCHENG WANBAO in Chinese 6 May 81 p 2

[Article: "Is There Such a Thing as Absolute Freedom of Speech?"]

[Text] Most recently, some people have fanatically played up absolute freedom of speech and the independence of public opinion. From their point of view, it seems that speech in capitalist society is absolutely free, and that we should emulate capitalism. What, after all, is freedom of speech? This year's issue No 7 of RED FLAG contained an article by Ye Zi [0573 1311] entitled, "Is There Such a Thing as Absolute Freedom of Speech?" In it he gave a critical exposition of this problem.

The article said that in a class society, freedom of speech has always been concrete and relative, and has always partaken of class nature. There can be only one premise behind the formulation of articles on freedom of speech in bourgeois constitutions, and that is to preserve the ruling position of capital. If you exercise your right of free speech, yet in so doing violate the fundamental advantage of the bourgeois class, you will have a lawsuit on your hands. In capitalist society, so-called freedom of speech is merely the freedom to propagandize the ideology of the bourgeois class; it is merely the freedom to use the newspapers and periodicals that have been bought over and bribed by the rich--freedom for the rich to use the lies contained in newspapers and periodicals to intoxicate the people: As far as the working people are concerned, this kind of freedom is something that exists only on paper.

According to the article, freedom of speech can be realized only by following the socialist system. Our constitution, along with formulating basic citizens' rights such as freedom of speech, clearly specifies that "the state prohibits any person from using any means whatever... to harm the public good," etc. If any person, on the pretext of freedom of speech, publishes a counterrevolutionary opinion, slanders or opposes the four basic principles, or endangers the power of the people's democratic dictatorship or the socialist system, then that person must be curtailed and prosecuted by the law. At the same time, the freedoms of all individuals cannot be separated from the duties which they also take on as citizens. Our constitution stipulates that citizens have the duties of supporting the leadership of the Communist Party, preserving the socialist system, upholding the dictatorship of the proletariat, obeying the direction of Marxism-Leninism and Mao Zedong Thought, and protecting our ancesteral nation. Whoever wants, for the sake of "freedom," to forsake these duties has himself canceled all the freedoms that he ought to be enjoying.

IMPORTANCE OF IDEOLOGICAL WORK STRESSED

Wuhan CHANGJIANG RIBAO in Chinese 8 May 81 p 4

[Article by Chen Changyou [7115 2490 2589]: "Material Rewards Should Be Linked With Ideological and Political Work"]

[Text] Recently, from conversations with some comrades, it appears that some comrades consider that in accomplishing the four modernizations it is not ideological-political work that is essential; it is distributing rewards that will have a big effect." Actually, that is not so.

Last year in a small factory, in the course of putting into effect the management of its economy through the use of economic methods, the unit thought only to issue rewards to the staff and workers, and overlooked ideological-political work: The staff and workers were only thinking about completing their output value quota and did not pay due regard to the products' quality, with the result that because of poor quality they were left with several hundred thousand yuan in overstocked products. How is it that the staff and workers of this unit were issued quite adequate rewards and yet production did not improve? The reason was that they had slackened up on their ideological-political work, with the result that the staff and workers lacked a sense of responsibility and of being masters of their own affairs, worked only in order to receive more rewards, and paid no heed to the advantage of the state or to the quality of their products.

At another small factory, due to the fact that they had stepped up their ideological-political work, the staff and workers of the entire factory developed the spirit of being masters of their own affairs, and in the areas of allocating raw materials, manufacturing, and processing they checked quality strictly, thus enabling their products to find an outlet in the market very quickly. Last year this unit's output value reached over 1.2 million yuan, and they exceeded their planned output by 68 percent. Of some 4,000 products that left the factory, the state purchased only somewhat over 1,300. The staff and workers found ways to market the remainder themselves, causing profits to be 50 percent higher than expected, and also increasing the income of the staff and workers.

From this, one can see that we must take every opportunity to combine ideological-political education with the implementation of economic methods such as material rewards. Neither should be emphasized at the expense of the other, and we absolutely cannot, because of emphasis on the use of economic methods to manage the economy, suppose that we can then relax our ideological-political work. In particular, under the present circumstances of our large population, meager economic basis, and lack of sufficient experience for bringing about the four modernizations, some unforeseen situations and problems are necessarily going to appear. For a way to recognize and solve these new situations and problems, we can only rely on the common striving of the people of the entire country. In this way, the position and effect of ideological-political work in uniting our vast millions of people to strive to realize the four modernizations will appear more important and more prominent. Only by uniting everyone's ideology with the party's line, programs, and policies, so that everyone will have great ideals and lofty sentiments in common, will we be able to march in step, with one mind and one effort; only in this way will there be any hope of developing our socialist economy and realizing the four modernizations.

In sum, we must promote our party's long-standing, excellent tradition of placing importance on ideological-political work, give ideological-political work its important role of serving as the main content for strengthening and improving the party's leadership, conscientiously pay close attention to this, and get a firm grasp on it. Any way of thinking or any method that weakens or denies the position or effect of ideological-political work is in complete opposition to our great goal of realizing the four modernizations, and in actual work it is likely to meet with a rebuff.

STRUGGLE AGAINST FEUDAL SUPERSTITION IN RURAL AREAS URGED

Beijing XIN SHIQI [NEW ERA] in Chinese No 6, Jun 81 p 19

[Article by Zhang Guoqiang [1728 0948 1730] of Hebei HENGSHUI RIBAO: "Need To Strengthen Rural Political Work Is Urgent"]

[Text] I have learned through a news coverage trip that at present the political work in the countryside is in a rundown condition, resulting in failure to convey promptly the party's line, principles and policies on agriculture to the commune members. During the past year, in some communes no congress of members has been held, nor have the commune members been organized by the party organizations of some brigades and production teams to study the documents of the party Central Committee and their superior party committees. This failure to keep cadres and commune members informed of the party's current agricultural policy has adversely affected the development of rural work and agricultural production. For example, the wired broadcasting system formerly welcomed by commune members is now in bad shape, with its poles fallen to the ground, the lines disrupted, and the loud speakers silent. The transmission lines between the county and its communes and between the commune and its brigades have been disconnected. The formerly popular blackboard (wall) bulletins produced by brigades and production teams have disappeared.

The failure to strengthen the political work has given rise to unhealthy trends and evil beliefs. In many places, fortunetellers, astrologers and other types of feudal superstition have become active. Theft, burglaries and gambling have become common in some brigades and production teams. There was a male commune member in a brigade in Henghsui County who had searched for doctors to cure the pain in his abdomen for years without success. One day when he heard a witch spread the word that she could cure his disease, he immediately sent a car to bring her from Hengshui township to his home, and then he was told to burn incense and offer sacrifices in her presence. Later, she treated a youth plagued by headache in the same village in the same way. The witch nonsensically told the youth that his headache was caused by a fallen tree located near an old temple east of Bao village which had hurt a certain deity, and that his headache would go away if he replanted a tree there and offered five white sheep as sacrifices at the temple. The youth did just what he was told. In this manner the woman fortuneteller deceived the people for several days until she had satisfied her appetite with enough food and drink and cheated enough money out of the villagers' pockets, then she disappeared, leaving her patients just as sick as before her arrival.

The prevalence of such unhealthy trends and evil beliefs reminds us of the urgent need to strengthen our current political work. To this end, cadres and commune members must be organized to study the documents issued by the party, in order to unify their thinking behind the party's line, principles and policies. Meanwhile, all propaganda media must be fully mobilized and put to good use. This propaganda and education work must be conducted in a lively and realistic manner. Rural grassroots party organizations must boldly assume responsibility and take effective measures to deal blows to and prevent the growth of feudal superstitious activities and other unhealthy trends in an effort to insure the thorough implementation of the party's line, principles and policies.

STRENGTHENING STUDENT POLITICAL-IDEOLOGICAL WORK URGED

Shenyang LIAONING RIBAO in Chinese 7 May 81 p 1

/Article: "Liaoning Provincial Committee Emphasizes the Importance of Training Red and Expert Talents for Four Modernizations"/

/Text/ From 21 through 27 April, a forum sponsored by the Liaoning Provincial CCP Committee was held in Shenyang on ideological-political work in universities and colleges. During the meeting, First Secretary of the Provincial Party Committee Guo Feng /6753 1496/, Governor Chen Puru /7115 3877 1172/ and Standing Committee Member Liu Yiyun /0491 8381 0061/ listened to representative speeches at the forum. Both Comrades Guo Feng and Liu Yiyun participated in the discussions and spoke at the conclusion of the forum. The forums summed up experiences and exchanged views on methods of strengthening ideological-political work in schools of higher learning. Other questions that were fervently discussed concerned the position and the role of ideological-political work, the necessity and importance of strengthening ideological-political work for students, and the present policies and methods of ideological-political work at the universities.

Understand clearly the objective of university training and do a good job in ideological-political education. Comrades participating in this forum felt that students trained at the socialist universities must be able to grasp not only the modern scientific knowledge and the skill for carrying out the construction of socialist modernization, but they also must have communist ideals, confidence, morals and discipline in order to enable them to strive for making themselves both socialist-minded and professionally proficient so that they can really become high quality experts well developed morally, intellectually and physically. To attain such a goal, it is necessary to put moral education, i.e. the ideological-political education, in first place. Every university and college must have a clear-cut stand to justly, forcefully and convincingly educate students to adhere to the four basic principles. Courses pertaining to the current situation and ideology should also be offered. This is the way to help students acquire a communist world outlook and a communist outlook on life, to cultivate patriotism, and to foster fine moral habits and a high-level socialist spiritual civilization. The universities and colleges may thus be able to make contributions to safeguarding the stability and unity of schools and of society as a whole.

Work out a policy of convincing through reasoning to meet the special needs of students by emphasizing positive education. At the forum, everybody applied the standpoint of dialectical materialism and historical materialism to analyze the ideological state and the distinguishing features of university students at the present time. Everybody felt that the innate character and the main trend of university students of the present generation are good. However, owing to the poisoning of Lin Biao and the "gang of four" and the influence of various erroneous trends of thought and evil atmosphere in our society, a variety of problems still exist among them. In order to solve these problems, it is necessary to eradicate the influence of leftist ideology and to adhere to the policy of convincing through reasoning in our work. The meeting endorsed various vivid and rigorous educational projects with new appearances which are carried out by some universities and colleges according to the needs of students through such ways and channels as "social survey," "information gathered during home village visit," "report on current situation," "discussions on democracy," and "theatrical performance," and so forth. It was also emphatically pointed out that while ideological-political education for students is being carried out, attention should be paid to actual effects rather than to practicing formalism. The oversimplified and crude way of "I 'exert pressure,' you 'obey;' I 'hit,' you 'are subdued'" should never again be applied. Only by using the method of convincing through reasoning can we truly make students full of vigor and vitality ideologically and take a firm stand politically.

Strengthen leadership and improve teaching on Marxist-Leninist theory. Everybody felt that in schools of higher learning, to strengthen teaching of political theory is one of the main channels to enhance ideological-political work for students. To educate university students in theories of Marxism-Leninism and Mao Zedong Thought is a necessity in implementing the policy of a comprehensive moral, intellectual and physical development, and is an important channel to heighten socialist awareness, to foster communist moral values, and to acquire a Marxist-Leninist world outlook. Universities and colleges must earnestly give more effective leadership to strengthening courses on Marxist-Leninist theory, train and replenish teachers in this respect in a planned way, make an effort to improve teaching, conscientiously implement the principle of integrating theory with practice, and help students to learn the way of applying the stand, viewpoint and method of Marxism-Leninism to study, analyze and solve problems.

Build a contingent of political workers by combining full-time teachers with part-time ones, and pay attention to giving full play to the role of teachers in students' ideological-political education. The forum felt that building a perfect contingent of political workers by combining full-time with part-time teachers is a pressing matter of the moment for carrying out ideological-political work in schools. Full-time political assistants must be kept stable. Attention must be paid to solving their practical problems including problems of their status and remuneration. Full-time cadres must be organized to learn something about pedagogy, psychology, talent training and ethics, and so forth. The teacher in charge of a class must be selected from among the teachers of the class in order to encourage teachers to educate people through teaching.

Teachers of basic courses and specialized courses are numerous. They have more time to come into contact with students. Therefore, they are in a more favorable position to carry out ideological work for students. We must have faith in and rely on the vast numbers of teachers to bring into play their active role in carrying out ideological-political work to the maximum for students in order to put moral education in intellectual education and to deepen ideological education through the teaching of specialized courses. Everybody also felt that under the leadership of university and college party committees, the contingents of political workers, teachers and rear-services in schools must have close coordination in order to form a powerful ideological-political working force. It is necessary to make an effort to study and probe the laws for helping students become useful persons so that ideological-political work may eventually become a systematic science.

Strengthen and improve party leadership and establish a fine school spirit and a good style of study. At the forum, questions concerning party building and leadership system in schools were also studied. It was unanimously pointed out that a school must have a fine school spirit and a good style of study. To attain this goal, we must first have a good party work style. Only after a fine school spirit and good style of study have been set up can we train morally, intellectually and physically qualified students. Schools can then play a useful role to revolutionize the general mood of society.

LEADING BODIES OF SCHOOLS OF HIGHER LEARNING BEING STRENGTHENED

Beijing GUANGMING RIBAO in Chinese 10 Jun 81 p 1

/Article: "Leading Bodies of Schools of Higher Learning Are Being Strengthened Throughout PRC"7

/Text7 More than 1,000 middle-aged and young cadres under age 55 were selected last year by schools of higher learning in our country to be the reserve force for strengthening leading bodies of various schools. At present, more than 450 of them have assumed such offices as deputy secretaries of university or college party committees or vice presidents of universities or colleges. The youngest among them is only 37 years of age.

The middle-aged and young leading cadres who are holding leading positions in party committees were mostly elected by party delegates conferences and those who are vice presidents of universities or colleges were appointed on the basis of extensively soliciting opinions of the masses by way of public opinion polls, exchange of views at forums or by individual interviews.

As they have worked in schools of higher learning for years, the overwhelming majority of them have a university cultural level or the equivalent. They work enthusiastically and are well versed in their work. They are modest and prudent. They maintain links with the masses and adhere to principles. They are hard working and plain living. They enjoy the support of the broad masses.

POLITICAL STANDARD FOR ART, LITERATURE CALLED FOR

Tianjin TIANJIN RIBAO in Chinese 23 May 81 p 3

[Article by Zhao Damin [6392 1129 3046]: "A Brief Discussion of Political Standards in Art and Literature"]

[Text] The social effect of literature and art is a natural disposition of literature and art; once a work is published, a certain effect accompanies it. The principal social effect is a political effect; in order to appraise a good or bad political effect, there are bound to be "political standards." Ordinarily this would be a question solved long ago in the history of literary and artist appraisal, but some people somehow have now posted a certain doubt. One view holds that the proposition "political standards first, artistic standards second" in the appraisal of literary and art works must be eliminated. Three attendant reasons are given: 1) This kind of proposition is unscientific. The political content and artistic expression of literature and art make up a single entity. They coexist in a literary or artistic work, like water and milk, and are therefore difficult to separate from each other. It is even more difficult to designate them as first and second. 2) Advocating political standards first means advocating the diagramming of politics or policy through literature and art. [According to the proponents of this view,] this is because, if a writer were to keep political concepts in his mind before he started to create, he would be unable to depict life according to the rhythm of literature and art, and that would be the most fundamental reason leading to the production of a work according to some formula or some a priori concept. From this, therefore, the conclusion is derived: 3) That in order to promote the prosperity of literature and art, it is necessary to eliminate political standards.

I

Putting art and politics in an antagonistic relationship should be said to be an evil consequence resulting from the devastation suffered by socialist literature and art during the 10-year catastrophe. Because of their political needs, the "gang of four" distorted, castrated, and tampered with the quintessence of Marxist literary and art theories as they pleased. The new obscurantism they promoted not only suffocated the party's principle of "letting a hundred flowers bloom, letting a hundred schools contend," but also threw the 1 billion people into a realm of spiritual hollowness and cultural paucity. After 10 years of spiritual deprivation, the masses of people have begun to have a hungry feeling toward their need for spiritual food. They resist the kind of ersatz products of art put out according to some formula or a priori concept; nor can they stand the drab kind of political preaching. They need genuine works of art whose content is solid, whose art is impeccable, and whose educational value is embodied in the form of recreation. What kind of principles should we implement and what measures should we adopt, after all, in order to effectively prompt the emergence of a situation of prosperity in literature and art? I think the above-mentioned kind of proposition, intent upon necessarily eliminating political standards just in order to promote literary and artistic prosperity, by no means answers the needs of the day or corrects the illness at hand.

The relationship between literature and art and politics is namely the relationship between writers and artists and classes (including political parties). The nature of politics is the concentrated expression of class character (party character). In his article "Party Organization and Party Literature," Lenin, while expounding that well-known passage which we quote regularly--(i.e., "It is beyond dispute that in literary undertakings it is least possible to effect any mechanical equalization or uniformity, or to make the minority obey the majority; it is beyond dispute that in this kind of undertaking it is absolutely necessary to assure a broad world of individual creativity and a broad world of ideas and imagination, of forms and contents"--also unequivocally suggested: "Literature should become party literature" and the Marxist principle that "literary undertakings should become part of the overall undertakings of the proletariat." Comrade Mao Zedong's proposition on the two standards of literary criticism further clearly determined the class nature of literature. He said: "Any class in a class society is bound to put political standards in first place and put artistic standards in second place." This dictum has played a positive role both in the interpretation of literary phenomena in history and in the literary practice of the proletariat. Indeed, searching for the political concepts, political articles needed by a certain class in a literary work or requiring a certain literary work to diagram a certain concrete policy, and taking this as the only standard for appraising that literary work, is a kind of narrow utilitarianism, which is of course hardly preferable or scientific. Because insofar as literary and artistic phenomena are concerned, the political attitudes of writers and artists are often melted in their artistic forms. The greater a literary work, the more tracelessly is such an attitude melted therein, so that it is able to get the reader to be imperceptibly affected and to accept its political influence. This is precisely why art is great as art can exist, and also why art is different from other superstructures. On this point, Engels presented a well-known passage of exposition in his letter to Minna Kautsky. Said he: "I think an inclination should be spontaneously revealed in a scene or plot, and not especially pointed out." Obviously, this famous statement by Engels contains two implications: First, he considered that literature and art should have a political proclivity; and second, it is not necessary to express political proclivity by political preaching. Here, Engels first of all considered that there should be such a proclivity, but at the same time he kept in mind the characteristics and laws of literature and art and gave sufficient thought to the disposition of "socialistically inclined literature."

Adherence to the fundamental principle of "political standards first" by no means excludes exposing and criticizing the defects and mistakes in our work. Works that present a false picture of peace and prosperity, hide the bad and exalt the good, and say a great deal but tell very little are incompatible with the character of proletarian literature. But this kind of expose and criticism are not intended as temporary emotional outlets or meant for writers to have superhuman courage, but for improvement of our work. For the present, they are intended for the promotion of a political situation of stability and unity and for the realization of the four modernizations, so that an advanced spiritual civilization commensurate with our socialist system can thereby be created. What is involved here is a question of motivation and effect. It will do us some good on this question if we read two letters written by Stalin respectively 1. Bie-sai-mieng?-se-ji and 2. Jie-mi-yang Bie-de-nei-yi. These two writers both had written works that exposed social defects in the Soviet Union, but the effect of their works was completely different. Stalin praised the two works by Bie-sai-mian-se-ji, calling them "examples of proletarian revolutionary art." He said in his letter: "The basic characteristics and moving ingredients making up these two works ...lie in their emphasis on pointing out the defects of our organs and on believing that there is a possibility to have these defects corrected.... Their main points are here, and their basic value lies here."

In his letter to Bie-de-nei-yi, Stalin criticized a few of the author's miscellaneous essays. There was this passage in the letter: "What is the essence of your mistake? It is your criticism of Soviet life. In the case of this indispensable and needed criticism, you apply it rather accurately and skillfully af first. But you indulge too much in it, and once you indulge in it, it begins in your works to turn into slander against the Soviet Union, slander against its past and slander against its present." In pointing out defects and at the same time "believing that there is a possibility to have these defects corrected," and in simply exposing the dark side while sensing no outlet, the standpoint of the two authors was not the same, and the effect of their works was also different. I think this is precisely the difference between socialist literature and the criticism of realistic literature.

II

Ever since mankind entered the stage of class society, every class always has had its own standards for understanding literature and art. The ruling class throughout history has always determined the political standards of literature and art according to its own class interests. The earliest literary anthology in our country, the "Zhaomin Anthology," was compiled by a relatively liberal personality, Xiao Tong [5618 4827], among members of the ruling class. He himself regarded the standards by which he compiled the anthology as rather objective, but actually they were tinged by very great class prejudices. The so-called principle of "exalting virtuous cultivation and praising successful achievement" was his political standard; and the principle of observing that if "a plot is derived from deep thinking, a moral implication can be attributed to fine literary embellishment" was his artistic standard. He was supposed to have selected the literary pieces strictly according to his established standards. Yet, in that very voluminous anthology, a narrative poem such as "The Peacock Flying Southwestward," which had such a beautiful story and which to a certain extent exposed the evils of the ruling class, could not even be tolerated. This illustrates that Xiao Tong not only adhered to his political standard, but also strictly followed the principle of politics first in selecting the literary pieces. Let me give another recent example:

A theatrical group from our municipality was preparing to perform in a certain capitalist country. When people on the other side proceeded to examine its repertoire, their eyes opened very wide with respect to those traditional plays that had undergone some renovation after liberation; they were afraid that, with socialist coloration added, they would cause trouble in the capitalist world. Their attitude toward our revolutionary literature and art, of course, can only be worse. The developmental history of literature and art has long proved that in a class society, leterature and art can never be independent of class politics. Propagating an art that transcends class, an art without politics, can only remove one's own ideolgical armament, dissipate one's own revolutionary fighting will, and ultimately lead one's literature and art astray.

Some are worried that, should we advocate political standards first, our literature and art would inevitably develop into a situation accommodating the principle of political standards first, thus leading to having our literary and art works produced according to formulas, a priori concepts, and the words of wall posters and slogans, so that politics and policies would become diagrammed with literature and art, and so on. In reality, this is a misunderstanding. Structuring a literary or an artistic work with a political concept as its point of departure is different from carrying out Marxist literary criticism toward the same work (including political criticism). The former is an erroneous method of creation, while the latter is an appropriate standard of critique. The two are related and yet are different from each other. We should acknowledge that the phenomenon of literary and art works produced according to formulas and a priori concepts does exist. But this is not entirely, nor mainly, the result of our advocating political standards. Propagating politics through literature and art is a practice which has existed in past historical periods. We might as well say that certain propagandist and agitative literary and art works all had this quality. This was especially unavoidable in the case of revolutionary literature and art during a period of enlightenment. I think this is not a shame for revolutionary literature and art but their characteristic; or we may say this is an unavoidable stage in the process of their development. From what I know, none of the many "new plays" (dramas) of the "4 May period was without such a quality. "The White-Haired Girl" of the Ya'an period was subjected to repeated revisions around the issue as to whether Huang Shiren [7806 0013 0088] should be put to death; this was meant merely to have the plot of the play be more adapted to the nature of the party's policy at the time. Here, the integrity of art and the accuracy of policy were consistent with each other. Politics by no means spoiled art. Generally speaking, we are opposed to the practice of diagramming politics or policy with literature and art; nor do we advocating introduction of the concrete process of a certain movement by literature and art. After all, these are not the main functions of literature and art. Literature and art should reflect life, embody education in recreation, and heighten the people's spiritual state, moral outlook, and lofty sentiments through the forms the people like to hear and see. It is precisely in this sense that we say a writer is "the engineer of man's soul." Genuine works of art often possess heartrending power. And this power is not necessarily reflected in certain concrete political questions but, instead, often in the destinies, beliefs, and morals of characters and in irreconcilable conflicts of class dispositions and characters. I don't think advocating "political standards first, artistic standards second" would bring any obstacles to great literary and artistic depictions. On the contrary, the correct world view of a writer or an artist is bound to bring him a sharper weapon for observing life and reflecting life. There have already been quite a few precedents in the developmental history of our proletarian literature and art.

III

The question of the social effect of literature and art is also related to the political standards of literature and art. Dialectical materialism acknowledges the reaction of spirit on material. Hence, any viewpoint that overlooks or takes lightly the social effect of literature and art is incompatible with the Marxist view of literature and art. Bourgeois literateurs and artists orally deny the social effect of literature and art and trumpet the supreme value of literature and art in themselves; in reality, they take literature and art as the plaything of the few members of the ruling class and turn literature and art into a vassal and slave of the bourgeoisie. Proceeding from extreme utilitarianism, the "gang of four" exaggerated the role of literature and art to the degree of being able to manipulate politics and overthrow political power; this was an indication of a very preposterous utilitarian point of view. Those who advocate the elimination of the political standards have also proposed a standard for testing literature and art. That is, let practice test the quality of literature and art. Generally speaking, since practice can test truth, and literature and art constitute a kind of social phenomena, they can of course also be tested by practice. But here they have overlooked a special phenomenon in literature and art: literature and art fall in the ideological realm; their process of social practice (such as when works are published and plays or movies are put on and accepted by the readers and viewers) is also the process through which literature and art complete their own historical mission. If what is in question happens to be a work of bad political inclination or yellow pornography, it will, through practice, already have resulted in bad social effects. We can of course still use the weapon of literary and artistic criticism to criticize it and render it innocuous, but the influence and poison it has exerted on the people's minds will have been far greater than can be eliminated by one or two articles. We can hardly imagine that we would, when we are engaged in a war of defensive counterattack against Vietnam, allow certain works of literature and art that tend to dissipate the fighting stamina of the troops and that propagate the fear of war, to have their "social practice" among our fighters. That would be tantamount to helping the enemy. The reason why all ruling classes in history must without exception pay attention to ideological campaigns through literature and art lies precisely here.

We are anxious to see prosperity in literature and art; we need to see a hundred flowers bloom. We loathe the "gang of four's" policy of using the stick and the bleak atmosphere that prevailed when they ruled over the literary circles. Many of our comrades can never again think of those days when they were on tenterhooks and trampling on thin ice. But the literary and art workers of our party are writers and artists of the masses of proletarian people. As regards certain fundamental principles of Marxism-Leninism on literary and art questions, we can never abandon or deviate from them. We cannot establish other standards apart from those classical works which have proved to be correct through practice. In his "Congratulatory Speech" to the Fourth Congress of Literary and Art Circles, Comrade Deng

Xiaoping said: "We must continue to adhere to the orientation proposed by Comrade Mao Zedong for literature and art to serve the broadest masses of the people--first of all, workers, peasants, and soldiers--and adhere to the principles of letting a hundred flowers bloom, replacing the old with the new, foreign things serving China, and ancient things serving the present."... "Literary and art workers responsible to the people must consistently and unswervingly turn toward the broad masses, strive for better and better creations in art, do their best to avoid perfunctory creations, conscientiously and solemnly consider the social effects of their work and endeavor to contribute the best possible spiritual food to the people." This is a clarion call issued to our literary and art workers by our party in the new era. In further advocating the emancipation of our thinking, we must also adhere to the fundamental principles of the classical esthetics of Marxism. In advocating respect for the laws of art, and in following as closely as possible such laws while providing leadership to literature and art, we by no means suggest that party leadership is to be weakened in any sense. We are opposed to the view concerning political standards that is expressed by vulgar sociology, but we must adhere to the Marxist view on political standards. We shall refrain from continuing to pose the slogan "Literature and art are subordinate to politics," because such a proposition is liable to create a pretext for some to interfere at random in literary and art work. But literature and art should neve, noe can it, depart from politics. This is the fundamental Marxist view on literature and art. We have no reason whatsoever for abandoning political standards on the contrary, we must continue to heighten the ideological nature (i.e., the political nature) of proletarian literature and art around this greatest political goal, the realization of the four modernizations, and dedicate to the people of the new era works that have the best possible political effect.

POLITICAL WORK AMONG STUDENTS STRESSED AT HUBEI MEETING

Wuhan HUBEI RIBAO in Chinese 6 Jun 81 pp 1, 3

[Speech given by Chen Pixian [7115 0012 7539] on 14 March 1981 at the Hubei Provincial Higher Education Work Meeting]

[Excerpts] Comrades! The present work meeting on higher education throughout our province has discussed and studied two problems: 1) how to strengthen ideological and political work among our young students, and 2) how to implement in higher education the eight-character policy which has readjustment as its core content. The study of these two problems is very timely, very necessary in order to implement the spirit of the December 1980 Central Committee Work Conference. It also reflects the problems which the Tianjin conference, called by the Ministry of Education of the central government, had demanded be solved. Our present meeting has been very successful.

Today, I will not discuss a wide range of problems, but will merely give my opinion mainly on the problem of increased ideological and political work among the students at our institutions of higher learning, for your reference.

The First Question: On the Importance of Ideological and Political Work Among Our Students From the Overall Standpoint of Socialist Construction

The strengthening of ideological and political work among our students is fundamentally determined by the overall conditions of socialist construction. Socialism is first of all a kind of socioeconomic formation. Its basis is public ownership of the means of production, and production relations are in a dominant position. On top of this the political power and the laws of the people's democratic dictatorship, socialist ideology, etc are added as superstructure to serve the system and help its formation, consolidation and development. The ideological and political work of which we are speaking here covers the area of the superstructure, especially the ideology prevailing in it. It is an important organic component of the spiritural culture of socialism. "...So-called spiritual culture not only refers to educational and scientific culture (which is absolutely essential) but also to the communist ideology, ideals, beliefs, ethics, discipline, revolutionary stand and principles, the comradely relations between men, etc." "How could socialism be built without this spiritual culture, without communist ideology, without communist ethics?" This is a very important question, which involves our comprehension of the socialist modernization work. Please, Comrades, be earnestly aware of this fact.

Generally speaking, material culture and spiritual culture are interdependent, conditioning and promoting one another. Material culture is the foundation of spiritual culture while spiritual culture, on the other hand, has an enormous counteracting force on material culture. However, under certain historical conditions, due to the shortcomings of its economic system, a society may show a certain degree, or even a serious imbalance, between its spiritual aspects and the level of production force it has already reached. In the Western capitalist societies, material production is at a high level and science and technology are also well developed, but the spiritual life of the people is very much devoid of meaning and decadent, their moral customs are very bad and their crime rate is very high. In the Western capitalist countries, there are now also many people who have to admit that the pursuit of a high level of material life alone has already led to harmful consequences. These conditions are determined by their social system based on the capitalist system of private ownership, and the capitalist countries cannot solve these problems within the constraints of their system. Only the socialist system can provide the guarantee for mutual coordination and mutual promotion between the material and the spiritual culture. This is also one of the manifestations of the superiority of the socialist system. Today, on our new long march, our party and our state must be resolute and daring in setting about the task of solving the problem presented by the relationship of the two cultures. This indicates that our party Central Committee, with great foresight, will have to do a good job not only of realizing the four modernizations, but also in building up a socialist spiritual culture that will be far superior to anything in the capitalist world, so that our spiritual culture will be one that all people who clamor for revolution and progress will yearn for and that will arouse the envy of the many people in the world whose spiritual life is now meaningless and whose mental state is one of depression. This is an inevitable historical development. History has placed this significant task before us.

The clarification of these principles will, in my belief, greatly enhance our understanding of educational work and of ways to strengthen the ideological and political work among our students. The reason is very simple: the socialist spiritual culture cannot develop and take shape spontaneously. Building up this socialist spiritual culture is extremely arduous and formidable, the same as is the case with building up the material culture; it requires a tremendous amount of work from us. On the one hand we must develop our educational, scientific and cultural undertakings, and on the other hand, we must exert great efforts in ideological and political work, in propagating the communist ideology and ethics, in continued criticism and gradual elimination of all influences of the exploiting class. In both these respects we were speaking of the entire society; concretely applied to each of our schools the demand is now to nurture a generation of new men who have high ideals and moral principles, great knowledge and physical strength, and who are determined to make a contribution for the benefit of their people, their fatherland and of all mankind. In brief, we must nurture a new socialist successor generation who are both red and expert.

Do we want our students to master modern scientific and cultural knowledge? Of course. The fundamental task of students is to study. Rejecting science and culture was the stultifying policy of Lin Biao and the "gang of four" in their vain attempt to plot to have society retrogress. We will not again fall into that trap. Against those "leftist" mistakes of despising knowledge we must continue our criticism and thoroughly eliminate such influences. However, in running our schools it is also essential not to have the students acquire scientific and cultural knowledge alone: we must also have them gain a correct political direction, socialist consciousness, a good ideology, good moral principles and habits and at the same time grow up healthy in body and mind. Whether their education comprises Marxist-Leninist ideological and political education or not constitutes one of the differences in the character of our socialist universities as compared with capitalist universities. If the students nurtured at our universities did not support the leadership of the Communist Party and refused to serve the cause of socialism, that would be the failure of our education. This problem must definitely have our deep thought and attention. What is the position that ideological and political work is to occupy in our higher education? In my opinion, the ideological and political education of our students is of equal importance to their education in the specialized knowledge of engineering, physics or the humanities, and must furthermore be adequately integrated into their education. We also see that the ideological and political work of students at our institutions of higher learning had its special characteristics as compared with work on the other frontlines of our struggle. On the other fronts, the ideological and political work is conducted in the main as an integrated part of the work as the important guarantee for the smooth completion of the various tasks in implementation of the party's line, principles and policies. At the universities, the ideological and political work also has this function of a guarantee, but it is not only that. The ideological and political education in itself is an indispensible organic component of the content of higher education. It not only penetrates all the various aspects of instructional activities but in many cases is taught in specially established courses.

Our slogan is "red and expert," which signifies a unity of politics and vocational work and a unity of ethics and abilities. On this problem we must not engage in a dispute over concepts but must emphasize the comprehension of its spiritual essence and earnestly translate it into action. "Expert" is not the same as "red," but "red" must be "expert." A man with genuine socialist consciousness will inevitably do his best to learn the specialties of his line of work and earnestly try to master the skills to work in promoting the four modernization projects. Therefore, a man who is "red" but not "expert," or even content with not being "expert," is definitely not genuinely "red." In the reverse case, if a man is "expert" but not "red," has abilities but does not want to serve the people and socialism, but pursues crooked ways, that kind of an "expert" is not wanted in our socialist society. In our instructional work we must therefore earnestly strengthen the ideological and political work of our students and unswervingly implement a policy of developing fully all three aspects, the ethical, intellectual and physical. Regarding this problem, it is our hope that all comrades in the educational departments and in our schools will conscientiously sum up the experiences and lessons of the past, rectify one step further the ideological line and strive for a correct and uniform understanding of this question.

I have repeatedly said that our province of Hubei is one of the provinces with a fairly well-founded higher education. In the last few years, the party committees at the various schools and the numerous workers in the educational field have exerted themselves, expended great energy, performed great work and achieved remarkable successes. By and large, the political state of our proviincial education is a stable one, and normal conditions prevail in our education, our work and our daily life. The quality of our education is also being restored and raised continuously. Furthermore, the state of stability in our schools has beneficially affected society in general. The provincial party committee is well pleased with your work, Comrades. During the last 10 days of October last year, a small group of students from Hunan Teachers College tried to engage in illegal contacts with Wuhan University and Hua Shi College, but thanks to the serious attention given this matter by the party committee and the correct methods adopted, the students at the two institutions rebutted all that leftist stuff and its erroneous methods, which would have proved dangerous to our stability and unity. The influence of this affair on the whole country is quite beneficial. Of course it also shows us that certain problems still exist in our work at the institutions of higher learning, or even that a large number of problems still exist. One of the problems is that the ideological and political work is not yet handled with sufficient competence. Realistically speaking, it is also not a problem of any particular unit or any particular front. Engaging in ideological and political work was originally one of our excellent traditions but during the last few years this tradition suffered "leftist" mistaken interference, particularly the grievous sabotage by Lin Biao and the "gang of four," from which it has not yet fully recovered. At the same time, we have now just arrived at a new historical turning point, when everyone is groping for a way toward progress, while this progression will have to undergo certain stages, be it in the field of knowledge or in the field of actual work. If some problems arise, let us not blame everybody around us. In my view, we must not, on the one hand, underrate the achievements because of the existence of some problems, but on the other hand we must also not, because of achievements accomplished, overlook the serious nature of the problem. We are determined to employ the spirit of the various important conferences since the Third Plenary Session, including the Central Committee Work Conference of last December, to unify our understanding, rectify our shortcomings and give new impetus to our work.

The Second Question: On the Basic Demands Facing Us in the Ideological and Political Education of Our Students

In my opinion, if we want to be effective in the ideological and political education of our students, we must first of all put forward, clearly and definitely, a basic demand with regard to our students' political direction and moral conduct. Haven't we said that we want to nurture our young people to become men of ideals moral principles, knowledge and physical strength? It is my understanding that having ideals refers to having a firm correct political orientation, feeling concern for the fate of our fatherland and of mankind, that is, a firm adherence to the four basic principles, a grasp of the basic standpoint of Marxism-Leninism and Mao Zedong Thought, being imbued with the spirit of patriotism and internationalism and determined to build up our country into a strong, modern, socialist country. In summary, can we not express it this way: in the course of receiving his higher education, a socialist university student must lay a solid foundation for the formation of a communist world outlook. For some time recently people have not been very interested in world outlook, a phenomenon that deserves our attention. The question of world outlook is a basic question, which nobody can avoid. Even when no world outlook is being discussed, a certain kind of world outlook will exercise its functions. The world outlook comprises a man's outlook on life, that is, what a man after all lives for. The meaning I want to express here is that we want to nurture in our institutions of higher learning a socialist successor generation that is both "red" and "expert." If we make clear and definite demands as to the "expertness," we must also make clear and definite demands as to "redness." Of course the demand for "redness" is not as specific and easily mastered as the demand for "expertness," but this problem simply must be solved, otherwise the objective of nurturing men who are both "red" and "expert" cannot be fully achieved. In my opinion it is extremely important to carry out among the university and college students an education with the objective of fostering these qualities. In the course of this kind of education, every single university student must be made aware of the fact that under our present conditions of material and financial limitations, the number of students that are enrolled is not very large, and while the party, the state and the people are creating these favorable conditions for study, they also entertain extremely high hopes as regards the university students. Every university student must therefore first of all acquire a communist world outlook, seeking to work for the interests of the vast majority of people in China and in the world. They must under no circumstances let valuable time slip by unused. They must be firmly determined and with single-hearted devotion learn well their particular specialties--socialist construction, socialist operation and management, the socialist legal system, socialist culture and art, etc--so as to become activists working under the leadership of the party for the realization of the four modernizations. In short, they must closely integrate their own studies with the fate of the country, the prospects of the nation and our four modernization undertakings, and establish a clear and definite study objective.

According to the present conditions and the ideological reality of the students, what are the points that we shall have to emphasize in the ideological and political education of university students at the present time and for some time to come? We must take the documents of the Central Committee Work Conference of last December as a basis and institute a fairly concentrated education of the students in support of the four basic principles. We must institute topical education that is linked to the 31 years of our history since the establishment of our state, that must make the students become aware of the great achievements of the socialist revolution and construction as well as give them an understanding of the shortcomings and mistakes in our past work and the presently existing problems, as well as methods of redress and solution. On this basis we must carry out a penetrating education in the party's line, principles and policies and an education in firm support of the four basic principles to guide the students to be able to better draw clear lines of demarcation between socialism, capitalism and feudalism, to have the students realize why a strong, modern, socialist country can be built up only under the leadership of the Communist Party, and why we must study and firmly uphold the cardinal principles of Marxism-Leninism and Mao Zedong Thought. They must gain a clear idea of what is to be upheld and promoted and what is to be opposed, resisted and criticized. This education must under no circumstances be merely regarded as a general education in current policies, but rather as one aspect of "capital construction," namely, of raising the ideological consciousness of the students. If this basic construction is done well, it will have far-reaching effects. It is absolutely necessary to clarify certain basic questions, such as for instance the superiority of the socialist system, the difference between socialist and capitalist democracy, the relationship between the development of democracy and the insistence on the leadership of the party, the relationship between centralism and democracy, freedom and discipline, etc. Did we not some time ago see in our society the emergence of a trend toward capitalist liberalization? This trend of thought had its influence on the schools and on the mentality of the students; we must not underestimate it. When carrying our education in support of the four basic principles, we must be fully prepared to carry out a convincing analysis and criticism of these ideological trends that had an influence among the students, especially of those absurd opinions that oppose the four basic principles. We must thus help the students widen their knowledge, draw clear lines of demarcation and clear up any ideological confusion. We must tell our young students that our party, our older generation of revolutionaries and the people of various nationalities throughout our country entertain high hopes for our young students and have a well-founded and very high opinion of them and solicitude for them. This is a fact beyond any doubt. There has now appeared among our young people a minority, very small in number, who harbor dark designs, like the rebels of the "great cultural revolution" who closely followed Lin Biao and the "gang of four," against whom we really must be on our guard. Although their numbers are extremely small, they are a force of evil. They are now engaged in seducing, deceiving, confusing and inciting young people who are politically immature and inexperienced, so that they, the rebels, might gain their treacherous political designs. Every sutdent with socialist consciousness will want to draw a clear line of demarcation against them and struggle against their reactionary words and deeds.

The Central Committee Work Conference of December last year was a very important conference in the history of our party. It demonstrated that in its political line, our party has already completely broken with the historical mistakes of the "left," thus following and elaborating the spirit of the Third Plenary Session, so that there is absolutely no question any more of "relaxations" and "restraints." We must realize that we are still mopping up the influences of "leftist" mistakes and unifying the ideology of the whole party and the whole people, including here of course the university students, into one of Marxist ideological line, political line and organizational line as established since the Third Plenary Session. Departing from the spirit of the Third Plenary Session and without an elimination of the mistaken "leftist" influences, it is not possible to carry out correctly an education in support of the four basic priniples, nor is it possible to effectively maintain the four basic principles in actual work. On the other hand, we must also realize that firm adherence to the four basic principles is a basic principle consistently upheld by our party, as it is also the core of the political line of the Third Plenary Session. Negations of any description from the "left" or the right, or viewpoints in opposition to the four basic principles, we shall definitely criticize and overcome most seriously and earnestly. It is absolutely wrong to set the four basic principles in an antagonistic position opposing the political line of the Third Plenary Session, or to refer to the four basic principles and the documents of the Central Committee as the "big stick." If such talk is uttered by people who are ignorant of the party's line, principles and policies, it shows that our propagandistic education has been insufficient; this is a question of knowledge and of education. There are, however, now certain individuals with long party affiliation who also utter such talk and whom we would then want to ask whether there is any party spirit at all left in them, and what kind of a standpoint they have moved to.

What methods should be used in teaching firm adherence to the four basic principles? At the present meeting some comrades have worked out some very good methods which in my opinion could be effective. For instance, based on the series of important questions in the Central Committee document No 2, certain special topics can be enumerated through a process of analysis and synthesis, and around these special topics the document can be studied topic by topic, giving the students guidance, organizing discussions among the students and possibly also arranging social investigations, letting them learn how to apply the Marxist-Leninist stand, viewpoint and method to gain an understanding of the problems, to effect their analysis, to gradually distinguish right and wrong and enhance their general understanding. Is there not half a day every week set aside for topical education? Good use must be made of this time. Of course, we need not limit ourselves to this time only, but should add a course in political theory, a course in ideological self-cultivation and coordinate the day-to-day ideological work with various kinds of activities. If we carry on in this way for a certain period of time, I believe the mentality of the students will undergo a great change, and if this is continued for a further lengthy period of time, it will be even more effective.

The Third Question: On the Need to Uphold the Principle of Seeking Truth From Facts and Employing a Policy of Removing Obstacles in Our Ideological and Political Work Among Students

Seeking truth from facts and in everything starting out from the realities are the basic principles that determine the quality of all work, as well as the basic principles that govern the effectiveness of ideological and political work among students. In the past, due to the long-term influence of "leftist" mistakes, especially due to the sabotage of Lin Biao and the "gang of four," ideological and political work had become greatly discredited. Why was that so? Because idealism and metaphysics were rampant at that time and these pernicious influences also showed up in the various aspects of our education, in its content, policies and methods. In personal and other matters no specific analyses were made, everything was reported "false, exaggerated or without substantiation." As regards methods, the system was one of powerful influences controlling the personnel, or of conducting affairs in a formalist way. If we now want to restore and promote the reputation of ideological and political work, we must display the excellent traditions of the party and never again resort to all those "leftist" methods. There is a saying: "The savage methods are outdated, the old methods don't work, the new methods are not clear." What are the "savage methods"? They are nothing but the "leftist" methods, methods that had "class struggle as program." That these things are outdated is fine; it indicates that we have made progress and won victories. An analysis of the "old methods" shows some things to be unsuitable and outdated; it is of course no good trying to open the doors of the eighties with a key of the fifties. However, many of the old methods reflect the excellent traditions of our party which ought to be continued and developed, certainly not discarded. The phrase "the new methods are not clear" is also not an altogether truthful statement. At some schools, some effective new methods of ideological and political education have already been worked out; they deserve our attention and we should sum them up. If we say they are not clear to us, then we had better try to find out about them and be creative; it would also show that we shoulder heavy responsibilities. In my opinion all that is needed is firm adherence to the principles of seeking truth from fact and in everything starting out from the realities, an unceasing study of the new conditions, solution of the new problems; then the new methods can be found and indeed will certainly be found.

The principle of seeking truth from facts has an extremely abundant content; I intend to talk here on how to view the problem of the young students. Solving this problem is an important precondition for the effectiveness of our ideological and political work Whether our basic appraisal of them is correct or not will affect the attitude, the policy and the methods that we adopt toward them; it is therefore an important question. The majority of expressions from our students of institutions of higher learning are good; the main currents of their ideology are also good. They support the political line, principles and policies enforced since the Third Plenary Session. They actively strive to move upward, demand progress and ardently love the party and the socialist fatherland. They exert great efforts in their studies and are determined to make a contribution toward the four modernizations. Under the loving care of the party and the state, they are growing up in good health, and more and more men of splendid qualities are emerging. Quite a few students have this or that critical opinion concerning the work of our party and government. On analyzing these opinions in detail, we find that some are not necessarily wrong. Some, although not exactly geared to actual circumstances or not completely correct, are well intentioned. They express the hope that we perform our work effectively and that the construction of our county is handled well; they have absolutely no bad intentions. We must therefore say with full confidence that they are certainly not a "confused generation" or a "bankrupt generation," but rather a generation of great hopes and great deeds. How could they be looked upon as one great mess? In that case, where could we see the future and hope of our country? Of course when we positively assess their basic aspects in this way, it does not at all mean that we deny that there are many problems related to them. For instance, there is a minority of students who doubt the four basic principles and yearn for a bourgeois liberalization. There is a minority of students who have some mistaken concepts of our country's present political and economic circumstances. There is a minority of students who show this or that defect as regards moral character and civilized conduct. These are all facts which require that we treat them seriously, patiently educate and give systematic guidance. As to individual persons who engage in antiparty and antisocialist activities, these cases must be thoroughly investigated and carefully analyzed. Depending on the seriousness of the case, the person concerned must be restrained according to law or reprimanded or punished as necessary. In short, we must arrive at a correct and comprehensive assessment of the young students and furthermore we must analyze the social and historical conditions in which they find themselves. We must realize that in general they "were born in times of distress, grew up in times of turmoil, are studying in times of readjustment." They are in the midst of a great historical turning point, which on the one hand gave them a good tempering, but on the other hand confronted them with complex contradictions and subjected them to a great variety of influences.
Marxism-Leninism holds that existence determines consciousness, man's nature is

the sum total of his social relations. The students do not live in a vacuum; how could the good or bad elements in society not exert influence on them? We must therefore not blame the young people, but must show concern and loving care for them, which is best shown by providing them with a vivid ideological education.

In the schools and in society there is still another problem, namely, how to treat the children of cadres, especially the children of cadres in higher positions. This topic is now much discussed in our presentday society. The Central Commission for Inspecting Discipline has twice investigated the conduct of children of cadres in high positions. The facts are basically: those whose conduct was good or ordinary made up a little over 98 percent; those whose conduct was bad or who were bad characters made up less than 2 percent. Besmirching the reputation of children of higher cadres is therefore inconsistent with the facts, as well as damaging to the party. An extremely small number of people with ulterior motives are out to fabricate and utilize this kind of public opinion to stir up trouble in a vain attempt to sever the flesh-and-blood relationship between the broad masses of youths and the revolutionaries of the older generation, as a means to attack and vilify the party. We must be on guard against such practices, but at the same time we must make the same strict demands on the children of higher cadres as we make on all other youths. The good ones will be commended and the bad ones will be criticized. Individuals who have indeed violated the law or offended discipline are to be firmly punished in accordance with party discipline and state law.

According to the basic analysis in the above, we can quite naturally arrive at the following conclusions: in the treatment of our young students we must start out from concern and loving care and maintain a policy of removing obstacles in their way to solve their ideolgical problems. This means dredging a free course and guiding them in their passage; in dredging a free course provide guidance; when providing guidance, dredge a free passage for them. Comrade Mao Zedong repeatedly said: in solving ideological problems, we must present the facts and reason things out, convince people by reasoning. In our treatment of the young students we don't approve of letting things drift.

We shall certainly not show tolearance of leniency as to erroneous things found among the young people. We shall firmly adhere to our principles, speak frankly and sincerely in pointing out things to them and calmly reason with them, full of ardor and sincerity, to inspire them to overcome their difficulties and rectify their ideas, without evading any thorny questions. At the same time we shall never be coarse or rough. Oversimplified methods or crude and rough methods cannot solve any problems. Some students who have some mistaken concepts must be made aware of the fact that they are mistaken; this is quite sufficient and there is no need to magnify things unnecessarily. At present the people of the whole country, especially the youngsters, are launching a "five discussions, four beautiful" movement of culture and manners, that is, concerning the discussion of culture, courtesy, healthy habits, orderliness and morality and "beautiful" spirit, speech, conduct and environment. This movement is of great significance for the building up of a spiritual culture and to encourage people to work with one heart and one mind for the realization of the four modernizations. The institutions of higher learning should launch this movement vividly and dramatically and in a down-to-earth manner. They should in this respect march at the head of society and excel in carrying out this movement. The foundation of the "five discussions, four beautiful" movement is attention to morality and refinement of spirit and in substance consists of the pursuit of the truly good and beautiful and opposition to the false, the ugly and the hideous. Are not young people very fond of the beautiful? Let us then lead them to give attention first of all to the spiritual beauty, which invariably comprises lofty ideals, a revolutionary mentality and noble sentiments. Let us concentrate our efforts on work in this direction. The majority of our youths lead simple and frugal lives; they detest dressing up and beautifying themselves but enjoy attending recreational and sports activities. This is good and understandable. We must not judge this new generation by old standards. However, we must strengthen our guidance of the young people. Comrades from outside this area say that the people in Wuhan are rather plainly dressed. That is very good, since plainness, neatness and cleanliness are also a kind of "beauty"! But the Wuhan area does very badly in environmental sanitation. That is not very cultured, and I hope the institutions of higher education will take the lead in improving the environmental sanitation. Should we determine which movements the students may participate in and which not? Everybody should study this question. In my opinion it is more important to be most energetic in launching various kinds of healthy activities and have them replace the unhealthy activities. We should do more and a better job at organizing and launching sports meets, various competitions of skill and art, musical performances, singing performances, sparetime scientific research, vacation travel, etc. There is no shortage of talented people in the universities; all that is required is to get them organized, and the spiritual and cultural life will become more abundant and more active.

Adopting a policy and methods of removing obstacles from the activities of the students is most important and fundamental, but this will have to have necessary restraints, including the restraints of discipline and the laws. Strictly speaking, every person must accept certain disciplinary restraints. Where in the world is there "absolute freedom" or "abstract freedom"! From the first grade in primary school, our students must be made to acquire a strict sense of discipline. At present there are at our institutions of higher learning an extremely small minority of students of a seriously questionable type, of whom some participate in illegal organizations whose aims are in violation of the constitution and of the laws and opposition to the party and to socialism. They compose and print illegal publications and distribute statements that endanger our society, our state, the socialist system, our stability and unity, and are antiparty and antisocialist. We must definitely take note of the seriousness of the problem and take firm and serious action in accordance with the spirit of the relevant documents of the Central Committee. We must give attention to gaining a good grasp of the policies. As to participation in illegal organizations and illegal publications, each case must be dealt with according to its particular circumstances; we must carry out earnest ideological education and work on breaking up their organization, and strive to have the majority of their members change their stand. As they truly change their stand and express repentance, we must welcome this so that they will correct their mistakes and we must continue to help them warmheartedly in their progress.

It is a very important point that we integrate the solution of the students' problems of ideological understanding with the solution of their actual problems. We must realize that concern for the students' studies and livelihood and the solution of their ideological problems are two things that influence each other and help each other forward. As things are now, it is well worth our while to pay attention to the study problems and livelihood problems of the students. Students come to school to study; if the instruction at school is poorly carried out, there will be criticism from the students, from parents and from society. We must send excellent teachers to the forefront of our teaching and must furthermore study teaching methods and the art of teaching, striving for effectiveness in our teaching. The school dining halls must be run well and good control must be maintained in order to provide well for the livelihood of the students. Under favorable conditions the schools may operate farms and go in for agricultural sideline production to foster a spirit of arduous struggle and institute a part-work and part-study system. In the days of the revolutionary war, conditions were extremely difficult, but we were able by using our own hands to provide ample clothing and food. Now that conditions are so much better, why should we not be able to practice self-reliance to improve our own livelihood and improve the conditions for running our schools? One may say that under certain conditions, concern for the students' livelihood is in itself a kind of ideological and political work. Of course the schools still have many difficulties, shortcomings exist in many respects, but if we only apply ourselves earnestly to work out methods, many problems will gradually find their solution. If there are problems for which we really lack the strength to find solutions, this must be clearly explained to the students. I believe we should run our schools so as to have them gradually become one revolutionary family, so that after graduation the students will still always cherish the memory of their alma mater. Why is in this term "alma mater," the word for "mother," brought into connection with the school? To express the idea that that school of yours was well run, comparable to a mother's fostering of her own children, so that the children on their part will have grown very fond of their mother.

Within the schools all the various forces must be mobilized and organized in a joint effort to do an effective job of ideological and political education. Of the "various forces" we mentioned, one is the different kinds of organizations: the party organization, the Youth League organization, student associations--all these should engage in ideological and political work. At present not many students are party members, but Youth League members make up 70 to 80 percent of the total number of students. What a large force this is! If their enthusiasm alone is brought into play, the entire school will brim with vitality and assume a totally different appearance. Some of the Youth League grassroots organizations are now rather lax, many league members do not play the role they should. We must make a resolution to take this matter firmly in hand. Within the party and league organizations, we must strengthen and tighten up the organizational life, we must launch criticism and self-criticism, propose and encourage that everyone speak out freely and without reserve within the organizations, thus rendering the organizational life vivid and vigorous. We must pay attention to having the various mass organizations play their full part. On this point not enough has been done in the past, starting with the provincial party committee, which is a very great weakness of our work that has to be remedied. We must support the Communist Youth League and we must work boldly in this respect. Another force is the willingness of various kinds of people to engage in ideological and political work. First of all, we must of course have a contingent of capable full-time political workers. The responsibility on their shoulders is very heavy indeed and their work furthermore is very arduous, their remuneration is still very low and their work is not regarded as important. This must have our due attention and we must adopt measures to solve the problem. Since we acknowledge ideological and political work to be an important organic part of our higher education, we must also acknowledge that the contingent of full-time political workers, the same as the full-time teachers, are an important force that directly affects the effective running of the schools. Any disparagement of the political work personnel is wrong. To be effective in our ideological and political work it is of course not sufficient to rely only on the full-time political work personnel; the cadres at the various levels of the party and administration as well as the entire body of teaching staff and workers must also do ideological and political work. One maxim is "teach book knowledge but also teach how to be a human being", another maxim is "example is better than precept." Both these maxims must be propagated over and over again and earnestly put into practice.

Especially the leading cadres of the party must strictly observe discipline and set an example with their own conduct. There is still another problem at our universities in connection with the role of the students as the mainstay of our educational system. In the past there were two bad trends in our teaching methods: One was to treat the students like babies to be coddled or like weak-minded persons to be rigidly controlled. The other trend was to let go every hold on them and exercise no control, letting the students do whatever the liked. Being different from middle school students, the university students must be given even greater attention in order to activate their initiative and creativity and to arouse their zeal for self-education. If the core strength of the students is mobilized, many problems can be solved at the grassroots and in the embryonic stage.

The Fourth Question: On Having the Party Organization Direct Its Time and Energy Mainly to the Effective Performance of Ideological and Political Work

Regarding how to strengthen the party leadership, there has been a conceptional question that has not been solved for a long time. We have some comrades in charge of party work who have been prone to use administrative methods, making decisions, issuing directives, issuing orders, and in the multitude of tasks taking care of everything personally, considering this to constitute the leadership of the party. Is this a correct concept? In my opinion it is at least a one-sided concept. Whether the party organization is truly in a leadership position and whether the party organization has the power to issue orders in all administrative affairs are two different questions. Only exercising administrative powers and issuing orders without broad ideological and political work will hardly bring about a genuine leadership role for the party. In a school it will be through strong and effective ideological and political work of the party organization, which must be turned into a fighting bastion, that the entire body of teachers, students, employees and workers will be made to trust, uphold and support the party's line, principles and policies, that they will of their own free will advance in the socialist direction pointed out by the party, and that they will strive to fulfill the general tasks of the party. In my opinion this would be the true realization of party leadership.

I have already mentioned that the party organization in the institutions of higher learning in our province has achieved great success and acquired much experience in strengthening the ideological and political work. The question is only that following the further development of the situation, the demands that the party makes on us are ever increasing and the demands that the people make on us are also ever increasing, so that in many directions we must raise our knowledge and improve our work.

Some of our comrades still lack the necessary knowledge as regards the importance of ideological and political work. We must pay attention to this problem and solve it. Now that the focus of work throughout the party has been shifted to the work of modernization and the focus of work in the institutions of higher learning has been shifted to specific studies and scientific research, some comrades believe that effective ideological and political work is no longer important, that it is sufficient to do an effective job in specific studies and scientific research. This conception is obviously wrong, because it places ideological and political work in opposition to specific studies and scientific research, or equates the two on an equal basis. In actual fact, after the focus of educational work at school had been shifted, the ideological and political work must not only not be weakened, but must rather be improved and strengthened in order to conform to the new situation. In order to guarantee a stable environment, a smooth progress of specific studies and scientific research conformity of all educational work with the line, principles and policies of the party and the realization of the educational objectives of the students in our institutions of higher learning, we must do a very large amount of ideological and political work. The party organizations at all levels in our schools must propagate among the entire body of teachers, students, employees and workers the party's line, principles and policies and explain to them all circumstances and principles in order to make them understand the relationship between the party's line, principles and policies and their own vital interests. The problems experienced by teachers, students, staff and workers must be discussed with them and settled through discussion, and realistic and convincing explanations must be given on the confused concepts they may hold. This kind of work may be called ideological guidance. If none of this work were done, specific studies, scientific research and any other work could not be effectively carried out. I have already talked about the concern we should hold for the livelihood of the students; here I still want to add concern for the livelihood of the teachers, staff and workers; we must do a good job at logistics, which is also an essential condition to guarantee the smooth progress of specific studies and scientific research work. There are some old professors who are good scholars but bad at managing their own livelihood. We must give attention to care for them so that they may concentrate all their energies on teaching and scientific research.

There are some comrades who are afraid of the difficulties in ideological and political work; they do not dare to tackle the problems arising among the students and do not dare to take charge. On all important problems they feel they cannot express themselves clearly and convincingly, with straightforward logic and forceful vigor, which causes them to lose all confidence. There are also some comrades who had intended to take this work in hand and to take charge but feel a lack of certainty, they are full of worries, worry about mishandling and mismanaging things. We must admit that this condition is not completely due to subjective reasons. With the appearance in society of an ideological trend toward bourgeois liberalization and with our existing shortcomings in theoretical propaganda work, the difficulties of carrying out ideological and political work are rather great.

However, as a party committee of any rank, as a responsible comrade or a party committee, we must have a thorough materialistic attitude and the revolutionary spirit of pressing forward in the face of difficulties. There are many comrades who have done many years of school work, who have abundant experience and who are certainly knoledgeable as to what has to be done and how it has to be done: Why would they not dare to take charge! As to not being able to deal with new problems, this merely requires strengthening self-study, enhancing one's understanding of theories, ideologies and policies and thus being enabled to reply convincingly to any questions that the students may put forward. I know this myself from experience: under the present historical conditions, a person doing ideological and political work cannot merely live off his past gains, there must be further study. We must strengthen investigation and research, study the new situation and new problems from the standpoint of Marxism-Leninism, and with its methods, and make efforts to arrive at the correct generalizations. Otherwise, would it not be a case of "those in the dark themselves trying to light the way for others"?

There are also quite a number of comrades who cannot free themselves from many and diverse administrative chores and who have not placed ideological and political work on the agendas. At present, a school is like a small community of its own; any problems may be left to the school to settle and many problems must be referred to the party committee to decide. However, it is said that at some institutions the responsible comrade of the party committee has to sign the expense accounts for professors travelling on duty; that is no good. If the party committee is pestered day in and day out by such large and small particular tasks, how can it find time and energy to take ideological and political work in hand? Not to speak of its "primary time and major energy." These conditions must now be changed. We must enhance the understanding of ideological and political work and gradually change the way party committees are burdened with all the work. As the provincial party committee discussed it: The present leadership structure, that is, the system of personal responsibility of the school president under the leadership of the party, must not be lightly changed, but earnest improvements could be made with regard to a division of labor between party and administration. This would mean that routine administrative work and other business would as far as possible be allotted to the administrative and business departments to handle; we should support them in these matters while leaving them a free hand and recognizing their responsibility for the functions and powers of their offices, so that they may fully play their role. The party committees, especially the highest responsible comrades in the party committees, must devise ways to allot their primary time and major energy to firmly and realistically take in hand the ideological and political work at the schools. Of course, under the prevailing conditions, it would be unrealistic to take some affairs completely out of the control of the party committees, especially since some responsible adminstrative positions are held by old specialists who are not familiar with administrative work. For these comrades we should provide assistants.

In all this, I have mainly given some views and opinions focusing on the work of the party committees at the schools. It must be especially pointed out with regard to the ideological and political work of the students that apart from the efforts of the schools and educational departments, it is the party committees at various levels that should concern themselves with this work and take it in hand.

Some comrades have expressed the hope that the leading comrades in the province might manage to find time, a few days every year to visit the schools for heart-to-heart talks with the teachers and students, to arrange informal discussions and for reports on the situation. This is a good idea. Concrete arrangements may be left for later; we must not make empty promises now. The responsible departments concerned and the units concerned must exert efforts to improve their work. The cultural and educational departments of the provincial party committee, the provincial bureau of education and the provincial committee of the Youth League must coordinate their work very closely to help the schools in doing on their part more ideological and political work for the students. The provincial committee of the Youth League must make effective Youth League work at the universities one of its primary tasks. In this respect efforts must not be allowed to slacken.

Comrades! At present the situation on the educational front is very good. The CCP Central Committee shows extraordinary concern and considers the development of our educational undertakings extremely important. Our provincial party committee and the party committees at various levels are continuously enhancing their understanding of educational work. After its establishment, the Central Secretariat repeatedly discussed eudcational work, which was also repeatedly discussed by the Standing Committee of the provincial party committee or its secretarial work meetings. Of course, since we are in the midst of a period of readjustments, the strengthening and enrichment of education will require a certain process of some duration. Due to the huge debts of the past, it would also be unrealistic to think that the educational problems could be solved at one stroke. I hope all comrades working at the schools take the situation as a whole into account, share the country's cares and burdens, overcome all difficulties and do effective work.

On the other hand, the party committees at all levels, first of all the provincial party committee, must place even more emphasis on education and improve their leadership of educational work. There should be one comrade in the local, municipal and provincial party committees mainly responsible for educational work, and lower down there should also be some organization and personnel particularly in charge. As to the local and municipal universities, the various local and municipal party committees must strengthen leadership and not relax it. All trades and professions must support education. In our society we must create the custom of respecting teachers. We must as far as possible help the schools solve some of their actual difficulties and make efforts to improve teaching conditions. As to the supply of goods and material, we must appropriately care for the universities according to their special character. It was reported at the present meeting that some factories, mines, industrial enterprises and units did not welcome students to do field work; that is very bad. There was a good tradition before the "great cultural revolution," that factories, hospitals, middle schools and elementary schools of their own free will welcomed students to do their field work, considering this one of their responsibilities. This good tradition must be restored and developed. We oppose the "open-door schooling" of the "gang of four" that abolished book knowledge and classroom teaching, but that does not mean that we also negate field work practice. Field work is a fine form of linking theory with practical reality; it is an important item in the nurturing of talents and raising the quality of our education, and it is also beneficial for the ideological education of the students. It is our hope that all concerned will surely make good arrangements and support well the work of our schools.

As much as I have talked today, I admit it is not complete. As to the ideological and political work among the studnets of our institutions of higher learning, what should be its content and how should it be conducted? The answer still relies on your further study; don't let yourselves be restricted by what I have said. I hope everybody will give attention to a summing up of experiences gained and lessons learned in ideological and political work at our institutions of higher learning since the establishment of our government, investigate and study the new fresh experineces in ideological and political work since the Third Plenary Session and subject them all to a most thorough study. The purpose of my talk today is to draw everyone's earnest attention to the ideological and political work and furthermore to pool the wisdom and efforts of everyone for an improvement in this work. This is the hope of the provincial party committee of this province.

NINTH POLISH PARTY CONGRESS DISCUSSED

Beijing RENMIN RIBAO in Chinese 22 Jul 81 p 7

[Article by Fang Xuan [2455 5503]: "The Ninth Congress of the Polish United Workers Party Concluded Smoothly"]

[Text] The special Ninth Congress of the Polish United Workers Party, which the whole world watched intently, was concluded on 20 July.

This congress summarized the events that have taken place since the eighth Polish party congress in February of last year. In his report, party First Secretary Kania indicated that the major reasons behind the present Polish economic and social crisis were "the tremendous development of productive capacity, in conjunction with an inflexible system of national economic management leadership and all the contradictions in social life" during the seventies, "the numerous mistaken proposals" in economic and social policy during that time, and the "undemocratic functioning at times" of the party--primarily the party Central Comittee. Moreover, he again emphasized that the Polish party members would continue unfalteringly to carry out the line of reform and negotiation, and would be resolute in overcoming the crisis by themselves.

Ninety percent of the 1,964 representatives at the congress, who represented some 3 million party members, were new. The congress expelled the former party Central Committee first secretary, Gierek, and others of the party membership, and adopted the method of direct election by secret ballot of the new Central Committee. Eighty-nine percent of the original Central Committee members and alternate members failed to be reelected. Among the members and alternate members of the original Politburo, only Kania, Jaruzelski, Barcikowski, and Olszowski were reelected. The remaining 11 were not. Kania was again elected to the post of party first secretary. A congress spokesman said that the results of this election manifested the representatives' desire "to place persons who will resolutely carry out and support socialist reforms in the organ of central leadership." After being elected, Kania stated that he would not prove unworthy of the representatives' trust, and would "deviate to neither left nor right, but would move forward along the path of socialist reform."

The Ninth Congress of the Polish United Workers Party was held in the face of various pressures and contradictions coming from both inside and outside the state and the party.

On the eve of the congress, the Soviet Union placed tremendous pressure on Poland. In addition to carrying out military deployments and maneuvers both within Poland and in surrounding areas, on 5 June the Central Committee of the Soviet Communist Party dispatched a letter to the Central Committee of the Polish party issuing an ultimatum and declaring that the Polish situation "already threatened the interests of the entire socialist family," as well as "our common security." It charged that Kania and Jaruzelski had done nothing to change "yielding and compromising policies" and that "position after position had been given up." The letter demanded that the Polish party "return the situation to the proper course before the ninth congress of the Polish party." During the discussion of this letter at the 11th Plenum of the Eighth Polish Party Central Committee, the overwhelming majority of the Central Committee members expressed support for Kania and Jaruzelski. In this situation, the Soviet Union had to declare that its letter "was not criticizing the reformist line" and that it "supported the Polish party" leadership. After doing so, the Soviets decided to send Gromyko to visit Poland and to continue to put pressure on Poland through their press propaganda. At the special session of the ninth congress, the head of the Soviet delegation, Grishin, declared again that the Soviets "cannot be unconcerned" about the fate of Poland.

Inside Poland, the economic situation is undergoing precipitious changes. The people lack the necessities of life. The amount of foreign debt is staggering. Production is down. The society is in turmoil. Spontaneous strikes are a constant occurence. The people are demanding an early end to the crisis. The cries for reform grow stronger day by day.

There is a critical struggle going on within the Polish United Workers Party. One faction of the party leadership, represented by Kania, supports a line of negotiation and reform, with an emphasis on the Polish people solving their problems themselves. Another faction opposes the reformist line. They receive the support and encouragement of the Soviet Union. The Soviets call them a "healthy force," and accuse the reformist faction of being "revisionist" and "opportunist." Soviet interference complicates and intensifies the struggle within the Polish party. On the eve of the ninth congress, the struggle was manifested in the election of representatives to the congress. Having gone through heated debate in which various views were aired in various "public forums," the absolute majority of the ninth party congress representatives selected by the party organizations of the provinces, cities and other areas supported the line of negotiation and reform.

Within the Solidarity union, arguments that the interests of the people are paramount and calls for avoiding giving the Soviets an excuse to intervene are more and more being accepted by the broad masses. Walesa, the leader of "Solidarity," called on the union members to understand "the geographic position that Poland occupies," and the "political consequences" that extreme actions could produce. "Solidarity" has expressed firm disapproval of provocative behavior such as the smearing of the Soviet military memorial. This sort of attitude on the part of "Solidarity" of attaching great importance to the overall situation created a beneficial atmosphere within the country for the holding of the special ninth Polish party congress.

The ninth congress of the Polish party overcame numerous difficulties and concluded smoothly. The congress adopted plans to establish a program for overcoming the crisis and for economic reform, as well as a series of important resolutions concerning a new party constitution and petitions of the Polish people. But with the Soviet threat and the serious economic situation within the country, the Polish United Workers Party still faces severe tests.

REVIEW OF RECENT CHINESE BIOGRAPHY OF KISSINGER

Beijing DUSHU [READING] in Chinese No 7, 10 Jul 81 p 11-15

[Review by Zhang Jialin [4545 0857 3829]: "A Valuable Effort: Comments on 'A Critical Biography of Kissinger'"]

[Text] Chen Youwei's [7115 2589 3634] book "JIXINGE PINGZHUAN--A CRITICAL BIOGRAPHY OF HENRY KISSINGER" is a very special piece of biographical writing.

For some unknown reason, in China works on living famous people are as rare as unicorn horns, and biographies of living foreign politicians are even more rare. Can it be that a coffin lid must close on a person before a discussion can take place? Can it be that we cannot use a Marxist point of view to provide Chinese readers with a glimpse of influential foreigners? On this point alone the book is quite valuable. It fills a long-felt void in Chinese biographical works and has caught the interest of a broad range of readers.

In the history of western foreign relations, it would be quite difficult to find another diplomat with such an air of intrigue and who also elicits so much interest and debate. It is not easy to evaluate such a complex person. In writing this book about Kissinger and the related historical events the author carried out extensive research of foreign affairs, picked over a great mass of confused, repetitious materials, discarding the useless and keeping the essentials, eliminating the errors and choosing the best, and used a dialectical method to make an analysis. His deft literary style then constructed a lush, full-blown portarit of this colorful figure in American foreign relations in the 1970s. From 1969 to 1977, Kissinger wielded great power in foreign relations in the cabinets of presidents Nixon and Ford. For the American ruling group to use this Jewish scholar, as the author describes it, "clearly describes their feeling over the continual erosion of American power, and their hope that the skills of a few politicians could augment the lack of actual strength and thus keep from being overthrown by the raging storm." Even though Kissinger used his intelligence and resourcefulness and performed act upon act of eye-catching drama both in America and world-wide, nonetheless he finally was unable to overturn the laws of historical development and was unable to halt the erosion of American hegemony. This is the basic premise of the author's critical biography.

The special features of Kissinger's personality are sharply portrayed in this biography, mainly, I believe, because the author was able to operate within the context of the actual social life in a fixed historical period. It shows the relationships between various American factions as well as the complex relations between America and other nations. The book moreover places Kissinger in the context of this special historical background and describes him within this temporary framework. Engels has pointed out that, "The main characters represent a certain class and certain tendencies, and consequently are the representatives of the ideology of their times. Their motivations are not made up from the fragementary hopes and desires of individuals but are derived from the historical trends within which they exist." The period in which Kissinger was in office was the period in which America was losing the Indo-China war, when the national economy was suffering from "stagflation" and when the state of the nation was worsening day by day. Under such conditions, the American ruling group, in seeking to halt the advance of Soviet imperialism and protect its own bases, found it necessary to absorb some new views and positions to replace its outmoded, defunct foreign policy. Kissinger, as a strategist for this group, naturally was affected by numerous political and historical phenomenon and naturally became "the representative of a certain ideology of his times." When introducing Kissinger's thought and views, the author placed the development of his political thought into two periods: One was from 1957 to the early 60s, when, in response to the American defeat in the Korean War and the bankruptcy of the "strategy of large-scale retaliation," Kissinger advocated "limited war" and the the strengthening of conventional military forces, which caught the attention of the Kennedy administration. The second period was from the latter 1960s to the early 1970s, when Kissinger suggested the policy of "balance" as the main feature of a "peaceful order." From this we can see how the author has deeply investigated and understood Kissinger's major writings, how he has organized and incoroporatedtheir main points and revealed their true meaning to show the main features of Kissinger's foreign policy.

The author has made a penetrating theoretical analysis of Kissinger's "philosophy of foreign relations," and I feel that this is the book's outstanding feature. Kissinger was a "newsworthy person" for a period of time and people are relatively aware of his main activities in foreign relations, but lacked systematic information on the theory and origin of his policies. Therefore, the author placed emphasis on the former. It is worthy of note that while reading this biography I was not at all bored. The author is quite well informed about world history and uses a vivid literary style to introduce such German thinkers as Spengler, Nietzsche and Hegel and the 19th century western political figures Metternich, Bismark and [Kaersilei] and their roles in the formation of Kissinger's world view and "philosophy of foreign relations" as well as the influence of such ideology and views held by Kissinger on American foreign policy and military policy of that period. Therefore, I believe that this book is both the biography of a person and an encapsulation of American foreign policy in the 1970s. Through this prismatic view of Kissinger the author has to a certain degree reflected a trend in American foreign policy.

According to the author's view, the main feature of Kissinger's "philosophy of foreign relations" is the theory of "balance" and its source is found in the idea of "balance of power" espoused by the 19th century Austrian foreign affairs official Metternich. As advisor to a political group, few of who were of any particular intellectual abilities, Kissinger was relatively capable of ascertaining that in the early 1970s the shape of the world and America's place in it were undergoing great changes. The changes were that from the "two poles" of Russia and America in the 1950s there developed the "five centers of power" America, Russia, Japan, Western Europe and China. The scope of effective American power was greatly reduced and she could not depend on her "superior" force to impose on others. The author believes that Kissinger advocated "temporarily reducing their positions, forming some relationships, taking advantage of certain contradictions, creating a favorable state of "balance" and concentrating the major forces to confront the major enemy" in order to gain and preserve their own status of hegemony. The author moreover reveals to us the application and expression of the foreign policy of "balance" in the policies and strategies advocated by Kissinger while he was in office. This point alone gives us the key to understanding American foreign policy ever since that period. For example, the Nixon administration used Kissinger's theories of "balance"and "many power centers" to further the "Nixon doctrine" of "force," "discussions" and "forming relationships." From this point America then adopted the policy of "detente" toward the Soviet Union and planned to use a ring of alliances to "put a halter on the Soviet Union" and reduce the danger of war between America and Russia. After Carter took power in 1977 he continued the Nixon and Ford policies toward the Soviet Union, even though there were differences in manner, method and emphasis. In the 1980 elections, Kissinger, as Reagan's advisor on foreign policy, continued to push for a policy of "balance." In his view, in recent years the "balance" between America and the Soviet Union had been destroyed and America had to strengthen military expenditures, strengthen national defense and "restore the balance of power." It appears that if America's economic and military strength continue to decline the American ruling group can only continue to follow the principle of "balance" in its strategic planning in the hope of protecting its domestic and foreign interests.

Of course, both the policy of "balance" and the policy of "detente" were hopes fashioned in accordance with American politics. The author believes that in terms of present world realities there can be no "balance" between America and Russia. World conditions today are basically different from those of Metternich's times and any policy which seeks to expand political power through the sacrifice of the interests of countries of whatever size is bound to fail. During the Nixon administration, for a variety of reasons, American-Soviet relations were placed in a premier position, which was unsatisfactory to the west European and Japanese allies and in reality no "balance" ever developed. During the Ford administration more and more Americans saw that the United States had been losing out to the Soviet Union for several years and criticized "detente" as a one-way street in favor of the Russians. This period of history ought to be a mirror for the present-day fashioners of American foreign policy.

This biography gives a lively description of Kissinger's style and personality. Kissinger lived in a time of great international upheaval, and both his origins and experiences and America's conditions at that time determined the depth and complexity of his personality. The author had deeply entered into the inside of Kissinger's mind and shown how his style and personality differ from that of other American foreign relations experts. For example, Kissinger's mind is full of strategems, the result of his many years of hard study. Kissinger enjoyed studying history so he had a broader perspective than other people on world affairs and moreover used this to consider America's strategic problems. He was unwilling to change his own views and opinions to suit the ideas of those in power. While in office he undertook reforms of the National Security Council and the State Department in order to concentrate power and promote efficiency in response to the needs of an ever more tense and complex international situation. Kissinger's creative spirit gave a new look to the structure of America's foreign policy, which had followed a conservative road for such a long time. At the same time, the author points out, Kissinger was both conceited and highly ambitious. He carried on single-handed, highly secret foreign relations, placing trust in no one and was over-confident of his capability to handle the situations around him. The author believes that this resulted from the intellectual influences of Spengler and Nietzsche and the rest on young Kissinger and that he then wished to become a "history-maker." The author makes an organic connection between Kissinger's early experiences and bureaucratic connections and the development of his thought and personality to clearly show the reader that even if Kissinger possessed superior intellect and strategies he nonetheless was unable to change the overall direction of historical developments. International conditions undergo great upheavals and the worsening conditions of America's real position cannot be altered by human will nor can such problems be solved by the strategems of any person.

One fault of the book is that when the author describes certain changes in Kissinger's post-government service thinking on major international questions he does not describe the causes for these changes. According to an analysis of much foreign material, in the past the Rockefeller financial group was in favor of "detente" and "cooperation" with the Soviet Union," but in recent years this attitude has undergone obvious changes. This is because of Soviet expansion southward, gradually encroaching upon and threatening the foreign interests of this financial group, especially in the Mideast and northern Africa oil regions. Therefore, the views on this financial group toward Russia also hardened. These developments are surely not unrelated to the changes in Kissinger's attitude toward the Soviet Union.

In summation, the author strives to use Marxist historical materialism and dialectical materialism to describe his research on a major foreign political figure, and this is worthy of our perusal.

IMPORTANCE OF NATIONAL SELF-RESPECT EMPHASIZED

Chengdu SICHUAN RIBAO in Chinese 25 Jun 81 p 2

[Article by Qi Ping [7871 1627] and Xie Hung'en [6200 3163 1869]: "Strengthen National Self-Respect; Construct the Four Modernizations"]

[Text] Our Chinese nation is one of the great nations among the world's ancient civilizations. In the course of its development, it has encountered many difficulties and complications and undergone countless domestic troubles and foreign invasions. Particularly for a hundred years or so in modern times. China was reduced to a semifeudal, semicolonial society because of the aggression of imperialism and the betrayal and surrender by the feudal ruling class and the bureaucratic capitalist class. The Chinese people were subjected to the oppression and exploitation of imperialism, feudalism, and bureaucratism. In order to save the motherland and promote the nation, our people carried out a prolonged and valiant struggle against domestic and foreign enemies. Countless moving heroic figures emerged, demonstrating the heroic spirit.

In the prolonged period of arduous struggle the Chinese people diligently learned everything that was advanced, and through untold hardships they sought the truth to try to save their country and people. They used every weapon and tried every plan, but nothing worked and all failed. Why? What could save China? The advanced people in China continued the search. The gunfire of the October Revolution brought Marxism-Leninism to China. The vanguard of the Chinese working class armed with Marxism-Leninism--the Chinese Communist Party--was born. In the course of leading the people of all nationalities throughout the country in their revolutionary struggle, it combined the general truth of Marxism-Leninism with the concrete practice of the Chinese revolution, giving rise to Mao Zedong Thought. Under the guidance of Marxism-Leninism and Mao Zedong Thought, and through a prolonged and arduously bloody struggle, the Chinese people finally toppled the three big mountains that weighed on their heads and established the first state ruled by the people in the history of our country--the People's Republic of China.

The establishment of new China was the most important turn in the history of our country. It freed itself from the tragic semifeudal, semicolonial condition in which everything was at the mercy of others! Once again the Chinese nation lifted its head and stood up straight, feeling proud and elated! At the same time, because of the establishment of state power and the socialist system of the people's democratic dictatorship, and because the whole people learned, worked, labored, and fought with the patriotic zeal and national pride, our country developed speedily and made progress such as had never been seen in old China. History has proved that only Marxism-Leninism and socialism can save China. Armed with Marxism-Leninism and Mao Zedong Thought, the Chinese Communist Party is the mainstay and nucleus of the Chinese people. Without the Chinese Communist Party there will be no new, socialist China or revival of the Chinese nation. This is the verdict of history.

Of course, the task is extremely formidable and difficulties cannot help but be numerous when building socialism in a country such as ours, which has a large population and a poor foundation to start with. At the same time, because there were faults in our work for many years, particularly the destruction on the part of the counterrevolutionary clique of Lin Biao and the "gang of four," our national economy suffered serious setbacks. That is why, up to now, our country is still relatively poor and the living standards of the people are still relatively low.

Confronted with these circumstances, what kind of attitude should we adopt? All patriots who have national self-respect should be guided by the party and make their greatest effort to change the backward appearance with their own hands. Many comrades are doing just that. With the attitude of being the masters, they go all out to make the country strong, work hard, fight tenaciously, and build an enterprise through arduous effort. Quite a few among them have become shock workers of the new long march, 8 March Red Flag standard-bearers, and advanced exemplary figures in all trades and professions who are good models for the whole people to learn from. However, there is also the type of people who have a sense of national inferiority. Seeing that our economic capacity cannot catch up with that of certain capitalist countries in the West for the moment, they believe that nothing in their own country and nation works, while everything in capitalist countries is good. They blindly worship the West and hold a low opinion of their own country and nation. Some even lose their personal and national character, the minimum mentality of patriotism and national self-respect. Yet it is necessary to have national self-respect in any nation that desires to survive and grow. We Chinese people have always disdained subservience and lack of national integrity. For this reason, although our country is still relatively poor, we will never lose our noble character, morals, and sentiments. All of us should devote ourselves to the motherland and to the practical actions of the four modernizations, and should strive to turn the motherland from poverty into wealth. A scientist who returned to the motherland has put it well: "Although the motherland is poor, she nevertheless is my mother." This fully expresses the utter innocence of the ardent love that a Chinese has for the motherland. If a Chinese uses poverty as the reason for disdaining his motherland and nation, how can he deserve to be called a descendant of Huangdi or a son or daughter of new China? Man needs to have spirit. An ardent love for one's own motherland is the minimum spirit a person should have.

Comrade Mao Zedong once said: "We must make all young people understand that our country is still very poor, and that it is not possible to basically alter this state of affairs within a short period of time. It all depends on the youths and all the people for several decades to unite and struggle and create a strong and and wealthy country with their own hands. The establishment of the socialist system has opened the path to the ideal realm for us, and its realization still depends on our hard work. Some youths think that everything should be fine when a socialist society is attained, and that they can enjoy a readymade happy life without doing anything. This is a very unrealistic way of thinking." (Selected Works of Mao Zedong, Vol 5, p 386) As we reread this passage today, we feel that it contains practical significance which is particularly important. It is true that beautiful flowers are watered with sweat and that a happy life is created by labor. All young people with a will and all people who ardently love their motherland should rouse their national spirit and increase their national self-respect. They should work hard for the prosperity of the socialist motherland and labor with their own hands to create a glorious future. Any self-degradation, pessimism, or lack of confidence in the future of the motherland is entirely groundless.

Naturally, emphasis on national self-respect is not advocacy of parochial arrogance, national peculiarities, or narrow nationalism. Each country and nation in the world has its own strongpoints. We must learn the strongpoints of all countries and nations--particularly their advanced science and technology. There should be no doubt about this. However, in learning any experience of other countries, we must combine it with our own national circumstances and learn it analytically and selectively, but never copy it blindly. We must continue to develop friendly relations with the people of all countries of the world and never again close the door. However, we must never underestimate our own capabilities or feel inferior or inadequate in international relations. It must be noted in particular that following the open-door policy of our country, international relations have expanded daily, and this unavoidably brings in influences of an unhealthy mentality. Under these circumstances, some young people who lack both experience in life and the ability to make distinctions and to resist are often easily misled by the "dazzling human world with its myriad temptations," reducing and even losing their national self-respect. This is a problem that must arouse our attention.

Our youths today are the shock workers of the four modernizations, the successors of the socialist undertaking, and the future and hope of the Chinese nation. To shoulder this arduous historical task, they must try hard to learn from the high qualities and patriotic spirit of the older generation of proletarian revolutionaries who ardently love the state and party, devote themselves to national liberation and communism, and treat the responsibility of the world as their own. They must strengthen their national self-respect, be self-conscious vanguards for the building of socialist material and spiritual culture, and contribute to the construction of the four modernizations for the motherland.

MODEL BEHAVIOR BY COMMUNIST PARTY MEMBERS URGED

Guangzhou GUANGZHOU RIBAO in Chinese 27 Jun 81 p 1

[Article by Liang Lingguang [2733 7227 0342]: "Communist Party Members in Guangdong Urged To Set Examples for Four Modernizations"]

[Text] As we now commemorate the sixtieth anniversary of the founding of the Chinese Communist Party we look back over the party's magnificent process of glorious struggle and look to the grand future of building the four modernizations we are filled with boundless pride and confidence. We feel even greater love for the party and cherish even more the memories of Comrade Mao Zedong, the other members of the older generation of revolutionaries and the countless revolutionary martyrs.

The party is a great Marxist political party and is the central force which leads in revolutionary matters. Marxism-Leninism-Mao Zedong Thought is the guiding ideology which leads our victorious march ahead. "Only socialism is capable of saving China." Without the communist party there would be no New China and without the communist party there would be no modernized, socialist China. This is an historical imperative.

Guangdong and Canton are important bases in the party's revolutionary life. Such important events as the Great Port Strike, the Hailufeng [3189 7120 6265] Peasant Uprising, the Canton Uprising and the Third Party Congress all took place here. Many of our party leaders such as Mao Zedong, Liu Shaoqi, Zhou Enlai, Zhu De, Li Dazhao, Chen Duxiu and Peng Pai all carried on revolutionary work here. During the years of revolutionary struggle, from the Wuling mountain peaks to the Wuzhi foothills, from the Chaoshan plains to the Nanlu mountains, the broad communist party membership and the broad revolutionary people followed party leadership in bravely upholding the armed struggle and the underground struggle to create laudable heroic achievements. The history of the Guangdong local party forms a page in the glorious history of the party. This all establishes a shining example for us, forms a strong basis for work in Guangdong and Canton and encourages us to grasp the four basic principles in order to complete our new historical mission.

We have now entered a new historical period and are facing a glorious but difficult historical task. The Third Plenum of the Eleventh Party Congress clearly indicated that the entire party's work focus should shift to construction of the four modernizations. This is a great historical turning point. Last year the Party Central Committee decided that Guangdong and Fujian would carry out special policies and lively actions and have experimental economic zones in order to find new paths of development for the nation's economic system. The party organizations and broad party membership of Guangdong and Canton must carry on and must give vent to the party's glorious traditions, make progress in strengthening and improving party leadership, give full vent to developing the use of progressive party workers as models during the four modernizations and complete this task which history has bestowed upon us.

Many matters must be attended to in giving play to the use of model party members, so which aspects should we now emphasize?

The first is to liberate our thinking and be realistic.

To liberate our thinking and be realistic is our party's ideological line of dialectical materialism and is the core of the Third Plenum's line. Marxism is a product of ideological liberation. In the "Communist Manifesto" Marx and Engels said, "A socialist revolution carries out the most abrupt break from the traditional system of ownership relations. It is not at all strange that in its own process of development it made a sharp break from traditional concepts." We are now implementing the four modernizations, carrying out special policies, lively actions and experimental districts. These will encounter many new contradictions and new problems, but in order to smash the bonds of many years of an irrational economic system we must have even greater ideological liberation, braver practice and we must dare to be more creative. Ideological liberation and being realistic are consistent, The Third Plenum did not suggest the slogan of ideological liberation alone but linked it with being realistic and with the theory that practice is the only true standard of measurement for truth. This is clearly distinct from the "left" ideology, "do not fear the inability to accomplish something, only fear not thinking of it." Ideological liberation is the foundation for grasping the four basic principles. This also demarcated a clear distinction from those chaotic, bourgeois freedoms which depart from party leadership, Mao Zedong Thought and the socialist road. To be a socialist, one must clearly recognize one's own old thinking and narrow concepts, including various "left" and right influences, so that one's own thinking can continually respond with new forms and keep up with the march of time. On the other hand, we must also follow the compass needle of the four basic principles to clear away ideological obstacles and become promoters of socialist modernization. In regard to economic adjustments and reforms, we must have a great sense of responsibility and urgency, hold to an unswerving course, dare to experiment, be positive in our actions and hold a steady pace. In this way we can forge a new path of economic development.

The second is to strengthen theoretical studies and emphasize investigation and research.

All correct policies of the proletarian party cannot be separated from the guiding principles of Marxism. Only if the theories are correct can the actions be correct. The Third Plenum line is the product of the true principles of Marxism combined with our concrete experiences in socialist revolution and socialist construction. Unless one comprehends Marxism one cannot even think of truly understanding and thoroughly implementing it.

The four modernizations and the special zones are new matters and many new conditions and new questions require a theoretical approach for solutions plus explaning and promoting them. During the ten years of chaos many basic principles of Marxism were criticized as revisionist, for example, criticizing the socialist principle of to each according to his labor as "material incentives," criticizing the necesaary importing of foreign advanced technology as "a slavish compradore mentality," and so on. If such things are not thoroughly removed from the principles there will be no unification of ideology and we will not be able to correctly and bravely carry out the four modernizations and operate the special zones. Of course, there must be a close connection between theory and practice, and this requires great effort in conducting research. Research involves a process, a process of long and difficult effort, and requires a stubborn revolutionary ardor. Party leadership cadres on all levels ought to strive to attain this, to achieve a close unity of the party line, direction and policy with the concrete practices in their districts, departments and units and use thoroughgoing plans and concrete methods which are in accord with reality. We must oppose the tendency toward bookishness, incorporation of undigested facts, mere copying and transmitting of information and imitation of others, and must oppose the spirit of not reading books or newspapers and merely working hard at studying upper level directives, and acting according to one's own limited personal experiences and making subjective decisions. All communist party members, especially leadership party members must strive to train themselves to become a proletarian vanguard with a certain level of cultivation in Marxist theory, be able to deeply understand the spirit of the line and policy of the Party Central Committee, be skilled at establishing links with reality, be proficient in his profession and consciously struggle to implement the party line.

The third is to engage in bitter struggle and be self-reliant.

Bitter struggle and self-reliance are in the grand traditions of our party and are a class quality of communist party members. We are now carrying out the four modernizations and must build the country into a powerful socialist nation with a high level of material and spiritual civilization. China has a huge population and a thin base, a low level of production forces and a population of one billion people, 800 million of whom are peasants. The destruction caused by Lin Biao and the "gang of four" wrought havoc with the national economy. Because of this, implementation of the four modernizations is an extremely difficult task. This requires even more that we give vent to the spirit of bitter struggle and self-reliance and regain the energies and hell-bent spirit we had during the revolutionary wars. All communist party members work for the four modernizations by becoming men of action, saying less, performing more real work, performing honestly at one's sentry post and bending one's back to the task. The mental attitude of listlessness and neglect of the four modernizations or even that of doubting it are contrary to strong revolutionary spirit of struggle found in communist party members and are extremely harmful to the four modernizations.

Building the four modernizations definitely requires foreign aid, but we must firmly hold to self-reliance as our major goal. As to the method of managing the importation of foreign advanced technology, equipment and science, we must unify with our actual conditions and absorb and digest them to make them our own. We must have a strict accounting for each cent of capital used for construction, be extremely careful with all public funds and property and grimly fight against extravagance and waste.

The proletarian spirit of bitter struggle is the great weapon which we used to overcome corrupt bourgeois ideology. Guangdong is a forward position in the struggle against the international bourgeoisie. We definitely cannot ignore bourgeois political and ideological infiltration and bourgeous illegal economic activities; nor can we ignore the perfume-hidden stench of the capitalist world. We must maintain alert minds and a high state of alertness to guard against corruption and avoid being polluted. Only in this way can communist party members maintain a vigorous revolutionary fighting spirit and remain forever inpregnable.

The fourth is to serve the people and be responsible for them.

This is the goal of our party and the task of communist party members. Comrade Mao Zedong has said, "No matter when or where, communist party members should not put their own interests first but should always subjugate individual interests to the interests of the nation and the masses." He also pointed out that party cadres of both high and low position are the servants of the people and must give their all in this service. Our party is the ruling party, and in these times of striving to build a high level of material and spiritual civilization, or efforts to make progress in emphasizing these questions has real significance. Communist party members must always be thinking of the personal well-being of the masses, must work for the good of the masses and provide them with perceptable material benefits. They should be public-minded, honest in their public performance, not seek after fame and eschew personal gain. They ought to lead the way in bitter toil, be last to enjoy the gains, and give their best till their dying day. In carrying out the special policies and lively actions and in operating the special zones we must make them truly special, lively and progressive;

nonetheless, as communist party members they must strictly adhere to the "Guiding Principles" and absolutely must not permit any special privileges. Such things as using public office for private gain, corruption and graft, speculation and opportunism and giving and taking bribes are prohibited by both party discipline and national law. Such manners as being above everyone else, separation from reality and the masses, imitation, ineffectiveness, shirking of duty, mutual wrangling and unresponsive bureaucratism are incompatible with the glorious designation of a communist party member. A party member is an element in the party organization and a party member's good or bad behavior directly influences the trust the masses place in the communist party and mass-party relations. Because of this, all party members must strictly observe party membership standards, have model behavior at all times and in all places and be a model leader. Only in this way can we unite with and lead the masses and share in the struggle to implement the four modernizations.

Guangdong is the southern gate to the nation and exerts a great influence both nationally and abroad and each communist party member in each sentry post is faced with different questions in performing in the correct party style and in serving the people even better. We must work hard at the Lei Feng spirit, promoting the communist style, implanting an excellent social manner, exerting utmost responsibility in performing work, having extreme warmheartedness for the masses and strive to build a high level of socialist spiritual civilization.

To strengthen party organization building and to strengthen the nurturing and education of party members is the guarantee for completely giving vent to the function of party members as models of the vanguard. To have a sound party organization, strengthen party unity, enforce party discipline, strengthen democratic centralism and positively open up criticism and self-criticism will make each party organization into a powerful fortress for struggle. There must be close relationships with the masses and a conscious acceptance of mass criticism of party members and party organization at any time and at any place. When we are now commemorating the birth of the party all party members should strive to become models in implementing party line, direction and policy, models in obeying laws and upholding unity, models of limitless honor and selfless effort in revolutionary matters, models of hard study, both red and expert and skilled in one's profession and make even greater contributions in carrying out the great endeavors of socialist construction of modernization.

FOUR PRINCIPLES REFLECT SOCIALIST SPIRITUAL CIVILIZATION

Hangzhou ZHEJIANG RIBAO in Chinese 17 Jan 81 p 3

[Article by Chu Xu [2806 2485]: "The Four Principles Are the Concentrated Reflection of Socialist Spiritual Civilization"]

[Text] The socialist state we wish to build must have not only an advanced material civilization but also an advanced spiritual civilization. This is an important historical mission conferred upon our people by our time. In order to fulfill this mission, the most fundamental point is unshakably to adhere to the four basic principles.

Why do we say this? Because the contents of socialist spiritual civilization are very broad. They include educational development, scientific prosperity, and literary and artistic exuberance and similar substantive aspects on the one hand, while on the other hand they include morals, traditions and customs and other such ideological aspects. In the final analysis, the intent is to infuse various ideological fronts with an ideology guided by Marxism so as to foster and train the new people of the socialist era. The four principles are important contents of socialist spiritual civilization and also are fundamental guarantees for the building of socialist spiritual civilization. Apart from the four basic principles, there is no way to reflect the characteristics and essence of socialist spiritual civilization, and the building of such spiritual civilization would lose its direction.

We are a socialist country; we have eliminated systems of exploitation, and what we are implementing is public ownership of the means of production. This serves to determine that the norms of collectivist conduct are the core of socialist morality. In a slave society, a feudal society, and a capitalist society, the moral norms are individualism and egoism. In a socialist society, people labor together, enjoy together, and endeavor to ensure that the material conditions and culture of the entire society will continue to be enriched and improved through common efforts in order to forge common ideals, common beliefs, common morals, and common discipline. Whoever struggles for such a public cause must abandon individualism and place collectivism at the core of all their moral qualities. Such persons adhere to the principle that the party's and people's interests are superior to everything else, and they therefore subordinate individual interests to the interests of the party and the people; apart from attempting to secure the interests of the broadest masses of the people, they have no particular interests of their own. Hence, only by adhering to the socialist path can we create an advanced socialist spiritual civilization.

The party must lead the building of socialist material civilization; it must also lead the building of socialist spiritual civilization. In order to shoulder these two heavy construction tasks, the party must not only undertake a series of organizational tasks but also carry out penetrating and careful work on ideological education, and in particular it must give play to the vanguard and model role of communists. The large contingent of heroic model personalities who have surged forth in the midst of the revolution and construction, the spirit of strictly abiding by discipline and readily undertaking self-sacrifice, the spirit of selflessness and yielding to others, the spirit of overcoming all enemies and overcoming all difficulties, and the spirit of adhering to revolutionary optimism and of eradicating all difficulties in order to win victory--these are all results of our party's training and education. Historical and realistic experience tells us that when the party's leadership and the party's fine traditions are subject to sabotage, public morality in society and the people's spiritual outlook will suffer devastation and old ideologies will spread. Hence, in building our socialist spiritual civilization, we must strengthen the party's leadership and try to influence and transform the people's customs with the party's fine traditions and workstyle.

People's democratic dictatorship includes dictatorship over the enemy and democracy for the people. In order to achieve both of these aspects, we must be as Lei Feng described: cruel as the autumn wind sweeping away the fallen leaves with respect to our enemies; and warm as the spring with respect to the people. Such a standpoint and such a viewpoint, which clearly differentiates love from hatred, is itself one of the principal contents of socialist spiritual civilization. This is one point. On the other hand, only by cracking down on various criminal elements can we do a good job of building a socialist spiritual civilization. This is because every criminal activity constitutes social havoc and a reaction to spiritual civilization. Without struggling against such scourges, without eliminating the destructive factors relating to spiritual civilization, we cannot even maintain general social order or observe common social ethics, let alone build a socialist spiritual civilization.

Marxism-Leninism and Mao Zedong Thought are themselves spiritual things. On the basis of inheriting the results of human civilization, they have summed up the historical experience of proletarian revolution and profoundly revealed the developmental laws of the natural world, human society, and mental activities. They are of great guiding significance to us in perceiving and changing the world. Engels said: "A nation which hopes to stand at the peak of science cannot do without theoretical contemplation, even for a single moment." Similarly, we cannot do without Marxism-Leninism. Practice has fully proved that the growth of many communist personalities is nurtured by Marxism-Leninism and Mao Zedong Thought. In our society, the more Marxism-Leninism and Mao Zedong Thought are popularized, and the more the people learn to apply Marxist standpoints, viewpoints, and methods, the greater progress socialist spiritual civilization will achieve.

Every era has a spirit of the time that corresponds to it. Socialist spiritual civilization is a new stage in the development of human spiritual civilization; it embodies the superiority of the socialist system and the advanced nature of the communist ideal. It has incomparable value compared to the spiritual civilization of any other period in the past. Today, when we consider whether a person has a socialist spirit, one important criterion is to see whether he upholds and adheres to the four basic principles. The reason is very simple: apart from the four basic principles, people are unable to have common ideals, beliefs, and morals, and without common rules and norms of conduct we simply cannot talk about correctly handling the relationship between what is public and what is private, between hardship and enjoyment, between life and death, between glory and shame, and between beauty and ugliness. Are we not launching a "five-emphasis" and "four-beautiful" civility and courtesy movement--a movement with emphasis on order, and with emphasis on morality, and with beautiful soul, beautiful language, beautiful conduct, and beautiful environment as its contents--on a broad scale today? Only by adhering to the four basic principles can such "five-emphasis" and "four-beautiful" activity have a correct orientation and a lofty soul. In our country, if a person did not ardently love the party, love socialism, love people's democratic dictatorship, and love Marxism-Leninism and Mao Zedong Thought, it would be sheer irrelevance to [try to] have him succeed in carrying out the "five-emphasis" and "four-beautiful."

As a colloquial saying puts it: "Without a compass and a carpenter's square, one cannot draw a square and a circle." Adherence to the four basic principles constitutes today's compass and carpenter's square. Whoever adheres to the four basic principles and applies them in his personal conduct is a person of morality, a person of noble character, and a person beneficial to the people. Two thousand years ago, Confucius put forward this kind of proposition; it was then called: "Don't look except according to the rules of propriety, don't listen except according to the rules of propriety, don't speak except according to the rules of propriety, and don't make a move except according to the rules of propriety." Because of the fact that the Confucianists have their own interpretations of "propriety," we cannot simply copy them today. But if we now impart new meanings to this term "propriety" and take it as the four basic principles and socialist moral norms, then these few sentences are just as applicable today. Each one of us should regard words and deeds that are in violation of the four basic principles and words and deeds that are in violation of socialist moral norms as not being "according to the rules of propriety." Thus we should not only refrain from "looking, listening, speaking, and making a move" in such cases, but we should also put up solemn struggles against them. Once such powerful social public opinion takes shape, the whole society will recreate a vigorous new trend to inspire a forward march in unity. Then our Chinese nation will surely have an advanced socialist spiritual civilization on which to stand independent among the world's nations. Our efforts to rebuild the state by means of the four modernizations will also be full of hope.

'HIGHLY DEVELOPED SOCIALIST DEMOCRACY' DEFINED

Beijing RENMIN RIBAO in Chinese 21 Jul 81 p 4

[Article by Su Shaozhi [5685 4801 2535]: "Important Evolution of Marxism"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," passed by the Sixth Plenum of the 11th CCP Central Committee, sums up scientifically and realistically the basic experiences of the party during the past 32 years since the establishment of the PRC. It is a conscientious study of the new conditions and new problems faced by our country in its practical experiences and is an evolutionary development of Marxism-Leninism-Mao Zedong Thought under the new historical conditions of today. To undertake a penetrating study and gain an earnest understanding of the spiritual essence of the "Resolution," and to raise our country's study of Marxism to new heights--this is the glorious task that all of us workers in the social sciences have to fulfil.

The "Resolution" enriches and develops Marxism in many aspects, and one of these aspects is the theory of a highly developed socialist democracy.

The "Resolution" points out that it is one of the basic tasks of the socialist revolution to gradually establish a highly democratic socialist political system, and that it is an objective of our party's struggle in the new historical era to gradually build up a strong modern socialist country with a high degree of democracy and culture. The demand for and emphasis on a high degree of democracy under the prerequisite of socialism was a pioneering proposition of Marxism. I shall briefly call it "the theory of highly developed socialist democracy."

This theory is put forward as a summing up of our party's historical experiences, both positive and negative. The "Resolution" points out: "Inadequate attention was paid to this task (Note: A reference to the establishment of a highly democratic political system) after the founding of the PRC. This was one of the major factors for the occurrence of the "Cultural Revolution," and it is a grievous lesson for us." In his "Speech at the Meeting Celebrating the 60th Anniversary of the CCP," Comrade Hu Yaobang said: "One of the fundamental reasons why the grievous errors of the 'Cultural Revolution' remained unrectified for so long is that the regular political life of our party--inner-party democratic centralism and the collective leadership of the Central Committee in particular--had been disrupted." He also added as his sincere statement and earnest wish: "All our comrades must forever remember this grievous lesson of history and take it as a warning."

This accords exactly with the facts. If there had been democracy within the party and in the political life of the state, such phenomena as mentioned in the "Resolution" could not have happened: the correct line of the Eighth National Party Congress was rejected soon after convocation; the CCP Central Committee failed to correct some of Comrade Mao Zedong's mistakes in time; during the "Cultural Revolution" the mistaken "leftist" course taken by Comrade Mao Zedong as an individual replaced the collective leadership of the CCP Central Committee.... The "tragedy" of Comrade Mao Zedong and the certain measure of responsibility on the part of the CCP Central Committee for the mistakes committed by Comrade Mao Zedong were all due to a lack of democracy within the party and in the political life of the state.

The proposition of the theory of a highly developed democracy also starts with the actual conditions of China. The "Resolution" points out: "China is a country with a long history of feudalism.... It remains difficult to eliminate the evil ideological and political influence of centuries of feudal autocracy. For various historical reasons, we failed to institutionalize and legalize inner-party democracy and democracy in the political and social life of the country, or we drew up the relevant laws but they lacked due authority. This provided the conditions for the overconcentration of party power in individuals and for the development of arbitrary individual rule and the cult of personality within the party. It was therefore difficult for the party and state to prevent the initiation of the 'Cultural Revolution' or to check its development." The theory of a highly developed democracy is the exact medicine that will remedy this malady.

The foundation for the theory of a highly developed democracy is the fundamental principle of historical materialism--the Marxist-Leninist principle that the masses are the makers of history. This principle tells us that the people are the creators of history. The people's revolution and the construction of socialism are undertakings by the people themselves. Whatever we do, we must rely on the people, trust the people, and accept the supervision of the people. With their victory in the revolution, the people have become the masters of the state and of society. The theory of a highly developed democracy is precisely the result of the evolution of this principle.

In many places the "Resolution" has expounded the theory of a highly developed socialist democracy. This may perhaps be summarized as follows:

A highly developed democracy means inner-party democracy and people's democracy as well as their interrelations. It stands to reason that if democracy fails to be the principle for inner-party life, then it cannot become the principle for our social life as a whole. And, vice versa, if there is no democracy among the people, democracy cannot come about within the party.

A highly developed democracy means democracy in political life, social life, and economic life. It ensures that the people are the real masters of the state, society and the enterprises, and that they take a direct part in making decisions in all fields.

A highly developed democracy means the institutionalization and legalization of democracy and the adoption of a series of policies and measures to ensure its realization.

A highly developed democracy means democracy for the great majority of the people; it is essentially different from bourgeois democracy, which only a minority enjoys. Highly developed democracy is a state of continuous evolution until communism is established and the powers of the state and its structure as well as the party itself wither away and it is turned into what Marx calls the "community of free men." Of course, this process will be one of gradual development. During the historical stage in which class struggle still exists, a highly developed democracy also means dictatorship over a small number of class enemies, for this guarantees that the majority of people enjoy a highly developed democracy.

The theory of a highly developed democracy stresses a high degree of centralism on the basis of highly developed democracy. This formulation truly expresses the special feature of the system of democratic centralism; it differentiates it from bureaucratic centralism and on the other hand also from anarchism.

The theory of highly developed democracy also deals with the relationship between party leadership and democracy. Comrade Hu Yaobang made a brilliant exposition in his speech: "To organize and support the people in fulfilling the role as masters of the country and society and in building a new life under socialism is the very essence of the party's leadership over the affairs of state." This calls for combining party leadership with the requirements of people's democracy so that the party is truly at one with the people and is a true representative of the people's interests.

The theory of a highly developed democracy will provide the key for the study and correct solution of the question of the relationship between the leaders and the party--a question which has not yet been correctly solved throughout the history of the international communist movement. It also serves as a key to the study and correct solution of a question in the theory of historical materialism: namely, the relationship between the masses, classes, political parties, and leaders.

There is not the slightest doubt that the theory of a highly developed socialist democracy is an evolutionary development of Marxism, and that in actual practice it will have a deep and far-reaching influence on the future development of our party and state--and even on the international communist movement.

IMPORTANCE OF SIXTH PLENUM RESOLUTION FOR SOCIAL SCIENCES

Beijing RENMIN RIBAO in Chinese 19 Jul 81 p 4

[Article by Yu Guangyuan [0060 0342 6678]: "Continue Exploration of the Law of Development of Socialist Society"]

[Text] In 1945, the resolution on the question of party history passed by the Seventh Plenum of the Sixth CCP Central Committee established at that time a uniform concept within the party, strengthened the unity of the whole party, and promoted the victory of the people's revolution. The resolution that has now been passed by the Sixth Plenum of the 11th CCP Central Committee will surely play an equally important role in history. This concept, held by all the delegates at the Sixth Plenum, is precisely the concept of the broad masses of our country's workers in the field of social sciences, who will certainly respond to the call of the plenum and, guided by Marxism-Leninism-Mao Zedong Thought, will make their own particular contributions in every sector of the social sciences toward the socialist construction of our country.

In analyzing the social and historical reasons for the occurrence and the 10-year duration of the "Cultural Revolution," this "Resolution" points out: "The history of the socialist movement is not a long one; the history of socialist countries is even shorter still. Some laws governing the development of socialist society have already become clear, but many more await further exploration." The serious setbacks and losses suffered during the "Great Cultural Revolution" have taught us a grievous lesson and deepened our knowledge of the laws governing the development of socialism, enabling us to avoid again committing such serious mistakes as the "Great Cultural Revolution." However, we must admit that there is still room for further exploration with regard to the developmental laws of socialism. To pursue such exploration is one of the glorious and arduous tasks of our country's workers in the field of the social sciences.

Scientific socialism is a doctrine first established by Marx and Engels. After this doctrine was grasped by progressive elements among the intellectuals and later by progressive elements among the workers, it developed in a number of countries into the socialist movement. After lengthy development of the socialist movement, and under favorable historical conditions, some countries achieved victory in their socialist revolution and realized socialism in their social system. This was followed by starting up the construction of a socialist economy and culture and the development of socialist material and spiritual culture.

Doctrine, movement, institutionalization, and culture--this is the general course taken by scientific socialism. However, even in countries where the socialist system has already been instituted and socialist culture is taking shape, the socialist movement is still in a stage of development; it is only that the character of the movement and its tasks are different from those prior to the adoption of the socialist system. The basic system of socialism is stable, but a country's system of economic organization is not immutable and frozen for all time. As reflections of the development of the socialist system and socialist culture, the doctrine of scientific socialism and scientific socialism as a field of science must quite naturally also undergo further development and progress.

Before victory in its revolution, our country was either a capitalist or a semifeudal, semicolonial society, and it was then that the Chinese Communist Party was born, guided by the doctrine of scientific socialism. Following this event, a revolutionary movement arose in China which was led by the CCP and which had anti-imperialism and antifeudalism as its social content. Under the specific historical conditions of the time, and due to the correct leadership of the CCP as well as to the arduous struggle of the Chinese masses, the revolutionary movement developed swiftly and violently. In the course of an arduous and tortuous 28 years, the victory of the people's revolution was finally won. In the 7 years of struggle that followed the successful conclusion of the revolution, from 1949 to 1956, the socialist transformation of the system of private ownership of the means of production and the change from new people's democracy to socialism, all under the leadership of the party, were basically completed. From then on, the contradiction in Chinese society was one between the constantly increasing material and cultural needs of the people and the backward state of our production. One way to solve this contradiction is to reform, within a given period of time, the system of socialist organization, to search for and implement a system better suited for the development of productive forces, bringing into full play the superiority of the socialist system for the greatest development of the social productive forces, and on this basis to gradually improve the material and cultural livelihood of the people. In the face of these tasks, it is extremely important and significant to continue to explore the laws that govern the development of socialist society. The "Resolution" calls on us to "make a great effort to strengthen the study of Marxist theory throughout the entire party," and one of the most important aspects of the study of Marxist theory is the study of the developmental laws of socialism. If we can register achievements in this respect, we shall accomplish in the course of our socialist construction an advance in Marxism-Leninism-Mao Zedong Thought.

Exploration of the developmental laws of socialism requires methodologically studying the facts and summing up historical experiences. Although the history of socialism is not a long one, it has been a century and a half since Marx and Engels first set forth the doctrine of scientific socialism, and over 60 years since the first socialist state appeared in the world; thus a fairly abundant amount of facts and material has already accumulated. Even in the 32 years since the foundation of the PRC, several stages of development have been experienced, as the "Resolution" points out, and many aspects of the developmental laws of socialism can be gleaned from our practical experiences. Chinese Marxists who study this question must of course stress the study of our country's historical experiences. The resolution of the Sixth Plenum put forth certain demands regarding such studies and points their direction. We, the workers in the field of the social sciences, are determined to use our specialized knowledge, building on the great quantity of factual and theoretical material accumulated in the 32 years since the foundation of the PRC, to engage in a penetrating and systematic analysis and to launch free and earnest studies and discussions.

At the same time, we must also be aware of the fact that exploration of the developmental laws of socialism is a question that has the concern not only of our country's workers in the field of Marxist theory but also of Marxist theoreticians in other countries. The historical experiences on which exploration of the developmental laws of socialism relies, as we mentioned before, are not limited to those of China. For a truly penetrating comprehension of the objective laws, the emphatic study of our country's historical experiences must be accompanied by the study of foreign history and by the drawing of lessons from useful foreign experiences. On this question we must make a comparative study of various countries. Since smashing the "gang of four," we have abandoned the policy of seclusion that had been in force for quite some time, and have visited many foreign countries. Our Marxist theoreticians have engaged in scholarly exchanges of various natures with scholars of Marxist theory in other countries. This has also been very beneficial for our studies.

After the Sixth Plenum, we, the workers in the field of the social sciences, have become very much aware of our own great responsibilities. Since the demise of the "gang of four," we, the workers in the field of the social sciences, have done a great amount of work with regard to emancipating the mind and turning chaos into order. We also have raised many important questions and launched discussions on them. It is my hope that the present conference will serve as a new starting point for social science studies in this country, and that even greater achievements than those in the past will be accomplished.

SICHUAN GOVERNMENT EMPHASIZES SPIRIT OF SIXTH PLENUM

Chengdu SICHUAN RIBAO in Chinese 4 Jul 81 p 1

[Article by reporter Ai Feng [5337 7364]: "Unify Ideology in the Spirit of the Sixth Plenum: The Central Study Group of the Provincial People's Government Institutes Systematic Study of the Various Resolutions Passed at the Sixth Plenum and of Comrade Hu Yaobang's Speech"]

[Text] Starting 2 July, the central study group organized by the deputy governor, the chief secretary and all leading cadres of the Sichuan provincial government instituted a concentrated study of the various resolutions passed at the Sixth Plenum and of Comrade Hu Yaobang's speech. The various departments and bureaus also began systematic studies with party members taking the initiative.

During the discussions, the members of the central study group of the provincial people's government maintained a spirit of high enthusiasm and took to the floor one after another. All were agreed that the Sixth Plenum, coming on the heels of the Third Plenum, was another meeting of great significance in the history of our party, a meeting that summed up our experiences and signified our march forward in unity. This meeting is bound to have a tremendous effect on the unity of the entire party, the ideology of the entire nation, on inspiring revolutionary enthusiasm, on clarifying the direction of our advance and on the unity in our struggle to build a strong and modern socialist country.

Deputy Governors He Haoju [0149 6787 3515], Liu Haiquan [0491 3189 3123], Meng Dongbo [1322 2639 3134], Guan Xuesi [4619 1331 1835], and Wu Xihai [0702 1585 3189] related their own personal experiences and sentiments regarding the situation when discussing the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC." They were all unanimously of the opinion that this resolution was well written, expressing their innermost thoughts and feelings. It radiates in every respect the glory of Marxism-Leninism-Mao Zedong Thought and fully signifies that our party is a mature and prudent party with a high sense of responsibility toward the people, and therefore a party that can be trusted, a truly great party. In their discussions they expressed the view that the "resolution" fully affirms the achievements of 32 years of construction in our country, realistically evaluates the great merits of Comrade Mao Zedong, systematically and correctly explains the scientific theories of Mao Zedong Thought, points out and analyzes the serious mistakes committed by Comrade Mao Zedong in his later years, and differentiates the correct Mao Zedong Thought from the mistakes committed by Comrade Mao Zedong in his later years. In this way a clear distinction is drawn between merits and mistakes, between right and wrong, thus providing the entire party and the entire people with the basis for a unified ideology and conception.

Deputy Secretary Yue Zhong [1471 1813]; Comrade Han Zhengfu [7281 2973 1133], chairman of the provincial science committee; and Comrade Zhou Hang [0719 5300], deputy chairman of the provincial cultural affairs office, in their speeches said: Now we must not again get ourselves entangled in historical questions, but must establish an ideological unity throughout the entire party, particularly among the leading cadres, in line with the spirit of the Sixth Plenum, and look forward in unity and earnestly take in hand the 10 tasks pointed out in the "resolution," in order to gain the great revolutionary victory in our socialist modernization.

COUNTRY'S SOCIALIST FUTURE VIEWED AS HISTORICALLY INEVITABLE

Beijing XIN SHIQI [NEW ERA] in Chinese No 6, Jun 81 pp 2-5

[Article by Deng Liqun [6772 0500 5028]: "People's Choice, Historical Inevitability"]

[Excerpts] Our People Are Great, Our Party Is Great

When joining the party, all communists are determined and swear to struggle for the communist cause through to the end. The time when they join may be early or may be late, their party age may be long or may be short; passing through setbacks, failures and victories, some have gloriously sacrificed their lives, others continue to struggle. Because they have established this conviction in believing that the communist cause is bound to triumph, even under extraordinarily difficult conditions they can still get through a crisis by dint of resilient and persistent struggle. In 1927, the Chiang Kai-shek clique slaughtered a large number of communists, drowning the best elements of China's various nationalities in a sea of blood. Yet, those comrades who survived buried the bodies of their comrades, wiped off the blood, and continued to forge ahead. During the Long March of 25,000 li, our fighting ranks dwindled from 300,000 to only 30,000, but then the new anti-Japanese national united front began. During the 10-year "Cultural Revolution," our cause suffered great sabotage because of the activities of the counterrevolutionary clique of Lin Biao and the "gang of four." Our comrades by no means lost their confidence in communism as a result. Even when they were suffering the most cruel persecution and attacks, they still believed that difficult days were bound to pass away. In reality, we still won.

The "Cultural Revolution," indeed, hurt us greatly, but we must at the same time see that during the "Cultural Revolution" period we still exhibited a healthy side and there still existed healthy forces. The vast ranks of the masses of the people, the vast ranks of communists, including among them the older generation of proletarian revolutionaries and also including the vast ranks of youths, all engaged in undaunted, persistent, repeated struggles with Lin Biao and the "gang of four" in various periods, by various methods, and to various degrees. Was this not called "the February adverse current" in the past? Actually, it should have been called "the February forward current." After that, they continued once more to carry on the struggles; the end-result of these struggles turned out to be that Lin Biao and the "gang of four" were the ones who failed, and the party and the people were the ones who won.

In Chinese as well as foreign histories, there have been numerous examples of castles being breached from within. The Lin Biao and Jiang Qing cliques sneaked into our party Central Committee and seized part of the important party and state powers of leadership. The haughty positions occupied by these counterrevolutionary double-dealers and the cunning, venomous and sinister nature of their tricks were all unprecedented in our party history. We should admit that, during the period of the "Cultural Revolution," our party and state were in extraordinarily dangerous waters. But we must at the same time see that, despite the wide-ranging ravages of Lin Biao and the "gang of four" for 10 years, they, after all, failed to breach our fortress, failed to overthrow our party, and failed to break up our socialist state. Despite the heavy prices paid by the vast ranks of the party members, vast ranks of the cadres, and the people of various nationalities of the country, they firmly guarded our fortress through the struggle. Many sacrificed and maimed communists were still shouting "Long Live the Chinese Communist Party" at the time when they were subjected to severe punishment and torture. Some could not speak, as in the case of a maimed comrade like Zhang Zhixin [1728 1807 2450], but they still used writing to convey their firm belief. Some did not have time to exercise, or were deprived of, their right to put down their oath in writing and thus died in silence, but they died as glorious communists. Comrade Liu Shaoqi was one such example. They went through such treatment as being locked in cattle sheds, being put on a jet-like torturing device, beating, and all sorts of abuse, and persecution, but to this very day nobody has heard any real communist complaining about the party or leaving the party. None ever asked to withdraw from the party in those days. Some comrades were overthrown but reemerged again to take up their work. Some comrades stuck to their posts and, whenever possible, went on shouldering their heavy burdens in the face of adversity and doing whatever possible, braving whatever necessary, in order to protect the people, protect the party cadres, exert their utmost efforts to carry out various beneficial work for the party and the people under extremely trying conditions.

The "Cultural Revolution" made the management level of enterprises fall considerably. Various rules and regulations were also subject to violation. Concerned units have made some calculations, which indicate that during those 10 years the country suffered some 500 billion yuan of losses in national income. On the other hand, because comrades who stuck to their posts made their efforts and because of the high sense of responsibility shown by the vast ranks of the masses of the people, our cadres, technical personnel, and staff and workers toward their socialist undertakings, fixed assets increased by 150 percent during those 10 years, and the average rate of industrial growth reached 7 percent.

Our party and people have the great power to defeat all enemies from without and from within who attempt to carry out sabotage by various forms. This power does not come from anybody's subjective wishes but has been shaped gradually by the long history of the Chinese revolution. It has a deep, realistic foundation. What needs to be especially mentioned is the long-term education rendered by Mao Zedong Thought to comrades of the whole party and the people of the country's various nationalities. Mao Zedong Thought--this is the powerful spiritual weapon which enabled us to win victory. From the Zunyi Conference to the victory of the war of resistance, our party Central Committee and Comrade Mao Zedong educated a generation of people with Mao Zedong Thought, including that what is known as the "three-eight style" generation. There were also several generations educated after the war of liberation and the liberation itself. These people are mostly taking up leadership duties on the country's various fronts today. During the Yan'an period, the party Central Committee and Comrade Mao Zedong led and organized the whole party in undertaking conscientious study of Marxism-Leninism through the summing up of the historical experience of our revolution. This played a very great role in arming comrades of the whole party. Today, we all talk about "seeking truth from facts"; on the surface, they are but four characters. But these four characters contain the extremely rich experience and lessons from the process of several decades of our party's struggles; in a certain sense, they have been obtained by countless martyrs of the revolution with their own struggles and sacrifices. Such a basic point of Mao Zedong Thought has not been, but is and will be, of decisive significance to the ultimate success of our cause. We must absolutely not negate Mao Zedong Thought in any basic sense or completely deny Comrade Mao Zedong's merits just because he made mistakes in his later years. His merits are primary; his mistakes are secondary. This point must be affirmed clearly. Excessively stressing Comrade Mao Zedong's mistakes and smearing Comrade Mao Zedong's face would be tantamount to smearing the face of our party and the face of our state. For the past half century Comrade Mao Zedong's revolutionary activities have always been closely associated with the history of our party. Comrade Deng Xiaoping also said recently, the "Cultural Revolution" was indeed a serious mistake. But insofar as Comrade Mao Zedong was concerned, this was after all the serious mistake made by a great revolutionary, and we cannot exceed this limit. Exceeding this limit would no longer tally with historical reality. Of course, having been subjected to rectification, one is liable to feel uncomfortable or even resentful. But we must endeavor to become proletarian statesmen and refrain from resorting to emotionalism. We cannot depart from historical materialism.

What Mao Zedong Thought has fostered is not limited to the older generation of people; there has also been one generation after another of young people. There is one situation of which all the comrades I have met would speak with great pleasure and special excitement, and that is that during the period of the "Cultural Revolution," when large contingents of leading cadres at various levels were pushed aside and overthrown and Lin Biao and the "gang of four" held sway and seized power, when the party and the state faced a situation of mortal danger, those who stepped forward to struggle with these two counterrevolutionary cliques included not only the older generation of revolutionaries but also the new, younger generation educated by our party and our state. On the question of struggling with Lin Biao and the "gang of four," they had already taken over the banner of the older generation and stepped up to frontline. Taking a look back, this period of history is of great significance. Marxism-Leninism and Mao Zedong Thought, as well as real life itself, taught our youths and enabled them, through a comparison between the positive and negative aspects of our experience, to enhance their ability to differentiate the enemies from ourselves and distinguish right from wrong, so that the 1976 revolutionary movement to castigate the "gang of four" at Tian'anmen Square ultimately broke out.

The victory of the cause of Chinese revolution and construction was achieved by the common struggles of the people of the country's various nationalities under the leadership of our party. It is precisely because we have a great people and a great party that not only can we go on to greater victories when we triumph, when we encounter difficulties and detours, we can also toughen ourselves, ignore sacrifices, drive forward with determination, and open up new vistas. In the past, at present, or in the future, this would be the surest guarantee for the success of our cause.

The Socialist System Has Already Come To Be Deeply Rooted in China

The socialist system has already existed in our country for more than 20 years. After the Third Plenary Session of the 11th Party Central Committee, we summed up past experience and lessons and corrected the defects and mistakes in our past work; the purpose was to give full play to the superiority of the socialist system which had been demonstrated before the "Cultural Revolution" but which suffered great sabotage during it. This was altogether necessary. But another deviation took place at the same time, and that was that comrades thought too little of the achievements made by our socialist undertakings and underestimated them. In a situation in which we continued to win greater and greater victories, whether or not the socialist system exhibited any superiority seemed to have been a problem among certain parts of people.

The reason why some people had become skeptical about the socialist system, apart from certain causes in their subjectivity, had, generally speaking, also to do with two causes: One was the sabotage by domestic and external enemies, mainly by Lin Biao and the "gang of four" and its aftermath has hardly disappeared even now. The other was the defects and mistakes we actually showed in our work. Despite the continued efforts we have made in recognizing and correcting these defects and mistakes, things accumulated for a long time are not what can be solved completely in a year or two.

Regarding the liquidation of the remaining poison of Lin Biao and the "gang of four" we have already done a great deal of work. As we look at it now, we need to do still more. Not only does the remaining poison of Lin Biao and the "gang of four" need to be continually eliminated, but some facts already prove that the remnant forces of Lin Biao and the "gang of four" are still engaged in rather destructive activities in certain localities and units. They are raising the hubbub that there exists in China a special stratum today and the contradiction in Chinese society is the contradiction between the vast ranks of the people and this very special stratum. The only path for solving this problem, as they see it, is to resort to a so-called "second revolution." Some people even say that the last "Cultural Revolution" was to push the "capitalist-roaders" aside, but if we resort to "Cultural Revolution" once again, it would be no longer just to push them aside, but to kill them one by one. They are also propagating the theory that a gap separates the older generation and the younger generation. We cannot expect the older generation to fill up this gap, so the only thing we can do is to overthrow the older generation entirely and let people like them fill it. In a word, compared to those of Lin Biao and the "gang of four" the program, slogans, strategies, modes of activity of these people are slightly different in form but totally the same in substance.

It still requires great efforts on our part to further criticize the counter-revolutionary crimes of Lin Biao and the "gang of four" and further eliminate the residual poison of Lin Biao and the "gang of four" with respect to such anti-party and anti-socialist expressions and activities. The work we are required to do at present, aside from carrying out a resolute crackdown on veritable anti-party and anti-socialist activities and serious criminal offenses within the limits of the Constitution and the law, is to patently, carefully and persuasively strengthen our ideological and political work, win over and unite with the vast ranks of the masses, and reduce the market for those evil forces.

We need to use accurate, unimpeachable data to enable the masses of the people, especially youths, to understand that the superiority of the socialist system and its great vitality do not merely represent subjective longings, but are deeply rooted in an objective foundation and historical inevitability. Socialism replaces private ownership with public ownership, fundamentally eliminates exploitation and oppression, and carries out the principles of from each according to his ability and to each according to his work. Public ownership replacing private ownership is the most profound revolution in history. The realization of this revolution is itself a fundamental difference from all exploitative systems in the old society.

We must seek truth from facts in examining our achievements. Seeking truth from facts includes looking at problems from the overall situation. When our country was compared to the capitalist developed countries in recent years, we and foreigners alike often quoted one set of figures, that is, the average per capita share of the gross national product to determine our place in the economic development of countries of the world. This was accurate in one respect. But we cannot just use a standard of this sort alone to measure the degree of a country's development, but must carry out comparisons comprehensively over certain principal aspects of social production and social life, and among these the most important thing is to look at the degree to which basic needs in the life of the overwhelming majority of the people are guaranteed and satisfied.

Last year, an economic delegation from the World Bank came to our country to visit and study. They still considered ours a poor country, but at the same time acknowledged that, viewed from the overall situation, the growth rate of the Chinese economy was fairly fast, its industry was fairly well developed, the distribution of its national income was fairly equitable and success was being achieved in respect to the satisfaction of the needs of a majority of the country's population. In China, there are far fewer people living under the poverty line than in those countries, such as India, whose original foundations had been similar. They also lived under far better conditions, and great results had also been scored in such enterprises as education, public health and control over population increase.

Insofar as such characteristics as size of the country, size of the population and a weak economic foundation are concerned, the original conditions of China and India were quite similar, and the two countries also achieved liberation or independence at approximately the same time. But because we established a socialist system, we were therefore faster in various aspects of our development than India. We may carry out a comparison in the growth situation of nine principal industrial and agricultural products in this regard, to wit: crude oil, raw coal, electric power, rough steel, cement, chemical fertilizers, foodgrain, cotton fabrics and cotton. In 1950 our crude oil, raw coal, foodgrain and cotton production exceeded that of India, but not by a large margin. The range was a mere 15.4 percent (raw coal) to 106 percent (foodgrain). The production of all the other five lagged behind India. But what was the situation 30 years later? Among the nine products, when 1979 is compared to 1950, our margin of increase ranged from 2.1 times (foodgrain) to 675.4 times (chemical fertilizers), whereas that of India ranged from 1.3 times (cotton) to 112 times (chemical fertilizers). In his article "China and India: Comparison and Contrast," Indian economist Ramaswami, director of the India Management Research Institute of Bangalore fairly pointed out: China's conditions in 1949 were far worse than those of India, yet China's present per capita average income is twice or thrice the corresponding figure for India. Even a biased person looking at such a comparison would acknowledge that China far surpasses India.

Establishment and development of the socialist system in China is the choice of the people and a historical inevitability. Even such serious sabotage perpetrated by Lin Biao and the "gang of four" during the 10 years of the "Cultural Revolution" failed to shake its foundation an iota. Today, we have smashed those two counter-revolutionary cliques and conscientiously summed up our experience and lessons. At the Third Plenary Session of the 11th Party Central Committee and thereafter, we also reiterated and established a correct line and a series of principles and policies and continued to improve and promote various work. Who can break them down or destroy them? Those who violate objective laws will only get their heads cracked and bloodied by them. We have derived one conclusion and established one conviction from the development of world history and from the development of our history in the past 30 years: the socialist system has now taken deep roots in China, and such roots can no longer be cut or dug up. So long as we unite closely around the party Central Committee, continue to sum up experience, stay forever together with the people, and work solidly and conscientiously, the socialist cause is bound to win greater and greater victories, opponents are bound to be defeated, misguided persons are bound to wake up, and our people will become increasingly proud of their socialist motherland.

PARTY AND STATE

UPHOLDING MASS LINE IN SPIRIT OF PARTY RESOLUTION URGED

Nanjing XINHUA RIBAO in Chinese 7 Jul 81 p 2

[Article by Shou Chun [1108 2504]: "Uphold the Mass Line"]

[Text] In the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China," one of the three basic aspects of the living spirit of Mao Zedong Thought is summarized. This is the mass line--everything for the masses, everything depends on the masses; gather views from and return them to the masses. If our party hopes to further the cause of socialism, then we must uphold the mass line.

Comrade Mao Zedong, through the long process of leading our nation's revolution and construction, took an underlying principle of Marxism--that the masses are the creators of history--and systematically applied it to all party activities, and so formed the mass line of the party in all its work. This was a summation of the most precious historical experience of our party in carrying out revolutionary activities over a long period in the difficult environment in which a great disparity existed between our strength and the strength of our enemies. To uphold this mass line, Comrade Mao Zedong emphasized that our leadership must be correct when we lead the masses in actual work. We must utilize the style of "from the masses, to the masses," and carry out a merger of leaders and the masses and a combination of general appeals and individual guidance. This entire mass line system of leadership and work methods was a great addition to Marxist theory by Comrade Mao Zedong and the CCP.

As early as the period of land reform, Comrade Mao Zedong viewed the question of work method as being an important question in determining our ability to guarantee the victory of the revolution. He indicated that we must "pay attention to work methods," just as when we determine whether to cross a river by bridge or by boat. In the party Central Committee directive, "Some Questions Concerning Methods of Leadership," which he originally drafted during the war of resistance against Japan, he further explained the unified character of the dialectical materialist work methods of the line of cognition and the mass line, and clearly pointed out: "In all practical work of our party, all correct leadership is necessarily "from the masses, to the masses." This means: take the ideas of the masses (scattered and unsystematic ideas) and concentrate them (through study turn them into concentrated and systematic ideas), then go to the masses and propagate and explain these ideas until the masses embrace them as their own, hold fast to them and translate them into action, and test the correctness of these ideas in action. Then once again concentrate ideas from the masses and once again go to the masses so that the ideas are persevered in and carried through. And so on over and over again in an endless spiral, with the ideas becoming more correct, more vital and richer each time. Such is the Marxist theory of knowledge." This "from the masses, to the masses" scientific method of leadership is actually the concrete application of the Marxist theory of knowledge in practical work. It is not only the wellspring of our strength, it is also the source of our correct, guiding ideology. As Comrade Mao Zedong stated, in all cases "better leadership comes with greater skill in doing this." Why did Comrade Mao Zedong sum up the basic method of leadership of our party in the line, "from the masses, to the masses?" Basically, this was determined by the dialectical materialist worldview and theory of knowledge of the party. The essential aim of our CCP is the wholehearted service of the people. And if we wish to serve well, then we must begin with the actual situation of the masses and do things in accordance with the interests, views, and demands of the masses. "From the masses, to the masses" means placing the interests of the people first, and everywhere thinking of and planning for the masses. It further means penetrating into the practical activities of the masses, such as their struggle for production, their class struggle and their scientific experiments, as well as carrying out broad investigations, modestly listening to the calls of the masses, and seeing to it that our speech and actions accord with the interests of the broad masses and are supported by the broad masses. Our party, with basic Marxist theory as its guide, has always believed that the masses are the creators of history. Close reliance on the people is the source of our strength. The mass line firmly states that the creative ability of the masses is limitless, and so trusts the people and unites as one with them. In this way all difficulties can be overcome and all enemies defeated. In accepting the basic underlying principles of the dialectical materialist theory of knowledge, our party believes that the thoughts, opinions, plans, and methods of any heroic figure can only be the reflections of the objective world and can only come from the practice of the masses or from their own scientific experimentation. If we slight the practice of the masses and depart from it, then we cannot possibly attain even the most rudimentary knowledge, and the policies of our leadership organs and personnel will become "rivers without sources and trees without roots." If we do not understand the situation of those beneath us and simply take it for granted that we can put forth ideas and issue directives, then we will only carry out subjectivism and idealism, and will direct blindly and so be setting ourselves up for a fall.

The process of "from the masses" is actually the process of investigating and studying, the process, based on the foundation of practice, in which perceptual knowledge makes the jump to rational knowledge, the process of forming ideas and judgments, and the process of reasoning; the process of "to the masses" is the practice of turning theory around to lead the masses and of developing by passing through tests in practice. For simple things, the process of cognition is completed by passing through these two stages. But the practical activities in which mankind engages in remaking the world are endless. So our knowledge must also pass through unending development. Therefore, Comrade Mao Zedong emphasized that all correct leadership must not only go "from the masses, to the masses," but must also "once again concentrate ideas from the masses, and once again go to the masses so that the ideas are persevered in and carried through." It is exactly within this process of ceaseless cyclical repetition that the wisdom of the leaders and the masses are merged and jointly increased. "The ideas become more correct, more vital, and richer each time," causing the line, principles and policies of the party to correspond better to objective reality, allowing us to lead the masses forward correctly and to remake the objective world more effectively. The great Thought of Mao Zedong, the correct line of the party, is a magnificent crystal formed in the collective struggle of the party and the people. It concentrates the wisdom of the masses, and yet exceeds the wisdom of the masses; it reflects practice, and yet exceeds practice. Because of this it possesses great vitality and has become an invincible ideological weapon.

In reviewing the 60 years since the founding of the party, the lessons learned in advancing along the twisting path of China's revolution and construction teach us that when the subjective is more in tune with the objective and the leaders and the masses are more united, than the party line will be more correct and the revolution and construction will be smoother, and that none of this can be separated from the serious implementation of the work method, "from the masses, to the masses"; on the contrary, if we look for reasons when the party line contains errors of the "left" or right, and the revolution encounters setbacks, we find that the subjective and the objective never correspond, theory and practice are not in accord, and that this is the inevitable consequence of separation from the masses. This is true for the work of a single area or the work of a single cadre. Because of this, the "from the masses, to the masses" line initiated by Comrade Mao Zedong is not an ordinary work method which can be ignored, but rather is the basic work method relating to the success and failure of our party's cause. It is also the dialectical materialist line of cognition to which we must adhere. If we want to thoroughly implement the mass line of the party, our leaders must discard haughty and bureaucratic airs. We must maintain a firm mass viewpoint and the attitude of being happy to be the elementary school pupils of the masses. If we do not keep the masses in mind, are indifferent to their distress, turn a deaf ear on their cries, and do not penetrate the masses, but rather place ourselves high above the masses, then it will be impossible to implement the mass line of the party.

The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" made the mass line one of the three basic aspects of the living spirit of Mao Zedong Thought. This has important meaning for our conscious support of the party's mass line, our close dependence on the masses, and our construction of a strong, modern, highly democratic, culturally advanced socialist nation in the coming historical period. In the past, we upheld the line, "from the masses, to the masses," and solved countless difficult and complicated problems of revolution and construction. In completing new, great historical tasks in the future, we will meet with even more complicated conditions and difficulties, and this makes it imperative that we unswervingly persevere in upholding this basic aspect. This is a fundamental matter concerning the success and failure of our cause. We must definitely do a good job of upholding the mass line in accordance with the spirit of the "resolution."

BRIBERY, EXTORTION IN BUSINESS, GOVERNMENT REPORTED

Beijing RENMIN RIBAO in Chinese 23 Jul 81 p 4

[Article: "It Is Necessary To Stop Bribery, Extortion and Other Unhealthy Trends"]

> [Text] In its issue No 10 of 1981, PARTY STYLE AND PARTY DISCIPLINE [DANGJI YU DANGPENG], organ of the Central Commission for Inspection of Discipline, carried excerpts of two letters from party members, including one from Xin Qiushui [6580 4428 3055] of the Anhui Province Social Sciences Research Institute to the Anhui provincial party committee, dated February, along with an editor's note. The editor's note points out:
>
> The facts reflected in these letters show that the improper practices of bribery and extortion by some grassroots cadres and enterprise personnel today have reached very serious proportions. Commissions for inspection of party discipline should pay adequate attention to this problem. At present, they should coordinate with associated departments in initiating a thorough investigation into these improper practices in the economic field and into political and ideological problems affecting party members. They should get a clear understanding of this situation, and propose remedial measures. In the process of helping party committees study and implement the "guiding Principles," they should strengthen the education of party members and cadres in policies and discipline. Those party members and cadres found guilty of violating party discipline and state law, giving and accepting bribes, or committing extortion must be dealt with seriously on a case-by-case basis. We must do good political and ideological work among party members and rectify the party's workstyle.

In his letter to the Anhui provincial party committee, Comrade Xin Qiushui said: The problematical practices of bribery and extortion by some middle and lower level cadres and rural grassroots cadres came to my attention during a survey of the rural economy in Chuxian and other prefectures early this year. This problem seems serious. It was reflected in the following statements by some comrades attending a small-scale investigation meeting which I called in Jiashan County.

Zhang Zhibin [1728 1807 2430], director of the county's Second Bureau of Light Industry, said: Giving gifts and bribes and backdoor dealings are common tactics for our enterprises to get material supplies and to promote the sales of unwanted products. Purchasers are on a shopping spree everywhere. Their jobs are to obtain enough raw materials "to feed their factories." For this purpose, they are allowed expenses for travel, gifts, shipping and entertainment which are so large that they astonish everyone. In the first 45 days of this year alone, the Second Bureau of Light Industry spent more than 10,000 yuan on entertainment, in addition to expenses for gifts used to bribe people. During this same period, the handicraft plant in the county spent more than 4,000 yuan on gifts. To promote the sales of unwanted products also calls for giving gifts and bribes. The Jianshan County Handicraft Plant displayed a lot of unwanted products, including embroidered quilt covers, at the 1979 National Handicraft Trade Fair held in Guizhou. Because it presented a large quanity of peanuts as gifts at the trade fair, it sold more than 3,000 quilt covers, compared with more than 600 superior quality quilt covers sold at the Wuhu pavilion. Giving parties and gifts must be done with great thought and care. People ranging from leaders of some units to their administrative assistants must be listed one by one for parties or for receiving gifts. One oversight may spoil the whole thing. A large number of secondary guests must be considered and invited to any party in addition to the principal. As a result, the "guiding principles" have become a scrap of paper. I am a Communist Party member. Although I feel ashamed to be doing such things, I have no other option open to me. Without raw materials, my plant will have to close down and its workers and their families will starve. I have repeatedly suggested to the county party committee that it transfer me to some other post or make people assume the directorship of the Second Bureau of Light Industry on a rotational basis so that "I won't be the only person who will feel guilty of being a party to a bribery of extraordinary magnitude."

Kan Ke Rang [7074 0344 6245], director of the Jiashan County Handicraft Plant, said: Giving gifts and bribes and backdoor dealings constitute an important link in the operation of our enterprises. Although such improprieties have been cursed by all of us, none of us has had the guts to reject these practices. Last year when I went to the Zhengzhou, Henan, Textile Machinery Plant to buy a specific category of spare parts, its production manager first told me that no such parts were available, and then asked: What famous products are manufactured in your native place? I showed him three embroidered quilt covers. He took them over to his table, picked up a brush, scribbled a few words on a piece of paper and handed it to me, saying: Now I want to sell three packages of parts originally prepared for delivery to another customer. But when I went to the warehouse with the note, the keeper there would not give them to me, insisting that he could not break his promise to another customer. He did not change his mind despite an argument he had with the production manager. The production manager had no choice but to write a letter introducing me to the Changwei Prefecture Textile Machinery Plant, Shandong, so that I could get the parts there. Through negotiations, the man who handled my order first promised delivery sometime in July 1981. When I asked whether he could deliver it earlier, he asked: Is your place known for tea? I said: I didn't bring any tea but I have on hand a few embroidered quilt covers; are you interested? He was delighted to see these covers. After reaching into his pocket for cash, he said he forgot to bring any money with him that day but he promised to pay me another time. After taking the quilt covers, he immediately changed the date of delivery to near the end of 1980. When the time came for me to pick up the order, I brought along 4 jin of tea as gifts so that I could ship the parts home without any hitch.

Hu Qingshi [5170 7230 1102], purchaser of the Jiashan County Handicraft Plant, said: We purchasers can achieve nothing if we disregard these improper practices. When you give gifts and bribes to somebody, you have to cover it up and keep your mouth shut. No one involved dares to talk about it. Nor does anyone dare to expose it or write an article on this matter for publication. If you do, it means that you have broken all connections with them and you can never expect them to sell anything to you again, not to mention that you yourself are liable to be punished. Hu Qingshi added: Commodities that change hands on the market may also have to go through backdoor dealings. The same is true of the supplies distributed under the state plans. You cannot get them without bribing the suppliers with some gifts. An example was the distribution of 2 tons of manmade silk to my plant in 1980 under the state plan, which was to be supplied by the "Huadong Light Industry Supply Department of the Ministry of Light Industry." This department was unwilling to deliver them to us despite the distribution order and despite two trips we made at the expense of our plant. On a third trip, we brought along 5 brocade bedspreads, 2 embroidered quilt covers and 20 jin of peanuts. This trip was successful. The man who handled our order whipped out 15 yuan after taking the gifts valued at more than 90 yuan. Finally, we took only 10 yuan from him. It was in this manner that we brought the deal to a successful conclusion.

In his letter to the Anhui provincial party committee, Xin Qiushui said: These statements vividly testify to the fact that the practice of giving gifts and bribes has had a very bad effect on society. If this tendency is not reversed, how can we accomplish the four modernizations and implement the "guiding principles"? His suggestions to the provincial party committee were as follows: Measures should be taken to deal blows to and stop those improper practices. The party must gather information and grasp typical examples to educate the entire party membership. Party discipline and state laws must be invoked to punish those who break them and who accept and give bribes.

LOCAL PARTY LEADER DISMISSED ON CHARGE ABUSING POWER

Beijing RENMIN RIBAO in Chinese 23 Jul 81 p 4

[Letter from a reader: "Resolutely Rectify Unhealthy Practices"]

[Text] On 18 July, RENMIN RIBAO carried this news report: In accordance with the recommendations of the Hunan Province Commission for Inspection of Discipline, the Hunan provincial party committee has dismissed Li Fengzhou [2621 7685 3166], deputy secretary of the Linxiang County party committee, Hunan Province, from all posts within the party, and has suggested that departments concerned dismiss him from all posts outside the party for illegally moving 28 of his relatives from the countryside to the city, thus causing damage to the interests of the state and of collectives. The provincial party committee has also ordered Li Fengzhou to cancel the unauthorized movement of households from the countryside to the city, which betray the public trust, to return all illegally recruited personnel to the countryside, and to reimburse the state, collectives and the masses for their economic losses caused by his action.

The people are deligted to read this news, and also highly praise the Hunan provincial party committee for taking such a conscientious and serious attitude against violators of party discipline and state law and for correcting unhealthy tendencies.

As far as I know, this situation resulting from the abuse of power by cadres and from their illegal action to move their children from the countryside to the cities and then place them in positions with government organizations, enterprises and establishments exists more or less everywhere in the country. Such behavior is detested by the masses. This is also an important factor that has caused the overstaffing of some enterprises and establishments, inefficiency in their work and losses in their financial operations. I hope that erring comrades will consciously and voluntarily persuade the children and relatives they have illegally placed in positions with government organizations, enterprises and establishments to quit and go home. Cadres living in cities with children now on the waiting list for employment must observe the regulations of the personnel and labor departments and follow the normal procedures in getting jobs for their children. They should refrain from using their authority and special privileges to achieve this purpose. All their children who have been illegally placed in jobs should be persuaded to quit by their parents. All comrades who acknowledge and decide to correct their mistakes are good comrades and will receive commendations from the masses.

I hope that the party committees at all levels will emulate the example of the Hunan provincial party committee by resolutely rectifying their unhealthy workstyle.

HUBEI PARTY ORGANS STRENGTHEN LEADERSHIP OVER CYL

Wuhan HUBEI RIBAO in Chinese 24 Jun 81 p 1

[Text] The party organization at all levels of this province is effectively strengthening its leadership over the Communist Youth League and is considering its activities in youth work as one of its strategic tasks. Recently, the party committees in various localities, municipalities and counties called meetings of its standing committees, enlarged standing committees and leading cadres in the departments concerned for a joint analysis of the conditions of youth work in our area and for a study of concrete measures to implement the directive "On Certain Questions in Connection with the Strengthening of CYL Work," issued by the provincial party committee.

In order to further strengthen the leadership of the party in youth work, each of the party committees at the various levels has designated one secretary or deputy secretary to be particularly in charge of CYL work. A number of leading cadres of the party furthermore personally inspected and studied the CYL work and rendered guidance. The leading comrades in the party committee of Engineering Bureau 330 earnestly listened to the report of the CYL party committee, checked its work and made certain concrete demands. On receiving the work report from the CYL, Comrade Wang Qinggui [3769 3237 6311], first secretary of the Xiangfan municipal party committee, formulated concrete measures to solve problems prevailing in youth work. The municipal party committees of Huangshi and Shashi carried out certain readjustments in the leadership teams of its youth leagues, adding new members and selecting as responsible committee members some young comrades who had been party committee members before and have had a certain amount of practical experience. In 13 counties and municipalities of Jingzhou district, meetings of league representatives are under way to elect new leadership teams for the CYL. In view of the rapid changes of CYL cadres and the great number of new cadres required, the nurturing, training and raising of CYL cadres is being taken in hand by many local and municipal party committees as work not to be treated lightly. The party schools at all levels one after another arrange for CYL cadres to study in a planned way. Many units have training take the place of meetings and run short-term training classes or arrange for CYL cadres to study at sparetime, evening or television universities to assist them in raising the level of their cultural and scientific knowledge and their professional skills.

In working for a stronger leadership over the CYL, the party organizations at all levels are paying the closest attention to arousing the concern of all the different quarters of society so as to have them support the work among the young people. The organizations are furthermore making serious efforts to give the greatest attention to ideology, to be effective organizationally, to be supportive in actual work and full of concern for the livelihood of the young people. In Yichang the party organization of the Electrical Manufacturing Company and other units mobilized party, administrative, factory, youth league, propaganda and educational departments to launch discussions on youth work, thus gaining a better understanding of the direct influence on the attitude of the young people exercised by the social environment, family conditions and other quarters, and an understanding also of how the successful education and nurturing of our youths is only possible under the leadership of the party committees with the cooperation of everyone else in the joint effort of a total war. At a meeting of three levels of its cadres, the party committee of Wuchang County had the cadres of the CYL explain to the meeting the problems that exist among youth throughout the country and submitted suggestions to deal effectively with youth work, consciously concerned itself with the education of youth and accomplished certain work which will facilitate the studies and work of youth and enhance their livelihood. The motion picture companies, publishing houses, cultural bureaus, etc, in many localities and municipalities took realistic measures to provide spiritual nourishment and better material conditions for a healthy development of youth and thus contributed to our efforts to raise a generation of young people who will be a good communist successor generation, both red and expert.

PARTY AND STATE

RECTIFICATION OF MISCOMPREHENSION OF MAO THOUGHT URGED

Hangzhou ZHEJIANG RIBAO in Chinese 13 Jul 81 p 1

/Commentary: "Thoroughly Study Documents"7

/Text7 Leading cadres at all levels and party members and other cadres throughout Zhejiang Province have mounted a campaign to study the "Resolution" of the Sixth Plenum in conjunction with its communique and Comrade Hu Yaobang's speech at the meeting in celebration of the 60th anniversary of the CCP founding. Various localities unanimously reported: The "Resolution" has become a popular subject of conscientious study and lively debate which is instrumental in inspiring the people to think and in cheering up their spirit. Leading cadres at all levels must emphasize particularly the need to study thoroughly these documents in order to make this study campaign more fruitful.

The "Resolution" is an important historical document pervaded with the brilliance of Marxism-Leninism and Mao Zedong Thought, an important basis upon which our party and state can distinguish right from wrong, and an important weapon with which we can make progress, and unite as one to carry on our cause and forge ahead. The "Resolution" is very rich in content and highly inspirational. As far as we know, there is no short-cut to the thorough understanding of this important historical document. A thorough reading of it is the only step toward achieving a gradual understanding of its key points and essence. Leading cadres who want to play a leading role in studying this "Resolution," who want to bring their thinking into line with its basic conclusions and who want to convey the "Resolution" to the masses, must read it thoroughly. It is unlikely to comprehend the "Resolution" and much less to meet the objective and requirements of this study campaign proposed by the party Central Committee unless everyone studies it thoroughly.

A primary task is to carry forward our party's excellent tradition to read its documents thoroughly. The documents of the party Central Committee concentrate the wisdom of the entire party and represent its will. These are documents whose carefully worded contents are works of thoughtful minds. Practice proves that comrades who can read these documents thoroughly will have no difficulty in roundly and accurately comprehending their essence and will be able to implement the documents properly with remarkable success; otherwise, they will have trouble fully appreciating the documents. They will even miscomprehend their essence, and will deviate from the correct course with bad consequences during their implementation. Early in this year, we also started a campaign to study the party's documents. During the campaign, in order to prevent the recurrence of the old problems which resulted from the study of its documents, the party Central Committee emphasized the need to study them seriously while appealing to comrades to make conscientious efforts to comprehend their essence. Consequently, a fine style of study prevailed, and the conscientious efforts by comrades to read the documents paid off and reaped rich fruits. During the current campaign to study the "Resolution," we must carry forward this excellent tradition and study style and persist in concentrating our energy on reading the documents thoroughly, and painstakingly.

Reading documents thoroughly means studying their texts sentence by sentence and paragraph by paragraph until everyone can firmly grasp their essence. No one should turn study sessions into random talks. Nor should anything be brought up for discussion that has nothing to do with the subject matter. When the "Resolution" is studied and discussed, we must focus our attention on the following major joints: We must evaluate realistically and appropriately the issues of right and wrong and the achievements and mistakes of the past 32 years following the founding of the PRC, make conscientious efforts to sum up positive and negative experiences and draw lessons from them so that we can turn them into invaluable assets which will guide us as we forge ahead. We must evaluate accurately the historical role of Comrade Mao Zedong and Mao Zedong Thought so that we can uphold Mao Zedong Thought in a better way in the days ahead. We must unify our thinking, and unite as one to look forward and to implement more consciously the line, principles and policies adopted since the 3d Plenary Session of the 11th party Central Committee. We must strengthen and improve party leadership, and strengthen the ideological and organizational building of the party, demonstrate the spirit with which to climb Mount Taishan, and effectively devote our energy to building our economy and spiritual civilization. We must grasp these key points as steps in the right direction of reading documents thoroughly and as the theme of our study and discussion.

Should the thorough reading of documents be integrated with reality? Yes. The principle of integrating theory with practice is one of our party's three major work styles. However, we must make it unequivocally clear: The objective of integrating the thorough study of documents with reality is to deepen our understanding of these documents and to comprehend better their essence. For example, some comrades have been able to integrate their thorough study of documents with what they actually have in mind; in order to prove that the points contained in the "Resolution" are correct, they have drawn a contrast between their past and present attitude toward these points. There are also some comrades who have graphically presented hard facts along with their experiences in work in order to prove that everything included in the "Resolution" conforms to objective reality and is a vivid reflection of dialectical and historical materialism. Integrating study with reality this way is very helpful in studying documents well. In this connection, attention must also be paid to the emergence of the following two possible situations: 1) Some comrades may be unwilling to study documents conscientiously. After going over them roughly once or twice, they may hastily jump to a conclusion on some specific problems and keep on talking incoherently about them. In the end, they will swallow everything without digesting it, pay attention to peripheral issues instead of the major ones, and make their efforts in study fruitless. 2) Instead of making conscientious efforts to grasp the essence of documents, they get entangled in minor historical issues or engage in disputes over specific historical issues of right and wrong in specific localities and units. This approach to the integration of study with reality is clearly wrong.

Reading documents thoroughly calls for displaying a tenacious spirit of devotion to research. We must reject lazy souls unwilling to think and encourage comrades to start up the machinery. Whether one has studied documents thoroughly is not determined by how many times one has gone over them. The key to success in this study lies in painstaking devotion to research. We must be able to see that many major historical events and many major theoretical issues contained in the "Resolution" were distorted beyond recognition by Lin Biao and the "gang of four" and some of them have long been construed by some people as Marxism-Leninism and Mao Zedong Thought. Today, we must draw a line between right and wrong, point out those past misconceptions and know how to take measures to rectify them. To achieve a clear understanding of these matters calls for painstaking devotion to research. Some major theoretical issues call for research on original works by Marx, Lenin and Comrade Mao Zedong and scientific analysis.

In short, we must study painstakingly, conduct in-depth research, and keep our thinking and research process going in the direction of taking reality into account until we fully comprehend the "Resolution" and truly convert it into our own assets. Only thus can we achieve a great leap forward on the ideological front, raise the level of our political consciousness, radically rectify our work style, and make a great breakthrough in work and a greater contribution to the party and people.

PARTY SCHOOL IN GUANGDONG STUDIES RESOLUTION ON MAO

Guangzhou NANFANG RIBAO in Chinese 15 Jul 81 p 1

[Article by Li Ruqing [2621 3067 7230]: "Evaluation of Chairman Mao Wins the Hearts of the Party and the People; Provincial Party Committee and Party Schools, Rotating Training Class Participants Discuss Understanding Gained From Study of the 'Resolution'"]

[Text] The more than 300 cadres from all over the province who participated in the first session of the rotation training class for cadres of county and higher ranks, organized by the provincial party committee and the party schools, specially allotted 11 days before winding up their 4 and 1/2 months of theory studies to an earnest study of the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC." All were agreed that the "resolution" was an extremely valuable, high-level, historical document. It expresses everyone's heartfelt thoughts and sentiments as it sums up the historical experiences of the party since the foundation of the PRC and in its objective, just and realistic evaluation of Chairman Mao Zedong.

The participants in the study were men of long struggle experience; many comrades had joined the revolution during the war of resistance against Japan and the war of liberation. In looking back over their own personal experiences, they had deep feelings of gratitude for the great achievements of Chairman Mao, achievements that greatly benefited the Chinese people and that can never be obliterated; he will always be the great leader and teacher of the Chinese people.

The evaluation of Comrade Mao Zedong's historical role and of Mao Zedong Thought, as given in the "resolution," is deeply appreciated by the party and the people and is completely in line with the basic interests of the party. All agreed that Comrade Mao Zedong and Mao Zedong Thought are inseparable from the entire history of our party. The correct evaluation of Comrade Mao Zedong's historical role and upholding the banner of Mao Zedong Thought are actually affirmations of our party's glorious history and vindications of the lofty image of our party and of the People's Republic. On this important question we must certainly maintain a serene and prudent attitude and not allow ourselves to be swayed by our emotions. Some comrades said: At the beginning of our studies, everyone still had somewhat confused ideas and different opinions on the history since the founding of the PRC and on the evaluation of Comrade Mao Zedong. The publication of the "resolution" clarifies right and wrong, unifies our thinking and brings stability to China, with implications all over the world.

In these studies everyone came to agree that Comrade Mao Zedong, like any other great historical personality, has had his shortcomings and mistakes. However, the mistakes committed by Comrade Mao Zedong were after all the mistakes committed by a great proletarian revolutionary. Several comrades said the "resolution" uses historical materialism in its analysis of the mistakes committed by Comrade Mao Zedong in his later years and points out the subjective elements, his becoming divorced from the masses and from reality, and also analyzes the social and historical reasons that caused these mistakes to occur. This will enable the whole party to properly absorb the historical experiences and lessons and will serve as a warning for all future times.

In the past, some comrades felt it emotionally difficult to hear about Comrade Mao Zedong having committed mistakes. After studying the "resolution," they admit that this kind of attitude and sentiment, although understandable, cannot stand in the way of scientific analysis and that it is also not in conformity with objective reality. If we do not admit realistically that Comrade Mao Zedong committed mistakes in his later years and do not differentiate between these mistakes and the scientific theories of Mao Zedong Thought, we would quite possibly persist in the various mistaken viewpoints of Comrade Mao Zedong. This would be detrimental to the emancipation of our minds, to the rectification of "leftist" mistakes and to the implementation of the party's line, principles and policies adopted since the Third Plenum.

Everyone was agreed that the "resolution" gives a scientific account of the principal content of Mao Zedong Thought and the three basic points that constitute its life and soul, thus raising everyone's conception of Mao Zedong Thought to new heights. Many comrades expressed the opinion that from now on, upholding the banner of Mao Zedong Thought demands of us as an important condition that we resolutely implement the 10 "important points" of our correct path toward socialist construction, as outlined in the "resolution." Firmly upholding these 10 points is nothing else but firmly upholding Mao Zedong Thought. Going against these 10 points is going against Mao Zedong Thought. We are unswerving in our determination to develop as rapidly as possible our social production force, regarding economic construction as the core of our efforts, and thus to gradually raise the level of livelihood of the masses in order to demonstrate even more effectively the power of Mao Zedong Thought.

'SCIENCE AND SUPERSTITION' ARTICLES ON IDEOLOGICAL STRUGGLES

Beijing DUCHU [READING] in Chinese No 5, 10 May 81 pp 38-44

[Article by He Xin [0149 2450]: "A Leaf from the Storm of Our Era--After Reading the Collection of Essays 'Science and Superstition'"]

I.

[Excerpt] Let us look back at the so-called "great cultural revolution." How devoid of historical sense it was as a movement! The political situation, personalities, and theories all changed constantly, like revolving paper figures in a lighted lantern. One solemn declaration after another became wastepaper overnight; for 10 whole years one fleeting historical scene after another puzzled 1 billion of the world's universally recognized abundantly intelligent people. But finally, "after this disaster, the Chinese people understood many truths from pain" ("Historical Initiatives and Historical Limitations"). History taught people to understand historical sense. Please read the collection of essays by Li Honglin [2621 3163 2651] entitled "Science and Superstition"; it is precisely such a good book which enlightens people with a historical sense.

II.

This collection includes 24 articles and a parable. These articles are the reflections and explorations of a communist with a sense of responsibility toward the future and destiny of the party, the state, and the nation, who has done his thinking about the pain of the 10-year catastrophe after the pain stopped. Frankly speaking, insofar as the scholarly value, i. e., the scientific integrity and theoretical depth, is concerned, these articles are not without blemishes. But as products of our very own era, these articles still have some special value. They have recorded a leaf from the storm of our era, and they rattle with the sounds of the pounding waves of an ideologicla liberation movement. Please recall the situation of 10,000 horses standing mute in China's ideological and theoretical circles before the Third Plenary Session of the 11th Party Central Committee. Many articles included in this collection bathed in the spring wind of the Third Plenary Session's emancipation of our thinking; what a thunderous ear-piercing role they played at the time!

Particularly noteworthy are those articles in the collection on adherence to the four basic principles. It is not difficult for anyone who is sharp enough to observe the current situation to see that, in the present political, economic, cultural and ideological realms, a series of manifestations indicate that we have already entered a very great and important era in China's modern history. The roar of the tides of change continues to hurl at the door of our era. Almost in no realm can we fail to see the looming buds of new things which are strenuously breaking through the hard crust of the earth, or to see the new trends' impact on, and challenge to, the old things. But precisely at this time of change and turn, apart from the main current of the movement which actively follows the inevitable path of history, certain subversive ramifications also appeared. Just as Comrade Mao Zedong pointed out, one trend often covered up another trend. While the trend of "whateverism" in insisting on "being faithful to every word and every sentence" was subjected to criticism, there also appeared at the same time the erroneous trend of wavering regarding the fundamental principles of Marxism-Leninism and becoming skeptical about the "four adherences." What was valuable was that precisely when this kind of trend raised its head, Comrade Li Honglin immediately wrote articles on resolutely maintaining the "four adherences" that also explained what kind of "four adherences" we should maintain, and thereby consciously resisted erroneous trends from both the left and the right. When we look back at the political trends of the past few years, we can see that certain people who have not drawn a clear demarcation with leftist trends in their thinking always attempt to put the "four adherences" in opposition to the principles of the Third Plenary Session of the 11th Party Central Committee. Actually, there is no contradiction between the "four adherences" and the principles of the Third Plenary Session; only by adhering to the four basic principles can we better criticize the sham Marxism, the sham socialism and feudal, fascist autocracy of Lin Biao and the "gang of four." And in the several articles included in this collection, Comrade Li Honglin has made profound analyses as to what kind of "four adherences" we should really maintain.

In the article "To What Kind of Party Leadership Do We Adhere," the author points out: The question of party leadership arises from history and must be solved in history. "There is no absolute authority in the world; nor is there natural leadership in the world. Any leadership comes from struggle and practice and must continue to be tested in practice." "On this land of China, there have been diverse political forces competing with one another during the past hundred years and more. They either served as leaders or tried very hard to become leaders. As shown in practice, only the Communist Party could lead the Chinese people to emerge from suffering." The Chinese Communist Party secured the support of the masses of the people and became the leader only by relying--as it could only rely--on its own correct program and line and acting through the heroic struggle and exemplary conduct of the vast ranks of the party members and cadres. Discourses such as these contain a very profound historical perception--that is, the people always choose, recognize and test their own leaders through historical practice. It was precisely through many years of practice that the Chinese people came full to perceive that only the Communist Party could save China. Hence, the leadership of the Chinese Communist Party is not subject to skepticism. On the other hand, proceeding from this understanding, precisely because we really adhere to party leadership, so we must continue to improve party leadership. The article also offers succinct discussions on such points as that we need to strengthen the party's political leadership and not administrative leadership, that we adhere to collective leadership and not individual leadership, etc.

In "To What Kind of Socialism Do We Adhere," the author even more profoundly points out that while various kinds of "socialism" have existed in the world, ranging from Hitler's state socialism to the feudal, fascist socialism of Lin Biao and "gang of four," the socialism we adhere to is not all those socialisms but can only be the scientific socialism of Marx. And we can really adhere to this scientific socialism only by exposing and struggling against sham socialisms that display the signboard of "socialism." These views are all dialectical and profound. But certain people who have been anguished by the movement to emancipate our thinking during the past few years may blame this collection of articles as a heretical work that serves to confuse people's thinking. This does not matter very much, because the truth of a view, an idea or a cultural trend is not determined by whether or not a certain kind of people or certain people agree with it; it is ultimately tested in practice and through historical development. Actually, in order to understand the profound and far-reaching significance of this ideological liberation movement in modern Chinese history, it is not enough just to look at current realities; we must look back at the whole modern history.

When the British knocked open the obstructive and seclusive door of ancient China with their cannons in the 19th century, China immediately entered into a historical movement oriented toward awakening the nation and strengthening it by making relevant changes. It has not stopped even to this day. The task and the goal has always been one--that is, to change China's backward state in relation to the advanced world in the economic, political, cultural and military aspects, and build a prosperous, civilized and advanced New China. For the sake of finding a path of modernization, for the sake of casting off the humiliating and miserable national status into which the country had fallen because of backwardness, countless advanced Chinese ranging from Kang Youwei and Sun Yat-sen, to Lu Xun and Mao Zedong bared their guts and shed their blood; in countless, undaunted sacrifices and struggles for over 100 years, the Chinese people walked along a path paved by blood and fire. The founding of the People's Republic of China in 1949 declared to the whole world that the Chinese people have now stood up. We have really achieved a very great victory. We have driven away the imperialists. We have realized something unprecedented in Chinese history: the unity of 1 billion people and more than 100 nationalities. We have established the new economic and political system, socialism. We have swept away many backward and abnormal feudal, colonial, old cultural forms and raised the embers of a new socialist culture. All these victories have laid a broad and deep foundation for the revival of the Chinese nation. These conspicuous achievements cannot be denied even by our enemies. But these victories also created historical illusions for some people, whereby the point of departure came to be regarded as the destination. China became once more regarded as the "center of revolution" around which the whole world revolved--the "central state." The victories achieved were inappropriately exaggerated, but the formidable exertion that still had to be made in order to really march toward state prosperity and national revival was overlooked. The peaks of such historical mistakes were the "great leap forward" and the "great cultural revolution," which were once taken as unprecedented historical beginnings. But history is not sentimental. The violation of dialectics cannot but be punished. When all empty talk dissipated like ephemeral clouds, when the Chinese people opened their eyes to look at the world for the second time in modern history, we finally painfully discovered that we were backward. We really wasted so much time, wealth, energy, and also people in fantasy, superstition, and wanton exaggeration. Why would we fall into such serious, historical blunders? Where did we slip?

After the Third Plenary Session of the 11th Party Central Committee, along with the launching of the discussion on the criterion for testing truth, the ideological taboo areas inhibited for many years were broken through one after another; ideological and theoretical circles began to thrive exuberantly, the spring tide began to surge forward vigorously, there appeared a scene of liveliness not witnessed for a long time. This was what people have called the ideological liberation movement. Supporters have been pleased and encouraged. Opponents have been worried and disheartened. But the reason why this movement has been so full of vitality is because it is different from any other movement since liberation; it was not artificially started. On the contrary, this historical movement originated from a series of fundamental questions faced by our nation, and it was in search of the answers and solutions to these questions that it rose to the occasion. This movement is not going to last just for a day, or for a few months or a few years. It is going to extend to several decades and affect several generations. In essence, this movement is irresistible, because it reflects history's inevitable needs. If it encounters obstacles, it will merely become an undercurrent, but it will definitely not be stopped. Looking at China's modern history, we see that several great ideological liberation movements took place in the past 100 years, and all of them achieved great results. One took place around the time of the 1898 reform. The orthodox classics of Confucius and Mencius were then subject to skepticism by reformers for the first time, whereas "Western learning" or new learning was introduced to China. People's historical vision was widened. The Chinese realized for the first time that a social system without emperor--that is, a "ruler-father," was possible. The upshot of this ideological liberation movement was that the 1911 revolution overthrew the emperor. Another was around the time of the 4 May movement. Heroic ideological revolutionary pioneers like Lu Xun, Chang Duxu, and Li Dazhao toppled the old castle of a 2,000-year feudal culture with an overpowering offensive, and thereby laid the foundation for modern China's new science and new culture. Thereafter followed the spread of Marxism in China and the establishment of the Communist Party. The new tide of ideological liberation thus surged forward fiercely with an irresistible momentum. The triumph of New Democracy and the founding of New China in 1949 were both great achievements of that ideological liberation movement. We can learn about the present by looking at the past. If we can say that without the ideological liberation since the 4 May movement there could not have been the modern New China, and without the renaissance and the enlightenment movement there would not have been the modern European and American world, then we can also make such a comparison: that this new ideological liberation movement, which began with the "5 April" movement of 1976, was affirmed by the Third Plenary Session of the 11th Party Central Committee, and will continue for several decades on a tortuous road, is bound to lay a grand new intellectual, cultural, and ideological foundation for a modern socialist New China economically, politically and culturally in the world's foremost ranks with an advanced democracy and an advanced civilization.

III.

Historically speaking, China's intrinsic culture had a universally known traditional inertia. Therefore, all China's reforms have been very difficult undertakings, and almost every step forward required struggle. This collection of articles "Science and Superstition" also reflects from the sideline such struggle on the ideological and theoretical front during the past 3 or 4 years.

The last article in this collection is an "old story in a new edition" with profound implications. It is entitled "Who Really Understood the Divine Farmer." This story tells the tale of how Li Shizhen had a label attached to him by the emperor's imperial hospital and was almost beaten with a stick because he revised the "Divine Farmer's Herb Medicine Classic" of ancestral days. But what is even more interesting is that, as the author tells us, after the story was published, immediately someone wrote to the newspaper office to express the wish to grab a bunch of poisonous weeds, and, among others, his list included precisely "Who Really Understood the Divine Farmer"--this may be really said to be a case of "current expose, current retribution!"

Actually, according to the poisonous weeds categorizing standards of the "gang of four" or the two "whateverists," there should have been far more than one article in this collection which could be designated as a "poisonous weed." Therefore, I recommend that when the reader reads this collection, he should not overlook the "appendixes" at the end of many articles. Certain perceptions revealed in those appendixes are very funny; sometimes one can hardly keep from laughing. Even a view which now seems very ordinary would cause much skepticism and blame at the time. We need not blame other people's reproach, of course; what is needed is that from this we can understand what a formidable task it always is to return to order from disorder on ideological and theoretical questions!

We are situated right now at a very important period of development in China's modern history. The Central Work Conference convened not long ago decided on the principles of further readjustment in our economy and further political stability. In order to overcome the many difficulties we face and in order to solve the many important questions history has put to us, it is necessary to carry out renewed learning and study of Marxist theories. Correct theories are the scientific basis for formulating lines. Historically speaking, because of a lack of theoretical preparedness, our party has gotten the worst of it both in the stage of the democratic revolution or in the stage of socialist construction. In this process of renewed learning, it is probably beneficial to read this collection "Science and Superstition" by Comrade Li Honglin, and to look back at the ideological liberation movement during the past 3 years, for the sake of absorbing historical experience and to avoid following the same fallen historical path.

LIFE OF FIRST ENVOY TO FOREIGN COUNTRIES RECOUNTED

Beijing RENMIN RIBAO in Chinese 13 Jul p 5

[Article by Wang Sizhi [3769 1835 3112]: "Zhnag Qian [1728 7505] Blazes a Trail to the West"]

[Text] Zhang Qian, an outstanding diplomat of ancient China, was the first to blaze a trail to the regions west of China. Both Sima Qian [0674 7456 6692] and Ban Gu [3803 0942] praised Zhang Qian, saying: His mission was to "hack a way out of an impasse," meaning that the road to the regions west of China cleared by Zhang Qian for the Kingdom of the Han Dynasty to establish relations with countries there was full of treacherous hazards and dangers.

The term "regions west of China" was first mentioned by people of the Western Han Dynasty. It mainly referred to China's Xinjiang region, central and western Asia and northeast Africa. At that time, the Huns, one of China's minority nationalities, grew so strong that they were able to control a large portion of Xinjiang and to constantly challenge the Kingdom of the Han Dynasty in the Central Plains.

In 140 B.C., Liu Che ascended to the throne, proclaiming himself Emperor Wu of the Han Dynasty. Following six or seven decades of rejuvenation and development of socioeconomic programs, the power wielded by the Kingdom of the Western Han Dynasty grew incredibly strong. It was determined to remove the long-existing threat to the Central Plains posed by the Huns. Shortly after Emperor Wu learned from defectors from the Huns inhabitants of the state of Dayueshi (or Darouzhi), originally living along today's corridor west of the Yellow River, quit the area and fled westward after suffering defeat at the hands of the Huns, his government decided to contact the state of Dayeushi for a possible alliance in the struggle against the Huns. At the same time, it was also determined to open a caravan route to the regions west of China in order to establish trade relations with countries near and beyond its borders and to meet the needs for the development of socioeconomic programs in the Kingdom of the Western Han Dynasty. It was under such circumstances that a decision was made to send envoys to the regions west of China. Since the route to the regions west of China had to pass through areas controlled by the Huns and was full of danger, the government of the Han Dynasty had to "recruit people really capable of doing this job." In the end, a man named Zhang Qian, a native of Hanzhong, came forward and applied for the job.

In the third year of the Jianyuan reign (138 B.C.), Zhang Qian was named an envoy of the Kingdom of the Han Dynasty and head of a more than 100-man delegation to the regions west of China with the mission of establishing contact with the state of Dayeushi. However, no sooner had he set foot into Longxi than he was he captured by the Huns and held captive for the next 10 years. But during this period of captivity, he "never gave up his title as the envoy of the Kingdom of the Han Dynasty under duress" and never deserted his own country. When days ran into months and months ran into years, his captors gradually relaxed their watch and security measures, thus enabling him and his followers to escape and continue their journey westward until they arrived in the state of Dayueshi. After scaling the Congling Mountain Range, they arrived in Dawan (part of today's Soviet territory which was under the jurisdiction of the Western Regional Garrison Authority of the Western Han Dynasty). The king of Dawan knew of the Kingdom of the Han Dynasty as an affluent nation of long ago but he knew of "no way to establish relations with it." When he saw Zhang Qian, he was delighted and later sent guards and interpretors to accompany him to Kangju (today's Tashkent in the USSR). The king of Kangju also sent guards to accompany Zhang Qian to the state of Dayueshi (on the upper stream of the Amu River in the northern part of today's Afghanstan). The Kingdom of Dayueshi had been relocated along the Gui River (today's Amu River) after defeating the state of Daxia (northern part of today's Afghanstan), which, according to the "Book of Han, Chapter: Autobiography of Zhang Qian," was more than 11,000 li away from the Kingdom of the Han Dynasty. Knowing that the two kingdoms were too far apart, the king of Dayueshi lost interest in taking revenge on the Huns. After more than 1 year's stay in Dayueshi, Zhang Qian left for Daxia. Because his mission to establish an alliance with the state of Dayueshi proved unfruitful, he decided to return to his motherland. Whi While on his way home, he was recaptured by the Huns. A year later, a civil war broke out among the Huns, thus enabling Zhang Qian to escape and return home, after spending more than 13 years abroad. When he left, he was accompanied by more than 100 persons. But on the day of his return, his entourage was reduced to one man. During the trip out and back, he and his followers encountered countless dangers. Occasionally they had to shoot beasts and birds for food. After returning to Changan, Zhang Qian submitted a report to Emperor Wu on his trip, saying: "I personally visited Dawan, Dayueshi, Daxia, and Kangju, and while there I was told that there are five or six countries adjacent to their borders," which included Wusun (southeast of Lake Balkhash, which was under the jurisdiction of the Western Regional Garrison Authority of the Han Dynasty), Yancai (at the northeastern tip of the Caspian Sea), Tiaozhi (today's Arabian Peninsula), and Anxi (Persia or today's Iran). He also discussed in his report the cultures, customs, products, economies and political and economic situations in the countries he visited. Zhang Qian's report was included in the "Historical Records, Chapter: An Account of Dawan." Particularly noteworthy is this statement by Zhang Qian: "When I was in Daxia, I saw bamboo sticks and clothes from Sichuan. I asked people there: How did you get such things? The people in the state of Daxia said: Our businessmen got them from India." This shows that at that time, commodities produced in Sichuan were exported to countries as far away as India and Afghanstan. This was another caravan route from China to Central Asia during the Western Han Dynasty. In their reports on China, scholars in ancient Greece and Rome also mentioned the Chinese business trade in silk which was exported to Italy's Rome through India.

After Zhang Qian reported to Emperor Wu that he saw clothes from Sichuan in Daxia, his majesty tried to open a caravan route from southwest China to Daxia via India, but was unsuccessful. Therefore, he had to send Zhang Qian to the regions west of China for a second time. By then, the situation there had undergone radical changes. The state of Wusun, originally an appendage of the Huns, gradually grew strong and defeated the state of Dayueshi, whose inhabitants were forced to flee farther to the west. After taking over the domain along the Ili River from Dayueshi, the state of Wusun "refused to pay further tribute to the Huns." As a result, a confrontation between Wusun and the Huns developed. Later, the Huns launched a series of offensives against the state of Wusun. On the basis of this changing situation, Zhang Qian came up with a farsighted foreign affairs proposal. Its key points called for "bribing Wusun with hard cash," establishing fraternal relations between the Kingdom of the Han Dynasty and the state of Wusun, selecting a princess to wed the crown prince of Wusun, and welcoming the people of Wusun to return to their original abode between the Qilian Mountains and Dunhuang in order to "cut an arm off the Huns." Another objective of an alliance with the state of Wusun was to "make all countries west of the state of Daxia vassal states of the Kingdom of the Han Dynasty." Emperor Wu adopted this proposal, naming Zhang Qian a general and chief envoy to the regions west of China. Accompanying him were many accredited envoys "who could be sent to other neighboring nations" as he saw fit. The huge delegation led by Zhang Qian consisted of more than 300 diplomats, each accompanied by two horses, large herds of cattle and sheep and carrying gold coins and silk valued at "hundreds of thousands of yuan" as gifts for entering into an alliance with the state of Wusun and other countries. After arriving in Wusun, Zhang Qian sent "envoys to Dawan, Kangju, Dayueshi, Daxia, Anxi, India, Yutian, Yushen and other neighboring countries" with the aim of widely establishing relations with central and western Asia and northeast Africa. But the unstable situation in the state of Wusun made its king hesitate to make any special commitment to Zhang Qian. After more than 1 year abroad, Zhang Qian returned home. Accompanying him on his homeward trip were scores of envoys sent by the state of Wusun whose visit to this vast Kingdom of the Han Dynasty resulted in a relationship in which the "people of Wusun paid greater tribute to the Han Dynasty." Zhang Qian died shortly after returning to Changan. Later, envoys he sent to other countries also accompanied envoys of their respective host countries to Changan one after another, thus "enabling the Kingdom of the Han Dynasty to establish direct communication with countries northwest of China."

Historical records describe Zhang Qian as "a man of stamina, magnanimity, and trustworthiness loved by barbarians," a contemptuous term Zhang Qian hated to use. Thus, Zhang Qian's formidable fortitude and indomitable spirit were assets which helped him fulfill all assignments irrespective of dangers and difficulties. He was also known for his unassuming personality and for being approachable to people, a personality which enabled him to win the trust of the countries west of China through mutual contact. From then on, "all envoys who followed in his footsteps to the regions west of China were called Duke Bowan (an honor awarded to Zhang Qian posthumously) so that they could win the trust of other countries as Zhang Qian did." In the days following, the government of the Han Dynasty continued to send envoys on the trail blazed by Zhang Qian, whose number ranged from "hundreds to at least a hundred" each year. These huge diplomatic delegations were accompanied by large herds of cattle and sheep and large quantities of silk just as they were in Zhang Qian's time. They were called diplomatic delegations as well as caravans of traders "who must carry a lot of commodities for sale for income to meet their daily demands."

At that time, "the number of envoys sent out each year ranged from a dozen to five or six. Their tour of duty varied from 9 years for those who were stationed in remote countries to a few years for those who worked in countries near China. "Foreign envoys to the Kingdom of the Han Dynasty also changed frequently." Such exchanges of diplomatic delegations were instrumental in strengthening the political and economic relations between Xinjiang and the Central Plains. The road to the west traversed by Zhang Qian subsequently opened up the famous "silk route." Meanwhile, the regions west of China exported thoroughbred horses, grapes, clover and other agricultural products to the Central Plains to enrich the cultural and economic life of people in the Kingdom of the Han Dynasty.

SOCIOLOGICAL, EDUCATION AND CULTURE

CONDITIONS OF EDUCATION IN YUNNAN REPORTED

Kunming YUNNAN RIBAO in Chinese 16 Jun 81 pp 1-2

[Report by Jiang Quan [3068 3123], chief of the Department of Education of Yunnan Province: "Extract of a Report on the Conditions of Primary and Secondary School Education, Education for Minority Nationalities and Sparetime Education Throughout the Province and on Views Concerning the Future (Deliberated and Approved by the Standing Committee of the Eighth Session of the Fifth Provincial People's Congress)"]

[Text] Members of the Standing Committee:

On behalf of the provincial people's government, I am submitting a report on the conditions of the educational system in our province and on views concerning the future for consideration by the Standing Committee of the provincial People's Congress.

After the smashing of the "gang of four," and particularly since the Third Plenum of the 11th Party Central Committee, the situation on the educational front in our province, like that of other fronts, has definitely improved, and progress has been made year by year. Its chief manifestations are as follows:

1. The basis and position of the educational system in our province have achieved further development. Despite a number of complications during the 31 years since the founding of the state, and particularly the serious destruction by Lin Biao and the "gang of four," the educational system has developed extensively in our province. Colleges, secondary and primary schools have taken shape and a rudimentary system has been formed. Fostering a large group of constructive talents and a large laboring reserve army with a definite cultural level as well as creating a new generation of intellectuals have played a positive role in raising the scientific and cultural level of the people in our province. A contingent of qualified teachers for the educational system who are loyal to the party has been created.

2. Guided by the line of the Third Plenum of the 11th Party Central Committee, the educational front has brought down the "two appraisals," determined that the educational line during the 17 years preceding the "great cultural revolution" was correct, ascertained that the absolute majority of intellectuals are part of the working class and a supportive force of the party, and made clear that it is necessary to rely on teachers in running schools. Following the shift in emphasis of the work of the whole party, the emphasis of the task of the schools gradually shifted to a course centering on teaching to foster the talents of those who are both red and expert for the construction of the four modernizations. This is an important historical turn from disorder to order on the educational front.

3. The position and role of education in the construction of the four modernizations increasingly receiving the attention of the whole party and various levels of the people's government. Since the Third Plenum of the Party Central Committee, investment in education in our province has shown a definite increase every year. The province and some prefectures, autonomous prefectures, municipalities and counties even take out part of their funds from local financial reserves and various subsidies allotted by the central government to develop the educational system.

4. The internal readjustment of the educational system has obtained great results. Since the Third Plenum of the 11th Party Central Committee, an increasing number of comrades have come to understand the imbalance of proportions and the phenomenon of false swelling created by the unrealistic development of the educational system under the influence of "leftist" mentality. They have therefore done a great deal of work to reform the structure of secondary school education in implementation of the readjustment policy.

However, because of the influence of leftist mentality, particularly the destruction by Lin Biao and the "gang of four," the educational system was seriously damaged. Although great progress has been made after several years of recovery and readjustment, the problems remain numerous. At present, the prominent ones are: 1) Due to inadequate arrangement of investment in education for many years, accounts were outstanding every year in the operation of the schools. Moreover, unrealistic development and serious shortage of school buildings of all types and at all levels made conditions in the operation of the schools poor and these conditions are still in evidence. 2) The professional level of a good many of the teachers is not suitable to the demands of teaching. Because of the 10 years of disorder, the educational system was on the brink of collapse. Schools of all types and levels did not have many qualified graduates to replenish the contingent of teachers. As the schools also developed unrealistically, teachers appointed by the local people sharply increased in number, resulting in the fact that among the present contingent of teachers a good many have a professional level that is not suitable to the demands of teaching. The shortage of academic leaders and teachers who do solid work at institutions of higher learning is relatively serious. 3) The structure of secondary school education is unitary and the imbalance of proportions is still very serious. Because of the long-term influence of the "leftist" mentality, the development of the educational system has only been concerned with necessity and not possibility, quantity and not quality. The relationships of vertical and horizontal proportions of various types and levels of schools are in serious imbalance. Their structure is unitary and this causes the serious phenomenon of "false swelling" in the educational system. It will require a lot more effort to resolve this.

In view of these circumstances, the educational work in our province must follow the significant guiding principle put forth by the work conference of the party Central Committee to further realize economic readjustment and political stability, continue to remove the influence of leftist mentality, further implement the eight character policy centering around readjustment, continue to readjust the proportional relationship between economic and educational construction, and gradually increase the investment in economic construction. The educational system must uphold the principles of being practical and realistic, doing what one is capable of, proceeding in an orderly way and step by step, and taking care to achieve practical results. We must correctly handle the relationship between necessity and possibility, quantity and quality, general and key points, being advanced and backward, and develop education in a planned and proportionate way.

I. Concerning Primary and Secondary School Education

1. Strengthen the foundation and gradually popularize primary school education by stages and in groups. Primary school education is the foundation of education as a whole. Premier Zhou pointed out that we must deal with it as a major policy. Last December the party Central Committee and the State Council issued the "Resolution on Several Problems Concerning the Popularization of Primary School Education." Our province should basically strive to popularize primary school education in the 1980's. In view of the great diversity of economic conditions and cultural foundation of various areas in our province, as well as the imbalance of conditions in the development of primary school education in recent years, we must have planning by areas in a realistic and practical way, give guidance to different areas with different demands and carry out the task of popularizing primary school education through planning, by stages and in groups. All areas must popularize primary school education according to plan and comprehensively consider the suitability of locations and forms of operating the schools. We must conform to reality, suit measures to local conditions; we cannot "simplify in one stroke" or "assume only one shape." The reform of the primary school system must proceed from reality through planning and leadership, and we must guard against irrational acts to avoid causing new "false swellings."

2. Secondary school education must be structurally reformed. 1) We must continue to control the development of ordinary senior secondary schools and readjust and consolidate junior secondary schools. While continuing to condense primary schools that provide junior secondary school classes, we should make appropriate readjustment of the geographic distribution of secondary schools. 2) We must positively develop professional and technical education, and in doing so we should adopt a diversity of forms. We can offer professional courses in ordinary senior secondary schools. Cities with a relatively large number of ordinary senior secondary schools can independently operate professional secondary schools or select appropriate ordinary secondary schools to operate as such. 3) We must be earnest about operating secondary vocational schools well. At present, we must emphasize doing a good job of readjusting, reinforcing, consolidating and improving existing schools. All concerned bureaus must strengthen their leadership, conscientiously resolve existing problems in operating schools, earnestly operate older schools well and insure that new schools gradually reach the predetermined level. 4) We must positively operate agricultural secondary schools. This is one of the important ways to foster junior agricultural technical talent for the rural areas. Every county should operate one school and gradually popularize it after gaining some experience. 5) We must do a good job of operating key schools. For the 24 key secondary schools, the 4 key secondary vocational schools and the 2 key teacher-training schools already determined in the province, the educational administrative departments must closely coordinate with the prefectures and units concerned, conscientiously strengthen the leadership, be earnest about operating them well, and truly give play to their exemplary role.

3. To develop primary and secondary school education, it is necessary to fully mobilize the enthusiasm of all sides and implement the principle of "walking on two legs." In popularizing primary education, it is clearly impossible to rely solely on the state to take care of everything; the principle of "walking on two legs" must be upheld in operating schools. For this, it is necessary to fully mobilize the enthusiasm of all sides including production brigades and collectives, factories and mining enterprises. Moreover, we must encourage the masses to raise their own funds to run schools. We must widely popularize and implement the party Central Committee's and the State

Council's "Resolution on Several Problems Concerning the Popularization of Primary School Education." It must be clear that "the operation of schools by rural production brigades should not be viewed as 'egalitarianism and indiscriminate transfer of resources' or an unreasonable responsibility" and that "the repair of school buildings and purchase of desks and chairs for rural primary schools should generally be the major responsibility of the production brigades but subsidized by the state, depending on the circumstances." We must fully mobilize the enthusiasm of production brigades for operating schools, improve the conditions in their operation and develop the educational system. The factories and mining enterprises which have operated schools have constituted an extremely important frontline army in developing the educational system in the past. Factories and mining enterprises and their leading departments in charge, in accordance with the spirit of the resolution of the party Central Committee and the State Council, must list problems in the operation of schools on their daily agenda and study them regularly, the leadership must provide a shared special administration, set up educational administrative organs to strengthen the school administration, promptly solve the practical problems in operating the schools and conscientiously do a good job.

4. A contingent of qualified teachers must be built up. Doing a good job in the training of qualified teachers is both an urgent task and a long-term necessity. At present, particular attention must be given to the following: 1) The training of teachers must persevere in the direction of being both red and expert. We must continue to implement the party's policy regarding intellectuals, enhance the social status of teachers, improve their living conditions and mobilize their enthusiasm. All levels of educational administrative departments and school leaders must strengthen the ideological and political work of the teachers, conscientiously uphold the four basic principles, establish the attitude of serving the people wholeheartedly, and be loyal to the party's educational system. 2) We must further raise the professional level of teachers and strengthen their in-service training. First we should train and enhance those teachers who are not well-qualified now but may have prospects after training so that the annual growth rate of the contingent of qualified teachers will gradually increase. We must strengthen and reinforce the structure of teaching and research in the prefectures and counties of the province, and earnestly develop activities in research and teaching. We must combine the work of training teachers and research activities in teaching and raise the professional level of teachers by various means and by adopting a diversity of forms. 3) We must earnestly operate secondary and higher teacher-training schools and institutions and supply qualified teachers to primary and secondary schools. 4) After various systems of job responsibility in production were implemented in the rural areas, contingents of teachers appointed by the local people wandered around because payment and grain ration were not provided. We must resolutely implement the various provisions of the report transmitted to the provincial department of education by the provincial government last year.

5. There must be all-round implementation of the party's educational policy, and the problems in strengthening the ideological and political work of primary and secondary school students must be confronted. Primary and secondary schools are an important front for fostering and educating youths. Strengthening the ideological and moral education of primary and secondary school students is an extremely urgent task at present. All levels of education departments and schools must further correct the ideology in education, implement the educational policy of developing students in an all-round way--morally, intellectually and physically; persevere in the direction of being both red and expert; persevere in fostering all the students; overcome and

correct the tendency to foster only a minority while ignoring the majority of students as well as the tendency to emphasize only intellectual development and cultural knowledge and studies while ignoring moral and physical development. We must educate the students in the four basic principles so that they will have rudimentary knowledge of Marxism-Leninism, lofty ideals, noble sentiments, and a correct outlook on life, so that they will be determined to be a new generation with ideals, morality, knowledge and sound bodies.

II. Concerning the Education of Minority Nationalities

The education of minority nationalities has a particularly important place in our province. It is of strategic significance to earnestly strengthen national unity, reinforce frontier defense and construct the four modernizations. To help minority nationalities, the means that will do most for them in the long run is helping them to develop their educational system and foster their talent. If we deviate from educating the minority nationalities we cannot talk about popularizing education in our province. In the past 31 years there has been great development in the system of educating minority nationalities in our province. We have fostered a large group of cadres of minority nationalities and all kinds of constructive talent, and we have initially built a contingent of teachers of minority nationalities loyal to the party's educational undertaking.

However, in these 31 years the educational system of the minority nationalities in our province has experienced many complications, of which the destruction of the entire education of minority nationalities created by the 10 years of disaster is the most serious. After the smashing of the "gang of four," and particularly since the Third Plenum of the party Central Committee, under the guidance of the correct political and ideological lines, the provincial party committee and the provincial people's government has further strengthened the leadership for the education of minority nationalities and adopted a series of effective measures, such as doing the utmost in educational funding. For many years funding for the eight autonomous prefectures of minority nationalities has been over 40 percent of that for ordinary education in the whole province, exceeding the funding level of prefectures in general. Starting in 1975 eight teacher-training schools for minority nationalities have been revived and set up in eight prefectures and autonomous prefectures at a total basic construction investment of over 3 million yuan. After an assessment was made, teachers appointed by the local people in 35 border counties were turned into public teachers to the extent possible (some of them also made the change in extremely cold and poor mountainous areas inland). Appropriate arrangements were made for those who could not make the change. In 2 years, 1979 and 1980, over 20,400 people made the change. Last year the provincial party committee and the provincial people's government decided that an annual amount of 5.5 million yuan would be transferred from local finances at the provincial level to operate 19 secondary and 21 primary boarding schools for minority nationalities. They are now actively under construction and are striving for student recruitment this fall. Last year the provincial party committee and the provincial people's government decided to expand the institutes of minority nationalities. By 1985 the number of undergraduate, preparatory and cadre-training students will reach 3,000. In recruiting students for colleges and secondary vocational schools, during the last several years there has been a continuous improvement in the ways to care for the students so that the proportion of students of minority nationalities in the total enrollment continues to increase. Last year Yunnan University, the Kunming

Engineering College, the Kunming Teacher Training College and the Yunnan Chinese Medical College offered four classes for minority nationalities and recruited students from nationalities along the borders. Five secondary vocational schools also operated such classes and recruited students of minority nationalities. For the last 2 years, in accordance with the will of various minority nationalities, the written languages of the Detai, Xitai, Jingpo, Lisu, Lahu, Wa and Zang nationalities have been taught in the concerned prefectures and are listed in the teaching program for primary schools. Various concerned prefectures have already organized the translation and editing of teaching materials for the written languages of nationalities and these will be published and distributed by the provincial publishing house of minority nationalities.

In short, since the Third Plenum of the party Central Committee the most basic changes in the educational work among minority nationalities in our province have been a greater understanding of the damage inflicted on the educational system of minority nationalities by the mistakes of the "left" as well as having corrected the ideological line. However, some problems still exist in the education of minority nationalities which must be stressed and resolved. In accordance with the spirit of the recently convened work conference on the education of minority nationalities as well as the experience and lessons of the last 30 years, we must treat the major policy of carrying out further economic readjustment and political stability put forth by the work conference of the party Central Committee as the central guiding ideology in dealing with the educational work of minority nationalities in our province. We must earnestly implement the party's policy on minority nationalities, continue to remove the influence of "leftist" mentality, and conscientiously respect and fully safeguard the right to national equality and autonomy of minority nationalities in cultural education. In the future the development of education for minority nationalities in our province requires that we stress doing well in the following tasks:

1. To strengthen the education of minority nationalities, it is most important to conscientiously pay close attention to primary and secondary school education in accordance with the different conditions of the minority nationalities. In particular, we must pay close attention to the foundation of primary school education in a down-to-earth manner. It is necessary to implement the party Central Committee's and the State Council's "Resolution on Several Problems Concerning the Popularization of Primary School Education" in earnest, pay close attention to treating the popularization of primary school education in prefectures of minority nationalities as a strategic task. All prefectures and autonomous prefectures should formulate feasible plans according to their real conditions and implement them step by step. At present each county must appropriately concentrate its manpower, material and financial resources to operate one or two primary schools for minority nationalities. Each commune should operate a central and perfect primary school, strive to increase the quality of teaching and foster a group of graduates who pass the mark.

2. We must continue to adopt special measures to foster the talents of minority nationalities. The basic way to resolve this problem is to increase the quality of teaching at the primary and secondary schools in prefectures of minority nationalities. In order to do this, for a long time we should give emphasis to doing a good job of operating the 40 primary and secondary schools for minority nationalities funded by the provincial party committee and the provincial people's government as well as the group of primary and secondary boarding schools for minority nationalities locally funded by some prefectures, autonomous prefectures and counties. Along with recruiting

students to schools of higher education, classes for minority nationalities should be set up at these schools and the practice should be continued of differentiating candidates from different prefectures and nationalities as well as giving them preferential admittance and admittance at lower passing marks under conditions equivalent to those of candidates of Han nationality. Those classes which have already started should be earnestly run well. Other institutions of higher education directly under the province must also actively create the conditions to set up higher education classes for minority nationalities. The industrial, agricultural, medical and financial secondary vocational schools of the eight autonomous and border prefectures of minority nationalities should actively create the conditions for setting up classes for minority nationalities, lower the admittance passing mark and recruit students of minority nationalities which are relatively backward economically and culturally.

3. We must strive to do well in teacher-training education among minority nationalities and strengthen the building of a contingent of qualified teachers. There are few teachers of minority nationalities among primary and secondary school teachers, which is not suitable for the development of education of minority nationalities. We must actively foster indigenous teachers of minority nationalities. All prefectures and autonomous prefectures must strive to do a good job of operating the eight teacher-training schools for minority nationalities. Their training should center around recruiting students of minority nationalities, and teachers from nationalities in the locale should be fostered as much as possible. After graduation they should return to teach in their own prefectures. Training schools set up by the various autonomous prefectures and counties for minority nationalities must earnestly pay attention to the training of in-service teachers of minority nationalities.

4. We must further restore and strengthen the teaching of the language of minority nationalities and build up the written teaching materials. This is an important manifestation of the realization of cultural equality among the nationalities and an important manifestation of the implementation of the party's policy on minority nationalities in the realm of education. We must be resolute in overcoming the various errors and tendencies in treating the problems in teaching the languages of minority nationalities. At present, all concerned departments must make a concerted effort and strengthen the leadership for the translation, editing and publishing of written teaching materials. Concerned prefectures and autonomous prefectures must speedily gather together translation and editing staff workers, do a good job in their work, and improve the quality of translating and editing teaching materials.

5. In the autonomous areas of the minority nationalities, we must safeguard their right to autonomy in the educational system. In the future in the autonomous areas and regions of minority nationalities, we must respect their right to autonomy in education in accordance with the provisions of the constitution and the law. The development of the educational system of minority nationalities under the guidance of the unified educational policy and principles of the state and province, such as the planning for popularizing primary school education, the system of school administration, the forms of operating the schools, the teaching materials, the school system, the appointment and recruitment of teachers, and the management and use of funds, should all be determined by the autonomous prefectures and counties in accordance with actual conditions.

6. We must give full play to the benefits of educational funds and, wherever possible, squeeze out a little more money to develop the educational system of minority nationalities. In view of the temporary difficulties of the national economy and the backwardness in the education of minority nationalities, we believe that educational funds normally distributed to the autonomous prefectures and counties by the state for the educational system must be safeguarded and cannot be seized by any one or any unit. At the same time, a considerable portion of the various subsidies from the party Central Committee and the State Council should be used in support of the development of the educational system of minority nationalities. Furthermore, the provincial Department of Education should set up a bureau for the education of minority nationalities. All concerned prefectures, autonomous prefectures and counties should set up corresponding administrative organs and conscientiously administer the education of minority nationalities.

III. Concerning Sparetime Education of Workers and Peasants

Sparetime education for workers and peasants was devastated during the period of the "cultural revolution" and did not recover and develop until after the smashing of the "gang of four," particularly in the last 2 years. The work to eliminate illiteracy has been extensively launched in the rural areas. According to incomplete statistics, over 6,000 literacy classes are in operation in the entire province with an enrollment over 150,000. It is estimated that by this winter and next spring, tens of thousands of production brigade cadres at the grass-roots level as well as youths will no longer be illiterate. In cities and towns, various sparetime cultural, primary and secondary sparetime technical training classes are being held and evening colleges, correspondence colleges and television colleges are being set up. They are welcomed by the broad masses of rural youth, staff workers on the job and youths looking for employment. They have played a positive role in promoting greater economic readjustment and safeguarding greater political stability. The desire of youths to seek knowledge is extremely strong at present, and they urgently demand the growth of sparetime education. For some time in the future, the task of sparetime education for workers and peasants will be to strive for the elimination of illiteracy in youths among workers and peasants; positively develop various cultural, professional and technical tutorial schools; appropriately operate higher and secondary vocational education; and raise the cultural, scientific and technical levels of the broad masses of peasants and staff workers on the job. We must pay close attention to emphasizing the elimination of illiteracy and actively develop the cultural and technical education of the peasants; actively develop cultural and technical tutorial schools for staff workers; appropriately develop higher education for staff workers; speed up preparations and promptly establish a self-study examination system for higher education in our province.

Members of the Standing Committee, how the development of the educational system turns out is the key to the success of the four modernizations. This is also an important matter that benefits future generations. It is hoped that people from all nationalities and all sides will mobilize themselves, give emphasis, concern and support to education, jointly strive to increase the scientific and cultural levels of the Chinese nation, foster a new socialist generation, and train a large number of talented people for the construction of the four modernizations!

(The provincial people's government has already been instructed by the Standing Committee of the provincial people's congress to transmit and issue department chief Jiang Quan's report for implementation.)

BAI HUA INCIDENT DISCUSSED

Hong Kong CHENG MING [CONTENDING] No. 45, 1 Jul 81 p 11-13

[Article by Cai Xin [5591 2450]: "A Look at the Chinese Communist Political Situation in Light of the Bai Hua Incident"]

[Text] The Bai Hua incident which occured on the eve of the Sixth Plenum of the 11th Party Central Committee is over. The Sixth Plenum has also concluded. Do China's literary world and the Chinese communists correctly understand the Bai Hua incident? Have they been able to learn a political lesson from the complicated affair?

Why Two Similar Turns to the "Left"

Since 1979 when the Chinese communists established the line of the Third Plenum of the 11th Party Central Committee which called for looking forward in unity and emancipation of the mind, and which shifted the focal point of work to realizing the economic construction of the four modernizations (and no longer carry out political campaigns), they have committed two rather serious leftist mistakes. These two mistakes had a mumber of striking similarities. The only difference was that the first was not noted in timely fashion and has still not been corrected, while the second was quickly corrected.

March 1979

At the beginning of 1979, with the encouragement of the Third Plenum of the 11th Party Central Committee, the people of the entire nation were hastening to emancipate their minds. Spontaneous debate about the merits and demerits of Mao Zedong, a question which for 30 years no one had dared to touch, had already begun. This put very real pressure on the Chinese communists. Deng Xiaoping knew very well that evaluating Mao was a sensitive and delicate matter. For this reason he once told an American reporter that the problem of evaluating Mao could not be solved by this generation, but must be given over to the following generation. But, whether we speak of society as a whole or of the party, the evaluation of Mao did not cease because of what Deng Xiaoping said. In March, at a Theory and Ideology conference in Beijing, the Chinese communists actually carried on a great debate concerning the evaluation of Mao. At that time there were three problems in society absorbing the attention of the top levels of the Chinese communist leadership: the first was that some youths were in blind pursuit of a Western lifestyle; the second was that some young women were sleeping with foreign visitors, which was harmful to "national prestige;" and the third was the intense debate about the Xidan democracy wall, with some people calling for more and greater democracy. Against this background, Deng Xiaoping made a report at the Great Hall of the People by way of summarizing the conference on theory and ideology emphasized the "Four Maintains." After that the political situation took a 180 degree turn with the advent of the Wei Jingsheng and the Zhuan Yuehua incidents. These were followed by the closing of the Xidan democracy wall and the abolition of the "Four Greats" [great contending, blooming, big character posters, and debate--the four methods of carrying out "struggle by reasoning"].

December 1980

In August of 1980 the Central Committee of the CCP opened an enlarged session of the Politburo which was followed by the third session of the Fifth People's Congress. If we say that the Third Plenum of the 11th Party Central Committee was convened for the purpose of solving the problem of "emancipation of the mind," then this meeting of the Politburo can be said to have been held for the purpose of solving the problem of "system reform." And these two meetings have played similar decisive roles.

But after only three months had passed, in December of 1980, the Chinese communists held a Central Committee Work Conference at which a report emphasizing an attack on "those holding opinions different from the government" was given. The political situation again turned to the "left." Within the party, the background against which this trend to the left occured was the 4,000 man congress which had just finished discussing the "Resolution on Certain Questions in the Hisotry of Our Party Since the Founding of the People's Republic of China," and which, it is said, had just begun to have some new developments in their discuesion of the "evaluation of Mao;" outside of the party, the background was, on the one hand, student agitation (especially their participation in local elections) and, on the other hand, the reported increase in activity of "people's publications." The direct result of this turn to the left was to uniformly and indiscriminately make all "people's publications" illegal and to carry out suppression of the relatively more ideologically active literary world, to the extent of taking a knife to Bai Hua and his work, "Bitter Love."

Intricate Political Storms

Two "Instigators" of Political Instability

These two relatively serious relapses of the Politburo both occurred within three months of the adoption of the first big reform policy and both occurred during the critical time when the "evaluation of Mao" was being carried forward. In both cases certain "negative phenomena" (or elements "harmful to stability and unity" were latched onto and written up in long articles, and in both cases the most prestigious revolutionary faction of the entire nation appeared to turn things to the "left." This is extremely surprising and puzzling.

The Third Plenum of the 11th Party Central Committee made it quite clear that there would be no more political campaigns in the future, but these two turns to the left were carried out swiftly and with great determination throughout the entire country. Furthermore, in investigating the persons and matters involved (including party members)--especially in the Bai Hua incident--from the outset they smack of "cultural revolutions" which was to be "stirred up every seven or eight years." The Chinese communists have clearly stressed the legal system, the "Three Nots" [do not recognize, support, or join any anti-revolutionary organization], and opposition to the "left," but the two turns to the left did not accord with the spirit of the law, violated the "Three Nots," and in each case the opposition was all "opposition to the 'right'." Why should this be?

Having experienced these two turns to the "left," we have discovered that the elements harmful to stability and unity came from two areas. The first was the ideological tide of anarchism rising among some youths who seek to profit from chaos; the other was the ideological tide among leading cadres who fear there will be no more political campaigns from which they can profit. Of these two ideological tides, one arises within society and one arises within the party, but the Chinese communists continue to place excessive emphasis on the former and to neglect the latter. In fact, however, the danger from the latter far exceeds that from the former.

The Bai Hua Incident and the Chinese Political Situation

A Smell of Gunpowder From The "Cultural Revolution"

The latest turn to the "left" began with certain expressed attitudes of Deng Xiaoping and Hu Yaobang. Later, certain persons in Shanghai literary circles who were unhappy with the suppression exerted by Chen Yi (head of the Propaganda Department of the Shanghai Municipal Party Committee) reported the situation to Deng Yingchao in Beijing. Deng Yingchao referred the situation to Hu Yaobang who only then began to monitor it. It was just at this time that "Bitter Love" was made into the movie "Sun and Man" and show to the upper echelon of the military and at the Central Party School. The criticism surrounding "Bitter Love" began brewing among these two groups. At that time, most of those studying at the Central Party School were heads of propaganda departments or of cultural departments of various provinces and municipalities. They fommed strong opinions about this picture, believing it to be a poisonous weed that was anti-party and anti-socialist. They organized their opinions and reported them to the Central Committee of the party. After seeing them, Hu Yaobang offered his own remarks critical of them, the major thrust of which was: we should not lightly attack others and saddle them with labels, and if a work has flaws, then we should help to revise it, etc. The motion picture world, and even the vast majority of leading figures in literary circles (such as Zhou Yang Xia Yen, et al.) also held this view. In the military, some high ranking officers, especially several deputy chiefs of the general staff of the General Staff Department maintained a negative attitude toward this picture, as did the heads of the propaganda departments at the Party School. They sent a joint letter to Wei Guoching, the director of the Political Department of the PLA, requesting that he express support for them. A certain deputy chief of the general staff named Hu [illegible] raised the idea of openly cirticizing "Bitter Love" in the newspaper.

Even if Hu Yaobang had agreed beforehand, JIEFANG JUNBAO [LIBERATION ARMY NEWS] still launched a surprise attack, and took the lead in carrying out criticism of Bai Hua and his script, "Bitter Love." Moreover, it invoked a most startling magic weapon, the "Four Basic Principles." This was the big April 20 article, "The Four Basic Principles May Not Be Violated," which was presented in the name of a guest critic. The day before the article appeared, they secretly sent it to the Central People's Broadcast Station for broadcast, saying that it would be important news in the papers the next day. The following day at 6:30 in the morning the radio program "Summary of News and the Newspapers" broadcast it to the entire nation. Everyone heard the announcer that day speaking in the same tones as in the "Great Criticism Articles" broadcast during the "cultural revolution." It carried the same smell of gunpowder as at the start of the "cultural revolution." Because of this, it produced a very negative reaction throughout the nation.

"Two Newspapers and a Journal" and a "Yao II"

After the JIEFANG JUNBAO article came out, it met with opposition from all sides. Some persons even called the editors saying: "I hear that the writer of your guest critic article was Yao Wenyuan, is that right?" Even though PEOPLE'S DAILY received daily calls from the General Political Department of the PLA requesting that they reprint the article, it ignored them and neither reprinted the article nor expressed an opinion. Because of this, punitive censure such as that carried out by the "two newspapers and one journal" [the three chief party organs] which represented the party, the government and the military of the entire nation during the "cultural revolution" period did not materialize.

But, CONTEMPORARY REPORT, a magazine published in Beijing, rushed to stir up excitement by hurriedly putting out a supplement on April 23 containing two critical articles, "What kind of 'Movie Script' is This?" credited to the editor-in-chief, Huang Gang, and "The Truth About 'Bitter Love,' Inviting Criticism." Shanghai's WENXUE BAO [LITERARY NEWS] which is controlled by Chen Yi also "followed the situation closely," and JIEFANG JUNBAO and CONTEMPORARY REPORT coordinated their actions in the north and the south to give great play to the matter. Because of this, the masses called these the "two newspapers and one journal" and referred to the axis formed by the deeply buried guest critic, Liu Baiyu, along with Chen Yi and Huang Gang as the "triple alliance." They further referred to Huang Gang who wrote under his own name as the "Yao Wenyuan II."

The only difference between this time and the first "cultural revolution" was that this time the entire nation did not respond as clouds piling up before the wind to the "clarion call" of the "two newspapers and one journal," and the "call to arms" by "Yao II" was not prologue to a "second cultural revolution." Quite the contrary, the masses for once stood up spontaneously and resisted this "revolution." Two hundred students at Beijing University publicly demanded that Huang Gang come forth and debate the matter, but "Yao II", unlike the "Yao I", didn't dare feign "righteous airs," and so didn't dare respond to the challenge. Shanghai's WEN HUI BAO and SHANGHAI WENYI also openly resisted Chen Yi's orders and from beginning to end refused to reprint the article of the guest critic of the JIEFANG JUNBAO. In spite of this, the department heads who had studied at the Central Party School still demonstrated their true "political activist" qualities by getting more than 20 odd newspapers throughout the nation (in 20 odd provinces) to reprint the JIEFANG JUNBAO article.

A Spear Aimed at Hu Yaobang, Deng Xiaoping

People cannot help asking: when looked at through the eyes of the left, there are many works around that are more "anti-party and anti-socialism" than "Bitter Love." So why insist on criticizing "Bitter Love?" When it is clearly a problem of the recently filmed movie, "Sun and Man," why insist on only criticizing the script of "Bitter Love," which was put out in 1979? Since the original script was the work of both Bai Hua and Peng Ning, and "Sun and Man" was directed by Peng Ning, why criticize only Bai Hua and not Peng Ning?

It is now quite clear that the matter of criticizing Bai Hua is not only Bai Hua's personal problem or a literary problem, but is also a political conspiracy. It is precisely because the script of "Bitter Love" came out in 1979 that it is criticized and "Sun and Man" is not; it is precisely because Peng Ning participated in it that they only criticize Bai Hua and not Peng Ning. Why? The reason is that Peng Ning and Hu Yaobang are personally very close, and at the time that the "Bitter Love," script was put out in 1979, Hu Yaobang was directing the work of the Central Propaganda Department. If you could bring about the downfall of "Bitter Live," then Peng Ning and "Sun and Man" could fall of their own accord; if you could bring about the downfall of "Bitter Love," then you could discrddit the literary record of 1979 (numerous "problem pieces" came out in 1979), and this would naturally involve the question of Hy Yaobang's responsibility. If Hu Yaobang had to take responsibility, the Deng Xiaoping could not escape responsibility. This then was the "ulterior motive" of those criticizing "Bitter Love." Criticizing "Bitter Love" was their "sneak attack." The criticism of Liu Xiaoqi also began as a criticism of Wu Han's "Hai Rui Dismissed From Office."

The Lesson for the Chinese Communists

Why should the Bai Hua incident occur on the eve of the Sixth Plenum of the 11th Party Central Committee? This was another goal of the critics who hoped to exert pressure on the Sixth Plenum by means of the "campaign of criticism," and to cause the plenum to proceed in accordance with their wishes. That there should be such influences at work is not at all helpful to the Chinese communists in carrying out political and economic reforms. So just what lesson did the Chinese communists learn from the Bai Hua incident?

A Literary Beginning and a Literary End

Once the bell is tied around the tiger's neck, you still need someone to remove it. As we see it, the Bai Hua incident was brought about by a turn to the left on the part of leading figures of the reformist faction. Consequently, it was corrected by their "turn to the 'right'." On the one hand they allowed Zhou Yang, Xia Yen, Zhang Guangnian, and other giants of the literary world to come forth and directly confront the JIEFANG JUNBAO, and to use various methods (including talking to outsiders) to eliminate the evil influence of the army paper; and on the other hand they demanded the following in the name of the Central Propaganda Department: 1) in the future, everyone is to carry out criticism in their own names (that is to say that no one can use such appellations "guest critic" to intimidate people); 2) when an article is printed by a certain paper, there is no need for the others to vie with each other to reprint it, (that is to say that no one may launch a "campaign" and suggest that "public opinion is uniform"); and 3) no one can adopt methods of political campaigns or disguised political campaigns (actually referring to the army newspaper) to handle literary questions. At the same time they also allowed the literary world to give Bai Hua's work, "The Tide of Spring is In Sight," one of the new poetry awards. Hu Yaobang allowed this and strove to save the literary situation which the "triple alliance" (the "two newspapers and one journal") had disrupted.

The results of the Bai Hua incident make it completely clear that the ability of the Chinese people, both those within the country and those overseas, to distinguish truth and falsity has already improved. Their courage to speak boldly in defense of justice has already been heightened. And their thinking in opposition to the "left" has already advanced. They have coalesced into a strong force with which to be reckoned.

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MAO'S HISTORICAL ROLE IN REVOLUTION EVALUATED

Xian SHAANXI RIBAO in Chinese 8 Jul 81 p 2

[Article by Li Lun [2621 0243]: "Immortal Commendable Performances of the Great Pioneer of the Socialist Road"]

[Text] An overall accurate evaluation of our proletarian leaders with the aim of preserving the prestige of our party leaders and upholding party leadership is essential to the success of the cause of the proletarian revolution. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC"—which contains a realistic evaluation of the historical role of our great leader and teacher Comrade Mao Zedong in the Chinese revolution, a full-scale review of Mao Zedong Thought as the guiding ideology of our party and which guides people to look forward--fully reflects the aspirations of party members, cadres and people in their millions.

Marxism holds that the emergence of a leader and reaffirmation of his historical role are not something that happens by accident but a development of a specific stage of history and a specific era. "A leading figure represents a specific class and trend as well as the specific ideology of his time. He is not motivated by trivial personal ambition but by the historical whirling currents in which he lives." (Engels) The emergence of Comrade Mao Zedong as a great leader and teacher in Chinese history and the formation and growth of Mao Zedong Thought absolutely had nothing to do with his personal ambition but were closely connected with his great contributions to the Chinese revolution and the history of the revolutionary struggles waged by the Chinese people under the leadership of the Chinese communists represented by him. The history of the Chinese revolution shows that following the Opium War, the people of all nationalities in China failed to stop the aggression and plunder committed by the imperialist powers despite their heroic resistance and bloody struggles. Meanwhile, many patriotic heros and dedicated men with strong desires to save their nation also failed in their search for a doctrine of "national salvation" in every conceivable way. However, the salvo of the October Revolution marked the transmission of Marxism-Leninism to China and a new beginning for the Chinese revolution. Yet, as Lenin said, the Marxist theory "provides only general guiding principles who adaptation in England to some extent differs from that in France, in France differs from that in Germany, in Germany differs from that in Russia." It was no one but the Chinese communists represented by Comrade Mao Zedong who creatively adapted Marxism to the actual needs of China and who led the Chinese people to the great victory of worldwide significance so that they can stand up in the Orient with a new outlook. This is why Mao Zedong Thought has been regarded as a scientific summation of the Chinese people's revolutionary struggles and crystallization of the collective wisdom of the Chinese communists as well as a truth of our time. This is why the people have concluded that "without Chairman Mao, there would have been no new China." The "resolution" profoundly points out: "We should not credit all our achievements to our revolutionary leaders. Nor should we underrate their important roles. Comrade Mao Zedong occupies the most prominent position on the list of many outstanding leaders of our party." This conclusion is not only a rebuke to the idealistic worshipers of cults but also a thorough exposure of mistaken attitudes adopted by those who attempt to negate the historical role of Comrade Mao Zedong and the scientific value of Mao Zedong Thought. This conclusion is also instrumental in upholding historical materialism.

A party leader is symbolic of a collective which is closely connected with his personal role. Commenting on the historical role of individuals, Plek paid tribute to the tremendous role played by leaders and their great influence. In this connection, he pointed out: "Great men are people who really take initiatives, who can see farther than others, and whose minds work more energetically than others. They are willing to grapple with scientific problems from the earlier social process of the development of wisdom. They can forecast the needs of a new society created through the process of the development of social relations. They are willing to initiate moves to meet these needs. They are heros." Comrade Mao Zedong was a great Marxist, a great revolutionary, a strategist and theoretician. He had the revolutionary quality of loyalty to the people's cause. What is most important is that he upheld the revolutionary principle of seeking truth from facts, upheld the mass line, and was good at pooling the wisdom of the masses. He could always move higher and see farther than others. His prestige grew naturally through the protracted revolutionary struggle.

At every crucial turning point in the stage of the new democratic revolution, Comrade Mao Zedong was always prepared to turn the tide in our favor and guide the ship of revolution through the storms to safety. After the great revolution failed in 1927, comrades within the party influenced by the "left" deviationist ideology refused to acknowledge that the revolution was at its ebb. Buoyed by the belief that the revolution was surging to its "crest," they urged "using the cities as centers" from which to stage armed uprisings with the primary aim of capturing one or more provinces as the first step toward achieving nationwide victory. But this action taken at a time when we were weak and the enemy was strong and when our forces were outnumbered by the enemy forces cost our party, which had already suffered wounds and our revolutionary forces which already suffered blows, unnecessary sacrifices, thus placing the ship of revolution in danger again. At this crucial moment, it was Mao Zedong, Zhu De, Chen Yi and other comrades who resolutely led their troops on a march toward Jingganshan so that an armed regime based on the rural areas could be established, the revolutionary forces could be preserved and concentrated, the people's armed forces could be developed along with the guerrilla warfare, and a red revolutionary political power could be founded. This red banner hoisted by Comrade Mao Zedong in Jingganshan gave the blood stained revolutionary people at that time great inspiration and hope. This single flame in Jingganshan soon sparked a fire across the land. In the next 2 or 3 years, some 15 base areas, both large and small, were established throughout the country, quickly spreading the blaze of armed struggle and making it grow in strength. Soon Chiang Kai-shek mustered reactionary forces to mount five offensives against Jingganshan under the code name of "encirclement and suppression," the first four of which were smashed by our forces under the direction of Mao Zedong and other comrades. The fifth offensive forced the Red Army to begin a 25,000-li long march out of Jingganshan after opportunist Wang Ming relieved Comrade Mao Zedong of his correct leadership and military command. At this crucial moment, the majority of the comrades learned a lesson which clearly reminded them of the urgent need to settle accounts with Wang Ming's "left" deviationist military line. Then they met in Zunyi to reaffirm the leadership position for Comrade Mao Zedong. This is why the Zunyi meeting at which Comrade Mao Zedong reclaimed his leading role has been described as a turning point leading our party to grow in maturity from a stage of immaturity. Historical experiences show that negating Mao Zedong Thought means negating the revolutionary cause under party leadership and Comrade Mao Zedong's commendable contributions. By discarding the banner of Mao Zedong Thought, the Chinese people would lose their common ideological base. In the end, China would be torn by ideological confusion and would become divided again.

Because of the complicated nature of objective reality and because of the limited span of life, the mistakes committed by Comrade Mao Zedong in his later years appear unavoidable, especially at a time when our socialist system remained in an infant stage of exploration. But demerits should not be used to cover merits. His merits to the Chinese revolution were far greater than his mistakes. His merits were primary, while his mistakes were secondary. In his review of the international workers movement of his time, the leader, Lenin, left this famous proverb: "Eagles may occasionally fly lower than chickens. But chickens can never fly higher than eagles!" A leader of the proletariat is a beacon of the revolution and a banner of the people. His mistakes are mostly caused by complicated historical and objective factors. All adversaries of the communist movement always want to viciously point the finger of blame to mistakes committed by the leaders of the proletariat as having something to do with their personal quality and always want to take this as an opportunity to attack the dictatorship of the proletariat, for promoting the multiparty system and for accusing Lenin of being a "dictator" because he upheld the power of his class, the party and people. Some people within the revolutionary ranks who think in their own righteous way often consciously or unconsciously spread lies to discredit the revolutionary cause. Some people have used the banner of opposition to the worship of cults and mistakes committed by Comrade Mao Zedong in his later years as an excuse deny this great proletarian revolutionary the historical role he deserves. They have even vigorously mounted attacks on such a plain truth as "without Chairman Mao, there would have been no New China". In this way, they have totally exposed their ugly faces in the presence of the masses. Therefore, our overall evaluation of the great historical role of Comrade Mao Zedong Thought in connection with a review of the history of the new democratic revolution and our experiences in socialist revolution and construction is undoubtedly a very significant step taken by us to constantly uphold the banner of Mao Zedong Thought and the four basic principles. As far back as the early stage of the democratic revolution, a debate over what course the Chinese revolution should take occurred within the party. Contending that condiditions in China Duxiu suggested that capitalism be first developed in China until it ran its full course so that the proletariat could stage a comeback in a second revolution. In the course of practicing his right 1st opportunism, Chen Duxiu handed over the leadership of the new democratic revolution to the Kuomintang reactionaries, thus bringing defeat for the great revolution. It was Comrade Mao Zedong who conducted a thorough analysis of Chinese society at that time, advising the Chinese revolution to take the following two steps: 1) The launching of the new democratic revolution with the aim of overthrowing imperialism, feudalism and bureaucrat-capitalism and establishing a republic under the people's democratic dictatorship; 2) The transformation of the new democratic revolution into a socialist revolution. To achieve this, Comrade Mao Zedong suggested that the first step in the Chinese revolution was to build rural base areas, to encircle the cities from the countryside and to capture the cities in the end. This suggestion is an important contribution to Marxism from Comrade Mao Zedong. During the early stage of the socialist revolution and construction, Comrade Mao Zedong proposed the timely thesis that "only socialism can save China," and creatively applied the Marxist compensation policy to carry out the socialist transformation of the system of private ownership of the means of production and to organize and guide millions of people to take the socialist road of coprosperity. In this way, an unprecedented large-scale socialist construction program was launched throughout the country to transform the hopeless old China into a socialist new China taking initial steps toward prosperity. Today, the socialist system has taken deep root in the soil of China with a population of 1 billion, and the socialist road has become a path indispensable to the development of history. When we walk down this road with giant strides, can we forget the commendable services performed by its great pioneer? Therefore, only by taking the stand of the party and people, adopting a scientific approach to seeking truth from facts, and accurately evaluating Chairman Mao and Mao Zedong Thought can we enhance the proletarian revolutionary cause, the development of a policital situation of stability and unity and the four modernizations program, and push society forward.

PEOPLE TERMED MASTERS OF COUNTRY UNDER SOCIALISM

Kunming SIXIANG ZHANXIAN [JOURNAL OF YUNNAN UNIVERSITY, SOCIAL SCIENCES] in Chinese No 3, 1981 pp 1-8

[Article by Yun Gao [0061 7559]: "Socialism Must Have the People as Masters of the Country"]

[Excerpts] In recent years, China's academic field has explored ever deeper the question of what is socialism and launched free discussions of its manifestations. Some comrades feel that the manifestations of socialism consist mainly of two items: Public ownership and distribution according to labor. Others want to add the elimination of exploitation. All three items are essential. However, I feel that there should be another item, viz., the people as the masters of the country. I wish to discuss in this article my superficial views on this basic manifestation of socialism.

(I) Why, when the manifestations of China's socialism are brought up, people often discuss only the first two items, or add the third, but seldom mention the fourth? One important reason is that we have not raised the socialist democracy to its proper height, and therefore, we do not regard it as a basic socialist manifestation. For a long time, people have failed to distinguish the concepts of "state" and "society" and of the "state system" and the "social system." They have failed to realize that, under the identical social system, different "state systems" may be created due to the different historical and concrete conditions of the different countries.

In modern times, the capitalist society created a relatively universal democratic system, mainly the bourgeois parliamentarian democracy. The creation of the bourgeois democracy was an epoch-making progress in the history of mankind. Today, what is practiced in our socialist state is a brand-new democracy, viz., the socialist democracy of the people as the masters of the country.

According to the Marxist viewpoint, democracy is primarily an issue of the state system; it is a form and a pattern of the state. How do we regard the socialist democracy in terms of the form and the pattern of the state? First of all, it is an issue of the state system, which is the issue of the positions of the proletariat and other classes in the state, an issue which determines the fundamental nature of the state. Next, it is an issue of the governmental system. While the state system determines the fundamental nature of the state, without a suitable form of governmental system and a suitable form of state management, it will be impossible for the fundamental nature of the state to be correctly embodied and difficult for the ruling class to achieve its goal. Marx found that the Paris Commune was a specific form of the proletarian social republic; Lenin felt that the USSR was a new form of state management by the proletariat and the laboring people; Comrade Mao Zedong, in accordance with China's national conditions, adopted the system of the people's congress as the form of state management by the people. While the concrete forms are different, the basic essence is a governmental system of the state with the people as the masters.

Thousands of times more superior than the bourgeois democracy, the socialist democracy created by the proletariat after overthrowing the bourgeoisie is of the highest type. Generally speaking, this highest type of democracy in the development of the state system should possess the following three characteristics:

First, socialist democracy means that the laboring people directly control the political power, directly manage the state, and are the true masters of the state.

Second, socialist democracy means control by the overwhelming majority. The supreme power of the state is not concentrated in any individual, and no one has the legislative power of the emperor in the period of autocracy. The supreme legislative power belongs to the people's representative organ created through elections. In our country, it belongs to the National People's Congress.

Third, socialist democracy is guaranteed by giving a material foundation to the laboring people, because it is built on the foundation of the production means public ownership, thereby enabling the broad laboring people to enjoy equal rights in state management.

Such socialist democracy with the people as the masters is a basic manifestation of socialism as well as a characteristic of the socialist state system.

(II) Whether considering the people as the masters a manifestation of socialism is most important in distinguishing between genuine and sham socialism today.

It has only been 130 plus years since socialism emerged in the society of mankind as a new scientific ideological system, and its birth in some countries as a new social system has only been 60 plus years in the earliest of those countries. The realization of the socialist ideal in our country has only been 30 plus years.

If we say that the disputes on socialism before the October Revolution were mainly on the development of the ideological theory, then, the disputes after the October Revolution mostly concentrate on how the socialist theory, in practice, becomes reality and what kind of reality it becomes. Practical socialism is established in the particular environments of particular countries in specific historical periods; therefore, it emerges in many types, each with its own characteristics. This is the diversity of socialism. However, the diversity of the types of socialism cannot conceal in the least bit the identity of its essence. Regardless of how diverse the types of socialism, there is only one criterion.

According to the thinking of Marx and Lenin on the socialist society and the socialist practice of recent decades, the proletariat, after seizing political power, can only launch the first stage of communism--socialism. The development of socialism will go through the undeveloped and the developed stages. When building a new socialist society, the economically backward countries can only first enter the undeveloped stage of socialism. Currently, the socialist countries with Marxism as the guide are basically in the undeveloped stage, and so is our country. Like the rising sun, China's socialism is a brand-new social system which has just begun. China basically possesses the fundamental characteristics of socialism: First, the production means private ownership has been replaced by the socialist public ownership. Second, equality under the principle of distribution according to labor in consumer goods has been basically realized, more labor more pay, less labor less pay, and no labor no pay. Third, exploitation has been eliminated, labor is no longer a commodity, money is no longer capital, and the exploiting class has basically vanished. Fourth, the people's democratic dictatorship led by the worker class and founded on the worker-peasant alliance has been established, and the laboring people have become the masters. All four items are extremely important to a socialist country, none dispensable. However, when discussing the manifestations of socialism and distinguishing genuine and sham socialism, people, in a previous period, often mentioned only the first three items, which are naturally important. However, to discuss socialism, one must mention the issue of the socialist state and the state system; to distinguish genuine and sham socialism, one must mention the issue of the socialist democracy, which is the issue of the people as the masters of the country.

As shown by the socialist practice of 60 plus years, socialism must be built on a democratic foundation and truly make the people the masters of the state. If we are satisfied with only the creation of public ownership, the introduction of distribution according to labor and the elimination of exploitation and fail to uphold the people as the masters, then socialism not only will become bureaucratized politically, resulting in the deterioration of the socialist political power, but also will economically fail to fully develop the superiority inherent in itself. In a socialist country like ours, we urgently need not only economic modernization, but also political democratization. Without political democratization, there can be no economic modernization. Therefore, the issue of democracy is the issue of the people as the masters of the country.

(III) To truly realize the socialist democracy and let the people be the masters, we must introduce political, economic and social democracy and let the laborers directly manage the state, the enterprises and society. The laborers are not only the owners of the enterprises, the state and society, but also the direct policymakers and managers, with the power to decide on the use of the production means owned by society and the distribution of the fruits of their labor. To truly practice political, economic and social democracy and thoroughly make the people the masters, we must conscientiously attain the following four points.

1. The public service personnel of the state must serve as the public servants of the people, placing correctly the relationship between the masters and the public servants.

The public service personnel of our socialist state, from the heads of state to the basic level leaders, are not "the masters for the people," but the public servants "letting the people be the masters." The difference of one word in the two expressions reflects two fundamentally opposite standpoints. "Masters for the people" is a sort of heroic historical concept, considering oneself wiser than the masses, regarding oneself the master of history and entitled to special privileges, and placing oneself above the masses, while "letting the people be the masters," "letting the people manage their own affairs," recognizes the people as the masters of history, and the fact that all the public service personnel of the state must diligently and honestly serve the people and perform the duties of public servants.

After liberation, our country destroyed the system of exploitation and oppression, and the servant stratum vanished. Nevertheless, we call the public service personnel of the state public servants. The meanings of public servants and slavish servants are basically different, but in their relationships with their masters, the contents are similar. Our intent in using the term public servants is that we hope and demand that the public service personnel of the state, like servants, obey the words of their masters (the common people) and serve the people heart and soul. The facts are precisely thus. For the cause of the people, numerous superior public service personnel, seeking no credit and bowing their heads in service, spare no effort in the performance of their duties and devote their entire lives to the people. They are the good public servants of the people in fact as in name. All our public service personnel should continue to develop the "Yanan spirit" and the "Eighth Route Army style" and learn from the models of "selflessness."

2. We must introduce the general election system of the Paris Commune. The people should have the power to directly elect the public service personnel of the state and the power to replace and dismiss them.

Among our public service personnel, why are there some who have turned into fierce servants oppressing the people, while the masters are helpless? It has a direct relationship with our system of employing them. For many years, the problem has appeared to be hard to handle, but actually it can be easily solved if all the public service personnel are elected by general elections as proposed by Marx when summarizing the experiences of the Paris Commune. Marx pointed out clearly: One outstanding characteristic of the commune is that its members must be elected, responsible to the voters, subject to their supervision, and subject to dismissal or replacement at any time. It embodies the democratic principle of the people as the masters.

To strengthen the democratic system of the state, our National People's Congress formulated the "Election Law" and followed the fundamental principle of the Paris Commune which recognizes the people as the masters. Direct election of the county level in our country was generally held in July 1980. According to the statistics of the Central Ministry of Civil Administration, among the 2,757 units of the county level in the country, 1,947 elected people's representatives, and 1,319 completed their election work. The elections produced new leadership teams of the standing committees of the county people's congresses and of the county people's governments. Election work was underway in 355 units. For the remaining 455 units, it will be continuously launched within this year. The elections this time were held in accordance with the "Election Law" and "Organization Law" promulgated by the second meeting of the Fifth National People's Congress. As these laws made revisions of the original provisions and expanded, especially the introduction of direct election and special election, the broad people were very enthusiastic and extremely interested. The voters and election participation rates of the various areas were over 90 percent, with some areas as high as 99 percent. The elected people's representatives and leadership teams enjoy the trust and support of the broad people. Nation-wide direct election of the county level is an important step in perfecting the socialist democracy.

3. The workers must directly manage the enterprises. This is a proprietary right of the socialist people and a self-governing right of the socialist enterprises and undertakings. It guarantees the maximum development of the people's positivity and initiative according to the actual needs and within the confines of the law. After the October Revolution, Lenin emphasized time and again that the exploited masses must "truly participate in state management," that the plants and enterprises must "recruit workers to participate in state management," and that "more and more laborers must personally participate in economic management." According to Lenin, only when this "extremely arduous task" was completed would "socialism be realized."

According to the practical conditions of our country, the best form for worker participation in management is the staff and workers' congress. A form of enterprise management by the people as the masters, it is both a power structure of the staff and workers in enterprise management and an important forum for the staff and worker representatives to reflect the opinions, suggestions and appeals of the masses.

4. The role of the National People's Congress as the supreme state power organ must be fully developed.

Our first constitution in 1954 clearly provided that the National People's Congress was the supreme state power organ, and the current constitution has the same provision.

Whether in terms of the system, or in terms of ideological understanding, we must fully develop the role of the National People's Congress, solve the issue of the relationship between the party and the government, change the customary practice of making no distinction between the party and the government and replacing the government with the party, and make the National People's Congress the truly prestigious supreme power organ in fact as in name. Actually, readjusting the relationship between the party and the government and changing the practice of making no distinction between the two will strengthen and improve the party's leadership. Separating the party from the government does not signify negating the party's leadership. Upholding the party's leadership is not necessarily linked with making no distinction between the party and the government and replacing the government with the party. The practice of making no distinction between the party and the government and replacing the government with the party is unfavorable to activating the enthusiasm of the people's representatives and the broad masses in participating in the political life, blocks the development of the proper role of the political power organ in the life of the state, and hampers the party organizations of the various levels in concentrating on the important issues and fully developing their leadership effect in all realms. [The elimination of this practice] will activate the enthusiasm and creative spirit of the broad laboring people as the masters and promote the continuous progress of the various socialist undertakings.

(IV) As everybody knows, democracy was not always in existence. Nor did our socialist democracy drop down from heaven. It has been gained by the broad laboring people from the three great enemies under the party's leadership and after undergoing long and arduous struggles. To defend the socialist democracy exchanged with the blood of the people, we affirmed, after the founding of the nation, the democratic rights of the people as the masters by means of the constitution and relevant laws, making them into legitimate rights based on and protected by law. Therefore, to strengthen the socialist democracy and truly make the people the masters, we must reinforce the socialist legal system, making the socialist democracy of the people as the masters systematic, legal and orderly, and providing an inviolable and indestructible effective safeguard to the people's democracy. As proved by both the positive and the negative aspects of the practice in the 30 years since the founding of the nation, democracy and the legal system are indivisible. Democracy is the foundation of the legal system, and the latter is the safeguard of the former. Without the socialist democracy, there will be no socialist legal system. By the same token, without the socialist legal system, there will be no socialist democracy. Without the socialist democracy and legal system, it will basically be impossible to realize socialism and build a socialist economy, socialist politics and socialist society.

In China, economically we have already created the socialist popular ownership and collective ownership, providing a reliable material guarantee to the people in the enjoyment of their extensive democratic rights, and politically we have established the socialist democracy where all powers belong to the people, with the people's congresses of the various levels created through democratic elections serving as the organs for the people to exercise their powers. Looked at from these two most important aspects, the socialist democracy of our country is indeed the most progressive democracy in the history of mankind. However, as clearly known to the people, our democracy still lacks perfection and needs strengthening and development. In our reforms of the political, economic and cadre management systems now underway, one important content is to make them more compatible with the principle of the socialist democracy with the people as the masters.

The socialist legal system of our country, since the founding of the nation, has also undergone a tortuous course similar to democracy. In our country, laws representing the will of all the people as the masters are formulated and promulgated by the National People's Congress and its standing committee and enforced by the people's courts of the various levels. Acting according to law is acting according to the will of the entire people. The course of the 30 years of the new China fully indicates that, when the legal system was relatively sound, democracy developed smoothly; vice versa, when the legal system encountered trampling, democracy suffered disruption. Today, after the 10-year turmoil, people, like waking up from a long dream, clearly realize that, as our country, after a long feudal society of two or three thousand years, did not go through the stage of capitalist development and has spent only a short time on socialism, we lack experience whether in the aspect of democracy or in the aspect of the legal system, and that there are indeed many flaws and loopholes, which are easily utilized by enemies.

At the same time, the people of the whole country also profoundly realize that it will be impossible to build a modern socialist power without democracy, while democracy requires the safeguard of the legal system, and that democracy without the safeguard of the legal system will inevitably lead to anarchism, ultra-democracy and endless disasters. Democracy without discipline and order, an anarchist and lawless democracy, is definitely not the socialist democracy. It will only again sink our country into an anarchist state, thereby making it even more difficult for our country to democratize, for the national economy to develop, and for the people's living to improve. For this reason, we must, among the masses, especially the young people, launch a widespread propaganda education, explaining the kind of democracy we want and the relationship between democracy and the legal system.

Firs tof all, we must clarify the dialectic unity of democracy and the legal system. Some people want only democracy, not the legal system, on ground that the two are opposed to each others. This is completely wrong. They fail to understand that, in addition to such democratic rights as freedom of speech enjoyed by the citizens, the right of the people to manage the state is even more important in the socialist democracy. The people are the masters of our state. This point is the main content of the socialist legal system. The constitution, laws and decrees provide the concrete content of the democratic rights, the procedure of exercising them, the ways of safeguarding them, etc.

Next, we must understand the legal democratic procedure. This procedure is democratic centralism upheld by our party for many years and found effective.

Under democratic centralism, we must practice centralism on the foundation of democracy, while developing democracy under the guidance of centralism. We do not permit democracy and centralism to be separated or placed on opposite sides. If we discuss democracy and fail to mention centralism on the foundation of democracy, it will be a distortion of the socialist democracy; it will not be the socialist democracy, but anarchism or bourgeois liberalism. If we discuss centralism apart from the foundation of democracy, negating democracy, then, not only we will not have a correct centralism, but it will be a distortion of centralism, and it may even become bureaucratic centralism. We must firmly resist both tendencies. Currently, some people in society erroneously interpret democracy as following one's own inclinations and doing what one likes. We maintain that it is basically not democracy. First, the socialist democracy is a democracy under leadership. In the period of the democratic revolution, to complete the historical mission of realizing the people's democracy, our party led the people of China in the heroic struggles for more than half a century, overthrew the three big mountains weighing down on their heads, wiped out the basic obstacles to the people's democracy, and created an independent and democratic new China. By the period of socialism, we introduced the socialist democracy, and one fundamental premise is to uphold the four basic principles, while the core of the four basic principles is the party's leadership. Currently, the masses inside and outside the party place their hopes in our party. What they demand is to improve and strengthen the party's leadership. It is the will and desire of the overwhelming majority in the country. Secondly, the socialist democracy is the democracy of all the people, not of one individual or a minority; therefore, we must, when developing the socialist democracy, consider the will and desires of the majority and maintain order. Such order requires that we strictly follow the principle of the individual obeying the collective and the minority obeying the majority, that we firmly defend the centralized and unified leadership of the party and the government, the policies and laws embodying the people's will, and the prestige of the leaders and managers carrying out the people's will, and that we uphold the social, productive and work orders, especially the overall situation of stability and unity. Thirdly, to enjoy the democratic rights in our socialist country, we must perform the obligations provided by law. Here lies the issue of the identity of freedom and discipline. If one wishes to enjoy the democratic right of personal freedom, one must perform, according to law, the obligation of respecting the personal freedom of others; if one wishes to enjoy the democratic right of freedom of speech, one must perform, according to law, the obligation of refraining from slandering others and fabricating rumors to mislead people; if one wishes to enjoy the democratic right to work and to receive wages from society, one must follow labor discipline and the rules and regulations provided by law and obey the directions of the managers. Only thus will one be a person who is responsible to society and to others, understands the socialist democracy and legal system, and deserves to be called the master of society and the state.

CURRENT ROLE OF MAO ZEDONG THOUGHT DISCUSSED

Beijing BEIJING RIBAO in Chinese 17 Jul 81 p 3

[Article by Yang Zenghe [2799 1073 0735]: "Mao Zedong Thought Will Long Guide Our Actions--Study of the 'Resolution of Certain Party History Issues Since the Establishment of the State'"]

[Text] How to correctly understand and treat Mao Zedong Thought--this is one of the basic questions which the "resolution of Certain Party History Issues Since the Establishment of the State" (hereafter simplified "Resolution") seeks to resolve. The "Resolution" profoundly expounds on the formation and development of Mao Zedong Thought, highly evaluates the historical position Mao Zedong Thought has in the Chinese Revolution and in the Marxist-Leninist doctrine, and strongly stresses the important guiding role of Mao Zedong Thought at present and in the future. Earnest study of the "Resolution" will indeed further raise our consciousness concerning the need to maintain Marxist-Leninism and Mao Zedong Thought.

Mao Zedong Thought is the application and development of Marxist-Leninism in China--it is the crystallization of the wisdom of the entire body of the Chinese Communist Party. It has guided our party to victory over the fiercest and strongest enemies inside and outside the country; it has achieved the great victory of the New Democratic Revolution; and, in such a large economically and culturally backward country as China where the population is one-fourth that of world population, it has successfully resolved the difficult task of establishing a socialist system and achieved great results in economic and cultural reconstruction which enabled our country to take on an increasingly important and positive role in the realm of international affairs. That Mao Zedong Thought is publically recognized as the guiding thought of our party is an inevitable conclusion in the development of history.

Some comrades believe the following. Mao Zedong Thought was formed and developed during the New Democratic Revolution--many of Comrade Mao Zedong's important works were written during the New Democratic Revolution period and the socialist Reformation period. Since our country has already entered a new historical era today, Mao Zedong Thought is no longer suited for now nor the future. This type of belief lacks a complete and deep understanding of Mao Zedong Thought. The "Resolution" points out, "Mao Zedong Thought is our party's valuable spiritual treasure--it will long guide our actions." This is completely correct.

In the first place, both the scientific world view and the methodology which Comrade Mao had used for a long time to view and resolve practical problems of the Chinese Revolution still have universal meaning. Comrade Mao's scientific world view and methodology, in summation, consist of three basic elements; that is, seeking truth from facts, line of the masses, and independence and self-motivation. These three basic elements are the embodiment of the glorious thoughts of Marxist dialectical materialism and historical materialism--they are the living spirit of Mao Zedong Thought.

Seeking truth from facts with everything based in reality--this unites the universal principle of Marxist-Leninism with the concrete practice of the Chinese Revolution; it is a fundamental characteristic of Mao Zedong Thought and it is also the fundamental starting point for Comrade Mao when he guided the Chinese Revolution and the construction of practical activities. In the past, the union of the universal principle of Marxist-Leninism and the concrete practice of the Chinese Revolution, insisted on by Chinese communist members with Comrade Mao as representative and based on China's actual situation, helped overcome hurdles of difficulties and step by step formulated and executed the general battle line and various policies which turned the revolution from disastrous defeat to great victory during the New Democratic Revolution. During the transition period, Mao Zedong Thought further creatively paved a road to socialist reformation that is suited to the Chinese Revolution and established a brand new socialist system within the country. Since the Third Plenum of the Central Committee during the Eleventh Congress, and in view of the historical experience and teachings, the Party, after serious reflection and summation, renewed the emphasis on the line of thought that is based on seeking truth from facts with everything based in reality; only then did we gradually established a correct road for modern socialist reconstruction that is suited to the conditions of China. Seeking truth from facts with everything based on reality--this is a correct principle which we must adhere to at all times.

The line of the masses is the basic line of our Party. Everything for the people, everything dependent upon the masses of people--this is the original point of departure for all of our Party's works. "From the people, to the people", "union of the general and the particular", "union of leadership and the masses"--these are the scientific guiding methods which Comrade Mao advocated when he united Marxist-Leninist theory of knowledge and the Party's line of the masses. In the past, it is because we relied on the millions of people who were truly and whole-heartedly in favor of the revolution and maintained work methods and guiding methods based on the line of the masses that we gained victory over our strongest enemy. The construction of modern socialism must also be "from the people and to the people"--we must firmly believe and rely on the masses before we can form a correct leadership, before we can develop the positive and creative natures of the masses and thereby strive for a new and greater victory.

To be independent and self-motivated and self-reliant--this is also a basic starting point of Mao Zedong Thought. The proletarian revolution is an international movement and needs the mutual support of the proletariats in other countries. However, in order to complete this task, we must base the plan upon our own strengths. The understanding of the laws of the Chinese Revolution is achieved mainly on the strengths of our own people. Today, in order to carry on modern socialist reconstruction, we must strive for foreign aid and must absorb other countries' advance technology and scientific management methods. But, we are a large nation relatively backward economically and culturally. If we were to merely rely on foreign aid, we will never be able to establish a strong modern socialist nation. We must continue to maintain the principles of independence, self-motivation and self-reliance; we must rely on our own strengths before we can continue to develop our country's reconstruction business.

Secondly, the many basic tenets and principles in Comrade Mao's writings still have an important function for us now and in the future. Aside from each one's own specific laws, revolution and reconstruction also have similar basic laws; as long as these common basic laws have not disappeared, the tenets and principles which reflect these laws will not be dated.

Let us take the construction of the party. As long as the party exists, there will be party construction problems. China has been an economically and culturally backward country with few in the labor class and a majority in the farmer and other petty bourgeois classes. The situation has not fundamentally changed even now. Therefore, working to overcome the influence of non-proletarian thoughts and the building of the party on an intellectual basis emphasized by Comrade Mao in many of his writings still have very important meaning evyn up to today. We must further see that after our party has become the party in power, the change in positions may easily lead some party leaders and members to engender various unhealthy thoughts. As a result, the emphasis on an intellectual construction of the party in power has become even more of a necessity. On the side of organizational construction, Comrade Mao in his works expounded that the individual shouls serve the organization, the minority obey the majority, the inferiors obey the superiors and the entire party obey the Central Democratic Centralization System principle and party regulations. In intra party struggles, Comrade Mao maintained the principle of "learning from past mistakes to avoid future ones and curing the sickness to save the patient" which emphasized the goal of clarifying ideology but also uniting the comrades. In party practice, Comrade Mao advocated the three great practice...All these thoughts and principles are still suited for today's use and for future use.

Aside from party construction, there are many theories and principles concerning the construction of the armed forces, of political power, of culture, of the economy and concerning the problems of minorities the unified front, foreign relations and battle plans and strategies. To study the works of Comrade Mao, we must put emphasis on learning and understanding these basic tenets and principles and use them as guide for action. We cannot purposely pick on one particular conclusion or a particular terminology and criticize it out of its historical context. Furthermore, we cannot, using this as a basis, negate tenets and principles which have universal meaning.

Thirdly, Comrade Mao contributed many valuable ideas in his search for a suitable road to socialist construction based on China's conditions. We must take over and develop these ideas. As early as 1956, Comrade Mao wrote the report on "The Ten Great Relations" and suggested that we search for a road to socialist construction suited to China. With the Soviet experience as an example, he summed up our economic construction experience and correctly clarified the various relationships in socialist construction. The program and principles mentioned in this report has already been proven from practice to be suited to our country's conditions. In

1957, Comrade Mao gave an important speech on the correct handling of contradictions within the people at the highest State Council meeting and correctly pointed out that we must rigorously distinguish the boundary between the contradiction between the enemy and ourselves and that among the peoples themselves, so as to correctly handle internal contradictions among the people. He set up the following regulations as the correct principles for handling contradiction among the people: "unity-criticism-unity", "Let a hundred flowers blossom and a hundred schools of thoughts contend" and "Overall consideration, all-round arrangement". In 1958, Comrade Mao further clarified that the party's point of emphasis should be placed on technological revolution and should center the majority of its strength on carrying out socialist construction--he emphasized that after the change in work emphasis, attention should still be focused on political and economic unification and political and technological unification. In 1962, Comrade Mao, in the enlarged Central Work Conference, again and again emphasized development of democracy and implementation of the democratic centralization system and the need to work toward the understanding of the objective laws of socialist construction in order to gradually form a set of program policies and methods suited to the conditions in China. The tenets and principles advocated by Comrade Mao in his search for a road to socialist construction for China are the main components of Mao Zedong Thought--their practicality is obvious and easily discernible.

Mao Zedong Thought was born and formed during the New Democratic Revolution period and received further enrichment and development during the Socialist Revolution and Socialist Construction periods. It is a valuable treasure of the party formed over half a century. In the past, we have achieved great victories under its guidance; heretofore, under its guidance, we will surely be able to achieve even greater victory.

BEIJING ORGANS SUPPORT NEW MEASURES ADOPTED TO CURB CRIME

Beijing RENMIN RIBAO in Chinese 21 Jun 81 p 1

[Editorial: "Mobilize People To Wage Resolute Struggle Against Crime"]

[Text] Resolute efforts must be made to deal blows to crime and to maintain social order. This is a matter of great concern to the broad masses of people in the capital, Beijing. The 19th Session of the Standing Committee of the National People's Congress recently adopted and proclaimed three resolutions as an answer to some problems and proposals submitted by various localities throughout the country with the aim of dealing blows to crime and strengthening public security work. The three resolutions are "Resolution on Strengthening the Work of Interpreting the Laws," "Decision on Problems in the Process of Approving Death Sentence Cases," and "Decision on the Handling of Fugitives or Prisoners Who Commit Crimes Again After Serving Terms of Reform Through Labor and Education." These resolutions entirely conform to the wishes of the people, are absolutely necessary and essential to the strengthening of the socialist legal system, and are measures to deal more telling blows to crime, to protect the people and to maintain social order. Yesterday, the party committee, the Standing Committee of the People's Congress and the government of Beijing Municipality held a joint mobilization meeting, calling on party members, cadres and the masses throughout the city to immediately mount a campaign to conscientiously study, publicize and implement the three legal documents, which deserve our complete support.

In recent years, our departments in charge of political and legal affairs and public security and the broad masses of people have distinguished themselves by dealing blows to the criminal activities and by preserving social order in this capital. However, today the criminal activities remain to be controlled because our efforts to publicize the socialist legal system remain far from adequate and because no strong measures have been taken to punish the criminals. A prominent problem is that some prisoners who undergo reform through labor and education continue to engage in criminal activities after breaking out of jail or after serving out their prison terms and being released. These criminals pose a grave threat to the social order and lives and property of the people. We have received strong demands to severely punish this handful of scum and pests from the broad masses of people who can no longer tolerate the crimes committed by them. The decision on the handling of fugitives or prisoners who have committed crimes again after serving out their terms of reform through labor and education adopted by the Standing Committee of the National People's Congress provides for extension of the terms of reform through labor and education for those found guilty of crimes. It also calls for meting out severe punishment to the criminals or extending their prison terms and/or denying them their right to live in the cities. These stipulations constitute a powerful weapon for us to quickly sentence the criminals to longer prison terms and to effectively deal with the fugitives or prisoners who have committed crimes again after serving out their terms of reform through labor and education, and therefore should be resolutely implemented by our public security and judicial organs and procuratorates. Enaction of these provisions is a response to the needs of our current struggle against criminals and to the people's demands. Only thus can we curb the arrogance of the criminals, maintain social order and public security, and enable the broad masses of people to engage in the four modernizations program without worry. Furthermore, enaction of these provisions will make those ex-convicts feel that it is more difficult to commit crimes again and will help speed up their rehabilitation through reform and education. The organs of authority must bear the brunt of the responsibility for dealing blows to crime and for maintaining social order and public security in the capital, and must spare no effort to use their power to the best advantage. However, the efforts made by the public security and judicial departments and procuratorates alone are far from sufficient. The struggle against criminals calls for cooperation between the people and the organs of authority and active assistance by the former to the latter. By pooling their power and wisdom they will form a dragnet capable of exposing a handful of bad elements "like rats chased by all passersby along the streets." In popular language, the bad elements are like a "thief with a guilty conscience" and thus constitute only a minority extremely isolated from the rest of society. Our organs of authority must unreservedly support those people who display courage in combating the criminals, commend their heroism, and protect those who demonstrate an unflinching spirit to eliminate social ills harmful to the people. Resolute efforts must be made to deal blows to those criminals who take revenge on the opponents of crimes with retaliatory actions and bring them to justice.

The Strengthening of social order and public security calls for an overall effort, preventive measures, and "decontaminating" operations in order to nip the sins in the bud. Under an overall crime-control program, forces from all walks of life must be organized and placed under the unified leadership of the party in order to strengthen work in the political, economic, ideological, educational and cultural fields. This is a fundamental measure and a primary task that must be grasped by the entire party membership. The primary tasks under the overall program are to strengthen political and ideological work among the workers, to build a socialist spiritual civilization, and to foster decent moral beliefs in society.

A well-planned, specific propaganda and education program must be carried out by all departments and units with the aim of conveying the socialist legal system to the cadres and the masses of people, acquainting them with provisions of the laws and gradually popularizing basic knowledge of law among them. At present, vigorous efforts must be made to convey the three legal documents adopted by the Standing Committee of the National People's Congress to the broad masses of people until they really comprehend their essence. Only thus can we boost the people's morale and deflate the arrogance of the bad elements. The political and legal affairs and public security departments must use the three legal documents as a weapon to mount political offensives against law violators and criminals, calling on them to give themselves up to the law enforcement agencies, to expose crimes and to agree to rehabilitation. We must continue to concentrate on the education of youth so that they will recognize what is beautiful and what is ugly, what is glory and what is shame, what they should and should not do, what is legal and what is illegal or unlawful. We must give full play to the role of the neighborhood public security and mediation committees. Internal security measures affecting factories, rural villages, schools, and government organs must be successfully carried out. There must be joint guarding operations in order to insure their security. All units must regard security work as an essential part of their administration or enterprise management and make efforts to perfect their security and management systems. If particularly serious problems repeatedly recur in a specific unit, its leadership should be investigated and held responsible for any consequence. Cadres at all levels, especially leading cadres, must carry forward the party's excellent tradition and set a good example for the masses and youth to follow. In addition to doing good political and ideological work among the masses, party organizations at all levels must rectify their ways of thinking and help the party uphold its correct workstyle. When the workstyle of the party and people is rectified, a good groundwork can be laid for social order so that the bad elements will become more isolated than ever.

We believe that if the political and legal affairs and public security units can correctly apply the laws as a weapon in their resolute struggle against criminals, if party committees, governments and mass organizations at all levels are united as one to maintain social order, and if the broad masses are fully mobilized to do the job well, improved social order can be expected in the capital.

NEW LAWYERS RECRUITED TO ALLEVIATE SHORTAGE IN TIANJIN

Beijing GUANGMING RIBAO in Chinese 13 Jul 81 p 1

[Article: "Tianjin Recruits Lawyers Openly"]

[Text] With the approval of the Tianjin Municipal People's Government, the Tianjin Municipal Judicial Bureau has openly recruited lawyers in an effort to beef up the structure of the legal system, to alleviate the current shortages of lawyers with new recruits, and to prepare the related organizations for the implementation of a temporary regulation governing the practice of law in 1982. This recruitment will provide opportunities for those interested in law practice to pursue a career they have long cherished and to put their professional skills to the best use.

The recruitment of lawyers by the Tianjin Municipal Judicial Bureau began on 30 November 1980. In response to an advertisement on the recruitment of lawyers along with a related report published by TIANJIN RIBAO, more than 400 persons applied for such positions. Following a screening process, 308 of them were approved and permitted to take written and oral tests and political and physical examinations. By the end of March 1981, 43 full-time and 20 part-time lawyers were recruited by the bureau, which also recommended three legal advisers for use by the Tianjin Municipal People's Government.

Of the newly recruited full-time lawyers, graduates from college political and legal affairs departments accounted for 28 percent, graduates from other college departments accounted for 20 percent, and experienced political and legal workers accounted for 40 percent. Of the newly recruited part-time lawyers, graduates from college political and legal affairs departments accounted for 55 percent, including one legal expert who studied abroad, and experienced political and legal workers accounted for 35 percent. This indicates that the level of their professional knowledge meets the required standards. Of the recruits, party and CYL members accounted for 43 percent, indicating a standardized level of political quality.

This open recruitment has enabled a number of long misplaced legal professionals to return to their original posts, where they can really put their professional skills to good use and where they will no longer waste their energy as they did before. Among the recruits are legal experts whose transfer to their present posts was requested three or five times without success. Now, this problem has been settled through this recruitment.

This process of open recruitment was accomplished with the attention of party and government leadership and with the strong support of the departments concerned. The organization department of the Tianjin municipal party committee and the personnel bureau of the Tianjin Muncipal People's Government issued a joint circular on the open recruitment of lawyers to the lower level organizations and personnel units throughout the city, requiring them to take effective measures to speed up the recruitment process.

The principle of overall evaluation and selection of only those who are really outstanding was upheld as the recruitment process proceeded in Tianjin Municipality. In the recruitment, the standard of political and moral integrity was adhered to, the influence of the leftist ideology was ignored along with the theory that only class origin should be taken into account, and stress was laid on the current political performances of the applicants rather than their historical backgrounds or that of their families. Applicants of poor political quality were resolutely rejected. To make sure that the level of their professional knowledge meets the required standards, the Beijing College of Political Affairs and Law was invited to give test questions and to examine and evaluate the test papers returned by the applicants. Equal consideration was given to their test scores and special professional knowledge. Also recruited were some bright youths with a promising future legal career after undergoing training, despite the fact that they had never studied law or worked in the political and legal fields. The recruiters won the commendation of the masses for resolutely resisting unhealthy tendencies, for treating their relatives and friends just like any other people, for rejecting backdoor dealings, for following normal procedure and for giving fair treatment to all.

TROUBLE BETWEEN HAN, UYGUR MINORITY REPORTED IN XINJIANG

Hong Kong CHENG MING /CONTENDING/ in Chinese No 45, 1 Jul 81 pp 15-17

/Article by Ma Zheng /7456 2398/: "Two Nationality Disputes in Xinjiang"/

/Excerpts/ Bloody Incident in Aksu

In April of last year a serious incident lasting 2 days, in which Uygurs cruelly beat Hans, stole property from Hans, and rushed into and destroyed Han residential areas, took place in the southern city of Aksu in the Xinjiang Uygur Autonomous Region. The degree of cruelty of this incident far exceeded that of the military struggles that had taken place in Aksu Prefecture during the "cultural revolution" period in 1967 and 1968. At the same time, such an incident of destruction, wherein a minority nationality proceeded into a city's vast area to beat and rob Hans for 2 days, is extremely rare in the 31 years since the founding of the mainland regime. The day after the incident calmed down, up to a thousand telegrams and telephone calls of urgent appeal were issued from Aksu to Beijing and other places across the country to request the central authorities to demonstrate their position and to call upon provinces and municipalities of the whole country for assistance and support. But nationality disputes are questions about which the CCP feels greatly troubled, as for the time being it is very difficult to come up with effective means for coping with them.

The initial cause of the incident was very simple. In the beginning, a Uygur idler got into a quarrel with two Hans, and then the two sides started to fight. During the fight, the Uygur youth was accidentally killed by the Hans. A fight of this nature is really commonplace in Xinjiang. The people there are rough and belligerent. In the case of male and female youths, in particular, possibly because they are less exposed to culture and education, plus the fact that they were more deeply influenced by that trend during the "cultural revolution" period, when people wished to be "militant," they often get into quarrels over minute things, and all of a sudden, whole families pour out of their respective lairs to pick up any weapons whatever (such as iron bars and cutting knives) to join in the fight. Hence, deaths and injuries are heard of quite often. But because Hans had beaten a Uygur to death this time, a large-scale nationality dispute immediately developed. This is rather unusual, and evidently there is more to it than meets the eye.

After this incident took place, the news swiftly spread far and wide. Crowds of Uygurs, not organized or mobilized previously, immediately rushed to the site of the incident. A nameless, angry wrath directed at the Han nationality abruptly arose in the hearts of these Uygurs. When they could not at the time find the two Hans who had beaten the Uygur to death, their sentiments became further provoked. Thus, after some fanatical shouting and crying, this group of Uygurs started to direct their flames of anger at the Han bystanders around them. In the beginning they lunged indiscriminately at Hans; whether male or female, old or young, all Hans were grabbed and beaten. The incident quickly expanded. Then, once they had gone that far, they went all out. A group of Uygurs proceeded to gather Uygurs from every factory and commercial department in Aksu, on the one hand, while on the other hand, those who drove trucks stopped along the roads to the outskirts to arouse large contingents of Uygur peasants to come into the city and join their ranks. Thus, counting on their numbers and their momentum, the Uygurs started to launch a cruel headlong attack against the Hans. In the streets, wherever they met Hans they would simply grab them and beat them out of their wits tear their clothes, and take away their watches and any other property they were wearing or carrying. Those who were riding bicycles were dragged down, had their bicycles crushed, and were given the same fists and kicks. Instantly, a bloody, tyrannical atmosphere hovered over Aksu, this city of over 100,000 residents. Stores along the streets quickly locked their doors; factories suspended work; the city became paralyzed. Residents hid at home and dared not venture into the streets. Whereas the crowds of Uygurs became increasingly larger, the streets of the whole city were clear of any sign of Hans. But the frenzied Uygurs still did not stop. They rushed into the largest factory in the center of the city--the Aksu Daguang Woolen Textile Mill. This mill had several thousand workers, most of them Hans. They smashed furniture and knickknacks in the homes of Han staff and workers, and, as a matter of convenience, once more robbed them clean. For 2 days the hoodlums did whatever they pleased with overwhelming preponderance, as if they were in no man's land. During the 2 days after the incident first occurred, the Aksu Military Subdistrict did not dispatch any troops to interfere; public security personnel in the public security offices in Aksu all ran home and locked their doors. Aksu all of a sudden became the world of the Uygurs.

Strangely enough, the beginning of the incident was accidental, abrupt, and unrehearsed; yet the consequence obviously suggests that people were manipulating and organizing it behind the scenes. Then, after 2 days, the incident spontaneously subsided. Uygur peasants returned to their own villages, and Uygurs in the city also dispersed. Except for the smashed articles left behind and the unknown number of injured people, the city of Aksu returned to its former condition. What makes people feel even more strange is that, although several hundred Hans sustained different degrees of injury from being beaten under the venomous fists of the frenzied Uygurs, somehow not a single Han lost his life; the extent of the beating and injuring sesms to have been controlled very precisely. After the conclusion of the incident, several leading culprits among the Uygurs were arrested. Upon questioning, it was learned from these persons that they had attempted to organize, make contact with, and instigate people across the whole area of Xinjiang, and that they had planned in advance to stage an uprising in July that year and start trouble throughout Xinjiang in order to stir up an anti-Han tidal wave of even greater scale. Although as of July, more than 2 months later, no Uygur disturbance of greater scale had occurred in Xinjiang since that incident in April, the Hans seemed to have become frightened out of their wits by the Uygurs; they no longer dared to bother the Uygurs in any way whatever, and even when they walked along the street they tried to stay away from them as far as possible in order to avoid unnecessary trouble. Thus the Uygurs behaved like victors, extremely pleased with themselves. They became very cocky and supercilious.

Soldiers Raid Peniteniary in Kashi

For Xinjiang, 1980 was really a restless year. Not long after the Uygur-Han disturbance in the Aksu subsided in April, at the end of autumn an incident exploded in the Kashi area along the Sino-Pakistani border. Locally stationed troops got into a dispute with the Uygurs. That one involved a very common traffic incident, as a military truck of the unit crushed a Uygur to death. Relatives of the Uygur citizen who had been crushed to death and the driver of the unit held different opinions as regards the responsibility for this traffic incident, and neither side was ready to yield. But the local government proved to be fainthearted in the face of the local power of the Uygurs and the pressures exerted upon it from top to bottom, and hence it sentenced the military driver to death. After the sentence was announced, it aroused very great resentment on the part of the officers and men of the unit. The unit raised a strong protest, and the local public security department refused to carry out the execution order. Pressure from above was continually exerted, while resistance from below was reinforced, too. Finally, the unit started to take action; soldiers rescued the detained driver from prison and hid him in a secret place. The incident became more and more serious. Soldiers of the unit let it be known that if the court upheld the original sentence, they would then lay down their arms and go home. The unit was faced with the possibility of a mutiny. The vigor with which this unit opposed the mistaken nationalities policy and firmly resisted orders from above forced the authorities to consider the attendant impact and consequences. In addition, Kashi is located on the border area; once trouble started, it would be very difficult to wind up. Weighing the pros and cons as a result, the authorities could not help but overturn the original sentence and exempt the driver from the death penalty. This temporarily calmed the disturbance.

The Impact of Tibet and Taiwan Policy

In the past few years, the mainland regime's policy toward the Tibetan Autonomous Region has changed. This is because Tibet's spiritual leader, the Dalai Lama, is in exile abroad and has repeatedly sent delegations to carry out visits and investigations in Tibet. The Dalai has said that as long as Tibet achieves real national autonomy, and as long as the living standards of the Tibetans are really improved, he will support the mainland regime's Tibetan policy. Because there has been behind this Tibet question the force of India in recent years, and also because of the international influence resulting from the Dalai's exile abroad, the Beijing government, for the sake of the "united front," has changed its policy toward Tibet; this has been reflected mainly in giving the Tibetan Autonomous Regional Government greater autonomy. As a specific measure in this change of policy, the Beijing government agreed not to let the number of Han cadres in Tibet exceed one-third the total number of cadres in the region; this would allow more Tibetans to serve as local cadres at various levels. After this policy was put into effect in Tibet, large contingents of Han cadres were transferred from Tibet and back to the interior. But this policy somehow caused a chain reaction in Xinjiang: Since the Tibetan Autonomous Region could attain a greater degree of national autonomy, why could this policy not be similarly applied in the Xinjiang Autonomous Region? Hence the Uygurs immediately stirred up a tidal wave to squeeze out the Han cadres. On the other hand, insofar as the Han cadres themselves were concerned, they all had a strong degree of homesickness because of their long years of work far from their native places. They did not have the patience to stay in Xinjiang over the long run, and would be pleased to be transferred out of Xinjiang. Thus, all Han cadres in various party, government, and economic departments were in a restless state, and the foundation of the entire social organization became loose. Consequently, the following situation emerged in Xinjiang: Uygurs intensified their efforts to exclude the Hans; Hans anxiously demanded to be transferred out of Xinjiang; but the highest power-wielding stratum failed to demonstrate a forceful attitude in handling the problem. Thus, disturbances continued to erupt. Besides, the Beijing government's policy toward regional autonomy of the nationalities is part of the overall united front policy. Contradictions between the centralization of authority and regional autonomy have always proved difficult to balance and solve during the past 30 years. Because of the establishment of diplomatic relations between China and the United States, the Taiwan question was also naturally brought onto the agenda of CCP policy considerations. In order to secure Taiwan's return, the CCP have in recent years frequently issued appeals to Taiwan and promised that after its return, Taiwan would practice regional autonomy and the living standards of the people of Taiwan would not be reduced. But because of the fact that regional autonomy for the nationalities has remained nominal over the past 30 years, such appeals completely lack the power of propaganda for Taiwan. For the needs of the united front, the CCP must correspondingly change its policy with regard to regional autonomy for the nationalities. Political clouds have caused torrents of rain to fall in the autonomous regions of the minority nationalities. Cries of "We want autonomy, not rule" are being echoed in Xinjiang. The tidal wave of struggle for genuine national autonomy is furious in its momentum.

Within a period of less than a year, the Beijing government has twice played the Wang Zheng /3769 7201/ trump card in an attempt to solve the Xinjiang problem. Twice it has sent Wang Zhen to Xinjiang to carry out pacification work. Even though Wang Zhen used to be first secretary of the party committee of the autonomous region in Xinjiang, where he has many old subordinates and old colleagues, in the face of the demands of the Uygurs that they gain real autonomy and that they be allowed to handle the affairs of their nationality according to the traditions of their own nationality, the big issue of life and death for 8 million Uygurs can hardly be effectively solved simply by a smiling face and a few warm expressions of sympathy on the part of Wang Zhen.

SOCIOLOGICAL, EDUCATION AND CULTURE

CORRECT MISTAKEN LEFTIST POLICIES TOWARD INTELLECTUALS

Hong Kong CHENG MING [CONTENDING] in Chinese No 45, 1 Jul 81 p 48-49

[Article by Wu Ke [0702 0344]: "'Left' Deviationist Mistakes and the Fate of the Intellectuals"; article originally published in XIN SHIQI No 2, 1981]

[Text] During the 30 years since the founding of our state, our intellectuals have traversed a bumpy road. They have had their days of bright sunshine, pleasant feelings, and fruitful exertions, but regrettably those days have never lasted very long, and during a greater number of days they have been subject to all kinds of blows and struggled forward in difficult steps under "left" deviationist mistakes. The thorough liquidation of "left" deviationist mistakes in connection with the question of the intellectuals in order to mobilize their enthusiasm has become a very urgent and very important matter for the cause of realizing the four modernizations.

Our intellectuals have been subject to most serious attacks on two occasions: one was the 1957 antirightist movement, and the other was the "Cultural Revolution."

The 1957 antirightist movement was a political movement with intellectuals as the principal objects of revolution. In order to overcome bureaucratism, subjectivism, and sectarianism in our work as well as to eliminate the isolation of part of the masses (mainly the intellectuals) toward the party, our party decided to launch a rectification movement within the whole party and also asked the masses outside the party to help carry out this rectification. At that time, except in the case of an extremely small number of rightist elements, the vast ranks of the masses, especially intellectuals, put forward many critical opinions out of their love for the party. But because our party made a mistake in appraising the situation of class struggle, when it counterattacked against the rightists it greatly expanded the area of attack, classifying as rightists a great contingent of intellectuals who had dared to put forward those opinions but who were more advanced in their thinking and who were very talented. Thus the ranks of the intellectuals suffered a heavy blow.

During the 10 years of the "Cultural Revolution," the intellectuals suffered an unprecedented catastrophe. Most among them lost the opportunity to engage in mental work and were forced to carry out heavy, punitive physical labor. A considerable number of them had such labels as "counterrevolutionary revisionists" and "reactionary academic authorities" attached to them, and some were even tortured to death.

For many years, various erroneous theories led people to entertain incorrect views about intellectuals. Generally speaking, there have been the following points of development:

1. Upon the basic completion of socialist transformation, it was not recognized that the overwhelming portion of intellectuals had already become a component of the working class; instead, they were erroneously taken to be bourgeois intellectuals.

2. Proceeding from the above erroneous appraisal, the demand by the vast ranks of intellectuals to enjoy more democratic rights on being masters of their own house and their revolutionary enthusiasm in trying to play a greater role in the building of socialism were erroneously taken as attempts "to seize leadership power from the party."

3. Science and culture were despised, and the point that "the more knowledge one has, the more stupid he becomes" was spread. It was denied that the building of socialism required the supportive force of the intellectuals, as if it would be enough simply to have the hard-working masses of workers and peasants.

4. The slogan "Turn intellectuals into laborers" was put forward in order to let the intellectuals engage in physical labor for long periods of time, or even to force certain intellectuals to abandon their own specialties and become workers and peasants.

In the old society, the overwhelming majority of China's intellectuals were subject to oppression by imperialism, feudalism, and bureaucratic capitalism. During the democratic revolution, they played the roles of vanguard and bridge. Even in the old society, it would have been improper to take all intellectuals as bourgeois intellectuals; then after liberation, when they served socialism under the party's leadership and education, how could they all be designated as bourgeois intellectuals? How could their proper demand to make more contributions be designated as an attempt "to seize leadership power from the party?" Besides, along with daily changing science and technology, not only does the development of the forces of social production depend on scientific and technological power, but a large amount of heavy physical labor will gradually be replaced by machines. Physical labor will continually be reduced, whereas mental labor will continually be increased. This makes it increasingly necessary to train huge contingents of intellectuals. The attempt to eliminate the distinction between mental and physical labor by "turning intellectuals into laborers" is not only an unrealizable "left" deviationist fancy but also a retrogressive policy.

Our party originally had a correct policy toward intellectuals. During the first few years after the founding of our state, our party adopted the principles of unity, education, and remolding with respect to intellectuals. Thus it not only united with intellectuals from the old society but also won over a large contingent of intellectuals abroad to return and participate in undertakings of socialist construction. They played their role very well in the restoration of the national economy and in the realization of the First Five-Year Plan. In 1956, we basically completed the socialist transformation of agriculture, handicrafts, and capitalist industry and commerce. This was a new historical turning point. How should we appraise and treat intellectuals in the new era? At the conference on intellectuals convened by our Party Central Committee, Comrade Zhou Enlai made his "Report on Intellectuals" and comprehensively put forward the Marxist principle for treatment of intellectuals. Comrade Zhou Enlai pointed out that, of our intellectuals, "The overwhelming majority have already become working personnel of the state, have already been serving socialism, and have already become part of the working class." He proposed strengthening and consolidating the alliance between the workers, peasants, and intellectuals, and to rely on this alliance in order "to build our country into a completely modern, prosperous, socialist industrial power."

But this Marxist principle did not get implemented; instead, it was replaced by "left" deviationist mistakes. What led to the rise of these mistakes was, theoretically speaking, first of all the fact that our party passed idealist judgment on social contradictions. Upon the basic completion of socialist transformation, it erroneously proposed once again that the principal contradiction in our society was still the contradiction between the proletariat and the bourgeoisie; it also proposed carrying out a so-called socialist revolution on the political front and the ideological front. Essentially, these propositions were all aimed at intellectuals. The problem was thus clearly laid before us: since we still needed to carry out revolution, where would we find the objects of this revolution? Because exploitive classes no longer existed, our society was then basically composed of three kinds of people--workers, peasants, and intellectuals. We of course could not take the workers and peasants as such objects, so in the end we found the intellectuals. In response to this kind of political need, a theory that differentiated the classes according to their ideologies and world views somehow rose to the occasion. According to the funadmental principle of Marxism, a class is only the product of a given type of economic relationship. The viewpoint that differentiates the classes according to their ideologies and world views is thoroughly a viewpoint of historical idealism. The so-called bourgeois intellectuals were created artificially as objects of revolution in the new era by nothing more than this viewpoint of historical idealism.

Here we must point out that the proposition about socialist revolution on the political front and the ideological front cannot stand the test, either. The fundamental question of political revolution concerns the seizure of political power. This task was accomplished long ago when we established the People's Republic of China. If we came to raise the question of socialist revolution on the political front 7 years afterwards, then from whom were we to seize this political power? As for questions in the ideological realm, we can only attempt to solve them by means of discussion and study and by means of persuasion and education; this has always been the case. To attempt to solve ideological questions by means of launching revolutionary movements and by means of coercion is not only useless but bound to lead to the mistake of expanding class struggle. Next, there have been deep social roots that have given rise to "left" deviationist mistakes, as they reflect the influence of feudalism and the thinking of small producers. Our country has a feudalist tradition of several thousand years, and our productive forces have been very backward. Even after socialist transformation was accomplished, small production still dominated. Hence, certain comrades within our party who had been subject to the rather profound influence of the thinking of small producers inevitably exhibited an attitude of looking down upon knowledge and despising science, thus showing no understanding at all of the great revolutionary role of modern science and technology in the development of productive forces in society and the propulsion of society forward. Toward the science and culture developed under capitalist conditions, they even harbored a psychology of fear. Such thinking and feelings led them even to take all intellectuals with definite culture and scientific knowledge as heretical forces, and hence, they instinctively attempted to exclude them. For the first few years after the founding of our state, our party's ideological line, political line, and organizational line were all correct; therefore, on the question of intellectuals, the influence of feudalist thinking and the thinking of small producers was reflected only in individual questions and partial questions. The sectarianism pointed out by Comrade Zhou Enlai in his report on the question of intellectuals was a mistake of this nature. Although certain excessive struggles also took place in the ideological and cultural realms during those few years, from an overall point of view the situation was not yet very serious. Later on, along with the rise of "leftist" mistakes in our party's guiding ideology, the influence of feudalist thinking and the thinking of small producers, as reflected in the question of intellectuals, also became more and more serious.

After the smashing of the "gang of four," our party paid a great deal of attention to the work of putting into effect our policy on intellectuals. There has been a new affirmation of our intellectuals as part of the working class, as well as a rectification of unjust, false, and erroneous cases of litigation since the 1957 antirightist movement, and all of these things have served to create certain conditions for giving scope to the role of intellectuals. Nevertheless, the obstacles encountered by this work have been great, and the progress has not been very fast, either. Certain intellectuals still are not rationally employed; situations whereby they are not applying what they have learned are still quite serious. The working and livelihood conditions of certain intellectuals are still rather inadequate, and there has been no improvement for quite a long time. In particular, the bad practices of discrimination and exclusion with respect to intellectuals still exist. As soon as intellectuals raise their heads, some again use the pretext of their "raising their tails" and attempt thereby to put them down. This demonstrates that the remnant poison of "left" deviationist mistakes is far from eliminated.

There are also people who do not agree that labor compensation for intellectuals may and should be higher than that for physical laborers; they feel that the salaries of intellectuals are excessively high. The facts are exactly the opposite. On the contrary, in our present wage system an outstanding problem is the fact that labor compensation for teachers, scientific and technical workers who are the same age is even lower than labor compensation for workers who are engaged in physical labor. This kind of irrational situation is not beneficial to raising the scientific and cultural level of the whole nation, and it is harmful to the realization of the four modernizations.

China's intellectuals are precious and worthy of esteeem. They not only have knowledge but also are patriotic. Even during the difficult days when they were subjected to all sorts of persecution, they still loved the motherland, supported the Communist Party, and resolutely served socialism. We must make up our minds to eliminate the remnant poison of "left" deviationist mistakes and strive for the further realization of the party's policy on intellectuals. As intellectuals, they must also strive to arm themselves with the Marxist world view and to ascend a step further the level of their professional knowledge, so as to make even greater contributions the realization of the four modernizations.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

'RENMIN RIBAO' REVIEWS VOGEL'S BOOK ON JAPANESE ECONOMY

Beijing RENMIN RIBAO in Chinese 12 Jul 81 p 7

[Article by Yu Zhong [7183 0022]: "Probing the Mystery of the Japanese 'Economic Miracle'"]

[Text] In recent years, almost all the capitalist nations have become greatly interested in the Japanese economy, thereby setting off a "Japan craze." The book "Japan As Number One - Lessons for America" was published during this craze. This book, which was published in May 1979 both in English and Japanese, was put on sale simultaneously in the United States and Japan and turned to be a best seller.

The author of this book, after years of study, cited a vast amount of material and concrete instances to probe the mystery of the Japanese "economic miracle." He felt that the mystery in the Japanese economy does not come from the so-called traditional national character or the virtues inherited from the old days, but lies in its unique organizational capability, farsighted planning and policies, ability to pool the wisdom of the masses, and its consciousness in achieving its goals. In the early 1950's, when its economy began to revive, Japan was able to aim at its long-term interest by formulating a policy of "taking trade as the foundation of the state' and went a step further to organize trading companies in a planned way to vigorously develop overseas markets. Preferential treatment was provided by the government in this respect. In the second half of the 1960's, in order to improve the competitiveness of its products in international markets, the Japanese government concentrated its capital on capital-intensive industries. In the second half of the 1970's, in view of the fact that contradictions intensified in world's scramble for international markets, Japan again put forward a policy of "taking technology as the basis of the state" in order to turn the "material war" into a "soft ware war." Since the shock of the oil crisis in 1973, its focal point has again been shifted to service industries as well as industries concerning information and knowledge, which consume less energy.

The author pointed out that the quality of the people of a nation is an important factor influencing the speed of national development. The Japanese miracle has relied on its educational undertakings and on its "knowledgeable people." Japan has implemented a system of 9-year compulsory education. Japanese students from primary to senior middle schools have a good grasp of their basic courses. As a result, their level is comparatively higher than students of the same grade in

Western nations. Besides school education, the Japanese enterprises are more concerned with long-term profits. They provide on-the-job training for their employees regardless of costs. In Japan, it is almost impossible to find a leader of an enterprise who is not of the "intellectual circles."

The author also felt that another factor of the success of Japan lies in its personnel and wage systems. The Japanese industries have adopted a system of permanent employment with an "order of seniority" which means the position of an employee is decided in accordance with his seniority. He must start with his job as a junior worker and will then be promoted step by step to section chief, division chief, and then department manager. Measures adopted in the wage system include basic salary and fringe benefits. Everyone is eligible for promotion; however, more generous supplementary wages are given to the more capable, vigorous and hard working people who have achieved obvious successes. This double standard wage system which is strict and impartial in meting out rewards and punishments is regarded as advantageous to encouraging the initiative of the employees in production.

The book also felt that both the labor-management relations and information gathering in Japan are better than that in other Western nations and thereby enabling Japan, a "small country in terms of resources," to become superior to those large countries having abundant resources.

Ezra F. Vogel, the author of "Japan As Number One - Lessons for America," is a professor and Chairman of the Council on East Asian Studies at Harvard University. He has spent more than 20 years studying the politics and economics of Japan. Vogel said himself that his purpose for writing this book was to "sound the alarm for America" so it would "get going." He cited the words of Lu Xun: Is it necessary to awake those who are fast asleep in a house which is about to collapse? The conclusion: "The alarm must be sounded loudly." Perhaps because of the fact that he was too anxious to "sound the alarm," the author in his book overly-idealized the achievements of Japan. Some aspects of secondary importance were also regarded by him as primary aspects deserving of affirmation. Moreover, the method employed by the author to try to interpret the "Japanese mircle" simply from the angle of economics seems to be not comprehensive enough. Of course, among the books of the Western nations on Japanese economy, "Japan As Number One - Lessons for America" is a book having its own particular point of view and fairly rich contents. This is a book good for our reference.

'XINHUA' REPORTS ON POLISH ECONOMIC SITUATION

OW291501 Beijing Xinhua Domestic Service in Chinese 1221 GMT 28 Jul 81

[Text] Warsaw, 27 Jul (XINHUA)--In view of Poland's continuously worsening economic situation and shortage of market supplies, the Polish Government recently decided to lower meat ration standards for residents by an average of 20 percent in August and September this year. Except for coal miners working underground, children and expectant mothers, whose meat rations will remain unchanged, rations for all other residents will be reduced from 5 to 3 kilograms per month.

The Polish Government also plans to increase at once or in stages the price of bread, milk, coal, power, soap, refrigerators and other food and industrial products, expand the scope of rationing, and for this reason give suitable subsidies to low-income families.

It is reported that since the strikes in summer last year, industrial production has sharply declined. According to official statistics, industrial output value for the period between July 1980 and May 1981 dropped by 130 billion zlotys (equivalent to 4.3 billion U.S. dollars) as compared with the same period a year ago. The production situation has further worsened since the beginning of summer this year. Industrial output value for June dropped 16.9 percent compared with the same period last year. The number of cattle, hogs and sheep in stock dropped 6.7 percent, 13.3 percent and 7.4 percent respectively compared with the same period last year. Production decline has led to greater market shortages. Store shelves are empty, and there are increasing panic buying and long lines of shoppers.

The Polish Government's decision on lowering meat rationing standards and its plan to raise prices have drawn strong repercusions from people of various circles. The three major trade union organizations, the "Solidarity" Trade Union, the Industrial Trade Union [Hang Ye Gong Hui 5887 2814 1562 2585] and the Federation of Self-Governing Trade Unions separately held meetings or issued statements, opposing the decision.

According to a PAP report, (Ya Ao-nei-shi-kai-wei-qi), press spokesman of the "Solidarity" Trade Union, said at a press conference that the trade union did not agree with the lowering of food rations and requested the government to take emergency measures to improve the food supply situation. Walesa, leader of the "Solidarity" Trade Union, also said at a press conference that as a component part of economic reform, price hikes should come into effect after the economic reform or in the final stage of the reform, and that the workers must be consulted on the necessary subsidies they should receive. At the same time, he indicated that the "Solidarity" Trade Union headquarters did not advocate nationwide protest activities. He said that protest actions organized on the issue of food and daily necessities shortages not only could not produce any concrete results, but on the contrary could aggravate the existing tense feelings.

It is reported that the Polish Government and the "Solidarity" Trade Union held a meeting on 27 July on the question of meat rationing standards and food supplies and reached a temporary agreement on reducing meat rations for residents only in August.

Since 25 July, mass meetings or demonstrations have taken place one after another in Kutno City in central Poland, Szczecin in the northwest, Lodz--Poland's second largest city--Katowice and Torun, protesting food shortages and opposing the reduction of meat rations and the proposed price hikes.

WOMAN COMPLAINS TO DENG ABOUT PRC-SRV WAR

OW041451 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 3 Aug 81

[Text] The self-defensive counterattack against Vietnam ended more than 2 years ago. However, the Sino-Vietnamese border has not been calm and our PLA soldiers have continued to shed blood and make sacrifice in unnecessary armed clashes. Although the PLA Political Department has ceaselessly strengthened propaganda work among the troops, the heavy military casualties have doubtlessly affected the morale of our commanders and fighters.

The miserable feelings of parents, brothers and sisters who lost their kinfolks in this endless war can hardly be described. Many parents and other relatives of war victims have written to the central authorities to express their misfortune and misery and to put forth their problems, views and demands in connection with the border clashes.

One of these letters, from (Wu Huisheng), a retired woman schoolteacher in Kunming, to Deng Xiaoping is particularly touching. This letter reflects the innermost feelings of the tens of thousands of parents who have lost their sons. We will now broadcast, for our comrades, the full text of this letter:

Vice Chairman Deng: As I was waiting with an expectant feeling for the return of my youngest son who was soon to be demobilized, I suddenly received a notice about his death in some Sino-Vietnamese border area. The feeling of sorrow in my heart cannot be described. I had hoped that, as my youngest son and the family's sole successor, he would live with me for the rest of my life, since my husband and my daughter had died from hard work during a 3-year period of hardship and my elder son had died in an armed struggle during the 10 years of turmoil. At present I am a lonely and miserable old woman, the only survivor of the family.

Vice Chairman Deng, I understand that every one is responsible for his or her own prosperity or misery and that a man should fight on the battlefield to defend his country so that he will be respected even if he dies in action. However, what I do not understand is why China and Vietnam, which have been friendly neighboring countries and have been class brothers sharing weal and woe, have now become sworn enemies? Why should the Chinese and Vietnamese peoples kill each other? What is the Sino-Vietnamese border conflict for? For whom did my son die in action?

Vice Chairman Deng: I also do not understand how Vietnam, being a small country, can be hostile to our country of one billion people? I do not believe that Vietnam invades our border areas, kill our border people and threatens our security without reason or cause. I believe that we have punished Vietnam to serve our own political motives, thus creating the present situation.

Vice Chairman Deng, I am an old, retired schoolteacher who does not know much about state affairs but I do feel that the Sino-Vietnamese border conflict is meaningless and is not what the people want. The late Premier Zhou has said: All international disputes can be solved through peaceful means. It is you who has reached mutual understanding and established good relations with our old sworn enemies Japan and the United States. Why can you not improve our relations with Vietnam, a socialist country?

Vice Chairman Deng, I understand that you cannot make my son live again but I strongly believe that you can negotiate with Vietnam and reach an agreement to stop the bloody Sino-Vietnamese border conflict.

Vice Chairman Deng, as the mother of a victim of the war, I ask you to save the sons of tens of thousands of other mothers and to consider the feelings of mothers the world over.

[Signed] (Wu Huisheng)

PARTY AND STATE

DENG SEEN MAKING SAME MISTAKES AS MAO

OW041301 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 3 Aug 81

[Text] The resolution on historical questions adopted by the 6th Plenary Session of the 11th CCP Central Committee stressed: Likewise, responsibility for the errors committed in the work of the 1956-1966 period rested with the same collective leadership. Although Comrade Mao Zedong must be held chiefly responsible, we cannot lay the blame on him alone for all those errors.

Undoubtedly, this is a correct appraisal of the questions in the history of our party. But, we must add, the central leaders must not be divided among them evenly.

Judging from the merits and demerits of the current veteran leaders on the Party Central Committee, Ye Jianying, Chen Yun, Li Xiannian, Bo Yibo and Peng Zhen, and of the younger leaders such as Hu Yaobang and Zhao Ziyang, it is obvious that a larger share of the responsibility for the errors committed in the past should rest with Comrade Deng Xiaoping. This is because among the present veteran comrades Deng Xiaoping had the closest work relationship with Chairman Mao. He was the general secretary of the Party Central Committee for many years, working at Chairman Mao's side and implementing the late chairman's important instruction. So Comrade Deng Xiaoping and Chairman Mao must be held chiefly responsible for all those errors.

An extremely important fact which should especially be pointed out here is that working at Chairman Mao's side for many years, Comrade Deng Xiaoping was most profoundly influenced by Chairman Mao and learned from his bad methods of leadership and his bad work style. Even before Chairman Mao's death, Deng Xiaoping used to practice what he learned. He has inherited Chairman Mao's bad methods of leadership and his bad work style. Because of this, he is the most dangerous man in the country.

Everybody knows that after Deng Xiaoping's reinstatement, our cadres and people hoped that he would adopt a correct method of leadership, inherit the party's fine work style and use his rich experience and knowledge and his power to help the Party Central Committee bring order out of chaos so that our party and state would quickly return to the correct road. But facts show that Comrade Deng Xiaoping, who has now reached an advanced age, has acted more and more arbitrarily and has become feudalistic and authoritarian and that he cannot change the erroneous method of leadership and bad work style he inherited from Chairman Mao. Herein lies his tragedy, the same kind of tragedy as pointed out in the party's resolution on historical questions in its appraisal of Chairman Mao.

In other words, summing up these facts, we can say that since his reinstatement Deng Xiaoping has, like Chairman Mao during his lifetime, begun to get arrogant. He has gradually divorced himself from practice and from the masses, acted more and more arbitrarily and subjectively, and increasingly put himself above the Party Central Committee, resulting in a steady weakening of the party's democratic centralism. As a matter of fact, Comrade Deng Xiaoping's erroneous personal leadership has replaced the collective leadership of the Party Central Committee and his authority has reached a peak.

Inheriting Chairman Mao's personal style of making arbitrary decisions and his personal method of leadership, Comrade Deng Xiaoping has put himself above the other leaders of the Party Central Committee. Without his permission or approval, even such trusted persons as Hu Yaobang and Zhao Ziyang cannot handle questions of prime importance, not to speak of other colleagues. This feudalistic and authoritarian practice has resulted in serious mistakes and tremendous damage to the country and is the root cause of the fact that the people find themselves now in an abyss of suffering.

The resolution adopted by the 6th Plenary Session of the 11th Party Central Committee said: This state of affairs took shape only gradually and the Party Central Committee should be held partly responsible for failing to correct those errors in good time.

We should understand that if this state of affairs is not corrected promptly, the errors already committed will bring us still greater damage than ever before.

CSO: 4005/828

CADRES DENOUNCED AFTER BEING FOUND GUILTY OF VIOLATING LAWS

Beijing RENMIN RIBAO in Chinese 30 Jul 81 p 8

[Article by Li Kuo [2621 1674]: "We Don't Want Secretaries of That Kind"]

[Text] "We do not want secretaries of that kind." This remark is a clear-cut response to a news report (see RENMIN RIBAO of 18 July 1981) that Li Fengzhou [2621 7685 3166], deputy secretary of the Party Committee of Linxiang County, Hunan Province, was dismissed from all his posts both inside and outside the party on the charges of abusing his power in order to serve his personal interests.

The people have ample reason to denounce unhealthy tendencies. During the 10 years of turmoil, Lin and Jiang did great damage to the party by tarnishing its image and trampling its workstyle under foot. By then what the people saw in their real life were such rarely seen or seldom seen characters that emerged from among the communist party members: There were elements who thrived on the business of acting as "rebels" or informants intent on hunting and framing the innocent; there were speculators and sycophants who were awarded high official positions; there were double-dealers and opportunists; there were abusers of power, and elements devoted to fighting for the interests of their clans or small mountain-strongholds or for their own interests. In the past, these elements were always subjects of condemnation by people of rectitude and the mass media. The people have ample reason to be angered by the fact that so many years after the "gang of four" was overthrown, there remain figures such as Li Fengzhou who take advantage of their leadership positions to continue their wrongdoings in violation of party discipline and state laws.

"The workstyle of our ruling party is a problem which may spell life or death and survival or demise of the party." This problem has been repeatedly emphasized by the leading comrades of the party Central Committee during the past several years and has been written into the resolution of the Sixth Plenary Session of the 11th Party Central Committee. Has this thoughtful admonition aroused enough attention of our comrades, (first of all our leading cadres)? Have they frequently used this as a rule to control every step they have taken and every statement they have made? A review of what county party committee deputy secretary Li Fengzhou has done during the past 5 years and the process in which he violated the laws and disrupted discipline reminds us that the corrosive effect this unhealthy tendency has had on the organization of our party has reached alarming proportions! Li Fengzhou's new home was a project which called for use of a tract of land owned by two units, building materials taken from 35 units, trucks borrowed from 18 units, a labor force organized by 10 units, and services rendered by 13 bureau directors, section chiefs and higher level cadres. This last point was more essential to his project than anything else. Were these cadres unwilling to bring their respective roles into full play, and to use their respective authorities to support Li Fengzhou, the building of his new home occupying 260 square meters in floor space was absolutely impossible. Needless to say these dozen or so "supporters" played different responsible roles in this case of violating law and discipline. Have any efforts been made to improve the living conditions of ordinary cadres and workers in Linxiang County? Has this county party committee ever mobilized more than 10 section chiefs, bureau directors and higher level cadres and manpower and material resources of scores of units to solve housing problems for the masses? These are something I really don't know.

"We do not want a secretary like that." This expresses a feeling that the masses are wholeheartedly behind the party's action to rectify its workstyle and to dismiss that secretary for violating law and discipline. The Party Central Committee has adopted a correct line, and correct principles and policies, clearly outlining the direction in which we will move and tasks we must fulfill. However, in certain localities, there remain persons like Li Fengzhou who tirelessly devote themselves to building cozy nests for themselves, and who still cherish special privileges and are contemptuous of party discipline and state laws. They have been proved incapable of leading the masses to thoroughly implement the party's policies and resolutions with one mind and one heart or to build our socialist spiritual civilization. The problem concerning the party's workstyle should be solved as a matter of first priority in the course of realizing the four modernizations and building socialist spiritual civilization. The recently published letter from Comrade Mao Zedong to Comrade Lei Jingtian [7191 4842 1131] provides a guiding principle for us to solve this problem. This solution is a reaffirmation and effective implementation of this important principle: "The members of the communist party and Red Army must be more strictly disciplined than the general civilians." Leaders and cadres must be treated more sternly than the ordinary members of the party. Once this principle is put into effect, it will certainly provide faster solutions for those seemingly unsoluble problems. This decision to deal blows to the unhealthy trends and practices and to revive and carry forward the party's excellent tradition and workstyle will convince the masses that our party really means business in its efforts to further rectify its workstyle. This is also a step to win greater support from them.

LIU DINGYI'S ARTICLE ON REVOLUTION PRAISED

Beijing RENMIN RIBAO in Chinese 31 Jul 81 p 1

[Article by Sun Dunxiu [1327 2415 0208]: "Story Telling and Reasoning"]

[Text] I have finished nonstop a reading of an article by Comrade Liu Dingyi [7120 1353 0001] entitled "Who Can Lead the Socialist Construction Program to Victory?" This article is a response to a letter from GONGREN RIBAO, an interesting article dealing with the issue of confidence in the revolution. In this article, he conveyed his points in the form of a dramatic story rather than a dull speech full of theoretical phrases. "However, this article is not designed to tell a story alone." It was clearly designed to convey logical and theoretical matters in the form of a story. It can be said that he embodied his logic in his story! Today, some comrades often present their speeches and articles in a dry and undramatic manner which often lulls their listeners and readers to sleep. Their speeches and articles often include quotations from the Central Committee documents, newspapers and journals. Because they are merely a combination of quotations from different sources, they carry no power to appeal to the people. Some articles and speeches written for leading comrades by their secretaries invariably embody worn-out quotes, known principles, phrases, and oft-repeated remarks and therefore, they are nothing more than a scrap of "official paper." Certainly, they carry no power to inspire their readers or listeners.

Someone may ask: "How can a theoretical article be presented in a story form? Generally speaking, it is certain that since a theoretical article is not a story, no one can substitute story for a theoretical article. But the two can be mixed to make an article more presentable. Does it not sound good when an article is presented in a way that can appeal to the people just as Comrade Liu Dingyi has done?

BRIEFS

GUANGDONG'S PARTY MEMBER CONGRESSES--By the middle of June, 104 municipalities and counties in Guangdong Province, including six districts in Guangzhou Municipality, had held congresses of party members to democratically elect new leadership groups for the municipal and county CCP committees. The municipalities and counties which have held party congresses account for 90 percent of the total number of municipalities and counties. [HK180840 Guangzhou Guangdong Provincial Service in Mandarin 2330 GMT 28 Jun 81]

TIANJIN NEW PARTY MEMBERS--Over the past 4 years, Tianjin Municipality has recruited 34,000 new party members. Investigation reveals that 337 of the 843 new party members of No 1 Light Industry Bureau, Public Utility Bureau, National Defense Industry Office and 12 subordinate grassroots units of Hangu District have been assessed as advanced producers and outstanding CCP members and eight of them have been assessed as model workers. Party organizations at all levels have paid special attention to recruiting new party members from among the intellectuals. In 1980, 48 high-grade intellectuals joined the party. [HK230208 Tianjin City Service in Mandarin 2330 GMT 29 Jun 81]

WAN LI WANTS NPC CONVENED--Beijing, 8 Aug (KYODO)--Chinese Deputy Premier Wan Li said Saturday the National People's Congress (parliament) will be convened by the end of this year. Major topics at the congress will include China's next five-year development program and restoration of the position head of state. Wan said this when he met Takao Kameoka, the visiting Japanese agriculture, forestry and fisheries minister, at the Great Hall of the People. Kameoka earlier met Agriculture Minister Lin Hujia, who said China's 1981 harvest will be slightly bigger than last year's but gave no figures of the 1980 harvest. POLITICAL ACTIVIST ARREST--Hong Kong, 10 Aug (AFP)--Another Chinese political activist, Huang Yifei, has been arrested in Guangzhou, sources from the Hong Kong-based China Democratic Movement said here today. The sources said Huang, a motor mechanic in his early 30's, was probably arrested for having tried to publish an appeal against the arrest of noted dissident Wang Xizhe in April this year. Huang's house was searched at the time of the arrest of Wang Xizhe, but he himself was not picked up until the end of June, the sources said. There has been a wave of arrests of human rights and democracy activists throughout China since April this year, when activists planned to demonstrate for freedom of publication. Most of the arrested were editors or publishers of underground magazines across the country. [Text] [OW101409 Hong Kong AFP in English 1257 GMT 10 Aug 81]

MILITARY AND PUBLIC SECURITY

EXEMPLARY HOME LIFE OF GENERAL WANG GUANG-HUA DESCRIBED

Shijiazhuang HEBEI RIBAO in Chinese 15 Jul 81 p 1

[Article by Gao Feng [7559 1496]: "Life in a General's Home"]

[Text] Editorial Note: Parties have a party style, nations have a national style and families have a family style. Families are the cell units of a society and if the family style is correct then the party style and the national style can improve. Therefore, all politicians who have a strong sense of responsibility to their own class will be very careful about having a good family style. ZHU ZI ZHIJIA GEYAN--ZHU XI'S MAXIMS ON FAMILY LIFE is an example of the model family style as determined by the political representatives of the feudal class. We of the proletariat see the liberation of all mankind as the highest duty and are faithful to the collective interests of our class, therefore we should exert our utmost to build a good family style.

A style consists of traditions. A good party and national style is the crystallization of the glorious traditions of the party and the nation. The quality of a family style is reflected in how well a familiy head fulfills his own class responsibilities and the level of sincerity the family head has toward class interests. Therefore, those party and national leaders who are esteemed by the people are all very attentive to their own family style. Comrade Mao Zedong taught his son to learn from the peasants, Comrade Liu Shaoqi exhorted his daughter to go to the countryside for training, Comrade Zhou Enlai told his neice to learn from Wang Zhaojun...these all are fine stories which inspire the people. Comrade Chen Yi's poem "SHI ERNU-INSTRUCTIONS TO MY CHILDREN" is very moving, "...I wish to serve the masses, to seek private gain is shameful. When all people can follow this, the world will then be free. What I hate are exploitation and eating but not working. Oppression is hateful, using people like draft animals. Even more hateful are the preachers, who truly are like ferocious adversaries. In rooting out the old system, there can be no decline of revolutionary will. I am an old soldier, now past my sixtieth year.Succeeding generations look to you with hope, so quickly make your plans. Heaven is truly beneficent, do not waste your youth." This article describes how Comrade Wang Guanghua [3769 0342 5478] educated his children and demonstrates how he upholds the party's glorious traditions under the new conditions.

Those who truly love their children should be like Comrade Wang Guanghua and let them strike out on their own. Striking out on their own means to follow the revolutionary line and make continual growth in serving the people.

----The Editors

The name Wang Guanghua is familiar to the older comrades in Hebei. At one time he was commanding officer of the Hebei Military Region and Chief of the Public Security Bureau, and in 1952 was transferred to the General Headquaters Staff. During the last 30 years, especially ever since the ten years of chaos, what have the working and living conditions of this general been like? This paper previously published an article titled JIANGJUN YIJIU ZAI DOUZHENG-THE GENERAL STILL CARRIES ON THE STRUGGLE. Today we wish to describe the general's family style. Even though these are details of family life, they can serve to enlighten and inform us.

General Wang Guanghua has two sons and three daughters. By the age of six or seven when they could perform minor tasks, both boys and girls were exposed to the rules of the house: take care of washing your own clothes and cleaning your shoes, don't let the maid do it. Sunday is the maid's day off so the children must cook. The girls must also learn to sew. The children were fond of playing and resisted by secretly giving their clothes to the maid to wash Once when the maid was secretly washing the children's clothes the general found out and he severely reprimanded them, "Take care of yourselves! If you are raised to have others take care of your clothes and feed you, what abilities will you have when you grow up!"

When the children had washed their clothes and cleaned their shoes the general would conduct an inspection to see if the tasks had been properly performed. Once when the boy named Wang Qi [3769 3823] had very carefully cleaned his shoes, he looked up to his father and said, "Dad, look how well I've cleaned my shoes!" The general made a careful inspection and shook his head saying, "Not quite finished, do it over!" He moved the laces to show the tongue of the shoe and said, "Look, they're still dirty here and need to be cleaned over." He threw the shoes in the bucket and said, "No matter what you do you must have a spirit of thoroughness and cannot be slipshod, careless or just put on a show of fulfilling your duties." His second daughter Jijun [0370 6511] is a factory worker, and whenever she wipes down the machines she does so very thoroughly. Other people ask her, "Who taught you to be so thorough?" and she answers, "First of all it is my teachers, but in principle it was my father--from the time I was small my father taught his children to have a spirit of sincerity and thoroughness."

Fifteen Yuan Living Expenses

The general had another strictly enforced rule: the living expenses could not exceed fifteen yuan per person per month. Their daily fare consisted of cheap tea and plain dishes, with better food on Sundays.

For breakfast each day they ate cornmeal or millet with plain dishes and every Sunday the had two meals of steamed corn bread. The children would beg the maid to buy better food but she would laugh and say, "Yout father only gives me enough expense money for this." The children would then ask their father and he would say, "We are of peasant stock and just about everything we eat and wear is provided by them. Our living standards are already higher than theirs." Isn't it so! The children saw that their friends and relatives from their native place in Shandong wore nondescript clothes and brought gifts of yam bread and millet. By comparison, they were much better off. Their father explained it further, "Haven't you seen in school how the children of workers and peasants eat and dress? You should make more friends among the children of workers and peasants to learn their spirit of hardships and frugality."

A simple life teaches children to have a positive attitude toward suffering hardships. During the "Cultural Revolution" their father was jailed and received no wages. Their mother became ill and received only 80 percent of her wages. Her monthly income of 86 yuan had to provide for a family of six. During this period Jijun took care of the household chores and she very carefully held the daily food expenses for the whole family to three yuan so that they would not go broke. Later, the children went to the countryside to enter the brigades and some went to the May Seven farm of their mother's cadre school to work. All of them suffered patiently and performed labor in an outstanding manner. People could not tell from their attitude toward livelihood and labor that they came from a general's family. Because of their continual good work they were transferred to factories to be workers. The children knew that this was the result of their father's strict teaching.

Making One's Own Way

When the "theory of the unique importance of class origins" was in full force their father was in jail and the children were per force implicated, so their labor sentry posts were rather unsatisfactory. After the general was released from jail and was rehabilitated his children wished to change to different surroundings and asked permission of their father. The eldest son Jixin [0370 2450] was raising chickens at the Beijing municipal barns located in Changping. Since each trip home required two hours, he wanted to be assigned a post in the city. The second son Wang Lin [3769 3829] and the second daughter Jijun both wanted to join the army. In these several years they had seen the children of other families don uniforms and leave. They were very envious! However, because of their father's situation, they were unqualified for military service and could not even join the Nei Mongol construction forces. Right now, their father has been out of jail for the past eight years so a request to join the army is no wild dream.

Jijun remembers very clearly that her father told her more than once the story of how she was named at her birth in Baoding in December of 1949. He said that although the revolution was victorious, national construction needs still required people in Baoding and the army also still needed people, so when she grew up she was to join the army, and so was given a name referring to military service in Hebei province. From an early age Jijun looked forward to joining the army. However, her father said to his children:

"All work is related to the needs of the revolution so why are you so set upon the army? I certainly won't use pressure to help you to be accepted!" His children became nervous, "How is it using pressure, you only need to ask someone!" "This isn't a perquisite that comes with office. Make your dreams come true yourself. Even one word from me would be using pressure and I definitely won't do that for selfish reasons!" Their father stubbornly refused them. Wang Guanghua told his children to make their own way in the world and not depend on their parents. I worked the land since I was a child, was an apprentice, worked in a factory and finally picked up a rifle--I made my own way in the world. You live in the new society and conditions are far superior to those when I was a child. The old saying is right, "Its better to seek for yourself than take from your parents." You can only stand in society if you are personally able, your parents can't follow you wherever you go.

"If dad won't help out, let's do it ourselves." These were strange words for the children, but true. The twin boys Wang Qi and Wang Lin made up their minds to try hard to pass the university entrance examinations. For these two brothers who had only finished the first year of middle school before the "Cultural Revolution" to even dream of passing the university entrance exams after their years of homeless wandering was no easy matter. They had to work in the daytime which left only the evening hours for study. The two brothers fiercely took up the challenge and went every night to the Beijing Steel Institute to study, never eating dinner before ten o'clock at night. When their mother saw them come home tired and hungry to revenously eat their dinner she was heart-broken! However, without bitter toil there is no gain. The two brothers studied hard for two years and in 1979 Wang Qi won entrance to the Beijing Legal Institute and in 1980 Wang Lin won entrance to the Chinese Department of a branch of the People's University. The children were thrilled--this was the accomplishment of courage and hard work.

At this time their father also taught the children, "Its great to gain entrance to university, but don't be vain about it. You must get hold of your genuine abilities in order to make yourself truly and realistically engage in study. Take the time to learn more now so that you can make greater contributions to the people in the future." The boys did not ignore their father's teachings and were very successful in school.

While working at the factory, Jijun also finished the "July 21" University. She is now participating in the all-city worker-peasant-soldier examinations and a passing score will mean promotion to technician.

The children took their father's concern and teaching to heart. They say, "Father's strict demands rid us of our dependency and tempered our personalities."

What is True Love for One's Children?

The general's eldest daughter Jijun is today still working in a small collective factory. The eldest son Jixin is still raising chickens at the animal barns. The children no longer make any requests, but the neighbors who are concerned about the children said they should ask their father to do something for them in the belief that all parents care for their children.

It is true that all parents love their children. But general Wang Guanghua properly asks, "What is parental love? Is it to provide them with everything and let them wait for happiness to come to them? Or is it to teach them self-reliance, to depend on their own abilities and to establish themselves in society?" Obviously the general holds the latter point of view. He believes the this is the true way to show one's love. The general taught his children to be content with their work and to avoid frequent trips home except on Sunday. He also personally went to the animal barns to inspect his son's work and discovered that the chicken house wasn't cleanly swept out. He searched out the barn supervisor and asked that Jixin be ordered to work harder and not let the fact that he was a general's son make his life easier for him. When he came home on Saturday the general criticized him, "How could you be so sloppy in your work and not fulfill your responsibilities! If the chicken house isn't clean they will become ill...."

The general was fond of his daughters, especially Jijun, who was always bright and obedient. In recent years, society has become more conscious of style and makeup, but Jijun still wears the style of tensome years ago. One time a factory helper looked at her faded blue trousers, threadbare white shirt and plastic-soled cloth shoes and said in a half-joking, half-satirical manner, "Jijun, your clothes from the 50s really are too countrified. You ought to be more stylish rather than be unchanging in the face of constant change."

Jijun just smiled at her, but said to herself, "You ought to see my parents. Dad only wears army uniforms and mom isn't dressed as well as some of the old ladies around here." That evening, Jijun told her father of this incident. The general said, "Clothes should be plain an and loose fitting, why pursue vulgar fashions! Moreover, young people are busy with their studies and shouldn't be concerned with clothes and makeup." Jijun makes full use of her time at both work and study. Her teacher is an old worker who is very strict with his apprentices. But he can find no fault with her. He frequently expresses his satisfaction by saying to her, "Jijun, don't think that you are an anonymous worker, you actually bring glory to your parents! We workers are especially fond of hard-working girls like you."

This is praise from the people for high level cadres and also is praise for the general's family style.

'BA YI RADIO' MARKS PLA FOUNDING ANNIVERSARY

OW031555 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 31 Jul 81

[Text] Commanders, fighters and comrades: We wish to extend to you our highest revolutionary salute on the occasion of this lofty "1 August" Army Day.

Comrades, since its founding on 1 August 1927, the Chinese PLA has traversed a glorious course of 54 years. In the civil war, the anti-Japanese war, the war of liberation and throughout the various revolutionary periods, the PLA valiantly fought battles and shed blood. It eventually accomplished its military, political and historical mission.

Since the founding of the PRC, the PLA has successfully defended the nation's territorial integrity, including its territorial waters and airspace. It joined the war to resist U.S. aggression and aid Korea, defeated the U.S. imperialist invading troops and safeguarded the security of the nation.

Politically, the PLA took part in the land reform and helped to stop the increasingly intensified armed struggles in the tumultous years of the cultural revolution.

The PLA made even greater contributions in the economic sector. During the past 31 years the PLA built more than 13,000 kilometers of railroads, or 37 percent of the total mileage built since liberation. The PLA capital construction engineering corps completed 81 key national projects. The broad masses of cadres and fighters also joined civilians in the construction of more than 100 large-scale water conservancy projects. At the same time PLA units energetically developed agricultural and sideline productions. In the past 20 years the PLA produced over 22 billion jin of grain and some 1.5 billion jin of meat.

Furthermore, the PLA conducted numerous rescue operations during floods, typhoons and earthquakes and rescued more than 3 million people from distress. Particularly in fighting the recent floods in Sichuan, Hubei, Guangxi and Heilongjiang Provinces, PLA commanders and fighters valiantly rescued people regardless of the risks involved. They have left a glorious chapter in the annals of the army.

However, during this short span of 31 years, the PLA also encountered trials and hardships. Some schemers and careerists within the party regarded the army as their private property and used it for usurping power, preserving autocratic rule and eliminating dissidents. After achieving their goals, they ruthlessly suppressed army cadres, particularly leading cadres, like killing the hounds for food once all the hares are bagged. They did so during the cultural revolution and after the overthrow of the gang of four. The number of leading army cadres persecuted to death was several times more than that of those who died during the war years.

This particularly stands since Comrade Deng Xiaoping took over the military commission of the CCP Central Committee, the active role of army cadres, especially of leading cadres, in society has been played down and restricted. The attempt to restrict the army cadres to the barracks has been extremely detrimental. The revolutionary PLA has trained tens of thousands of outstanding cadres to administer the party, the nation and the army.

The important achievements made on all fronts in the first 10 years following the founding of the PRC is inseparable from the role played by army cadres. In his article "On Correcting Mistaken Ideas in the Party," Chairman Mao pointed out: The Chinese Red Army is an armed body for carrying out the political tasks of the revolution. Without conducting propaganda among the masses and without organizing them, arming them and helping them establish revolutionary political power, fighting loses its meaning and the Red Army loses the reason for its existence.

It can thus be seen that the attempt to restrict the army to the barracks runs counter to the tradition of the army and the party. In greeting the 54th founding anniversary of the PLA, the commanders and fighters of the whole army must strive to raise their military, political and cultural levels and vie for playing a more active role in the political and social life of the nation.

'XINHUA' NOTES NAVY BUILDING 'CARRIER-BASED FORCE'

OW102043 Beijing XINHUA Domestic Service in Chinese 1133 GMT 10 Aug 81

[Newsletter by XINHUA reporters Yu Fengyuan and Wang Jinzhong: "Brave the Wind and the Waves"]

[Text] Beijing, 10 Aug (XINHUA)--During a visit to our country last fall, a Western admiral showed great interest in the various types of warships and boats moored in Shanghai's Wusong harbor. Pointing at the precision instruments on the bridge of a missile destroyer, the admiral asked: "You made all these yourselves?" The skipper nodded.

Later, pointing at the power system in the engineroom, he asked: "You made this yourselves?" The skipper again nodded.

Stopping under a missile launcher, he again asked: "Did you make this yourselves, too?"

The skipper smiled and answered: "Yes. Everything on this warship is made by our own country."

The admiral nodded approvingly. During a toast at a banquet afterward, he exclaimed: "I have been in the navy for more than 30 years and I have visited more than 50 countries. I can say without any exaggeration that the Chinese Navy is one of the finest navies in the world. I congratulate you for having such beautiful warships."

During the building of the People's Navy, there were serious frustrations as well as times of rapid development. After the crushing of the Jiang Qing counterrevolutionary clique, and especially after the 3d Plenary Session of the 11th CCP Central Committee, the building of the People's Navy entered a new stage and a new leaf was turned.

It was early summer. The surface of the Yellow Sea was brightened by many sunrays. Here we witnessed a highly demanding technique of the modern navy--lateral supply. When this technique has been mastered, a warship can extend its range and can travel on the vast sea far away from its base.

On that day, we saw our missile-equipped destroyer, braving wind and waves, quickly approaching an oceangoing supply ship. When the two ships were many meters apart, we heard a loud thud and saw a cable, like a dancing rainbow in the sky, shoot from a launcher, instantly linking the two ships. Soon afterward, steel cables were hoisted and large, pliable pipelines were quickly connected. Square containers began to travel between the ships and fuel oil, fresh water and staple and nonstaple foods were delivered to the destroyer from the supply ship.

The quick mastery of this new technique has been accomplished by the navy in implementing the guidelines of the 3d Plenary Session of the 11th CCP Central Committee. Early last year, when the supply ship was newly completed and the equipment for lateral supply was just installed on the destroyer, a large number of seamen, workers and technicians were from various quarters assembled for the trial. But nobody had any experience in this field. However, with support and encouragement from various departments, the plan sumbitted by chief mechanic Xing Haoli, an ordinary technicians, was successfully implemented. Not only was the amount of fuel oil delivered to the destroyer much greater than originally planned, but the speed of replenishment was doubled.

The wisdom and talents of the broad masses of navy commanders, fighters and scientists, which were repressed for many years, have been set free by the party's correct line, which has eliminated the spiritual yoke that fettered these broad masses. With emancipated minds they now dare to challenge the "forbidden zones" and scale the heights. New things have been continually introduced into the navy in just a few years:

The first submarine, which traveled a long distance in deep waters for many days and nights, has triumphantly returned. It has blazed a way for naval vessels to make long-distance journeys.

The first naval training center has been set up, greatly speeding up the training of naval units.

The first generation of carrier aircraft pilots [jian (chuan) zai ji fei xing yuan 5324 (5307) 6528 2623 7378 5887 0765] has been trained. This training has provided precious experience for building the carrier-based force [jian zai ji bu dui 5324 6528 2623 6752 7130] of the People's Navy.

Each of these "firsts" marks a breakthrough in the modernization of the navy.

To work in coordination with the launching of China's carrier missiles into the Pacific, new China's first special composite unit on the sea first left its wake in the distant South Pacific during the first spring of the 1980's. That long journey was a review of the modernization of the People's Navy, and it marked the new level of the combat capability of new China's Navy. The world gasped in admiration that "China's naval force has achieved remarkable success."

The size of the special composite unit's fleet, the distance and duration of the journey and the difficulty of the mission were all unprecedented in the history of the Chinese Navy. The mammoth fleet of the oceangoing supply ships, salvage ships, twoboats, precision instrument-equipped survey ships and investigation ships looked like scientific fortresses moving on the sea. The magnificent warships sometimes fanned out to open a passageway for the survey ship fleet and sometimes formed a protective steel screen to escort the survey ship fleet. On these warships, with their five-star red flags and the 1 August army flags fluttering in the breeze, missile launchers pointed proudly to the sky, and their radar and sonar systems were constantly watching the sky and sea bottom. Commanding this oceangoing fleet were two veteran soldiers of the Red Army who took part in the long march. Every aspect of the mission--from charting the fleet's route to forming and commanding it--reflected their painstaking efforts.

During our visits to various naval units on China's vast territorial waters, we were happy to see that new China's Navy--which was built on the foundation of the ground troops--is showing the brilliance of the old traditions while also gradually mastering the constantly renovated equipment and technology resulting from the country's economic and national defense development. Twenty years ago our predecessors from a speedboat unit on the East Sea front once initiated this sonorous and forceful slogan: "Fix our torpedoes with bayonets." They meant that they were determined to display the army's spirit of fighting with bayonets, to get close to the enemy and to destroy the enemy ships with the powerful torpedoes. With this spirit, they repeatedly displayed their invincible might in one sea battle after another and sank four enemy warships and damaged three others. Due to the renovation of equipment, the speedboats' torpedoes have now been replaced by more powerful modern missiles, and the new generation of seamen are much better educated in science and culture. Despite this, their predecessors' spirit of fighting with bayonets still remains. Now, to suit the new situation, they have again loudly proclaimed that they will "equip our missiles with bayonets." Also, many well-trained radar operators, nautical chart readers, engineers and missile firing experts have come to the fore. During the several live missile firing tests conducted in recent years, they all hit their targets accurately and relentlessly.

STUDY OF TOTAL POPULATION TARGET

Xian XI'AN JAOTONG DAXUE XUEPAO [JOURNAL OF XI'AN JIAOTONG UNIVERSITY] in Chinese No 2, Apr 81 pp 115-125

[Research article by Hu Baosheng [7579 0202 3932], Wang Huanchen [3769 3243 1057], Zhu Chuzhu [4281 2806 3796], Li Weiyue [2621 4850 1471]: "Research and Study on Total Population Target in China"]

[Text]

Abstract

In this paper the problem of total population target in China has been investigated and discussed. More than 20 factors affecting the total population after 100 years have been analyzed from the trends of development and the viewpoints of natural resources, environments, economics, state of population, psychology of all nationalities, etc. System's engineering's multiobjective decision-making techniques have been used to try to treat the dynamic relations among these interactive factors. The optimal target of 0.7 billion is obtained from our investigation. If the results of our efforts are better than our estimations, or if the standard of living of the people is lowered, the optimal population can be increased from 0.7 to 1 billion.

Foreward

What is suitable for "human" habitation at present is our earth. This sets limits to the population of mankind. The whole earth has a surface area of 510 million square kilometers including land area of 148.9 million square kilometers and ocean area of 361.1 million square kilometers. The natural growth rate of world population is 1.8 percent at present. Estimated on the basis of 1 square meter per capita, human beings will fill the land area in 585 years and spread to the whole globe in 653 years--mountains, lakes, plains, deserts, forests, and oceans.

Today, human activity has reached such an extent as to affect nature and the earth itself. This fact poses a question for mankind: Are "the growth in the population of mankind and the improvement in living quality" compatible with "the growth in human capacity" and in harmony with "the environment on which mankind depends for survival?" This question involves social problems of the whole world and each sphere of human activities. Even if it is confined to one country, the factors involved are so numerous and the relationships are so complex that it is difficult to make a generalized study. In this paper, an attempt is made to use the technique of multiobjective decision-making in systems engineering to probe into this question. First, we separate the inter-connections among various factors and separately study the partial effects of individual factors and then sum up their total effects, giving consideration to the interconnections among the various factors.

Through theoretical analysis and estimates, the major cycle of population growth in our country is estimated at about 70 years, which is close to the average lifespan of man. Therefore, in approaching the problem of population control in our country, we should go beyond 70 years to consider policy measures to be taken today. Thus, in this paper we take 100 years as the time range of discussion. This will take account of the tremendous inertia of population process and the possibility of forecast while leaving room for approximate change in the development of things and the policy decision.

Opinions vary over the problem of total population target. Some say 200 million is just right. Others say 300-400 million is proper. Others say 500-700 million is optimal. Still others say 800 million to 1.5-2 billion is also feasible. This shows people are universally interested in this problem. In this paper we join in the discussion and offer our views; more importantly, we apply systems engineering methodology and offer a scientific policy-making method.

We approached the problem from 20 angles, then combined them into nine categories, and finally summed them up as "possible and satisfactory" extent of total population, which is used to reflect the rationality of the total population target in relation to "needs and possibilities," thereby providing a basis for determining the total population target.

1. Land Potential

Our country has 9.6 million square kilometers of land, equivalent to 14.4 billion mu. As things stand at present, there are 1.5-2 billion mu (10-14 percent) of cultivated land, 1.83 billion mu (12.7 percent) of forests, 4-5 billion mu (28-37 percent) of grassland, more than 4 billion mu (27 percent) of wasteland and barren hills, 300-400 million mu (2-3 percent) of fresh water surface, and more than 2.2 billion mu (15.9 percent) of barren soil like deserts and gobi.

Forests play a very important part in regulating the climate and weather and in conserving water and soil. The rates of world forest cover are 22-28 percent, 34 percent for the U.S., 40 percent for the Soviet Union, and 29 percent for Europe. According to estimation by experts in the fields of agriculture, forestry, and ecology, the optimal rate of forest cover is around 30 percent. As far as our country is concerned, forest cover should reach 4.3 billion mu. Within this context, a forest cover rate of 30 percent and more may be considered fully satisfactory. Thus, we take the "satisfactory extent"-- Q_1 ($\geq 30\%$) = 1.0. The present rate of 12.7 percent is extremely unsatisfactory; we take Q_1 ($\leq 13\%$) = 0. The satisfactory extents between 13 percent and 30 percent cover rates are connected with a straight line as indiciated by diagram 1(a).

At the present stage, more than 60 million mu are afforested each year. If the annual afforestation decreases progressively (with afforestation becoming more difficult as time goes on), in 50 years afforestation will increase by 1.5 billion mu, and in another 50 years the forests will be stabilized, bringing the total forest area to 3.33 billion mu and the cover rate to 23 percent. We take the possibility --P_1 ($\leqslant$ 23%) = 1. By afforesting 70 percent of barren hills and wasteland and 30 percent of deserts and barren soil, the cover rate can be brought to 37 percent. We take the possibility --P_1 ($\geqslant$37%) = 0. The curve is as indicated by figure 1(a).

As to cultivated land, the average around the world is now 10.8 percent; 10.8 percent for the Soviet Union, 22.4 percent for the U.S., and 14.3 percent for Japan. In our country, the reclaimable wasteland is estimated at 1.5 billion mu. This plus 2 billion mu of existing cultivated land may bring the total rate to 24 percent. But there are people who estimate that there is not much wasteland that can be reclaimed and that expansion of forests will affect land reclamation. Now we take the possible extent --P_2 ($\geqslant$ 24%) = 0, and take P_2 ($\leqslant$ 14%) = 1. The possible extents between 14-24 percent rates of cultivated land are connected with a straight line as indicated by figure 1(b).

2. Water Potential

Our country has 2.7 trillion tons/year of surface water (river runoff) and 1 trillion tons/year of shallow groundwater. These sources of water are replenished by rainwater. In terms of the present water per capita, they are up to only one third the world level (not counting groundwater). The total volume of water used for industrial and agricultural purposes in 1979 accounted for about 18 percent of surface water.

In the United States, annual river runoff amounts to 2.4 trillion tons/year, of which 25 percent had been developed as of 1975, and it is estimated that 40 percent will be developed by the year 2000. Japan has 200 billion tons of surface water and as of the seventies was utilizing 45 percent.

We take the possibility of 50 percent utilization of surface water in our country after 100 years--P_3 ($\leqslant$ 50%) = 1, and take the possibility of 100 percent utilization--P_3 ($\geqslant$100%) = 0.

As for groundwater, we leave it out of account because it is not possible to take groundwater as an independent water source. Besides, over-exploitation will cause earth subsidence.

70.8 percent of the earth's surface is oceans, and sea water accounts for 97.2 percent of the total volume of water on the earth--1.3-1.4 billion cubic kilometers. Ice accounts for 2.16 percent, and fresh water 0.64 percent. Thus a huge volume of water is in the oceans. Desalination of sea water consumes enormous amount of capital and energy and we should not place great hope on it at present.

The situation being what it is in various countries of the world, what should be particularly guarded against at present is the pollution of water sources. Our country should pay full attention to this problem and prevent water pollution in the next hundred years. So the curve for the potential of utilizable water is indicated by 1(c).

3. Air Potential

Man is breathing at all times and all animals breathe. They keep inhaling oxygen and exhaling carbon dioxide. Mineral fuels consume enormous volumes of oxygen when burning and generate carbon dioxide.

The supply of oxygen is attributable to photosynthesis of plants. There are 26 billion tons of plants on the land of the earth and 18 billion tons of green planktons in the oceans, consuming 1.6 trillion tons of carbon dioxide and generating 1.2 trillion tons of oxygen.

The percentage of carbon dioxide in the atmosphere is increasing at present. Whether this phenomenon is good or bad has not been determined. Some scientists are of the opinion that the greenhouse effect caused by the increase of carbon dioxide will increase the average temperature on the earth and cause the polar icecaps to melt, submerging vast tracts of land. Others take the view that pollution of the atmosphere and the increase in powder and dust will decrease the quantity of heat of sunlight on the earth, thereby bringing about a new ice age. According to an agriculture science station in the United States, at the present level a one percent increase in carbon dioxide will accelerate photosynthesis 0.5 percent and lend itself to a bumper harvest in agriculture. It has been reported that bumper harvests were gathered in the vicinity of carbon dioxide wells in some parts of our country.

Thus, it is not known what the ideal density of carbon dioxide in the atmosphere is. However, it may be preliminarily affirmed that changes of carbon dioxide and oxygen should approach a balance after 100 years.

Since the atmosphere is a global phenomenon, it has no national boundaries. However, regional effects caused by uneven regional distribution are still existent.

In our country, on the basis of 4.3 billion mu of forests, 5 billion mu of grasslands, and 3.5 billion mu of farm crops, the total capacity for absorbing carbon dioxide is estimated at about 95 billion tons/year. We take the possibility of achieving this as 0, and the possibility of a 35 billion tons/year CO_2 absorption rate with present forests/cultivated land as being 1. The corresponding curves are shown in diagram 1(d).

The ratio of capacity for generating oxygen and that for absorbing carbon dioxide is about 32:44. Thus, there is no need to take carbon dioxide into separate consideration. As for other harmful air pollution, where pollutants cannot be absorbed by green plants, additional measures should be taken to solve the problem.

4. Energy Potential

All activities of mankind are inseparable from energy. Our country is comparatively rich in energy resources. Verified coal reserves have reached 641.8 billion tons, petroleum 2.74 billion tons. and natural gas 700 billion cubic meters. Among the regenerated energy resources, there are about 680 million kilowatts of waterpower, and 1-2.5 billion kilowatts of solar energy. In addition, geothermal, tidal energy and wind energy have exploitable potential, but relatively speaking this is not great. On the other hand, atomic energy and nuclear-fusion have exceedingly great potential.

Taking the country as a whole, in the near future we should fully utilize mineral fuels, particularly coal. Taking a long-range view, we should vigorously develop new energy resources like solar energy and atomic energy. In this way, if all the water energy and solar energy that can be technically and economically opened up are put to use after one hundred years, the total volume of energy will be equivalent to 870 million-1.37 billion tons of standard coal/year. Further, assuming that atomic energy and other new energy resources fully supplant all the energy resources we have at present, there will be energy resources equivalent to 2 billion tons of standard coal/year. After 100 years, this level will be reached if the 1979 energy production level is increased at a progressive rate of 1.175 percent a year.

The annual rate of energy growth was 3.4 percent in the U.S. during 1950-1973. According to estimates by the International Energy Organization, the annual rates of energy growth in the U.S. will be 3.7 percent in 1976-1985, 2.9 percent in 1985-1990, and 2.2 percent in 1990-2000. Corresponding growth rates will be 5.9 percent, 5 percent, and 4 percent in Japan; 2.7 percent, 2.1 percent, and 2.2 percent in the United Kingdom; and 4.9 percent, 4.1 percent and 4.1 percent in France.

During the periods of "first 5-year plan," "second 5-year plan," three-year adjustment, "third 5-year plan," and "fourth 5-year plan," annual rates of energy growth in our country were respectively 18.6 percent, 11.4 percent, 4.5 percent, 9.1 percent, and 7.9 percent. The average rate of annual growth was 10.7 percent during 1953-1978.

In all, the likelihood of an average 2 percent energy growth in 100 years from now on may be taken as 1, and the possibility of a 5 percent annual growth rate may be taken as 0. The curves are indicated by 1(c).

5. Potential in Per Mu Output of Grain

Average output per mu in our country was 137 jin/mu.year during 1949, 332.1-442 jin/mu.year (calculated on the basis of 2 billion or 1.5 billion mu) during 1979. The average annual growth rate was 3.00-3.99 percent. As to world average level of output per mu during 1979, it was 740 jin/mu.year in Japan, 591 jin/mu.year in France, 486 jin/mu.year in the United States, and 528 jin/mu.year in Denmark. During 1949-1979, the average amount of annual grain increase was 6.5-10.2 jin/mu.year in our country. Calculated by arithmetical progression, in 100 years per-mu output will also increase to 982.1-1,461.8 jin/mu.year, and the average annual growth rate will be 0.8 percent-1.1 percent.

In light of the world level mentioned above, we take the possibility of 500 kilograms per mu p6 (≤ 500) = 1. And the possibility of 1,500 kilograms and more p6 (≥ 1500) = 0. The curves are indicated by figure 1(f).

6. Aquatic Production Potential

World catches were 21 million tons during 1950, and reached 69.70 million tons during 1975, with an annual growth rate of 4.9 percent. In addition, worldwide breeding of aquatic products is expected to reach 70 million tons by the year 2000, topping the total volume of the present worldwide catches.

In Japan, where coastal waters are utilized, the area of unit output of fish has reached 5.3 tons/hectare. Our country has 13.5 million mu of shallow coastal waters and 24 million hectares of coastal waters equivalent to domestic shallow water surface. Estimated even on the basis of unit output of 1 ton/hectare, output is expected to reach 24-48 million tons/year.

If estimated according to bait, world fish output may increase by 10-100 times. At a certain ratio our country may have a share amounting to 45.5 to 455 million tons/year.

China's total output of aquatic products was 4.305 million tons during 1979. In light of the above state of affairs, we take the possibility of reaching 20 million tons/year in 100 years, p7 (≤ 0.2) = 1, and take the possibility of reaching 150 million tons/year, p7 (≥ 1.5) = 0. The curves are indicated by 1(g).

7. Economic Development Potential

Except for the 7 items mentioned above which are limited by resources, the various necessities of human life--food, clothing, shelter, and transportation--may be incorporated into the economic development potential and considered in these terms.

GNP is an index of the relative strength of the national economy. GNP may approximately demonstrate the consumption scope in a country.

The ratio of energy growth rate to the rate of gross industrial output is called energy elastic coefficient. Our energy elastic coefficient was 0.95-1.0 during 1950-1978. On the whole, the trend of development of elastic energy coefficients in various countries is on a gradual decline. For example, it was 0.94 in the U.S. during 1950-1973. It is estimated that it will decline to 0.6-0.7 by 1978-1985 and to 0.55-0.65 during 1985-2000. The trend is particularly evident in energy-deficient Japan: it was 1.0 during 1960-1979 and declined to 0.43 during 1975-1978.

Therefore, as far as our country is concerned, along with the spread of energy conservation techniques it can be predicted that in 100 years the energy elastic coefficient will gradually decline to at least 0.5. Thus, on the basis of the possible extent of an annual energy growth rate as indicated by diagram 5 of curves, we can work out the curve of the possible annual growth rate of the GNP. Take 3 percent and 7.5 percent as the turning points, and we get what is indicated by figure 1(h).

8. Per Capita Food Requirements

Man's nourishment is very rich in content, but the most principal and representative indicators are calories and proteins. The World Health Organization has set one standard: 3,000 large calories/person.day for an adult male and 2,800 large calories/person.day for an adult female. The former standard set by our country is close to that while the standard set in the United Kingdom is said to be 2,470-2,567 large calories/person.day. As for protein, the United Nations has proposed 70 grams/person.day, of which 40 percent should be animal protein. China formerly had a standard of 80 grams/person.day. Therefore, we may adopt 2,500 large calories/person.day and 80 grams of proteins/person.day. Animal nourishments accounting for 40 percent are taken as standard nourishment converted into food forms: 400 grams of cereals, 100 grams of animal meat, 80 grams of fish, 48 grams of eggs, and oil, sugar and vegetables.

Thus, the standard grain ration is 400 grams/person.day. This plus fodder grain which is about seven times the amount of meat and also industrial grain and loss which double the amount makes a total of about 800 kilograms/person.year. We take the satisfactory extent -- P_9 ($\geqslant 800$) = 1. As to 400 kg/persons.year, which does not include grain for industrial purposes and loss, we take the satisfactory extent--Q_9 (400) = 0. These are indicated by figure 1(b).

9. Per Capita Livestock Requirements

From the above we come to know that animal meat per capita is 100 grams/person.day, which converts into 3.65 kilograms/person.year. Per capita output was 10.8 kilograms/person.year during 1979.

Total production of pork, beef and mutton amounted to 10.624 million tons during 1979. The corresponding number of pigs was 319.705 million head, that of cattle 71.346 million head, that of sheep 183.42 million head. Now, on a pro rata basis we can work out per capita livestock requirements: 1.1 pigs/person, 0.25 cattle/person, 0.63 sheep/person. Reduced to standard livestock of 50 kilograms each, it is about 5.2 standard head/person. We take the satisfactory extent--q10 ($\leqslant 5.2$) = 0, and take the satisfactory extent (with 50 percent as surplus)--q10 ($\geqslant 7.8$) = 1, as indicated by figure 1(f).

10. Per Capita Fish Product Requirements

From item 8 we know fish requirements per capita are 80 grams/person.day. It is estimated that fish good for food make up about 75 percent of catches, and that half of them are waste. It is known that per capita fish product requirements are 78 kilograms/person.year. We take the satisfactory extent, Q_{11} (78) = 1, and half the satisfactory extent, Q_{11} (39) = 0, as indicated by figure 1(g).

11. Per Capita Energy Requirements

Human activities are inseparable from energy. On the basis of 2,500 large calories/person.day required to maintain the life of each person, the requirements are equivalent to 0.13 ton of standard coal/person.year. And to produce foods with so many calories it is necessary to consume more energy to the extent of from 0.013 to 1.56 tons of standard coal/person.year, depending on the kinds of foods produced. In addition, under conditions of modern society, clothing, food, shelter, transportation, culture and recreation require large amounts of energy. On the basis of 3,099.5 large calories/person.day, it is estimated that 1.615 tons of standard coal/person.year are required.

Per capita consumption of energy is the highest in the United States. Per capita consumption of energy was 11.574 standard tons/person.year in 1977. Japan, a country "deficient in energy" pays great attention to energy conservation; per capita consumption of energy during 1977 amounted to 3.806 tons of standard coal/person.year. Actual levels of consumption in the three major cities of Beijing, Shanghai, and Tianjin during 1979 were respectively 2.24, 1.70, and 1.47 tons of standard coal/person.year. On this basis, we select the satisfactory extent of per capita consumption of energy as follows: q12 (4.0) of 4 standard tons/coal.year = 1, and q12 (1.6) of 1.6 tons of standard coal/person.year = 0, as indicated by figure 1(e).

12. Per Capita Water Requirements

Man cannot live without water. With the development of industry and agriculture, water is increasingly showing its value. Per capita consumption of water in the U.S. reached 2,300 tons/person.year during 1965 and increased to 2,880 tons/person.year during 1975. It is estimated that by the year 2000 per capita consumption of water will reach 4,550 tons/person.year. Per capita consumption of water in Japan reached 789 tons/person.year in the mid-seventies.

In our country, consumption of water for industrial, agricultural and living purposes was approximately 400-500 tons/person.year during 1979. We take the satisfactory extent of 2,880 tons/person.year in the U.S. in the mid-seventies, q13 (2,880) = 1, and take the satisfactory of 500 tons/person.year in our country, q13 (500) = 0, as indicated by figure 1(c).

13. Per Capita Air Requirements

An adult needs 1,000 liters of air a day, inhaling 0.75 kilogram of oxygen and exhaling less than 1 kilogram of carbon dioxide equivalent to approximately 0.365 tons/person.year. In addition, per capita livestock requirements are 5.2-7.8 standard head/person. It is not possible to estimate wild animals. For the time being, we estimate them on the basis of the same number of domestic animals.

The ratio of mineral fuels to energy resources after 100 years is estimated at 50 percent at the highest and 5 percent at the lowest. Carbon dioxide thus generated will be about 0.73-7.3 tons/person.year.

Altogether, the amount of carbon dioxide averages about 4.8-13.4 tons/person.year. The oxygen needed may be worked out at a 32:44 ratio. Figure 1(d) is the curve of the satisfactory extent of per capita carbon dioxide.

14. Per Capita GNP Requirements

From discussions in item 8 it may be realized that this indicator can roughly reflect people's living standards. According to figures released by the World Bank, in 1978 per capita GNP was US$12,700/person.year in Kuwait (world's highest); US$9,960/person.year in Switzerland; US$8,640/person.year in the U.S.; US$5,640/person.year in Japan; and US$3,011/person.year in the Soviet Union. The world average was US$1,800/person.year.

Our country's per capita GNP level is now about one sixth the average world level. The highest world level is 47 times ours. Therefore, it is not so satisfactory for us to reach the present world level after 100 years. We should take q15 (1,800) = 0. The curve is indicated by figure 1(h).

15. Per Capita Housing Space and Land Requirements

The per capita housing space is 29 square meters in West Germany, 18 square meters in the U.S., 13 square meters in Japan, and 7.2 square meters in the Soviet Union. Per capita housing space is 3.6 square meters in our country, and some people estimate that by the year 2000 it will reach 10 square meters. We take 30 square meters and 5 square meters as the turning points of the satisfactory extent of per capita housing space. Housing space accounts for about 65 percent of the area of structure. Streets account for approximately 10-30 percent of the urban areas. It is assumed that land for public buildings is offset by the ground area saved from high-rise buildings.

Urban afforestation area is included in forests and grassland. Factories, mines and transportation use large amounts of land. Over the past 30 years they have taken up 150 to 180 million mu of land.

Taking all this into account, we may take the satisfactory extent of per capita use of land, 0.3 mu/person, q16 (0.3) = 1, and the satisfactory extent of 0.18 mu/person, q16 (0.18) = 1 [as published; should be 0] as indicated by figure 1(i).

16. Possibilities of Land Used for Housing, Industry, and Transportation

Forests, cultivated land, barren hills and waste land make up approximately half of the total area of our country at present. If we want forests to take up 37 percent and cultivated land 24 percent in the future, we will have to turn to deserts, gobi and grasslands, and must use the land sparingly. In the 20 years from 1957 to 1977, cultivated land in our country decreased by 180 million mu, or 10 percent. It is assumed that 15 percent and 30 percent are taken as the low and high points in the possibilities of land for housing, industry and transportation. Taking account of the possibilities of cultivated land (see item 2), we can work out the low and high points, 2.1 percent and 7.2 percent of the total area nationwide.

17. The Lowest Total Birth Rate Acceptable to the Masses

The total birth rate (B) is approximately equivalent to the average number of children begotten by a married couple in their lifetime. The number of births was 2.2 in 1979. If childbirths follow the trend of the past few years and drop by 0.1 a year, childbirths are expected to drop to 1.5 by 1986. By that time, in the rural districts, which account for 80 percent of the total population, 40 percent will have one child and 6 percent two children each. In cities, which account for 20 percent of the total population, 90 percent will have one child each and 10 percent two children each. It is predicted that after 100 years the population will be 603-777 million. We take this possibility, p18 ($\geq$7.0) = 1. If within 100 years 100 percent of the population will have one child each, it is predicted that the population will be 233-370 million after 100 years. Under the conditions of our country, it is difficult to achieve this. We take the possibility of this, p18 ($\leq$ 3) = 0 as indicated by figure 1(j).

18. Limit to the Ageing Coefficient

The ratio of persons aged 65 and over to the total population is called the ageing coefficient (l_2). Distribution of the ages of the present population being what it is in our country, to lower the level of the total population in 2080 will certainly bring about a growth of l_2. L_2 in the next hundred years. It is necessary to put forward the hopes for limits of l_2.

From analysis we come to know that with present mortality rates, the corresponding base value of L_2 is about 0.14. This being so, we think that as long as L_2 is smaller than or equivalent to 0.15 it is satisfactory, and that L_2 larger than or equivalent to 0.3 is unsatisfactory. Through calculations based on more than 30 schemes, we have worked out the corresponding total population after 100 years to be 1.4 billion and 500 million. Therefore, we take the satisfactory extent, q19 ($\geq$14) = 1, and q19 ($\leq$5) = 0. The curves are indicated by figure 1(k).

19. Comparison of Total Population with Various Countries

Our country has always been the largest one in terms of population. Total population is one aspect of national strength. Therefore, a direct comparison with various countries should be taken into consideration.

Countries with a population of 100 million or more are China, India, the Soviet Union, the U.S., Indonesia, Brazil, and Japan. In the case of the last four countries, the maximum population does not exceed 260 million. Therefore, what we need to watch is the development of population in the Soviet Union and India.

The Soviet Union is pursuing a policy of population growth. Its present population is 264 million and its natural growth rate is .9 percent. In 100 years constant growth will bring its total population to 647 million. We take its satisfactory extent - q_{20R} ($\geq$6.5) = 1 - and take the satisfactory extent of 450 million (30% less) - q_{20R} ($\leq$4.5) = 0.

India has a population of 667 million and its natural growth rate is 2.1 percent. By the end of this century it will grow to 1.0107 billion. Its maximum population is estimated at 1.6 billion. Therefore, we take its satisfactory extent - q_{201} (≥ 10) = 1 - and take q_{201} (≤ 7) = 0. The above curves are indicated by figure (1).

20. Overview

The above are more than 20 factors considered. Figure 1 indicates the possible extents and satisfactory extents of the various factors. They may be combined by using the technique of multiobjective decision-making techniques in systems engineering. The process of their combination is illustrated by figure 2 with the following results:

1. Viewed from the aspect of grain, the possible-satisfactory extent of total population is 1 when it is less than 1.26 billion, and 0 when it exceeds 6.48 billion.

2. Viewed form the production of fish, the possible-satisfactory extent of total population is 1 when it is less than 260 million; thereafter, it begins to decline slowly.

3. Viewed from the use of land for industrial, transportation and living purposes, the possible-satisfactory extent of total population is 1 when it is less than 1 billion, and will decline to 0 when it exceeds 5.67 billion.

4. Viewed from the use of water, the possible-satisfactory extent is 1 when the total population is less than or equals 450 million, and will drop to 0 when it exceeds 5.4 billion.

5. Viewed from the changes in oxygen and carbon dioxide, the possible-satisfactory extent is 1 when land is rationally distributed and the total population is less than or equals 2.6 billion.

6. Viewed from standpoint of energy, the possible-satisfactory extent is 1 when the total population is less than or equal to 640 million.

7. Viewed from GNP, the possible-satisfactory extent is 1 when the total population is less than or equal to 640 million.

8. Viewed from the process of population development, the possible-satisfactory extent is 1 when it exceeds 1.4 billion and is 0 when it is less than 500 million.

9. Viewed from the comparison of population with other countries, the possible-satisfactory extent is 1 when the total population is larger than 1 billion, and is 0 when it is smaller than 450 million.

Curves of the above possible-satisfactory extents are indicated by diagram 3. If these factors are satisfied fully and simultaneously, the highest possible-satisfactory extent is only 0.25, which is obviously not good enough. Here we can find that water consumption, GNP, and population development process produce the greatest effects. The process of population movement is caused by the present surging distribution of population ages. As a result of estimations and calculations based on "scores of plans," it is discovered that the proportion of old people around 2040 will be too large, making it necessary to make arrangements at an early date. As to use of water, care should be taken to use water rationally and to prevent pollution. As to GNP, efforts must be made to strive for steady, high-rate growth.

From different viewpoints, six plans are listed below (see "Comparative Table of Six Plans for Total Population Target in China"). From the table it may be noted that if we consider only food and things for use and the economic strength, it would be advisable to keep the population target below 540 million; if mutual compensations for certain factors are permitted as indicated by plan 4, then the population target should be kept below 760 million, and its possible-satisfactory extent is above 0.9. However, we cannot but consider the actual conditions of population development, particularly the average number of births by a married couple that is acceptable to the masses of our country. As to the peak of ageing coefficient that will appear in the forties of the next century, we may use our economic strength to tide us over.

Thus, plan 5 is formed with 700 million as its population target and 0.65 as its possible-satisfactory extent. It seems plan 4 is desirable and, if mutual compensation for certain factors is permitted, plan 6 is formed. Here the population target may be raised to 700 million-1 billion.

Diagram 4 indicates the possible-satisfactory extents of the six plans. From the curves we can clearly see that after 100 years from now on 700 million appears to be optimal target of total population and that if things are stretched a bit, the target may be raised to 700 million-1 billion.

We feel that the problem of total population target is one of utmost importance to our country. With this target set, we can find out the best tactics to control the process of population development, and a clear orientation for population control in our country. At the same time, we can know from various conditioning factors which are serious, which are moderate, which should be given double care, which are the focal points of work. This will led itself to the planning and coordination of various kinds of work.

With time, the development of science and technology, the progress of society and the deepening of our knowledge, we may keep determining the total population target to be reached 100 years from now on and aim all policy decisions at this target. In this way, we shall always be in control.

Plans for Comparative Table of Total Population Targets in China

Plans	Factors considered										Total pop. in 2080 (100m)	Possible-satisfactory extent (degree of rationality)
	food		things for use			strength		process of population movement		Compared with other countries		
	grain	fish	land used	water use	air	energy	GNP	no. of births	ageing coeffi-cient			
1	Fully and simultaneously satisfied										10.5	0.25
2	Mutual compensation of factors considered							simultaneously satisfied			14	0.68
3	Satisfied simultaneously							not considered			5.4	0.9
4	Mutual compensation of factors considered							not considered			7.6	0.9
5	Satisfied simultaneously							simul. satis.	not consid.	simul. satis.	7	0.65
6	Mutual compensation of factors considered										7(~10)	0.83

PRC COLLEGES READY TO ENROLL FRESHMEN STUDENTS IN AUGUST

Beijing GUANGMING RIBAO in Chinese 13 Jul 81 p 1

[Article by XINHUA correspondent Yang Jianye [2799 1696 2818]: "Millions of College Bound Students Take Uniform Entrance Examination This Year"]

[Text] (XINHUA), Beijing 12 July--The 1981 uniform college entrance examination taken by some 2.58 million students from all over the country has come to an end. The evaluation of test papers which is now well under way in various parts of the country is expected to be completed by the end of July so that major institutions of higher learning can begin their enrollment of freshmen students in August.

This year's uniform college entrance examination was preceded by an initial selection of students in 13 provinces and autonomous regions. Among them were Sichuan, Gansu, Xinjiang, Hubei, Shanxi, and Heilongjiang. Added to the list of provinces selecting students this way this year were Henan, Jiangsu, Shandong, Guangxi, Jilin and Shaanxi. This initial student selection process was accomplished by these provinces and autonomous regions in connection with the last examination taken by high school graduates. In the 13 provinces and autonomous regions, students who took initial tests were estimated at 3.68 million, 1.26 million of whom were selected to take the uniform college entrance examination. Students who took the uniform college entrance examination this year were estimated at 720,000 less than in 1980 because some provinces and autonomous regions adopted the initial student selection procedure. Examination rooms were mostly located in counties throughout the country. In each examination room, test takers were seated in single tables separated from each other.

From 7 to 9 July, no disorder was reported in all examination rooms throughout the country when tests took place under the watchful eyes of responsible overseers. Test-takers were mostly in high spirits, and were willing to observe discipline while quietly pondering and conscientiously answering test questions and confidently conveying their academic achievements to their motherland and awaiting its final decision. Many personnel involved in the recruitment of college freshman students this year reflected that this year's examination room order seemed better than in any previous year, saying that this reminded us that the programs to build socialist spiritual civilization and to carry out the "five stresses" and "four beauties" activities have reaped fruits.

This year, there were 18 provinces, municipalities and autonomous regions where high school graduates applying for colleges and junior college level vocational schools were asked to take the uniform entrance examination at the same time. Those who pass examination will be admitted to colleges or vocational schools in accordance with their respective wishes. Among these provinces, municipalities and autonomous regions were Hebei, Anhui, Beijing, Tianjin, Shanghai and the aforementioned 13 provinces and autonomous regions which have adopted the initial student selection procedure. Of the 117,900-odd students who took the nationwide uniform college entrance examination in Beijing Municipality this year, 27,900-odd students applied for the junior college level vocational schools, 59,400-odd students applied for both colleges and vocational schools, and students who applied for colleges alone were estimated at more than 30,500. In this connection, facts similar to Beijing Municipality were also reported in other parts of China.

Test questions for this year's college entrance examination have received favorable response from many high school teachers and test takers. At a forum attended by a cross-section of high school teachers in Beijing Municipality, the consensus is that all test questions for this year's college entrance examination were all based on the high school teaching program and high school textbooks and therefore, compatible with the real objective of secondary education to test the ability of students to grasp rudimentary knowledge. Although the test questions vary in depth, none of them can be considered odd or catch questions. They added that test questions given this way will be helpful in improving the quality of secondary education, in guiding students to concentrate their energy on acquiring rudimentary knowledge well and in emancipating the minds of high school teachers and students from the "strategy to conjure up a large number of potential test questions" and a great variety of refresher material.

DEPENDENTS OF ARMY BORDER DEFENDERS NEED ASSISTANCE IN LOCATING JOBS, SCHOOLS

Jinan DAZHONG RIBAO in Chinese 15 Jul 81 pp 1, 4

[Circular of the State Council and the Military Commission of the Party Central Committee on Locating Jobs and Schools for Children of Army Cadres Stationed in Remote Areas]

[Text] (XINHUA), Beijing, 14 July--The State Council and the Military Commission of the Party Central Committee recently issued a circular calling on various localities and army units to make joint efforts and take proper measures to solve the problems of army cadres stationed in border or unpopulated areas and on off-shore islands in locating jobs for their accompanying dependents and schools for their accompanying sons and daughters.

The circular says: The PLA units stationed in border or unpopulated areas and on off-shore islands and the people's armed police troops stationed at border defense outposts have been assigned the glorious task of guarding and defending the frontiers of their motherland. These army cadres with their units mostly stationed in the economically and culturally undeveloped remote areas now face many practical difficulties in locating jobs for their accompanying dependents and schools for their accompanying children.

Various provinces, municipalities and autonomous regions as well as leading organs of the army at all levels must conscientiously and thoroughly implement job placement policies and measures set forth by the Central Committee. Joint efforts must be made by the local governments and army units to actively create employment opportunities, to broaden the prospect of employment in a way suitable to the specific local conditions and to make proper arrangements for these dependents of the army units to engage in work and productive labor. In coordination with the local economic development programs, the army units can take advantage of their access to various natural resources to build factories or service and processing industries operated by their dependents. The local governments and departments concerned must advise them of technical know-how on production, supply and marketing and help them establish contact with enterprises and their associated units. Through consultations with the local governments, the army units can build army dependent family activity centers or bases at the strategically selected points where the widely scattered army dependents can be concentrated to engage in productive labor. Individual economies can be developed within the framework of the state policies and regulations in areas where the employment opportunities are nil.

The circular says: Wives of army cadres who originally worked in units of public ownership or collective ownership at the county, district and higher levels can be temporarily placed in positions with the army-operated enterprises and establishments or dependents factories when they follow their husbands from one station to another where no suitable jobs are really available to them. Their original positions and grades must be retained, their length of service must be counted on a continuing basis, and their wages and salaries must be rated in accordance with the relevant regulations of the local governments. Army cadres receiving orders of transfer to border defense outposts and off-shore islands may leave their families in their original places in order to relieve their units in border areas and on off-shore islands of difficulties in resettling them. Families living with the army units must still be taken care of and controlled by their original units. Those living in civilian residential areas must be taken care of by their original employment units and local governments. First consideration must be given to those families which experienced housing difficulties in the allocation of new housing units.

The circular says: Sons and daughters of army units stationed in border or unpopulated areas and on the off-shore islands and armed police units at their border defense outposts, who are on the waiting list of employment must be included in the labor-employment programs and must be employed on a priority basis. Those physically suitable sons volunteering to be enlisted in active service must be processed and approved on a priority basis. Daughters of army cadres deserve similar consideration in the drafting of women soldiers in the army. Upon their retirement from active duties, those provinces, municipalities and autonomous regions which originally drafted them into active service must assume responsibility for resettling them in civilian life. In case their parents have been transferred elsewhere upon their retirement, the districts in which their parents are located should take up the responsibility for their resettlement.

The circular urges local governments at all levels to give strong support and assistance to the aforementioned army cadres in solving the problem of schools for their sons and daughters in accordance with the principle of assigning them schools nearest to their homes. It says: Schools operated by the departments of education are advised to admit these students on a priority basis, and can be compensated by tuition from these students in accordance with the regulations of the state. But they are prohibited from accepting any extra fees for this purpose. In localities where no such schools are available, they can be enrolled into schools run by enterprises, communes and brigades and other collectives and establishments which have no reason, whatsoever, to reject these students. The army units can do everything possible in their power to support those civilian schools which have enrolled a large number of children of army cadres. Local governments must plan to build new schools or expand existing ones in their areas where no schools are available or new schools need to be built or existing ones need to be expanded to enrol children of army cadres stationed there. The army units stationed there must give them necessary assistance in carrying out such projects. In localities where no resources are available to build any schools for the time being, the army units stationed there should build schools of their own in accordance with the principle of economization with the support and assistance of the departments of education which should provide instructions, teaching materials and equipment, teachers and facilities for their training. Graduates from such schools must be considered for promotion to other schools or for jobs along with their counterparts from other schools under a unified plan. The departments of education must actively help army units in localities with no schools send children of their cadres to schools in nearby cities or in remote areas. If these schools cannot provide board and room for students, army divisions and higher level units should provide such facilities for middle school students.

NEED FOR WRITERS TO ESTABLISH COMMUNICATION WITH LIFE URGED

Beijing RENMIN RIBAO in Chinese 15 Jul 81 p 5

[Article by Du Ai [2629 1002]: "On Understanding of 'Plunging Into the Thick of Life' Once More"]

[Text] Some comrades maintain that today since the subject matter for creative works has been broadened and restrictions on writing have been lifted, we have much to write and therefore don't have to pay any attention to what is going on in real life. There is also a misunderstanding of the slogan "keep in close touch with life" among some individual comrades who contend that this slogan, which was proposed under a specific historical condition and therefore applicable only to a specific historical circumstance is no longer "valid" today as the situation has changed. This shows that an accurate evaluation of the relationship between life and writers remains a matter of concern that commands the great attention of our writers, especially young writers.

Social life is a base in which literature and art are created while knowledge of life is a preparation essential to writers. Literary and artistic works are a reflection of social life which can be expressed from a single angle or many different angles and in one form or many different forms. In whatever form their works take, they must be based on social life, rather than pure imagination and free-wheeling fabrications which are unlikely to give the public any good masterpieces of lasting value. Good works usually come from writers who have experienced life to a certain degree and who have undergone specific training in literature and art. In this sense, life is the first and decisive factor essential to the writers. Those famous realistic works of ancient and modern times at home and abroad were fostered by writers on the soils of real life. Had Tolstoy been deprived of the chance to fight in the Crimean War between Russia and Turkey, he would have been unable to produce his "War and Peace." Maxim Gorki's "Mother" and other outstanding works did not come until he accumulated adequate experiences in life and struggles. Likewise, Lu Xun's "A Madman's Diary" and "The True Story of Ah Q" would never appear if he failed to keep in close touch with the life of old China and to achieve a deep understanding of peasants who were trampled under foot as the lowest class of society at that time. Some young writers of our time such as Jiang Zilong [5592 1311 7893], Wang Meng [3769 5536], and Gao Xiaosheng [7559 2556 5116] have published some good and relatively good works. Their successes have very much to do with their rich knowledge of life and their deeper tastes of life as it is reflected in their works.

On the other hand, there are also some works which have proved unsuccessful. In the final analysis, such failures have something to do with their writers' attitude toward life. Some of our current literary and artistic works have proved low in quality and unpopular with readers. Although many reasons can be cited for their failure, what is most important is that these works were fabricated. Fabricated works usually come from writers who live in isolation from life. There are some writers who have portrayed certain aspects of life without making efforts to get acquainted with them or demonstrating any willingness to communicate with them and/or getting any tastes of them. Works produced in this way will prove unacceptable.

Some people argue that knowledge of life is required for works of the realistic style but not for historical stories. This understanding is wrong. Creative works dealing with history also face a problem of how to get acquainted with the life of the past. Works of historical interests deal with historical life unfamiliar to their writers. Before writing such works, they must conduct careful and thorough investigations and interviews, read volume upon volume of historical documents, and conscientiously analyze and study them. Otherwise, they will find it impossible to get the job done. Without getting the knowledge of historical life, Yao Xueyin [1202 7185 0995] would have found it impossible to produce his work "Li Zicheng." Nor would Ling Li [0407 0500] have found it possible to produce his work "Star-Like Grass." Therefore, the assumption that knowledge of life is not required in the writing of historical works is wrong. On the contrary, without knowledge of life, no realistic works can be produced. Even the fictitious myths cannot break with what is going on in this mundane world. Fundamentally, the reason that all the world-renowned myths have been handed down from generation to generation stems from the fact that they dramatically reflect the social life of their specific historical periods and in a sense express the people's aspirations and demands of those historical periods.

As it was stated earlier, as far as the writers are concerned, there are two types of life: 1) the type of life personally experienced by them; 2) the type of life not directly tasted by them. When a life is personally tasted by a writer, he will have a deeper impression and understanding of it and will find himself in a position to early comprehend and express it. But any writer must use other people's practical experiences to enrich his own through the reading of books and printed materials. Such efforts are not only justified but also necessary. As far as literary and artistic works are concerned, such direct and indirect forms of experience in life complement each other rather than tamper and conflict with each other. Whatever a writer is going to create--either realistic or historical works--he must conscientiously taste the life of our time, and make his presence felt among the masses so that he can draw nutrition from them and achieve rapport between literature and the masses of people. He must first understand the life, aspirations and demands of the people before he can produce any works conforming to their desires.

A writer needs to know life. This requirement is consistent with the Marxist materialist theory of reflection. But this does not imply that once he plunges into the thick of life, he will be able to solve all problems he faces and to produce good works. The opposite is true. Life bears a striking resemblance to a rich mineral deposit whose development calls for hard work. If a miner has no knowledge about mining, he may be unable to produce any valuable ore no matter how hard he works. Life also resembles a piece of crude jade covered with dust, whose shining splendor will be revealed only after it is polished. What is important is that a writer must achieve an "in-depth" understanding of life. If he communicates with life in a way that touches only its surface, if he behaves like a fleeting cloud skimming over the water or a dragonfly stopping short of going deep into the water after a delicate touch upon its surface, he will find it impossible to solve problems he faces in writing. What is important is that he must delve deep into life, and broaden his horizons of the world so that he can gain a thorough understanding of it. Writers are required to make painstaking and unremitting efforts and adopt various ways and steps to get close to the masses, and to get accepted by them as members of their own. They must share weal and weo with the masses so that they can observe, appreciate, study and analyze their activities.

Of course, many different ways can be devised by a writer to communicate with life. He can do this in ways that takes into account his age, experiences, character, and interest. For this reason, the leadership of the organization of literary and artistic workers should refrain from imposing general, and absolutely arbitrary regulations on writers demanding that they can keep in touch with life only in one way but not in another way. Flexibility rather than rigidity should be emphasized in this connection. Writers should be allowed to communicate with life in various ways, especially those aspects of life totally unfamiliar to them. Middle-aged and young writers are urged to find part-time jobs or active practical work or locate specific positions which will bring them into direct contact with life. This should be regarded as a very ideal and effective method of communication with life.

The reason is that practical work can provide a writer with an easy access to the masses and an opportunity to understand them. We writers must join the masses in accomplishing the great four modernizations program and the transformation of life, and make ourselves acceptable to them as members of their own. Only thus can we place ourselves in a position to know, observe and analyze their activities from a vantage point. Writers who feel that they can do this, and consider it necessary and are willing to do this must go out of their ivory tower as many times as possible in order to broaden their horizons of the world. Only in this way can they win more opportunities to enrich their life in terms of breadth and depth.

SOCIOLOGICAL, EDUCATION AND CULTURE

OBSERVANCE OF DISCIPLINE, FOUR BASIC PRINCIPLES BY WRITERS, ARTISTS URGED

Beijing BEIJING RIBAO in Chinese 23 Jun 81 p 3

[Article by Li Sheng [7812 3932]: "An Analogy"]

[Text] Xun Zi [5424 1311] of the era of the Warring States once drew up lively analogy to emphasize the indispensable role of teachers in the learning process. In this connection, he said: "Although Huali, Qili, Qianli and Green Ears were good horses of the ancient times, they could not run a thousand miles a day until they were harnessed with saddles and long lashes and trained by Zao Fu." I consider it very appropriate to use this analogy to depict the dialectical relationship between discipline and freedom and between restriction and liberation and to explain that our writers and artists must accept the Marxist theory of literature and art as a guide, supervision from the masses of people and the leadership provided by the proletarian political party.

Of course, a good stallion which gallops at a speed of 1,000 li a day will feel neither free nor comfortable when it is saddled and mounted by a rider with a long lash in hand. However, please imagine that once it is really relieved of all this equipment, and set free, and once it gets everything it wants, it will lose its sense of purpose and direction and stamina which is its source of strength for galloping a long distance. This being the case, can it still move toward the intended destination at a speed of 1,000 li a day? Can it still deserve to be called a good horse capable of running 1,000 li a day? By then, the horse will become heedless of orders and will run amuck just like any other horses of bad temper. This shows that discipline and freedom and restriction and liberation are elements which oppose and complement each other. Once the former is separated from the latter, the latter will loss its counterpart on which its existence depends and will change its original character. Nothing seems simplier than this reasoning in this case.
